We ask you as patriots, many of you who are descended from men who fought in the Civil War, and as veterans yourselves, to meet with your leaders. Then the entire Pennsylvania delegation sponsor a resolution with all the gentlemen from the South to carry out the purposes we have outlined, before this session ends.

With every good wish.

Sincerely,

MARLAN O. WALTER,
Department Commander.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Address of Hon. Dewey Short, Member of Congress, Seventh Missouri District, Before the Postgraduate Medical Assembly of South Texas, at the Shamrock Hotel in Houston, Tex., on Tuesday, July 19, 1955

EXTENSION OF REMARKS
OF

HON. CARL VINSON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 29, 1955

Mr. VINSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith an address by the Honorable DEWEY SHORT, ranking minority member of the Committee on Armed Services, before the Postgraduate Medical Assembly of South Texas at the Shamrock Hotel in Houston, Tex. I believe that every Member of the Congress will be as impressed as I was with the reasoning of the distinguished gentleman from Missouri concerning many of the medical problems that confront our Nation and the Armed Forces today.

The address follows:

Mr. Chairman, ladies and gentlemen, it is with some trepidation that I appear before this distinguished gathering today. I have tremendous respect for doctors, not only doctors of medicine, doctors of osteopathy, doctors of philosophy, doctors of dentistry, but also for doctors of divinity. But rarely in my life have I appeared before a group who quite rently would probably have very cheerfully cut my throat—and who possess the skill to do the job neatly.

I am referring, of course, to the recent extension of the Doctors' Draft Law which passed the House and was signed into law on June 30.

In my own small way, I undoubtedly have contributed to the potential displacement of some of you for a 2-year period.

It is an unfortunate, discriminatory piece of legislation, this Doctors' Draft Law, but I want to assure you that it is absolutely essential.

Perhaps it is the penalty you share for belonging to a very select organization. As physicians and surgeons you hold an extremely responsible position in our economy. You have studied long and hard; you have met the best competition and only the finest survive.

And because your services are so much in demand, it was necessary for us in the Congress to enact legislation to compel you to serve in the Armed Forces even though you are beyond the regular draft age.

Now I want to discuss this subject with you today because it is important not only to you and your colleagues, but also to the civilian population and our armed services.

Statistically, we had no choice but to extend the Doctors' Draft Law. The draft age has been reduced to 46, from the old age of 51, and from what I can gather from the facts that have been presented to us, doctors will be taken up to that age during the next 2 years.

We eased the situation with regard to physicians and dentists who are now over 35 and who previously applied for a commission in the medical or dental corps and were rejected for physical reasons, but we could not make that provision retroactive for those now serving on active duty. That also is discriminatory—for the doctor who was able to stay out of service, and who meets the criteria of this amendment, will not have to serve, while the doctor who is now serving on active duty who otherwise could have met the criteria, must remain on active duty until he completes his obligated period of service.

Wherever we turn in this whole manpower problem, we face inconsistencies and discrimination; even the regular draft act is discriminatory. Some must serve and others are deferred. Those who are healthy must go; those who are disabled remain behind. Those who are engaged in essential industry are deferred; those who are not, must serve.

This whole idea of compulsory service is repugnant to me and always will be, but I am also practical enough to realize that our Nation must possess an armed force capable of defending this Nation should that occasion arise. And the health of our armed services must be paramount in our thinking.

One of the serious problems that we face in this Nation is a shortage of doctors; and as far as I am concerned, there is a maldistribution of practicing physicians.

I do not believe that our medical schools are adequate in size to graduate the number of doctors that our economy requires. And unfortunately, since we are all human beings the natural tendency of many physicians is to go to larger cities where the patients are in a small area and where the level of income is high enough to justify charging reasonable fees.

That means that we have areas in this country that are inadequately staffed with doctors. And as far as I can see, that situation will remain with us and grow worse unless we take positive steps in increase the input of medical students and the output of medical school graduates. I would like to see that accomplished with as little Federal interference as possible.

It is not my purpose to deliver a sermon, but I would like to give you some of my ideas with regard to this whole problem of medical care.

Obviously, we cannot continue the doctors draft law for an indefinite period. Therefore the armed services must find a procurement method other than the doctors draft law.

Now so long as we have the regular draft law in effect we will be able to obtain a fair share of medical school graduates, since anyone who is deferred for any reason under the regular draft remains liable for induction up to age 35. But we can't depend entirely upon medical school graduates as a source of doctors for our armed services because then we would be depending entirely upon young men who have just completed their internships. The armed services need specialists and experienced physicians just as much as any other group of people. But we are not attracting experienced physicians and specialists in our Armed Forces on a career basis. And that calls for a little self-analysis.

Why aren't we getting more doctors to make a career of the armed services? Is it economic?

Yes, partly. It is a little hard to compare a major's pay with the $15,000 net income annually of the average practicing physician in the United States.

But I don't believe it is entirely economic. Pay is not everything. I think it may also involve the dignity of the profession, the constant changes of station, and perhaps to some extent, the unintentional subjugation of professional initiative.

I am convinced that the average doctor has a unique personality of his own: a rugged individualist—if you will. He has to possess that sort of personality, otherwise he would never have had the courage and stamina and determination to spend 4 years in college, 4 years in medical school, a year of internship, and 2, 3, and 4 years in residency training before he considered himself qualified to practice medicine.

And I suppose the average physician is not willing to enter into a form of regimentation in which his own personal attainments and ability will not be rewarded in proportion to his achievements. I believe that, too, may be a factor in this medical procurement problem in the armed services.

I don't know the full answer, although I can assure you that it is being studied carefully with a hope that some solution can be found. Basically, the medical situation in our armed services is one of supply and demand. So long as the demand exceeds the supply, the attractiveness of service life will undoubtedly take a back seat to the normal civilian life where the physician is his own boss.

The ultimate solution to the whole problem of supplying doctors for our Armed Forces and also for the civilian economy is a substantial increase in the number of doctors.

While the doctors draft law was under consideration in the House and in the Senate, Members of Congress were besieged with telegrams and letters from doctors urging the elimination of the doctors draft law. The contention was made that if dependent medical care were abolished and all other persons now entitled to medical care from service doctors were denied this benefit, there would be no need for a doctors draft law.

Well, I want to discuss that subject because it is of fundamental importance to you and to the Armed Forces. The number of individuals who are theoretically entitled to medical care from service doctors is large. But when you compare the actual statistics of medical care furnished to persons other than service personnel it soon becomes apparent that the existing legal entitlement is not being abused. As a matter of fact, if all medical care were abolished for all personnel now entitled to medical care from the armed services other than armed services personnel and their dependents, we would only be able to eliminate about 40 of the 10,000 physicians now serving on active duty with the armed services and the Public Health Service. And if we abolished all dependent medical care in the United States, we would only eliminate an additional 581 doctors from the armed services and the Public Health Service.

The next contention was that the ratio of physicians to armed services personnel is unrealistic—too high. It is now approxi-

mately 3.044 per thousand and you will hear statements made that this is so much greater than the civilian population that it obviously can be substantially reduced.

Well, ladies and gentlemen, medicine in the armed services is not confined solely to treating servicemen who are ill. Sometimes we all overlook the very basic reason that we have an Armed Force. We constantly strive to impose upon our armed services the same business standards that apply to the United States Steel Corp., General Motors, Humble Oil, and countless other groups in the country. But you can't compare a producing corporation with an insurance policy. Our Armed Forces exist so that those corporations and the people who work for those corporations, and the doctors and dentists and veterinarians, and small-business owners, and farmers, and railroad engineers, and students, and mothers and fathers, and everybody else in this United States, can continue to live in freedom. Of course, maintaining our Armed Forces is costly. Fantastically expensive. And, of course, there is waste. Of course, there is duplication, unnecessary transportation, administrative mistakes, poor decisions, bad buying, but we are dealing with an organization which employs almost 5 million people, an organization that spends 65 cents out of every Federal tax dollar, an organization that spends between forty and fifty billion dollars annually, an organization whose expenditures exceed the income of 18 of the largest corporations in the United States.

The Armed Forces isn't a business operation. It exists for the sole purpose of preserving this Nation. And in order to preserve this Nation we have to have men mentally and physically fit to perform all types of duty.

We have to have doctors who know how to prepare for the medical support of an amphibious operation. We have to have doctors who know all of the medical problems of logistical support of a land operation; we have to have doctors who are familiar with the human physical limitations in the problems of space; we have to have doctors who are experts in field sanitation, preventive medicine; and all of our doctors must have some conception of what a military organization is, how it functions, and what their responsibilities would be if they were called upon to take command of a medical battalion.

So, all the time of a doctor in the Armed Forces is not confined to the treatment of people who are ill; perhaps some doctors spend most of their time treating patients, but when that doctor is serving in that capacity another doctor is studying a supply problem, or a study involving the results of underwater demolition, or the proper way to treat victims of nuclear warfare.

So, it is not quite fair to our armed services to compare the ratio of physicians to the civilian population and then conclude that the ratio in our armed services should more nearly approach that ratio. The problem in our Armed Forces is to keep our people healthy and not wait to treat them after they are sick.

I am not trying to defend poor administration, for I would be the first to admit that there are undoubtedly a few places in the Armed Forces where improvement can be made in the proper utilization of physicians and their skills. And I can fully appreciate how a pediatrician feels when he is called upon to leave his own practice only to end up in a dispensary treating the children of service personnel. And that, of course, leads me to the various problems of dependent medical care.

Now, traditionally we have provided, on a space and facilities available basis, medical care to the dependents of service personnel. But I don't know of anything that would more adversely affect the morale of our Armed Forces than to eliminate this entitlement. On the other hand, it is obvious that we cannot continue in good conscience to draft individuals and ask them to treat the dependents of our service personnel. The number involved is not great—581 is the approximate figure, but even if we eliminate 581, that would be 581 less doctors over the age of 35 who would have to be ordered to active duty. So there we are on the horns of a dilemma. Can we jeopardize the morale of our Armed Forces to the extent of eliminating dependent medical care in order to alleviate to some extent the situation with regard to the drafting of doctors over the age of 35?

Well, obviously the answer for the next 2 years is that the Congress was not willing to jeopardize the career attractiveness of many thousands of experienced men in order to reduce to just a small extent the number of physicians who will be required to serve in our Armed Forces who are now over the age of 35. But we recognize the fact that we must find a solution to dependent medical care. Obviously, we are again on the horns of another kind of a dilemma. For if we abolish all dependent medical care in the Armed Forces, then many of the physicians who now are willing to stay in the Armed Forces until reaching retirement age will leave, since the present diversification of their practice may well be reduced to such an extent that they will prefer to leave the armed services and surrender the years of service they have built up toward retirement.

The average service doctor in a period of several years of service will treat service personnel who are basically healthy—perhaps an appendix now and then, a few bad colds, pneumonia, broken arms, broken legs, perhaps now and again a case of tuberculosis or a heart condition. But if the service doctor is treating just service personnel, he is not going to have much experience in gynecology, pediatrics, geriatrics, and many of the other types of medicine that are found in younger or older age groups.

So, what is the answer to that problem?

I am not sure that I can give you the answer, although I can give you a few personal observations. First of all, I think it is incumbent upon us in the Congress to adopt some type of group health-insurance program. In this way the dependent will be assured of medical care by civilian physicians even though the dependent is separated from the service member and in an area where no service facilities are available. On the other hand, unless some adequate program can be worked out in overseas areas, the dependents will continue to expect treatment from American doctors. It is possible that this can be worked out on a contract basis, but in some areas the only doctor available will be a service doctor, and he will be expected to treat dependents as well as service personnel.

Now whether this group program will supplement the present system or be a substitute for the present program, is the question. I would suspect that unless some method can be found to procure more doctors for the Armed Forces this system, if adopted, will at least for the time being, have to be a substitute rather than a supplement to the present system.

If we procure more doctors from the civilian economy on a career basis, at least we will eliminate the readjustment necessary in local communities throughout the Nation where practicing physicians are called into the service. In other words, if a doctor on his own initiative decides to make the service a career, his patients will usually have sufficient advance notice to make all the adjustment necessary, but when a doctor is taken from a community for a 2-year period with the full intent of returning to that community, there is often a void that cannot be filled. And at that point, the civilian community suffers.

If dependents are in an area where there are civilian physicians available and if they can go to civilian physicians under a health insurance program, that will ease the situation, to a very limited extent, but to some extent with respect to the number of doctors required in uniform.

On the other hand, it will give the dependent a benefit that she does not now enjoy and that is a year-round entitlement to medical care and not just on a space and facilities available basis.

To me, it is the only practical solution to the immediate problem and yet we have had no experience on this large a scale upon which to base such a program. While it is easy to criticise the Department of Defense and the Congress for failure to take action on this problem now, I think from what I have said here today you can see some of the ramifications. If we abolish all dependent medical care, we reduce the attractiveness of service medicine. If we continue to draft doctors, we not only disrupt the individual doctors, but in many cases, the local community in which he is practicing.

We must solve this medical problem in the armed services, not only for the immediate future, but for the years ahead.

I want to mention that considerable progress in medical manpower utilization has been made by the Assistant Secretary of Defense, Dr. Berry, and his assistant, Dr. Cushing, with the cooperation of a medical advisory committee and I am convinced that there is today a much better utilization of medical personnel than ever existed before. Some further progress can be made but I am afraid that insofar as the number of doctors required is concerned, we have just about reached the minimum.

I mentioned earlier that I considered the average physician to be a rugged individualist. I realize that that may be an unpopular term in this present day and age. Perhaps it is wrong to depend entirely upon one's self for a livlihood; perhaps I am living in the dark ages, but I cannot help but feel that all of the notable achievements of this century, and the past centuries, can be attributed to men and women who felt an obligation to their nation, their families, and themselves. They did not feel that being born entitled them to dependence upon the nation for a livelihood and for the better things in life.

We have become an extremely security-conscious people in the past few years and while much progress in social fields has been made, I sometimes wonder if it is not being made at the cost of the loss of individual initiative. And yet some of the social gains have been brought about by necessity, as well as public demand.

And very possibly, the next large field will be that of medicine.

I know it is unnecessary for me to tell you that socialized medicine, or any other name that you may wish to call a program of free medical care, is on the horizon. I can think of nothing that would do more to stop the progress of medicine than for this Nation to engage in a program of national socialized medicine. On the other hand you, as doctors, have made this Nation health conscious; you have stressed medical examinations, early treatment, danger signs, annual X-rays, and as a result you have made every person in this country extremely aware of the necessity for prompt and adequate medical care. As a result the health of the Nation has prospered. The average age of men and women of this country has increased and this in turn has increased the national income. But having started this very desirable awareness of the need for proper medical treatment, it is incumbent upon you as

private citizens, as advocates of the free enterprise system—yes, as members of a capitalistic team—to meet those demands through the free enterprise system. If that demand is not met by you as private practicing physicians, or by you as groups of private practicing physicians, then it will be done for you by the Federal Government.

That is the history of this Nation and nothing you or I can say will stop it. It is only what you and I do to fill the needs of the people through the free enterprise system that that system will continue to exist as we know it.

It is for you to decide as leaders in your communities, as men respected and loved by your patients, your friends, and your neighbors, as to where and how and when we are going ahead. It can be done by direction of the Federal Government or it can be done through the free enterprise system and the cooperation of the Federal Government, but as sure as I am standing here today, it will be done.

You will have to make the choice—and I believe I know what your choice will be.

In Expression of Gratitude

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. DEROUNIAN. Mr. Speaker, on the occasion of his meeting with the Honorable Herbert C. Hoover, Jr., the Under Secretary of State, His Grace, Archbishop Mampre Calfayan, primate of the Armenian Church in North America, presented the following scroll of gratitude:

IN EXPRESSION OF GRATITUDE

On the happy occasion of our meeting with representatives of the Secretary of State, and on behalf of the Armenian Church in the United States under the venerable Holy See in Etchmiadzin, with 48 authorized parishes and approximately 100,000 parishioners, may we again voice our expression of gratitude for the freedoms and opportunities granted us as citizens by birth or by naturalization; reiterate our devotion and loyalty to the principles of our Republic; and pledge to resist any and all enemies, both from within and without, which with aggressive intent, may seek to attack our beloved country.

While many Americans of Armenian origin are bound by ties of blood and sentiment with their brethren in their ancestral homeland in Armenia, the attachment is one of filial kinship. On behalf of my flock in the United States I can assure the Secretary of State that there can be no doubt whatsoever as to the loyalty of my people, in time of peace or in time of stress. The spirit of allegiance has taken root deep in our hearts. We are Americans. Our loyalty is unreservedly bound to the best interests of the United States, now and forever.

Our divine ministry commands us to seek the ways of peace and not those of war. We therefore pray for the fulfillment of the devout wish of our President Eisenhower, "to live in peace with all the world, to commune with them, to learn from their culture as they may learn from ours * * * so that our sons may stay at home, the products of our toil may be used for our schools and roads and churches, and not for guns and planes and tanks and ships of war."

Respectfully presented on this 19th day of July 1955 in Washington, D. C.

Archbishop MAMPRE CALFAYAN,
Primate of the Armenian Church in North America.

Bishop's Sermon at Ruma Details the Dignity and Duties of the Religious

EXTENSION OF REMARKS
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1955

Mr. GRAY. Mr. Speaker, His Excellency the Most Reverend Albert R. Zeroweste, D. D., bishop of Belleville, Ill, delivered a sermon at the Ruma, Ill., Motherhouse. Ruma, Ill., is located in my congressional district, and I am happy to include in the official CONGRESSIONAL RECORD Bishop Zeroweste's sermon.

The sermon follows:

"You have not chosen me, but I have chosen you, and have appointed you that you should go and bear fruit and that your fruit should remain." (John 15: 16.)

Right Reverend Monsignori, Very Reverend and Reverend Fathers, Reverend Mother, Dear Sisters and Beloved in Christ:

We extend congratulations to all the participants in today's beautiful ceremony. Your hearts are filled with joy and gratitude as you offered to Christ your mind, your soul and whole being and thus became His brides. The young women just beginning this dedication of self look forward with trust knowing that those who have gone before them have found joy, peace, and contentment with Christ. Those who have completed 25 or 50 years in the religious life have already experienced the lightness of Christ's burden, the sweetness of His yoke.

Since we have not here a "lasting city but seek one that is to come," we do not expect perfect happiness on this earth. Our Divine Master has told us that if we would come after Him we should take up our cross daily and follow Him. But, in spite of the daily crosses the true religious finds a happiness and peace that the world cannot understand nor enjoy. "Peace, I leave with you, my peace I give to you; not as the world gives do I give to you." (John 15: 17.) Do not let your hearts be troubled or be afraid." (John 14: 28.) "In my Father's house there are many mansions." "I am the way, and the truth, and the life." (John viii: 12). "No one comes to the Father but through me." These familiar words of the Divine Master reecho in your mind and heart today. They are the words of divine truth, they are the words that gave you strength to take the important step and they are the expression of Christ's companionship with the true religious.

Frequently you have meditated upon your dignity and duties as spouses of Christ. And like all who are called to His service you have at times been disturbed by doubts and questions. You asked yourself, why should I have a religious vocation? Why should I be privileged to be a bride of Christ? Am I worthy of such companionship? The words of Christ: "You have not chosen me, but I have chosen you," have reassured you, and you are worthy because Christ wants you, because Christ loves you.

It is important to remember this fact in the daily practice of your spiritual life. Christ wants you, Christ has called you, you are working for Christ and with Christ. You, therefore, never perform any action or fulfill any duty alone. Christ is your constant companion. He is with you in the classroom, at the bed of the sick, in the corridors of your convent; He sits beside you at your desk and kneels beside you at your prayers; you do not walk alone, but Christ walks with you.

There is a movie on vocations called God's Career Women. I suppose many of the Sisters have seen it. It depicts the life of a young woman from the day she enters the convent to begin her training in a religious order. It shows her in her work, her prayers, her daily spiritual exercises and at recreation. The title, however, to my mind, may be confusing. In modern usage the career woman has an entirely different connotation than our idea of religious career women. In the religious life one must abandon all careers as the world understands a career. A career for God, yes; a career for honor, glory, success or worldly recognition, no. This does not mean that a religious should not use her natural talents; it does not infer that she refrain from giving her best efforts in fulfilling the tasks assigned to her. It does, however, demand that the ego be submerged in the Christus; the bride, hidden behind the personality of her divine spouse. A true religious must even be forgetful of self. The religious vows themselves signify the submission of self to God and to our lawfully constituted superiors. True, it is not an easy undertaking but this submission of ourselves to Christ is absolutely necessary for a complete and happy religious life. One can succeed only when she has forgotten self for Christ and takes as her motto the words of St. Paul: "I can do all things in him who strengthens me." (Philippians iv: 13.)

When a religious learns this secret of abandonment of self, she has acquired the secret of success; then she is truly Christ's career woman. Remember there is no career of any religious except the career of becoming a saint. All other occupations, tasks or accomplishments are only rungs on the ladder leading to this end. "We build the ladder by which we rise; from the lowly earth to the vaulted skies; and we mount to the summit round by round, 'For this is the will of God your sanctification.'" (Thessalonians iv: 3.) "The Lord is faithful, who will strengthen you and guard you from evil." (2 Thessalonians 3: 3.)

The Master has spoken to you: "Come, follow me." You heard His voice and accepted the invitation. You have replied: "I have come; I have left father, mother, home, relatives and all things. You, my spouse, are my way, my truth, my life. Without you, dear spouse, I can do nothing."

Frequent meditation on the exalted dignity of your calling and the richness of the spiritual life will not only stir anew your gratitude for the privilege of being Spouses of Christ but will also quicken your desires to share with others the joy that is yours through religious life.

So each day walk along the way of the cross, the road of sanctity. It is not an impossible journey because Christ invites you and He never asks of us the impossible. "You therefore are to be perfect, even as your Heavenly Father is perfect." (Matthew 5: 48), Christ has invited you, you have accepted the invitation and now you put yourself completely in His care. He offers grace, light, and strength; He draws and guides you along the labyrinthine ways. He is pursuing you, asking you to love Him and to give yourself in return with docility, trust, and generosity.

Recall how much Jesus has loved you, how He has favored you in calling you to the religious life. In gratitude, you must now become a saint—there is no other way to serve. And remember that putting on Christ is the

work of a lifetime, but a work that must be done each day because from the first day you begin your work as teacher, nurse, or in any other activity you must begin at once to form Christ in others.

I need not emphasize the important role of devotion to the most precious blood in your striving for sanctity. You are dedicated in a very special manner to the precious blood. Christ's mission on earth was to shed His blood for man's redemption. This He proclaimed when He instituted the Holy Eucharist. "And taking a cup. He gave thanks and gave it to them, saying: "All of you drink of this; for this is my blood of the new covenant which is being shed for many unto the remission of sins." (Matthew 26, 27, 28). His blood seeped into the earth in the Garden of Olives; during the scourging it was scattered on the walls of the pagan court; it left a trail from Pilate's court to Calvary; it covered the hands and clothes of the executioners and claimed at least one of their number. And the last drop was drained from His body when one of the soldiers opened His side with a lance, and immediately there came out blood and water." (John 19: 34.)

The prodigality with which Christ shed His blood from the beginning of His Agony until His death on the cross is one of the mysterious aspects of His passion, especially since we know that one drop of His precious blood had power to redeem countless worlds. This profuse shedding was another proof of this boundless, infinite love.

As members of this community dedicated to adoration of the precious blood, be generous as Christ was generous. I assure you then you will reach the heights of sanctity and you will walk worthily in the vocation to which you have called.

We wish to congratulate the parents and relatives of these brides of Christ. They also have been generous with Christ in giving their own back to God. Remember that the Divine Master cannot be outdone in generosity. Your reward will be exceedingly great.

We priests share in the joy and happiness of this moment in a special manner. The pastors of these young women are particularly pleased because one or more among their spiritual children have been chosen to this exalted vocation. The rest of us know that our schools, institutions of charity will continue because there are young women to follow in the footsteps of the Holy women who aided Christ when He trod the wine press of sorrow alone.

Let all unite in a hymn of praise and thanksgiving to the triune God on this feat day honoring the precious blood of the Second Person of the Most Blessed Trinity.

Blinded Veterans Association 1955 Achievement Award Goes to Houston, Tex., Veteran

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. TEAGUE of Texas. Mr. Speaker, I wish to submit for the RECORD a news release of the Blinded Veterans Association, Inc., which tells of an award for achievement by that organization to Mr. Criss Cole, a blinded veteran of World War II. Since he was blinded by a Japanese grenade on Tarawa during World War II, Mr. Cole has completed all work required to obtain a bachelor of science degree and a bachelor of laws degree from the University of Houston and is now a practicing attorney in Houston and a member of the Texas State Legislature. The story of his achievement and his personal triumph over his handicap is an inspiring one which I commend to all Members of Congress. It follows:

NEW YORK, N. Y., August 7.—A 37-year-old former marine, who was blinded by a Japanese hand grenade during the bitter fighting for Tarawa in World War II, has been given the 1955 achievement award of the Blinded Veterans Association in recognition of his personal accomplishment and his service to the community.

The veteran, Criss Cole, of Houston, Tex., who is currently a member of the Texas House of Representatives, received the award last night at a banquet held at the Hotel New Yorker, the final function of the association's 10th annual convention, which opened on August 2.

The BVA achievement award is presented annually to a blinded veteran who has been especially outstanding in his chosen field of employment and in his adjustment to daily living as a blind person.

Despite his blindness and the fact that economic circumstances prevented him from obtaining much formal schooling before the war, Cole went through college and law school after he was discharged from the Marines. He became a successful candidate for the State legislature and now engages in the private practice of law between sessions.

Criss Cole was born in Sawyer, Okla., in 1918, and is 1 of 10 children. His family moved to Sims, Tex., when he was 2 years old, and he was raised in this farming community. With so many mouths to feed, it became necessary for Cole to leave school in the ninth grade in order to help his father on the farm. At the age of 18 he joined the Civilian Conservation Corps and spent 20 months in Colorado and California.

In October 1940 he enlisted in the Marine Corps and served overseas in Iceland, New Zealand, Guadalcanal, and Tarawa. On November 23, 1943, he was totally blinded when a Japanese hand grenade exploded in his face on the beach at Tarawa.

Cole was returned to the United States and received medical treatment at the Philadelphia Naval Hospital, being discharged on August 1, 1944. He then went to Houston, Tex., to look for a job.

For him, the year 1945 proved momentous. He was engaged by the Reed Roller Bit Co. as a bench worker and shortly after that married Joanne Spica, whom he had met while he was a patient at the Philadelphia Naval Hospital.

In January 1949, the Veterans' Administration authorized Cole to enter training to become a lawyer. The veteran passed a test entitling him to the equivalent of a high school diploma from the Texas State Board of Education and began his prelaw studies at St. Thomas University in Houston.

Two years later, he transferred to the University of Houston, where he completed his work for a B. S. degree. He was awarded an LL. B. degree from the same university in May 1954, and was named the outstanding law student of the year by his fellow students.

Cole was admitted to the bar in May 1954, and opened an office in downtown Houston. At the same time, he became a candidate for election to the Texas House of Representatives.

Without a campaign manager or financial backing, and making no promises, Cole entered the campaign with a two-point platform: (1) improvement of conditions at State mental institutions, and (2) a rehabilitation program for juvenile delinquents.

He was elected by an overwhelming majority that November.

Cole is active in church and civic affairs. He is deeply interested in the vocational rehabilitation of the disabled—both veteran and civilian—and devotes much of his time to addressing business groups, stressing the value of utilizing this source of productive manpower. He acknowledges the fact that loss of sight is a severe disability, but points out that the more efficient use of other faculties and resources enables a blind person to carry on a normal life. His own example demonstrates that a disability need not be a handicap.

He enjoys fishing and horseback riding and particularly likes to take his two sons Dennis, 8, and Warren, 6, on picnics and to the zoo.

The citation accompanying the BVA Achievement Award reads as follows: "For exemplifying the principles of initiative, independence, and self-reliance to which the Blinded Veterans Association is devoted."

The Newman Prize of $100 which accompanies the award was also presented to Cole. This prize is contributed annually by Nathan Newman, New York businessman and longtime friend of the BVA.

The three judges for this year's Achievement Award were Dr. A. Duane Beam of Grosse Point Farms, Mich., a prominent ophthalmologist who was in charge of eye casualties at the Philadelphia Naval Hospital during World War II; C. Warrend Bledsoe, Chief of Blind Rehabilitation, Veterans' Administration, Washington, D. C.; and Peter J. Salmon, Executive Director of the Industrial Home for the Blind, Brooklyn, N. Y.

In addition to Cole, the judges cited the following blinded veterans for their outstanding achievements: Alexander R. Bishop, Talladega, Ala., instructor, Alabama School for the Blind; Norbert L. Cormier, Newington, Conn., Veterans' Employment Representative, Connecticut State Employment Service; James F. C. Hyde, Washington, D. C., legislative analyst, Bureau of the Budget; Edmund Jemison, Basom, N. Y., social worker, Genesee County (N. Y.) Department of Welfare; Thomas J. Kennedy Jr., Baltimore, Md., owner and operator of an office supply company; Harry J. Kosmala, Chicago, Ill., vending stand operator; Fred Krauss Jr., Broomal, Pa., employment interviewer, Pennsylvania State Employment Service; Julius Morris, New Britain, Conn., attorney; Leonard M. Pawlak, Milwaukee, Wis., medical dictation transcriber, VA Hospital, Wood, Wis.; Lawrence L. Peets, West Arlington, Vt., bookbinder; Earle G. Ramsey, Brevard, N. C., attorney; and Stuart D. Rawley, San Gabriel, Calif., cabinetmaker.

Nominations for the BVA Achievement Award were solicited from Veterans' Administration Regional Offices throughout the country as well as from BVA's local chapters.

Statement by Oscar L. Chapman Presented Before the Committee on Agriculture on Legislation To Amend and Extend the Sugar Act of 1948 as Amended

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. UTT. Mr. Speaker, in view of my intense interest in our relations with our good neighbor, Mexico, under unanimous consent, I insert in the RECORD the following statement by Oscar L. Chapman

presented before the Committee on Agriculture on legislation to amend and extend the Sugar Act of 1948 as amended:

I am appearing here on behalf of the Association of Sugar Producers of Mexico, which has a very vital stake in the legislation now pending before this Committee. This opportunity to appear and testify is most sincerely appreciated by the association and by the many thousands of our good friends in Mexico who depend upon their sugar industry for their livelihood.

On June 17, I filed in the House of Representatives, a petition on behalf of the sugar producers of Mexico, which was duly received and referred to your committee. This petition states the affirmative case of the Mexican sugar producers. In order to save the time of the committee, I respectfully request that the text of the petition be incorporated in the record. I shall confine myself in my statement to some brief, but, I believe, extremely important comments on the legislation proposed by the executive establishment.

At the very outset, I wish to make it absolutely clear that we have no quarrel whatsoever with the proposal to grant relief to the domestic sugar industry as exemplified by H. R. 5406 which is now before you. I say that in the full knowledge that that bill would have the effect of lowering the quotas that would otherwise accrue to Mexico in 1955 and 1956. Certainly the Congress has an obligation to look after the best interests of the United States first, and to foster such a domestic sugar industry as it deems consistent with those best interests. We consider it entirely inappropriate for any foreign principal to seek preferential advantage for itself by attempting to influence that judgment.

Mexico seeks only to obtain a fair share of that portion of the United States market which is to be allotted among foreign producers after the domestic producers have been taken care of. In that regard, Mexico insists that it is entitled to equal consideration, on the merits of its case, with all other foreign producers.

Unfortunately, the proposal submitted by the executive departments does not reflect equal consideration on the merits. In fact, it is so grossly discriminatory and inequitable as to be shocking.

The essential evil of the proposal of the executive establishment is that it perpetuates a system which ignores present day equities and relies solely on ancient history. Under this bill, foreign quotas are not allotted on the basis of the needs and merits of 1955, but essentially on the basis of the quantitative distribution of the market as it existed in 1934. Thus no matter what has happened in the ensuing years in terms of economic and political relations, the lion's share of the market is reserved for the few suppliers who happened to be there first. No matter how efficient a new producer is, he is substantially excluded from the United States market.

Under this proposal, Cuba, beginning in 1957, is arbitrarily granted 60 percent of the total increments in foreign quotas. The remaining 40 percent is to be prorated among the full-duty countries in accordance with their average shipments during the period 1951 through 1954. This system guarantees that Mexico, for the duration of the act, must take a subordinate position to Peru and the Dominican Republic since she obviously shipped less sugar to the United States than they did during the base period. And why did she ship less than they did during the base period? Because under the current act she was not allowed to ship more. Moreover, Mexico was not allowed to ship more because during a previous base period she was similarly restricted.

This represents a kind of economic Shintoism which is entirely inconsistent with the professed international trade policy of the United States. The State Department itself has insisted, in the trade councils of the world, that where quantitative restrictions on imports must be adopted, there should be provision for making adjustments to meet special situations and to recognize current exigencies.

Surely at long last there must come a time when such a legislative scheme must be reexamined in the light of present-day realities and when reasonable adjustments must be made. That time is long overdue. This outmoded approach to foreign-sugar quotas should not be carried forward into the new legislation which you are now considering.

I can readily understand the reluctance of the executive departments to recommend a cut in the present quota of Cuba or any other country below what it presently enjoys, even though its relative share of the present market could not be justified by objective economic criteria. There is a natural tendency to try to make adjustments as painlessly as possible and to leave intact that which a country now has. That, however, is not the major defect of the executive proposal. The overriding evil of the bill is that it not only preserves the quotas accumulated under the historic base-period system, but it projects that system into the allocation of the future growth of the market. That is carrying history too far.

Under the bill proposed by the executive establishment and under H. R. 5406 for that matter, no foreign country would be cut 1 ounce below its present deliveries. Certainly this alone should eliminate any economic dislocation which might be feared. Beyond that, however, as we compute it, the executive proposal would have the effect of freezing participation of foreign countries in the future growth of the market as follows:

Foreign participation in future growth

	Percent
To Cuba	60.0
To Peru	18.4
To the Dominican Republic	11.6
To Mexico	4.0
To all others	6.0

Even if it should be assumed, giving due deference to history, that no foreign country should be called upon to give up 1 pound of the tonnage it now ships, by what magic can it be concluded that the Dominican Republic is entitled to participate in the future growth of the United States market almost 3 times the extent of Mexico, or Peru 4½ times. Why should Cuba be given a share in the future growth of our market 15 times greater than that allowed Mexico? I submit that this cannot be justified by any reasonable standard.

The Assistant Secretary of State told this committee: "The decision concerning the relative shares of the foreign supplier should, of course, be made on the basis of standards which can be applied as uniformly as possible among the various countries."

I am certainly in favor of uniform standards. I would like for the committee to judge on the whole record whether there has been a uniform application of standards in the position taken by the executive departments.

Frankly, I am quite weary, and I am sure some of you are, of being told that the entire export trade of the United States may collapse if Cuba's stranglehold on the United States sugar market is not maintained.

If export trade is to be used as the basis for justifying Cuba's position, surely it should be worth some consideration with regard to Mexico.

The fact is that Mexico's purchases from the United States last year amounted to $628 million and exceeded those of Cuba by $200 million. Moreover, Mexico's purchases from the United States last year exceeded the combined purchases of Cuba, the Dominican Republic, and Peru by $51 million.

In 1954, Mexico's purchases in the United States were more than 6 times those of Peru and more than 12 times those of the Dominican Republic.

The State Department also told you that most of the countries which sell sugar to the United States have an unfavorable trade balance with the United States. They wish to buy an increased volume of our export products but are able to do so only by increasing their sales here.

Compare Mexico's unfavorable balance last year of $299.8 million with Cuba's of $26.9 million, and Peru's of $300,000. The Dominican Republic had a favorable balance of $20 million.

Because of its unfavorable dollar situation Mexico was forced to undergo a devaluation of the peso in 1954. That devaluation caused grave injury to Mexico's economy and another would have irreparable economic consequence.

It would be well for this committee to consider too, just where the trade ties of the competing claimants lie. Seventy-five percent of Mexico's export trade is with the United States, as compared with about 61 percent for Cuba, 51 percent for the Dominican Republic, and 38 percent for Peru.

In face of all these facts, why should Cuba be entitled to participate in the future growth of our sugar market 15 times the extent of Mexico or Peru 4½ times or the Dominican Republic 3 times? It is difficult for the Mexicans to understand and I submit that it must be difficult for anyone to understand. In fact it outrages the sense of justice and fair play.

Mr. Chairman and members of the committee, Mexico has never before come to the United States for an increase in its sugar quota. This is the case even though as our good friend and next door neighbor and our only foreign supplier in a position to ship sugar overland, the United States is her natural and logical market. Mexico comes now, reluctantly, because there is no alternative.

Mexico has restricted its production. It has greatly increased its domestic consumption of sugar. Over the last 14 years sugar consumption in Mexico has doubled. Today Mexico consumes domestically 80 percent of its annual production. Mexico does not appear here seeking to become a great export country. It seeks only that small measure of relief to which it is equitably entitled, which is vitally necessary to sustain its domestic sugar industry.

As you know, Mexico has been substantially shut out of the United States sugar market. In 1953, as a result of the International Sugar Agreement, Mexico's ability to sell on the world market was drastically curtailed. The United States exercised a dominant influence on this agreement. Meanwhile, the United States has been subsidizing Mexico's competitors who have huge export surpluses and who use this subsidy to depress the world market price for sugar. All of this adds up to ruin for the Mexican sugar industry if no relief is available at the hands of the United States. That is why Mexico now comes to the United States as the only available source of relief. Having come here it fully expects just and fair treatment in comparison with all other foreign countries.

Mexico asked in its petition and in its representations to the State Department for a sugar quota equivalent to 2 percent of United States consumption. This is fair and reasonable in the light of Mexico's stature as a sugar producer second only to Cuba among Latin American suppliers and in the light of her trade relations with the United States.

Even if, in the interests of preserving to other foreign countries their present shipments, this should not be granted, at the very least Mexico would expect that it would be given a participation in the growth of the market bearing some reasonable relationship to the merits of its case. At the very least it would be expected that the 45 percent of increments in the United States sugar market which is allotted to foreign countries would be distributed among those countries on the basis of such considerations as (1) purchases from the United States, (2) trade balance with the United States, and (3) trade ties with the United States as compared with the rest of the world.

Mr. Chairman, I have prepared no suggested amendment showing what this distribution of the increase in the foreign portion of the United States sugar market would amount to according to such standards as I have suggested. Until these hearings opened the Mexican sugar producers had no idea that the executive departments would ignore their representations and would suggest a formula relying solely on history and denying any consideration of the merits of the individual cases presented. With the permission of the committee I should like to supply a suggested allocation of the annual increment in sugar consumption among the foreign suppliers.

The bill proposed by the executive establishments is bad legislation. It is bad because it makes no attempt to deal with the problem of foreign sugar quotas on its merits. In fact, it represents an attempt to side-step the problem and avoid having to deal with it on its merits. Such legislation can usually be counted on to create more problems than it avoids.

Mr. Chairman and members of the committee, Mexico has always been a good friend and good neighbor of the United States. The Mexican people are following these hearings with keen interest because of the vital importance of the outcome to the economy of Mexico. Mexico seeks no special favors here. It seeks only that its case be considered on its merits by any and all reasonable standards in comparison with the case of each and every claimant and that an enlightened and fair determination be made on that basis.

The Mexican sugar producers and the Mexican people are confident that they will receive full and fair consideration from this committee and I want to thank you again for your patience and courtesy in hearing me.

Those Swiss Dolls and Southern Maryland Tobacco

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks, I should like to include in the RECORD an editorial from the Baltimore Morning Sun of July 28, 1955.

The editorial follows:

THOSE SWISS DOLLS AND SOUTHERN MARYLAND TOBACCO

Mr. David Rosenstein, president of the National Association of Doll Manufacturers, has protested to President Eisenhower because of those Swiss dolls he bought in Geneva last week. As a publicity stunt, Mr. Rosenstein's protest has some merit. It enabled him to get some free space about domestic dolls.

But if the dollmakers of the United States cheer him, there is one group of patriotic Americans who won't. The tobacco growers of southern Maryland are mighty glad the President spent the equivalent of $21 in Switzerland. To that extent he undoes the harm he perpetrated when he raised the tariff on Swiss watches.

Watches are a major source of United States dollars for the Swiss. They use them to buy the things we grow and make over here. Maryland tobacco is one of their largest purchases. Last year they bought nearly 6,000,000 pounds of it for about $3,000,000, most of which went into the pockets of southern Marylanders.

If the higher tariff keeps the Swiss from getting dollars through the sale of watches, they can hope to improve the situation a little by the sale of dolls. President Eisenhower's chance purchase means just that to the Swiss. Maryland tobacco growers will get the point, no matter what Mr. Rosenstein's association may think.

A Vote Based on Misgivings

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. JOHANSEN. Mr. Speaker, the legislator's task is always easier and pleasanter when he can cast his vote on the basis of strong, affirmative convictions.

Sometimes, unfortunately, it is necessary for him to base a vote on his misgivings, and even worse, to be forced to choose between opposing misgivings.

Yesterday I voted, along with 66 other Republicans, against the Harris natural gas bill. This bill—which passed the House 209 to 203—would exempt producers of natural gas from Federal rate regulation. In doing so I was compelled to choose between opposing and serious misgivings.

On the one hand were the basic misgivings which I have with respect to Federal controls, particularly price or rate controls—including my fundamental distrust of bureaucratic control of the free-enterprise system, opposition to the malicious anti-business bias so often exhibited in Washington since 1933, and a fundamental belief that competition rather than government is the best economic policeman.

On the other hand, on this particular issue, I have serious misgivings as to whether, in the case of production of natural gas, competition can be an adequate policeman of rates and an effective guardian of the interests of the consumer—both the home user and the industrial user of natural gas.

State control of rates charged for natural gas sold by producers and gatherers in the field to pipeline companies for interstate distribution is barred by court decisions. Moreover in this case the competition is between buyers—the pipeline companies—and not between the sellers—the producers. Competition between buyers tends to increase the price to the buyer, and therefore to increase the price to the ultimate consumer, and so is not an effective policeman, as is the case when the competition is between sellers.

Federal rate control is generally accepted by all parties to this dispute as necessary and unavoidable so far as the pipeline companies are concerned. Even the Harris bill, which seeks to remove the producers from rate control by the Federal Power Commission, contains a provision designed to limit the amount which the pipeline companies could pay the producers. But there was deep divergence of opinion as to whether the provisions in the bill provide an adequate restraint on prices which can be paid to producers and passed on to the consumer. And there were serious doubts as to whether these provisions offered safeguards against a markup in the price of the accumulated natural-gas reserves of the pipeline companies—a markup which could yield a rich bonanza to these companies.

The closeness of the vote in the House indicated the grave uncertainties, pro and con, in this highly controversial issue. It is worth noting that the bill was reported out by the House Committee on Interstate and Foreign Commerce by a margin of only one vote. Moreover the Rules Committee voted to send the bill to the floor of the House by only one vote. In every instance, there was a sharp cleavage of sentiment among both Republicans and Democrats.

Since the basic principle of Federal rate control of the cost of natural gas to the ultimate consumer is generally accepted as necessary and sound, and since there was serious doubt in my mind as to whether adequate control and protection of the consumer against price gouging is provided in the Harris bill, I resolved my conflicting misgivings in favor of what I believe to be the legitimate interests of the consumer.

During the campaign last year I repeatedly said that I was deeply concerned about two kinds of human greed—the greed for unconscionable financial gain and the greed for political and governmental power. The issues posed by the Harris bill controversy touched on the human possibilities of both kinds of greed. Striking a balance of proper controls on each of these kinds of greed is a difficult, trial-and-error process.

The So-Called Refugee Act

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. WALTER. Mr. Speaker, the agitation in behalf of the so-called Refugee Act, precipitated by President Eisenhower's requests for still greater leniencies, unmasks the act for what it is: a fraudulent gesture of political hypocrisy.

For all its purported humanitarian aims, the act is a crudely concocted piece of old-fashioned pork-barreling on an international level. By itself and in combination with the proposals for revision it represents a clear and dangerous attempt to circumvent the carefully constructed legislation which now stands as this Nation's basic policy on immigration.

The people of the United States were duped when they were told of its need. The fact is that during the past 3 years, immigration pressures from the outside

have continuously diminished, and the conditions upon which the displaced-persons laws of 1948 and 1950 were predicated have all but disappeared.

A recently released State Department report states bluntly that despite the broadest interpretations as to qualifications, there are not enough applicants to us up even the visas provided for originally in the Refugee Act—a total of 209,000. There is no mass of starving, tortured humanity pounding at our doors.

DEMAND FOR VISAS REDUCED

Let me cite a few excerpts from the State Department report issued by the Administrator of the refugee program, Scott McLeod:

In Germany, he reports:

East German escapees, constituting the largest single bloc of potentially qualified aliens in West Germany, have the same working rights as West Germans. Greatly improved economic conditions in Germany will reduce the demand for visas under the act as many refugees are being integrated into the local economy.

Not only the regular immigration quota for people born in Germany—which is 25,000 a year—is open and visas are currently available, but preference portions of every immigration quota for Eastern European countries are open just as well.

Of the 2,000 visas allocated for Polish refugees residing in England, only 250 have been applied for.

In the Netherlands "the initiative shown by the Dutch Government in repairing the flood damage and in caring for the inhabitants of the flood areas, plus full employment, make it difficult for applicants to qualify as refugees."

The improved conditions that have enabled these peoples to become adjusted and integrated should be a source of tremendous pride to the American people. This has come about almost wholly as a result of the $38 billion which we have provided, in a genuine humanitarian endeavor, to promote recovery abroad.

The Senate and House conferees on the refugee bill, at the time of its enactment, stressed that it was not to be considered a "mandate to issue the full number of visas. These are maximum limitations, not quotas to be filled." But instead of taking satisfaction in the fact that the crisis has ended, the sponsors of the new recommendations are expressing great concern now that the goal of 209,000 additional immigrants may not be met. The refugee act as a consequence is being transformed into a grotesque Cinderella's shoe.

To justify the changes, the President explained that a "number of the provisions of the act require amendment if the act's objectives are to be fully met."

Let us examine some of the proposed changes and see how they would destroy even the limited safeguards of the original law.

The act of 1953 established a genuine hardship test for qualification as a refugee and requires that the prospective immigrant is not firmly resettled and is in urgent need of assistance for the essentials of life. It clearly did not wish to provide a better bet for persons who merely felt they could improve their lot in the Eldorado of America. The amendment proposals would upset this test completely.

Under the act of 1953, provisions for immigrant status, with the subsequent privilege of becoming citizens, were extended to 5,000 alien residents who lawfully entered the United States before July 1, 1953, and who cannot return to their homelands because of the peril of persecution. The demand that they had entered the country legally would seem a small enough one in exchange for the privilege conferred upon them. The amendment bills, however, would eliminate this requirement and bestow this privilege on any alien, including the ship jumpers and those who have simply sneaked across the border.

Closely allied to this is another proposal to eliminate the present requirement for complete information regarding the 2 years immediately preceding the application for entry of each prospective immigrant. Such a change would strike at the heart of our security system. Refugee camps in Germany are permeated with Communist agents ordered by the Soviets to adopt new undercover lives in Europe and America to carry out underground activities. Only the most careful scrutiny of past records can bring about the detection of these agents. Eliminating this provision in the 1953 act would prove of inestimable aid to Communist infiltration tactics which we have now begun to combat with increasing success.

When I was in Berlin recently, the Chief of the United States Counter Intelligence Corps, entrusted with the responsibility for the security investigations under the Refugee Act, was appalled at suggestions that the 2-year requirement be dropped. He recommended instead that it be extended to 5 years.

WOULD BECOME PUBLIC CHARGE

The act of 1953 specified that each prospective immigrant be sponsored by a responsible citizen, or citizens, who would guarantee that the new arrival would not displace someone else from a job or home. The obligation would rest solely upon the sponsors. Interestingly enough, there has been a notable lack of such sponsors. In the new proposals, sponsorship could be undertaken by approved organizations. In the case of public or semipublic agencies, the immigrant would automatically become a public charge, a situation which immigration laws throughout our history have been designed to prevent.

Another measure includes the Presidential recommendation to suspend the health requirements of our immigration laws to permit the entry of persons afflicted by tuberculosis, one of Europe's most rampant diseases. "We in the United States no longer regard tuberculosis with dread," the President declared. The United States Public Health Service lists it as one of the Nation's most fearsome killers, with an annual death toll of around 25,000. We have been battling this scourge with tremendous expenditures of money and medical talent. It has cost us untold wealth in the form of men and women lost to productive labor through its ravages. Are we now to import it deliberately?

The welfare of this Nation, in regard to augmenting our population from outside sources, is, I believe, best served by the diligently constructed immigration law, of which I am proud indeed to have been a coauthor together with the late and beloved Senator McCarran. This law provides the best coordination of our responsibility to ourselves as a nation and of our responsibility to the rest of the world. It permits us to remain of the same fiber that proved over the last stormy half century too tough to be subverted or conquered by any brand of totalitarianism.

The enactment of that law stands as an accomplishment which should not be subjected to partisan and demagogic ventures which can result only in the defeat of our purposes both here and abroad.

Clearing the Record of the Committee on Tax Exempt Foundations

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1955

Mr. REECE of Tennessee. Mr. Speaker, I received a letter from Dr. Robert E. Cushman, professor of government, Cornell University, which I wish to have printed in the RECORD for the purpose of correcting an error which occurred in report of the Committee on Tax Exempt Foundations. I am very glad to present this for Dr. Cushman for the purpose of clearing the record and overcoming the injustice which came about by reason of the error in printing. I express my regrets to Dr. Cushman:

MARCH 28, 1955.

Hon. B. CARROLL REECE,
House Office Building,
Washington, D. C.

DEAR MR. REECE: I am writing you about what I suppose you would call in Congress a point of "personal privilege."

To identify myself, I am Robert E. Cushman, a professor in Cornell University, and I directed the substantial study of certain civil liberty problems for the support of which the Rockefeller Foundation made an initial grant of $110,000 in 1948. This was one of the grants which was scrutinized and commented on by your committee in its study of tax-exempt foundations.

In the printed report of your committee (House Rept. 2681, 83d Cong., 2d sess., December 1954), an obvious mistake has been made with respect to my name, under which a total of six citations appear.

At the bottom of page 263, my name appears, with an initial item relating to a quotation from me made by Judge Edgerton (United States court of appeals, District of Columbia) in his dissent in the Barsky case. This is entirely correct.

Beginning at the top of page 264, however, appear five citations which do not belong under my name. Living as I do in an upstate New York city, it has taken me some little time, and quite a little outside help, to track down what seems to have caused this mistake. It seems probable that you intended these five items to be listed under the name of Mrs. Hallie Flanagan Davis, now professor of drama at Smith College, and that

the name was somehow lost in manuscript or proof. For example, my photograph does not appear in the December 23, 1940, issue of the Daily Worker (as the last citation states), while hers does. The Daily Worker on that date reviewed a book of hers, and printed her picture in connection with the review. The four other items listed on page 264 also appear relevant to Mrs. Davis. In the first two citations in particular, not only does her name appear (while mine does not) but she was Director of the National Theater project under WPA, while I have never in my life had any connection with the theater or any theater group.

To anyone who has ever gotten copy ready for the printer, or dealt with printer's proofs, it is clear what must have happened here. At some stage in the process the name Davis must have been dropped out, leaving these five citations under the immediately preceding name, Cushman. It will probably take someone in your office only a very short time to check back and verify all this. This is an understandable mistake, and I am entirely sure that it was through either error or accident that these items are attributed to me, when they clearly relate to another person.

I am sure you will agree that I am entitled to have this error in the committee report corrected, and I am also sure that you will wish to make the correction.

I have no desire for any publicity or fanfare about this matter. If you were to read into the CONGRESSIONAL RECORD a statement roughly to the effect that an error in the committee report had been brought to your attention, and that the items beginning on the top of page 264 of the report do not belong under the name of Robert E. Cushman, but under another name, I should feel satisfied. I feel, however, that fairness demands that such a correction should appear in an official Government document, so that I can refer to that correction if criticism arising out of the original erroneous citations are directed against me.

I have given this matter no publicity. It seemed to me only courteous and fair to bring it first to your attention. I do so in the belief that you will wish to make the correction, in some appropriate form, to which I am clearly entitled.

Very sincerely yours,

ROBERT E. CUSHMAN.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 2, 1955.

Mr. ROBERT E. CUSHMAN,
Department of Government,
Cornell University, Ithaca, N. Y.

DEAR PROFESSOR CUSHMAN: I have your letter of March 28 and I shall be glad to request permission to insert the correction in the CONGRESSIONAL RECORD when the House convenes after the recess.

Of course I regret any typographical error in the citation in the report that attended to put you in a bad light.

With kind regards,

Sincerely,

CARROLL REECE.

Greetings to Pakistan

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. POWELL. Mr. Speaker, I rise today to send greetings to the country of Pakistan and to their Prime Minister, the Honorable Quaid-e-Azam Mohammed Ali Jinnah on the occasion of the anniversary of independence of that nation, August 14, 1947. I wish to extend my salutations to the people of Pakistan today because the Congress will have adjourned before the date of the event.

Pakistan has demonstrated its dedication to the ideals of democracy and from its birth as a new nation has drawn inspiration from the United States in its efforts to resolve its problems. Through a positive policy designed to promote better understanding and closer cooperation between other nations and themselves, Pakistan has received substantial aid from the United States and has drawn closer to the American people.

Under the inspired leadership of Quaid-e-Azam Mohammed Ali Jinnah the Pakistan nation achieved its goal of independence. I wish to applaud the success of Pakistan's efforts in the attainment of the high ideals which they have set for themselves and wish for them continued progress in the future.

I could not conclude without noting the great role Mohammed Ali played in Bandung in setting the record straight as regards Chou En Lai and Red China. I also would like to point out that Mohammed Ali is one of the principal exponents along with the Prime Minister of India, Mr. Nehru, in presenting a plan for relaxing tensions between Red China and the United States. Finally, my greetings to the Ambassador from Pakistan, His Excellency Syed Amjad Ali.

Freight Rate Controversies Involving North Atlantic Ports

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. FALLON. Mr. Speaker, there have recently come to my attention remarks made on the floor of this House by my colleague from Clinton, Mass., dealing with the port of Boston and its freight rate relationships to other ports on the eastern seaboard, including my constituent port of Baltimore.

I am greatly disturbed by my colleague's statement that he intends to make his views known to the Interstate Commerce Commission and urge the elimination of alleged discriminatory rate by putting the port of Boston on a parity with every other port on the northeastern seaboard and that he proposes to render every assistance in his power to that end.

I have always considered the Interstate Commerce Commission to be an independent quasi-judicial body, reaching its decisions in rate controversies only on the record made before it in formal proceedings, without regard to sectional or political considerations. To my mind, Congress in establishing the Commission, appointed it to act as steward of the transportation policy of the Nation as a whole as we have expressed it. Our constitutional powers in that respect have been delegated since 1887 to the Commission and since its establishment we have always considered it to be the body best qualified by training and experience to determine such matters.

My constituent port of Baltimore has an equal stake with the port of Boston or any other port of the United States in the foreign commerce of our great Nation. For myself and for my colleagues in Maryland, I desire to express our confidence and that of our constituents in the ability of the Commission to decide the freight rate controversies now before it involving the North Atlantic ports in an unbiased manner in the national interest. Rather than acquaint the Commission with our personal views as to the merits of these controversies we shall observe the normal channels of presentation of Baltimore's case through testimony, briefs, and oral arguments on a formal record.

The Valley's Program

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by William G. Zetzmann, New Orleans, La., member of executive committee, Mississippi Valley Association, before the annual convention, National Rivers and Harbors Congress, Washington, D. C., June 1, 1955:

THE VALLEY'S PROGRAM

There is a truism that coming events cast their shadows before.

Today, I am going to try to point out a few shadows which are forecasting the greatest era in inland waterway transportation not only in this country but anywhere in the world.

One of those shadows was seen a few weeks ago when a new type of barge came up the Mississippi River to St. Louis. It was loaded with liquid sulfur just as it came from the ground pumped into the barge. This was not just an ordinary barge, but one built on the same principle as a thermos bottle, and it held the temperature of this liquid molten sulfur at 260 degrees Fahrenheit.

Several of these barges are being put into service to move this sulfur from its source to the place where it will be used by industry. Heretofore, liquid sulfur had to be converted to its powdered form, then loaded into barges and gondola cars and transferred to the place where it was to be used. It then had to be reconverted to its liquid form to be used by industry. The economic advantage of this type of transportation is so obvious that I'll not go into that further.

A few weeks ago, a small shipyard at Blair, Nebr., up the Missouri River some 1,500 miles from tidewater, launched two refrigerated barges for the armed services.

Recently in St. Louis, a new type of towboat with four screws and shallow draft—the most powerful vessel of its type in the world—was launched for service on the Missouri River. In spite of its very shallow draft, this boat has 3,600 horsepower and

on its maiden voyage up the Missouri River, it moved some 11,000 tons of steel against a current that for many years defied practical navigation.

The postwar years have seen the development of vessels capable of transporting cargo without reloading from Cuba, Puerto Rico, and other West Indies ports, even from Alaska, direct to the inland river ports in the Mississippi Valley.

Each year since the end of World War II has seen the volume of traffic on the inland waterways climb spectacularly. The Mississippi River carried 37 million tons of freight in 1943, 57 millions tons in 1948, and 80 million tons in 1953. Undoubtedly, this record will be broken by both 1954 and 1955.

The Gulf Intracoastal Canal handled 25 million tons in 1943, 30 million tons in 1948, and 43 million tons in 1953.

The tonnage on the Warrior-Tombigbee practically doubled in 10 years.

The tonnage on the Tennessee jumped from 2,800,000 in 1943 to 7,119,000 in 1953.

The Ohio River records 36 million tons in 1943, 42 million tons in 1948, and 62 million tons in 1953.

The Illinois records 6 million tons in 1943, 12 million tons in 1948 and 20 million tons in 1953.

Thus goes the story on all the navigable rivers of the United States.

In my hometown of New Orleans, the barges last year brought in a recordbreaking 42,185,000 bushels of grain as compared to the previous record of 36,747,000 bushels set in 1953. These receipts included 17 million bushels of corn from the Corn Belt, 12 million bushels of soy beans and almost 11 million bushels of wheat. All of the grain producing States have a very direct interest in what happens to us in New Orleans.

These are but a few of the portents which promise that the next half century belongs to the inland empire.

It is in this inland empire that industry is now locating in ever increasing numbers. The South and the midcontinent area of the United States are building the future security and economic stability of our Nation.

I sincerely believe that the last half of the 20th century belongs to the midcontinent and the southern area of the United States. What we do with it, or what we fail to do with it is our responsibility.

What has been accomplished and what the future holds can be traced directly to the fine teamwork which has been developed out there. It is organizations such as the Mississippi Valley Association, working with the National Rivers and Harbors Congress and other groups, that has brought about the tremendous development of both natural resources and industry. Evidence of this cooperation is the fact that I am a member of the executive committee of the Valley Association and treasurer of the National Rivers and Harbors Congress—contemporary but cooperating organizations.

This fine teamwork is predicated on the realization, to paraphrase Mr. Donne, that "no section of the valley is an entity unto itself alone, but that the success of all depends upon the cooperation of all."

We, of the Mississippi Valley Association, are well aware that the interests of every community we serve are interdependent with those of every other community in our area, and that each water development project is an integral link in the mighty chain that builds this area. We are dependent, gentlemen, one upon the other.

We have been unable in the years gone by to draw a fine line between a flood control and a navigation project. We made no progress whatsoever in the 17 reclamation States until we, who were primarily interested in navigation and flood control, recognized the rights of the irrigation interests west of the 97th principal meridian. Now 55 percent of the great Missouri Basin project is complete.

One of the responsibilities which we, in the Valley Association, accept is the task of bringing home to our people everywhere this interdependence one upon the other. We recognize that the New Orleans Tidewater Channel is of the greatest importance to the port of Chicago, for example, as is the improvement of the Cal-Sag Channel to the port of New Orleans. We know, as a matter of practical politics, that we who live in New Orleans cannot obtain the New Orleans Tidewater Channel without the help of such communities as Chicago. We have tried very hard, and we think successfully, in giving to the city of Chicago our support for the Cal-Sag Channel.

Through this program we have impressed upon the people of the Missouri Valley that they have a stake in the locks on the Ohio River and the improvement of the Warrior-Tombigbee Waterway just as the people of the South will benefit from the multiple-purpose program in the Missouri Basin.

We in Louisiana are using water today that was stored in the Missouri Basin. Our water level at New Orleans was raised considerably during the drouth of last summer, because of water released as far up as Montana on the Missouri River was made available. The use of these surplus waters benefited not only navigation, but they were vital to the municipal water supplies and for pollution abatement and water for industry all along the Missouri and the Mississippi Rivers from Fort Peck in Montana to New Orleans in Louisiana.

There is a direct corollary to this program of ours. You in the National Rivers and Harbors Congress can tell the valley story to the people who are interested primarily in the ports of New York, Boston, Baltimore, and other ports on the Atlantic coast; San Francisco, Los Angeles and other ports on the Pacific coast. We think you would be doing a great service to those ports by impressing upon them that they have a stake in the Mississippi Valley, as well as our concern with all tidewater ports.

The Mississippi Valley Association endored 53 water resource projects in the present session of Congres. Certainly, I do not have the time to go over each of these with you. May I briefly call your attention to 3 of them?

The Cal-Sag project is a navigation project authorized by Congress in 1946. It connects Lake Michigan with the Inland Waterways System of the United States. The present channel is obsolete and inadequate. It is crossed some 28 times by low bridges. When it is improved, we will have a proper and adequate water outlet in the great industrial areas around the Great Lakes down through the heart of America and this, of course, is of interest to all of us.

The second project that I would like to mention is the Old River project. If any project can be called a No. 1 project for the Mississippi Valley Association, this is it. We have taken an active part in the authorization and initial appropriations for Old River. Had nothing been done, we believe that the Atchafalaya River, with the help of the Old River, would have completely stolen the Mississippi River by not later than 1965. This would have been a disaster not only to New Orleans and the cities between New Orleans and Old River, but it would have been a disaster to all of America. Congressmen and Senators from all over the United States came to the rescue and helped pass legislation to prevent this disaster.

The third and last project that I want to mention to you today is the Mississippi River Gulf Outlet Channel. New Orleans is the second largest seaport in the United States based upon dollar volume. The proposed New Orleans Tidewater Channel will cut some 40 miles off of the route from our city to deep salt water. It will bypass some 110 miles of dangerous fog-bound river water, and will make a saving of approximately $1,500 per trip for oceangoing vessels coming into our ports. I wish I had time to discuss with you the tremendous job we have before us in rebuilding the obsolete, inadequate locks on the Ohio River. We have more than enough work to be done to keep all of the water-resource organizations in America very busy.

Last year, the President of the United States addressed the National Rivers and Harbors Congress. It was at this meeting that he made what I believe to be his first official statement to the effect that sound water-resource projects should be considered as capital investments rather than current expenditures by the Federal Government.

We, in the Mississippi Valley Association, have urged this philosophy for many years, and out of its recognition in Washington will, I am confident, come a policy which will expedite the orderly and economical completion of the water-resources program in which we all have a common stake.

When this program is complete, the shadows that I have mentioned earlier will have fulfilled my prophesy that the last half of the 20th century belongs to the midcontinent area. Undoubtedly that program that I prophesied will bring to us problems about which we have not as yet even dreamed. It is going to be a lot of fun to be alive and take a part in the development of America in the years immediately ahead of us.

Good Roads Lobbied Away

EXTENSION OF REMARKS

OF

HON. STUYVESANT WAINWRIGHT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1955

Mr. WAINWRIGHT. Mr. Speaker, being 1 of 29 Republicans to have voted for the so-called Democratic highway bill, I felt left out in right field. However, the philosophy that motivated my vote for both the Republican and Democratic highway program is ably set forth in today's lead editorial from the New York Times. The editorial follows:

[From the New York Times of July 29, 1955]

GOOD ROADS LOBBIED AWAY

The House, in a depressingly irresponsible action, has defeated all legislation to accelerate highway construction. It repudiated the good sense and sound financing of its Public Works Committee by rejecting the Democratic highway bill by a vote of 292 to 123. The committee, with great political courage, had agreed by an impressive majority to match spending with taxation in a single package. The House spurned such fiscal responsibility. It also defeated the Republican bill for long-term bond issues for roadbuilding by 221 to 193. So the public gets nothing except a stunning disappointment.

How did this come about? Speaker RAYBURN said: "The people who were going to have to pay for these roads put on a propaganda campaign that killed the bill." The Democratic floor leader, Representative MCCORMACK, of Massachusetts, said: "Everybody wants a road bill but nobody wants to pay for it." He had a "sneaky idea that the truckers of the country played an important part" in defeating the bill. Yet only the other day American Trucking Association denied that it was trying to kill the pay-as-you-build program, its president

saying that truckers had been the first to state their "willingness to pay tax increases to support the program."

Nevertheless, from the time House Members began to talk about specific user-taxes, such as on gasoline, diesel fuel, and tires, instead of just the abstract virtue of spending $50 billion of Federal and State money in about a decade to build and improve highways, it has been obvious that the lobbyists were hard at work.

The recognition of need for greatly increased Federal investment in highways has been general and bipartisan. The Presidential Clay Committee charted a $101 billion Federal-State program for the decade ahead, on which Mr. Eisenhower relied in urging congressional action. The Senate, while rejecting the President's financial plan on May 24 by 60 to 31, was insistent on some highway action at once and of substantial outlay. It rejected recommittal of the Eisenhower bill, and passed the Gore bill by a voice vote.

The House Public Works Committee, with several Ways and Means members sitting in, spent many weeks developing a revenue base that would avoid adding to the public debt, or the evasion of this by setting up an independent highway corporation to issue bonds, and also escape the costliness of high interest charges.

It is interesting to note that this committee, which spent so much time on the problem, stood 22 to 6 for imposing taxes to pay the bill. But when the House showdown came, 128 Democrats opposed the Democratic bill and only 94 Democrats supported it. The Democrats were overwhelmingly against what they viewed as fiscal unsoundness in the Republican bill; only 7 voted for it, while 214 of them voted against it, in a fine show of righteous indignation against heavy borrowing. But when it came to the final test of responsibility—the voting of taxes to accompany spending—128 Democrats couldn't rise to the occasion, and neither could 164 Republicans.

President Eisenhower, expressing his deep disappointment, and rightly arguing that "contention" over methods of financing should not be permitted to deny our people "these critically needed roads," has called for reconsideration before Congress adjourns. The House Republican leader, Representative MARTIN, believes a compromise could be worked out at this session "if we really want to do it." But the Democratic leader, Mr. MCCORMACK, says the House Members are anxious to adjourn, and in his opinion "there's no chance of getting the bill up again." We wouldn't want to interfere with an early homecoming for these House Members, but they shouldn't count on too cordial a welcome if they give up this easily on a highway bill. There are a great many people, including voters, who are willing to pay for good highways—even if the lobbyists aren't.

Greetings to Indonesia

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 29, 1955

Mr. POWELL. Mr. Speaker, I rise today to send greetings to the country of Indonesia and to especially extend my best wishes to President Sukarno on the occasion of the celebration of their anniversary of independence, August 17, 1955. I salute Indonesia today because the Congress will not be in session on the date of the event.

Ten years ago, on August 17, 1945, the Indonesians proclaimed their independence from the Dutch, and only after several years of hard and bitter struggling they received international recognition which they so richly deserve.

Under the colonial regime, Indonesian economy was characterized by production of raw materials for the benefit of their colonial exploiters. Under Dutch rule the average Indonesian laborer earned less than 3 cents a day; the country's death rate was one of the highest in the world, with the same situation prevailing in reference to infant and child mortality. Out of every 3 children born, only 1 on the average had hope of surviving beyond the age of 18. In addition to these deplorable facts, the health, sanitation, and educational conditions left much to be desired. Indonesia suffered from high incidences of diseases and over 93 percent of the population was illiterate.

What is the record since Indonesia gained its independence? The Indonesians have taken significant steps forward in the economic development of their country. Because of better maternal and child care, disease preventive and curative measures, the death rate has declined considerably. In respect to education and literacy noteworthy progress has been made. The Indonesian Government can point with pride to the fact that after a few years of independence half of the people can now read and write, whereas formerly this group constituted less than 8 percent of the population. The Indonesians are aware of the importance of educational development to the whole problem of economic development and to the attainment of the ideals of democracy.

To promote the development of the country the Indonesian Government has undertaken a program of gradual industrialization of the island and in keeping with this project many new factories have been established. The purpose of this program is to balance the economy by decreasing the country's dependence upon the export of raw materials. It is well known that underdeveloped countries which rely upon the export trade for the great portion of their income prosper or suffer according to the fluctuation of prices of raw materials on the world market.

The Indonesian Government reports that production is increasing in all areas and substantial gains have been made in agricultural production. Comparison of production statistics for tin, petroleum, bauxite, rubber, fish, and other food crops for the past decade with the figures for the colonial era reflects notable increases.

Mr. Ganis Harsono, press attaché of the Embassy of Indonesia, briefly delineated the more pressing problems facing the new state on the morrow of independence:

Right after the independence we had to start everything from scratch. The army, the navy, the air force had to be established. Diplomatic relations with the outside world had to be made overnight. The budget was almost nonexistent, and the new state was heavily burdened by a $1 billion debt to the Netherlands, made by the previous colonial government. Cities damaged by the war had to be reconstructed. With being complacent, the result of 5 years' hard work was not bad indeed. At this point, we still have not overcome our growing pains. Difficulties are there, but we are sure we can cope with them.

Through hard work and sacrifice the Indonesian people are forging ahead, overcoming gradually almost insurmountable barriers. To date they have made small, but insignificant achievements. Such gains along the road to economic development are indicative of the thinking of the Indonesian Government and the people, and while they are small, they can go a long way to raise the standard of living of the Indonesians.

I wish to applaud the efforts which the Indonesian people are putting forth in the achievement of their goals of economic development and wish for them continued progress and success in their endeavors. Finally, I wish to extend my greetings to his Excellency, the Ambassador from Indonesia, Mokearto Notowidigdo.

Amending Natural Gas Act

SPEECH

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1955

The House in Committee of the Whole House on the State of the Union had under consideraiton the bill (H. R. 6645) to amend the Natural Gas Act, as amended.

Mr. MACK of Illinois. Mr. Chairman, this pending amendment is the important amendment of the day. It is in the public interest and would provide a degree of protection for the consumers who have invested billions of dollars in gas-household appliances and equipment. I come from an oil-producing area and am, therefore, interested in the gas producers, as well as, in the gas consumers. I represent the second largest oil-producing district in the Illinois oil fields. I am sincerely interested in the welfare of the producers, but I am also interested in the welfare of the consuming public.

The phrase "reasonable market price" is ambiguous and the meaning definitely uncertain, which would make it ineffective from the standpoint of practical application. In my opinion and, I believe, in the opinion of the majority of the committee, "reasonable market price" has no meaning and would merely serve as a favored-nation clause for the payment of the highest price in any gas-producing field.

Most of us have tried to determine what a reasonable market price is. We have done considerable research on it. We have looked in dictionaries. We have inquired of the Chairman of the Federal Power Commission and we have asked all of the oil authorities what "reasonable market price" means. We have been unable to find a clear defini-

tion. We have found many interpretations as to what "reasonable market price" does not mean, but we have been unable to find what "reasonable market price" really means. And there is no interpretation in the section on definitions in this bill to clearly define the phrase "reasonable market price."

Mr. Chairman, I favor the amendment offered by our colleague the gentleman from Michigan [Mr. BENNETT]; and if his amendment is adopted on the floor, I will support this legislation, because I believe that we can accomplish considerable in eliminating the administrative difficulty by removing the producers from direct control of the Federal Power Commission. As I understand the amendment offered by the gentleman from Michigan, it merely substitutes "just and reasonable price" for "reasonable market price." Surely no one who is remotely interested in the welfare of our consumers could object to this amendment.

If I have time, Mr. Chairman, I want to read you what Chairman Kuykendall, of the Federal Power Commission, had to say about the term "reasonable market price." He says it is important for the Commission to know the interpretation of this wordage. He said:

I would suggest that the term "market value" is a new phrase which does not have any particular usage in the utility regulatory field that I know of. I would suggest either the use of "just and reasonable price" or "fair and reasonable price," as Mr. O'HARA has suggested.

I appeal to you to adopt this amendment.

What America Means to Me

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. RIEHLMAN. Mr. Speaker, recently the Crouse-Hinds Co., of Syracuse, N. Y., one of the foremost manufacturing concerns in this country and whose labor-management relations have been outstanding throughout the years, conducted an essay contest among its employees on What America Means to Me. Much interest was manifested and 100 excellent essays were submitted, out of which 13 winners were chosen. I commend to the attention of my colleagues the essay selected for first prize, written by Virginia Keonjian, a native of Russia who has lived in this country about 9 years:

I was not born in America but I've been in this country about 9 years. Yet from the very first day of my arrival, and particularly from the day I received my American citizenship, this country symbolized to me various things, all equally important and dear to my heart.

Upon looking back to my life in Communist Russia, I ask myself "What was I?" A government-owned slave who could be put in jail for a day's absence from work. It was in America that for the first time in my life I felt like an individual, a person, a human being, not just a number.

Here I am not isolated from the rest of the world as I was in Soviet Russia, because now I can follow events through the press and radio free of Government censorship.

My mind is not controlled by anybody. I can read and study whatever I wish according to my personal inclination.

In America I can attend the church of my choice and not be frowned upon by the Government for worshipping God.

My son can attend school where he is taught truth, not propaganda. As an honor student he has the opportunity to receive one of the most outstanding scholarships in this country to pursue his education in a college of his choice.

Only here in this country can I sleep without fear of being awakened at night and arrested without charge. My rights are protected by laws equal for all.

America gives me the right to have my own home, car, and personal property which cannot be taken away, because I elect my Government and it protects my interests as an individual.

Many other things which some people born here take for granted are of greatest value to me. They are best summed up by the wonderful word freedom—the most precious of all my possessions today.

Sermon by Rev. John F. Streng, in Commemoration of the Centennial of Nemaha County, Nebr.

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Friday, July 29, 1955

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a sermon which will be delivered by the Reverend John F. Streng, D. D., pastor of St. John Lutheran Church, in Beatrice, Nebr., in commemoration of the centennial of Nemaha County, Nebr.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

My friends, it is with the humblest feeling of appreciation and gratitude that I am permitted to return to my native soil for this sacred hour. It is a holy moment, replete with overwhelming memories. How dear to my heart are the scenes of my childhood when fond recollections present them to view. Here in Nemaha County, Nebr., near the county seat of Auburn, by the grace of God and the kind foresight of providence, I was born and reared. This evening, let me pay humble tribute to the God of our fathers, whose almighty hand destined my birthplace to be among the loveliest people of this Nation. Nestled a few miles west of this city, on the fringe of the hickory grove, still stands the white church with the tall spire. And beneath its sheltering dome sleep, among others, my sainted parents. God bless them, who above all indelibly implanted in my mind respect for God and country. Sincere thanks also to the patient public-school teachers and other public leaders who made it possible for us youngsters in the early decades of this century to dedicate ourselves so freely to a good life, liberty, and the pursuit of happiness. And thirdly, my grateful appreciation to the members of the centennial committee under whose careful supervision this service and ceremony was conceived and arranged.

We are come into this happy and holy hour to give thanks to Almighty God for the religious freedom He has given and still preserves to us. We are yet too close to pioneering days to regard ourselves so cultured that the faith of our fathers should have become outmoded by modern methods. Please believe me, that I shall not dare to affront God's rich blessings or the everlasting glory of pioneer parishes, by being so presumptuous as to think that we could do justice to their labors over the century in a fleeting 20 minutes. Religious freedom is the backbone of all our agricultural, industrial, moral, commercial, and spiritual progress. Religion is the foundation stone for which our fathers fled European straitjackets to seek the Promised Land, where they might worship God according to the dictates of their conscience.

Here in Nemaha County the settlers found open prairie and lush land and clear river water to build an empire second to none. Here they used the God-given forest and forage to hew logs for homesteads and houses of God. Here they tilled soil so rich in mineral deposits that in the early days Nemaha County crops were the talk of immigrant, industrialist, and implement dealer. The green carpet of this lovely spot attracted poet and peasant, farmer and factory worker, commercial and church leaders. Lest we forget, religious convictions and ideals were fundamental to the growth and expansion of the great Middle West. The first 100 years of progress are now commemorated by a grateful population looking both backward and forward. A long list and line of contributions to scientific, artistic, civic, humanitarian, intellectual, musical, historical, and spiritual progress bear glorious evidence of a marvelous heritage whose possibilities and promises are still unfathomable and unlimited.

The appreciation of every man's religion, race, and private opinion are memorialized in the many different monuments, one of which are the various churches that have thrived here. Those interests in the early religious history of this county must begin at Brownville, the metropolis of pioneer days. In January 1854, Rev. Joel Woods, one of the original proprietors of Brownville, organized the first Christian church in Nebraska Territory. The Methodist Episcopal Church was organized in June 1858, as was also the Congregational Church. In October of the same year the Presbyterian Church was organized. In this same year the Baptist Church came to Nebraska. Also the beginnings of the Lutheran Church were made in the same year at what was then known as Feming, Nebr., long since disappeared and now known as the Old Stone Church, near the Timber Creek Lutheran Church, southwest of Auburn. The Episcopal Church held its first services in the fall of 1863, and the Roman Catholic Church was established in 1870, when the cornerstone was laid by Father Curtis of Omaha. This is a totally incomplete sketch of the beginning and forerunners of the strong churches of various denominations in the county today. Some consecrated layman or laywoman of this county would reap the rich reward of a God-pleasing monument to the future by writing an authentic history of the march of the Christian religion in Nemaha County. It would be a source of never-ending inspiration to many to see these banners go. Today every city and hamlet and countryside has its church. Nationalties are blended to enrich and fertilize the common cultural heritage. Rare indeed is even the country school in which prayer is withheld and religious tenets deemphasized. Today's public-school teachers and private tutors and Sunday-school teachers alike share the God-given responsibility to remind their generation that this is a nation under God—a nation with liberty and justice for all.

It is indeed appropriate to remember this day the journeys of our spiritual fathers and

missionaries as they traversed Nemaha County, preaching, teaching, reaching flocks without a shepherd. Like an ever enlarging city of God, the panorama of religious citadels rising on the fruited plain, evokes awe and inspiration. From township to township the church has ministered to the people in the name of Jesus Christ, Lord of Lord and King of Kings. Like a mighty army moves the church of God, and both carefully kept church records and county court proceedings of incorporations bear witness to its strength in the course of empire. As we retrace God's steps and bind together loose cords we see again what God hath wrought in knitting together a people of many tongues into one strong race.

We gather together to seek the Lord's blessing as we begin to commemorate a century of loyalty and devotion. Your fathers and mine helped each in their way, known or unknown, to contribute to today's enormous spiritual wealth. God-fearing pioneers built a solid series of temples that embrace the loftiest ideals of our American way of life. Through mutual understanding and fellowship, through sheer faith, hard labor, progressive thrift, kindly tolerance, good industry, friendly neighborliness, this county ranks among the foremost among more than 90 others. The strong radiant, vibrant heart of a healthy Christian America beats in the rural communities and the small cities where people still plan and pray together.

This is an hour to voice our gratitude to God for His army of noblemen and women of yesteryear whose struggle and sacrifice makes this week's gatherings possible. The early settlers could not fathom the enormous riches that should come from this black soil, filtered and deposited here from great underground watersheds embedded in the western slops of this commonwealth. But they were courageous sturdy folk who brought with them a unique assortment of skills and crafts, and an undeniable industry for work. Here they establish their homes, schools, and churches. With their own hands they carved out a temple of liberty that stands unmovable today.

Because they had a mind and will to work honestly and for long hours, they made a name for themselves which lives in loving memory. They gave an account of their God-given talents and time by the sweat of their brow and the stint of hard labor. They did not ask that economic security be guaranteed nor did they gather in town hall meetings to agree on the amount of grants, loans, and subsidies they were entitled to. They honored the authority of God and government. They were so grateful to be permitted to worship God in their own way that they freely shared His bounty. They were so happy to become American citizens that they proudly wore a red-white-and-blue ribbon in the coat lapel, and sang the national anthem with heartfelt assurance.

In a hundred years an untamed wilderness has become a paradise. God showered material, cultural, and spiritual attainments upon them lavishly. America possesses more churches, temples, and synagogs dedicated to the service of God than any other nation. One hundred and seventy-eight years ago the American Constitution was adopted proclaiming the inherent rights of man as God-given. No government grants them nor can it withhold them; it can only safeguard them for the people. No one can take away what belongs to God. These fundamental truths must be told to every generation. We must patiently explain the glories of our land to children's children. We must arouse every citizen to a personal responsibility in the community, county, State, and Nation. Our glorious independence has become an interdependence, for all nations have become neighbors through global communication. We must teach American youth to be self-reliant, reliable, conservative, tolerant, unselfish, honest, God-fearing. Let us thank God for the Christian leadership of all public officials from the President of the United States to the local township leader.

Let us develop an ever stronger public spirit of civicmindedness and moral leadership. We are our brother's keeper, regardless of what his religion is, for we are all made in the image of God, and we shall all have to account for our stewardship of life before Him. There can be no future without religious vitality. Armies, navies, and the air force, do not make a nation strong if moral courage is lacking. The freedom of the individual is ordained of God, and therefore the foundation of national strength.

The Holy Bible begins: "In the beginning God created heaven and earth." Let us never forget that this is God's world and all that is therein is His to have and to hold forever. The preamble of our American Constitution begins: "We, the people." Thank God for the wisdom He gave to our forefathers for this priceless introduction. There is not one word about powers and rights of any ruler or President or Congress or lawmaking body.

As we celebrate the centennial prepared by our fathers from the day they set foot on this soil, let us remember that their integrity and industry make this celebration possible under the guiding hand of God. Three fundamental supports have made our Nemaha County great: Faith in God, faith in our Constitution, faith in private enterprise.

So let us begin the second century. Let freedom ring o'er hill and dale. Let the people enjoy the nobility of sons of God and sons of the soil. Let the simple truths instilled into children in the little white country school, the city schools, public and private, and the Sunday church school, be guarded as a sacred trust. Let the law of the land and gospel of the Lord be the two tablets of righteousness that shall serve as the foundation upon which future generations shall build. As we part with the past, we say: "Well done, good and faithful servants. Thanks be to God for all His benefits." As we walk into an unknown future, we proudly hail its dawn saying: "As for me and my house we will serve the Lord. I pledge allegiance to the Flag and to the Republic for which it stands; one nation, under God, indivisible, with liberty and justice for all." May God grant it. Amen.

The North American Case

EXTENSION OF REMARKS
OF

HON. R. WALTER RIEHLMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 29, 1955

Mr. RIEHLMAN. Mr. Speaker, in recent days remarks have been offered in this Chamber about an air carrier combine known as North American, and a recent 4-to-1 decision of the Civil Aeronautics Board revoking its operating authority.

The charges against this carrier are most serious. They all are based on the basic issue of repeated, wilful violation of the laws of the United States. These are not minor violations. They constitute the first and only instance, in the history of civil aviation, of such long continued operation of a full-blown scheduled airline without the award of a certificate of public convenience and necessity by the proper Federal regulatory agency.

Attempts have been made to justify this on the grounds of pioneering of air coach, on the ground that the law should be changed, and apparently through political pressure.

None of these grounds authorizes the flying of a scheduled airline. The law says that authority can come through award by the CAB, and in no other way.

I hope no attempt will be made to pressure the Board, and I trust that it will continue to render its decisions objectively, judicially, with the firmness of its convictions.

I wish to insert in the RECORD an editorial of July 25. It is from a publication which has often shown its sympathy for nonscheduled carriers, and which has, so far as I have been able to determine, never been charged with being dominated or improperly influenced in this matter. I consider the writer's remarks helpful in distinguishing between the claims of the deserving and the undeserving, among nonscheduled air carriers:

[From Aviation Week of July 25, 1955]

THE NORTH AMERICAN CASE: A MOCKERY

The airlines are a federally regulated industry. If the established economic and technical regulations that govern operations of the air-transport industry are not enforced chaos would soon result.

Thus the Civil Aeronautics Board had little choice in reaching its 4 to 1 decision to revoke the operating authority of North American Airlines and order this airline to stop its illegal operations immediately. The Board was in unanimous agreement on the issues that North American Airlines was violating the Civil Aeronautics Act and that it must be punished for these violations. In filing a minority report, Member Joseph Adams took issue with the majority only on whether the punishment proposed for North American was too severe and whether the public would suffer from lack of a competitive fare yardstick.

GUILTY ON FOUR COUNTS

The Board found North American Airlines guilty on four major types of violations that taken together made revocation of operating authority inevitable. The Board also found that the 4 principal individuals involved in the case had illegally acquired control of 4 irregular carriers (Twentieth Century Airlines, Trans National Airlines, Trans American Airways, and Hemisphere Air Transport); merged the properties without Board approval, and operated a single integrated carrier without a certificate of public convenience and necessity as required by law for this type of operation.

It is worth repeating some of the things said by the Board majority on this North American Airlines enforcement case.

"When we cut through the web of intercompany dealings and technical devices employed by the respondents it is perfectly clear that the respondents have attempted to make a mockery of the Board's regulations and to operate without regard for the requirements of the Civil Aeronautics Act.

"No amount of pious protestations by respondents can now obscure the fact that they deliberately embarked upon an involved scheme to operate a regular scheduled transcontinental air-transport business without a certificate of public convenience and necessity or other appropriate operating authority. * * *

"And now with the same degree of legal legerdemain employed in constructing the North American combine, respondents have resorted to a multiplicity of technical legal arguments in an attempt to escape the consequences of their unlawful activities."

North American Airlines has been operating what it candidly admits is a scheduled air coach service on high density traffic runs such as the transcontinental and New York-Miami routes. In 1954 North American flew 329,476,000 passenger-miles with a fleet of 7 DC–6, DC–4, and DC–3 aircraft. This compares with 7,275,000,000 coach passenger-miles flown by United States certified carriers during the same year. North American was interested only in the high density traffic routes where by price cutting it could skim some of the cream from the existing air transport market. It had no responsibility to serve less profitable points that are part of the public convenience responsibility shouldered by certificated airlines. And North American displayed no interest in serving anything but the richest route segments.

North American officials know that their operations violated the law. They blandly contended that the law should be changed and ignored it while pursuing their cream-skimming operations, confident that CAB inertia, legal maneuvering and political pressure would stave off the inevitable day of reckoning until the principal individuals involved had made their fortune.

There are many people and organizations in aviation today, including certificated carriers and airline manufacturers, who do not like the Civil Aeronautics Act and are actively working for its change. The legislation proposed by the late Senator Pat McCarran and now by Senator WARREN MAGNUSON have provided a proper means of affecting changes in this law. However, we know of no other aviation organization except North American Airlines which contends that it should be exempt from existing laws while seeking to have them changed.

FUTURE ISSUES LOOM

By taking firm action against North American Airlines and forcing it to face the consequences of its deliberate flouting of the Civil Aeronautics Act, the Board has cleared the way for consideration of the genuine problems concerned with the future expansion of air transport without blurring this picture by an enforcement problem.

These issues include developing an effective method of entry into the air transport business. No industry as dynamic as air transport can effectively close the door on new ideas or new methods of exploiting its potential services. The role of irregular or nonscheduled carriers in the overall transport picture needs sharper definition that will also provide real economic opportunity. The Board must exhibit more sensitivity to public convenience and the public's future needs and less concern with precedent and tradition in charting new regulatory courses for the continued growth of air transport.

ROBERT HOTZ.

Government Clinics

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. MILLER of Nebraska. Mr. Speaker, every other year during adjournment it has been my custom to hold a government clinic in each of the 38 county-seat towns in my district. These meetings are not political, but merely question-and-answer periods to give folks an opportunity to visit with their Representative, ask questions about government, and to render a report of my stewardship in Congress.

The first hour is devoted to school students, entitled "Youth Wants To Know." The last hour is for adults who may attend. Following is the schedule of clinics for the first 2 weeks:

Monday, September 19: Scottsbluff, 2 to 4 p. m.; Kimball, 7 to 9 p. m.

Tuesday, September 20: Sidney, 2 to 4 p. m.; Bridgeport, 7 to 9 p. m.

Wednesday, September 21: Harrisburg, 2 to 4 p. m.; Alliance, 7 to 9 p. m.

Thursday, September 22: Harrison, 2 to 4 p. m.; Chadron, 7 to 9 p. m.

Friday, September 23: Rushville, 2 to 4 p. m.; Myannis, 7 to 9 p. m.

Monday, September 26: Valentine, 2 to 4 p. m.; Ainsworth, 7 to 9 p. m.

Tuesday, September 27: Springview, 2 to 4 p. m.; Bassett, 7 to 9 p. m.

Wednesday, September 28: Butte, 2 to 4 p. m.; O'Neill, 7 to 9 p. m.

Thursday, September 29: Bartlett, 2 to 4 p. m.; St. Paul, 7 to 9 p. m.

Friday, September 30: Greeley, 10 to 12 a. m.; Taylor 2 to 4 p. m.

The meetings will be held in the county court house unless otherwise indicated. The public is invited.

Defense of the Bern Young Anti-Communists

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. MADDEN. Mr. Speaker, the following is a draft issued by the Committee for Aiding the Defense of the Bern Young Anti-Communists. This group which is now being prosecuted by the Communist conspiracy is making a life sacrifice for curtailing the future spread of Soviet tyranny:

DRAFT OF A STATEMENT ISSUED BY THE COMMITTEE FOR AIDING THE DEFENSE OF THE BERN YOUNG ANTI-COMMUNISTS

The Soviets' barbaric tyranny in Eastern Europe and their ruthless subversive methods in the free world, have not yet been able to crush the spirit of anti-Communist resistance on both sides of the Iron Curtain. The slave labor camps, deportations, mass massacres all over the Red prison of nations, the assassinations in the Katyn forest and all the other crimes against freedom and human dignity, which are going on even today, have not extinguished that burning flame of resistance in Eastern Europe, nor has the new campaign, waged by the Soviets among the exiles, of intimidation through blackmail and murder, shaken the faith and determination of the refugees.

But this overwhelming criminal pressure brought to bear both on the captive peoples themselves and on the escapees, has driven them to the verge of despair. Two years ago the despondent people of East Berlin attacked with their bare hands the oppressor; this year young anti-Communist refugees rising in utter desperation, raided a Communist Legation in Bern, Switzerland, exposing its subversive activities. These explosions of the strangled urge for freedom should be taken into serious consideration as they are warning signals of a general situation and not just isolated cases. In fact incidents such as that of Bern, are the expression of the deep instability, misery and tension created by the Soviet aggressive intrusion in the free countries of the Eastern part of Europe and by the shortsighted indifference shown by the free world. After long years of Soviet despotism and Western abandonment, these people are reaching the end of their tether.

Moscow is at this precise moment waging a powerful propaganda campaign to recruit among the unsettled, bitter and frustrated refugees, those desperate enough to accept repatriation with assurances of forgiveness and good jobs. The real aim of the Soviets in this maneuver is to get a corps of anti-western, especially anti-American propagandists, as being direct witnesses of the failure of the West in dealing effectively with the problem of those who had chosen freedom. There is no doubt that the Soviets badly need new instruments of propaganda to keep down the fermenting discontent behind the Iron Curtain and to kill the ever-renaissant hope in the West. But neither is there much doubt that the program for handling the refugee problem is clearly inadequate.

There is therefore a most urgent need to strengthen the badly strained morale of both the enslaved and the refugees. We are upholding this cause as being of vital importance in the battle for men's minds. We must give comfort and encouragement to those who, fighting for freedom, are serving as well the best interests of the United States. Such are the young patriots in the Bern incident who courageously tore off the mask of Red diplomacy. They are awaiting trial in Switzerland and we are sure that the Swiss courts will grant them a fair trial in accordance with their laws, product of a life of freedom and normalcy. But our purpose is especially to draw the attention of the public to the tragic background of the abnormal existence of terror and enslavement in which lies the motivation of their action.

The Soviet subjugated peoples have no longer the possibility to express their will, as they are the object of the most intolerant totalitarian rule. The technically legal facade, such as constitutions on the Soviet pattern, peace treaties, diplomatic relations, etc., corresponds in no way with the rights and free will of the people. As a matter of fact the people are deprived of all normal legal channels of expressing their feelings or defending their interests. As it has happened in the significant moments of history under such circumstances, the natural inalienable right of man are asserted by the resistance to oppression. The people, seeing that all legitimate juridical ways of defending their liberties have been denied them, are making use of the means forced on them by the very slavery to which they have been reduced, namely, passive resistance, sabotage, and direct action. The incident in Bern is due to this tragic situation in which the victims of tyranny are compelled to make use of their sacred right to resist oppression.

It is tyranny, persecution, and the fake legality of totalitarian conformism, which push people to insurrection, rebellion, and violence. It is, indeed, by now established that the law in the Soviet orbit is the mere instrument of absolute dictatorship. The American people as inheritors of the Declaration of Independence feel deeply that the honor and dignity of the captive peoples are not in their conformity to this fake Communist legality but in their very acts of revolt and violence against the oppressor. This is the real and dramatic background which caused the action of the young exiles in Bern. Aiding in their defense by giving them our moral support, we recognize the spirit of resistance and self-sacrifice which

animates them and all their like behind the Iron Curtain.

We appeal to our public to give its traditional understanding to these brave young men who, in their fight for freedom, lost both home and country, and thus bring a message of encouragement and hope to all our secret allies, the captive peoples.

Questionable Characters in the Government

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1955

Mr. HOFFMAN of Michigan. Mr. Speaker, recently a strange, strange practice, and I might add strange thinking, has grown up in connection with Federal employees.

In recent years there seems to be a feeling among certain individuals and groups that not only has an applicant for a Federal position a right to a job, but that once employed, the job is permanent. This is especially true in connection with those holding jobs who are associated with or subscribe to left-wing thinking.

Many others, especially some born abroad, seem to feel that the privilege of citizenship carries with it a right to subsistence from the Federal payroll together with job security, while they think and talk about how much better are the systems of government in other countries, especially in the land from which they came.

The Saturday Evening Post of July 30, 1955, carries an article which should clarify the thinking of some. It reads as follows:

LOYALTY BOARDS CAN ERR, BUT WE STILL NEED THEM

It now appears that sooner or later this country will be treated to a congressional investigation of the Government's security and loyalty programs. President Eisenhower has withdrawn his objections to such an investigation, and several influential Democratic Senators are breathing fire on this issue, doubtless hoping to deprive the Republicans of some of the political capital which they have accumulated from the Hiss case and other evidences of Soviet infiltration during the Roosevelt and Truman administrations.

Like other programs devised under emergency conditions, the Government's efforts to bar spies and subversives from Federal employ has not worked out perfectly. Undoubtedly, some individuals have been unjustly pilloried as Reds, although the left-wing propagandists have been hard put to it to produce many heart-rending examples of such injustice. It will be tragic if investigation is conducted along political lines, with too little attention to the primary reason for the existence of any loyalty program at all—namely, that the Communist espionage system has succeeded in penetrating our bureaucracy and will continue its efforts to do so.

Perhaps the most explosive issue likely to be developed during the investigation will be the question of the right of suspects to be confronted by their accusers. In its opinion on the dismissal of Dr. John P. Peters from the United States Public Health Service, the Supreme Court refused to rule on this issue, declaring that a ruling on the right of confrontation would "present serious and far-reaching problems in reconciling fundamental constitutional guarantees with the procedures used to determine the loyalty of Government personnel." But this question will have to be decided sometime. Surely, it cannot be beyond the resources of legal exegesis to resolve any apparent conflict between the rights of individuals and the necessity to protect the United States from outside subversion.

Unless we reconcile ourselves to the end of the FBI as an effective investigating body, we must continue to protect the anonymity of FBI agents in security cases. Even Senator HUMPHREY, of Minnesota, one of the prime movers for a congressional probe, declared, "If protecting sources of information represents a compromise with traditional American concepts of justice and fair play, it is a price which we should be willing to pay in times of national peril for an effective securtiy program." No effort to square this circle will be convincing if it dwells too much on the distress of accused individuals, many of them by no means whiter than snow, and ignores the security of the country. Grudge informers and poison-pen gossips can be eliminated by competent administrators.

A startling example of the sentimental approach to the security problem was the recent award of $5,000 by the Fund for the Republic to the officials of a Pennsylvania library who had refused to dismiss their librarian for having invoked the fifth amendment before the Senate's Internal Security Committee. President Robert M. Hutchins of the fund described the stand of the library trustees as "a courageous and effective defense of democratic principles" and implied that the librarian had been the "special target of self-appointed censors and amateur loyalty experts."

The anouncement as summarized in the New York Times gave the impression that the librarian had invoked the fifth amendment when asked whether she had been a secretary in a Communist-front school in Massachusetts. But the central question which the librarian refused to answer was: "Are you now a member of the Communist Party?"—"now" being May 21, 1953. After conferring with her counsel, the librarian replied, "In answer to that question, I decline to answer that question upon the ground that my answer might tend to incriminate me."

For all we know, the lady in question was not a Communist when she was asked this $64 question. There is no sense in punishing people for past errors or for their opinions. But, inasmuch as she refused to say whether or not she was presently a Communist, it is difficult to expect "self-appointed censors and amateur loyalty experts" not to get red in the neck. Although there is no occasion to yield to the extremists who see a Communist behind every lamppost, it would be equally dangerous to accept the view that there is no reason to fear Soviet espionage at all. To strike a proper balance we should like to see Dr. Hutchins give some of his foundation's money to the broadcasting company which refused to fire Winston Burdett for helping expose Communist infiltration instead of making that essential task more difficult. An even better candidate for an award would be Whittaker Chambers, who exposed the Communist conspiracy when to do so was to risk serious reprisals.

Perhaps these episodes have only a secondary bearing on the obligation of the Federal executive departments to set up a better loyalty program and of Congress to investigate the existing one. But they do suggest the kind of pressure under which those concerned with this problem must labor. Lest the whole controversy bog down into a series of recriminations and sob stories, it would appear to be the duty of somebody high in the Eisenhower administration to demonstrate in easy to understand terms the need for a loyalty program, the feverish effort by the left wing to destroy any loyalty program whatever, and the steps which may be necessary to iron out inconsistencies and defects.

East Texan Ernest L. Kurth, One of Nation's Builders

EXTENSION OF REMARKS
OF
HON. STUART SYMINGTON
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Friday, July 29, 1955

Mr. SYMINGTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by the senior Senator from Texas [Mr. JOHNSON] on the subject East Texan Ernest L. Kurth, One of Nation's Builders, together with a newspaper article and an editorial on the same subject attached to the statement of the Senator from Texas.

There being no objection, the statement, with the attached article and editorial, was ordered to be printed in the RECORD, as follows:

EAST TEXAN ERNEST L. KURTH, ONE OF NATION'S BUILDERS

(Statement by Senator JOHNSON of Texas)

On Monday of this week one of East Texas' most respected and beloved citizens, a constructive builder all his life, observed his 70th birthday.

I refer to Mr. Ernest L. Kurth, of Lufkin—Mr. East Texas in person.

As lumberman, manufacturer, business executive, financier, and far-seeing civic worker, Mr. Kurth has made a deep and lasting imprint on Texas and, indeed, on the whole South. No better example could be found of that tribe of men who have built our Nation and brought it to its present stature in the world.

Ernest L. Kurth has always looked to the future. Characteristically, he spent his 70th birthday at work on big projects of importance to many people.

I am proud to join his thousands of friends in saying "happy birthday" to a man I am proud to know as a Texan and as a personal friend.

I attach hereto an editorial from the Houston Chronicle and a news story from the Dallas News on Mr. Kurth's birthday, in order that all Senators may gain some idea of the career of this man who is truly a giant among men.

[From the Dallas (Tex.) News of July 25, 1955]

NEWSPRINT PIONEER—KURTH TOO BUSY TO MARK BIRTHDAY

(By Robert M. Hayes)

LUFKIN, TEX.—The man who gave Texas a new industry—the manufacture of newsprint—will observe his seventieth birthday anniversary Monday.

But Ernest L. Kurth, head of the Angelina County Lumber Co., the Southland Paper Mills and a key figure in at least a score of other enterprises, won't have time for any

special observance. In fact, he won't even be in Lufkin. He's in New Mexico on a business trip.

His friends say the 70-year-old industrialist has no thought of slowing up. On the other hand both his lumber mill and paper mill are in the midst of a $15 million expansion and modernization program.

Kurth, described by Gov. Allan Shivers as "Mr. East Texas" was born at Kurth Station near Corrigan in Polk County on July 25, 1885. He was educated in the Lufkin public schools and at Southwestern University, Georgetown. Soon after his graduation he went to work as a bookkeeper for the Angelina County Lumber Co., then owned by his father, J. H. Kurth. Today he is recognized internationally as an authority on timber production and forest conservation.

Kurth's success in bringing a newsprint mill to Texas is typical of his achievement in many fields.

Some 15 years ago when the United States was still largely dependent upon foreign importations for its supply of newsprint, Kurth heard of experiments being conducted by a Savannah, Ga., chemist, Dr. Charles Holmes Herty, to produce newsprint out of Southern pine.

Herty and a fellow scientist, Francis Patrick Garvin, discovered that southern yellow pine did not, as previously thought, contain too much pitch or resin.

Kurth saw the possibilities of the Herty-Garvin idea. If it worked it would mean the profitable utilization of millions of cut-over lands in East Texas which at that time were of little value.

After getting pledges from southern newspaper publishers to take 50,000 tons of newsprint in the first 5 years of the planned mill, Kurth undertook the task of getting the project financed. Prospective investors were dubious, some of them told Kurth frankly they thought he was crazy.

But the Lufkin man never gave up. Largely through his efforts the money was pledged and in 1939 the mill was completed with a single unit. Since then it has been twice expanded and another expansion is under way. In spite of his many business activities, Kurth has always found time for community problems. He is active in his local chamber of commerce and has served as president of the east Texas Chamber of Commerce. Hundreds of east Texas youngsters owe their education to Kurth scholarships.

Several years ago Kurth was named "man of the year" as the outstanding Southern industrialist. More than a thousand business leaders from over the Nation gathered in Lufkin to pay their respects to him.

It was about that time someone coined what probably is Kurth's most descriptive title: the titan of the tall timber.

E. L. KURTH, EAST TEXAS LEADER, ATTAINS 70 YEARS OF ACHIEVEMENT

On Monday, July 25, Ernest L. Kurth of Lufkin will observe the anniversary of his birth 70 years ago in a now nonexistent village in Corrigan in Polk County. His parents moved into Angelina County while he was still a child and there his father established a sawmill outside Lufkin.

Today, the son of that founder is known throughout the Nation as the pioneer who first envisioned the manufacture of newsprint from yellow pine and who established and now heads as president the Southland Paper Mills of Lufkin.

Earlier he had attained his stature as one of the leaders of the Texas lumber industry as president of the Angelina County Lumber Co., a position he retains.

Texas has produced many giants. She has sent her sons into the world of banking, commerce, and industry to reflect the glory of their native State. Not so with Ernest L. Kurth. He chose to remain in the region where he was born whence, through his industry, his vision and his imagination, his fame has radiated into the world he eschewed. His name today is as readily known in Wall Street or in Washington as it is in the streets of Lufkin.

His eminence was achieved through no accident. It is the result of a determination and a genius for hard work plus a refusal to permit handicaps which might halt ordinary men to thwart him. The same vigor that marked him in his prime guides him today. And so, in the evening of life, when most men are looking forward to retirement, Ernest Kurth is planning for the future. His two huge plants are presently under expansion in a construction program that will cost more than $15 million.

Ernest L. Kurth is a giant of whom Texas can justly brag.

Merry-Go-Round on the Niagara

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. RADWAN. Mr. Speaker, on March 30 of this year, I introduced a bill which would authorize immediate construction of power deevlopment works on the Niagara River. As anyone can see from a mere reading of the bill, it was completely nonpartisan and noncontroversial in character. Its sole purpose was to break the disastrous stalemate which has plagued this essential project for the 5 years since February 1950 when a treaty with Canada made the project possible.

Canada did not waste its opportunity. It has virtually completed the project which will permit it to generate $60 million worth of hydroelectric power per year—plus our equal United States share, until we are in a position to use it. And we have not even started, as the 5-year-old argument of who shall own and operate the power project on this side of the border, continues to stymie its development.

My bill was designed to break that log jam without offending anyone. It did not determine who would own and operate the project—but provided only for an immediate start on construction, on a neutral basis, so that the 4 to 5 years it would take for construction, could be utilized for the settlement of the arguments and the project would be finished when the arguments were settled, and not just beginning.

Over $300 million worth of much-needed electrical power for defense, industrial, and domestic use has run wastefully over the falls since the treaty was signed in 1950. Three hundred million dollars worth will run over the falls before the project is finished, if it were started today. Twenty million dollars worth has run over the falls since I introduced my bill.

It seemed impossible last March that this bill could fail of passage—and yet almost unbelievably, it looks as though neither it nor any other bill for redevelopment of the Niagara will be passed this session of Congress. Even if it passed next session, a year from now, we will have to watch $60 million worth of power run over the falls between now and then.

The Young Men's Republican Club of Erie County, N. Y., promptly recognized the overwhelming merit of the Radwan bill when they passed a resolution last June urging its immediate enactment. So also did the Buffalo Evening News when it editorialized last May:

> Only Congress can settle (this deadlock), and the signs that it will bestir itself to do it this year are none too encouraging. * * * All of which attests the supreme economic folly of stalling any more years before even getting the project under construction on our side. Whether or not Congress can make up its mind which party should operate the development, once built, there is no good reason why the actual construction cannot proceed at once * * * If the Harriman-Moses group and the private-enterprise advocates can muster their forces for an immediate showdown this year, well and good. But if nothing more than another deadlock results, we simply will have wasted valuable construction time. Whether as immediate insurance that something will get started, or as a deadlock-breaker to be passed later in the session if it develops that neither the private nor public-power advocates can have their way, we think the Radwan bill deserves to be taken seriously and supported as an alternative approach by all those who are sincerely interested in getting some kind of Niagara power development expedited.

The anticipated deadlock has occurred, as I feared it would.

Not a single argument was advanced against the merits of my bill. The strongest statement against it was that it was unnecessary, because one of the permanent bills, calling for construction and operation would be passed this session. Well, they have not been. Only the Lehman bill stands a chance of passing in the Senate, and no one expects it to pass the House, at least this session. If and when a permanent bill is passed, it will be subject to time-consuming litigation.

A recent article in the Buffalo Evening News is headlined "Power Use in Buffalo Area Hits New Peak for Summer." It is a fitting obituary for what has happened to Niagara power this year. But come January 1, I shall press for the only sure-fire solution to this deadlock—immediate passage of my bill for immediate construction of the project. Let us stop this merry-go-round on the Niagara.

Apologies Are Not Enough

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. MULTER. Mr. Speaker, I direct the atention of our colleagues to the following editorial which appeared in the July 29, 1955, issue of the New York Herald Tribune:

APOLOGIES ARE NOT ENOUGH

The Bulgarian Government has expressed its "sincere regret" for the shooting down of an Israeli airliner with a loss of 58 lives, including 13 Americans. But this is emphatically a case in which apologies are not enough. As the British Under Secretary for Foreign Affairs, R. H. Turton, said in the House of Commons: "I can't envisage any circumstances in which a civil airliner on a civil flight can be legitimately shot down."

The question of how to deal with incursions by planes of one nationality into the "air space" of another has been a source of friction between East and West for many years. Usually, the incidents involve military planes, and usually the "defending" Communist aircraft are themselves outside of Red airspace. The basic evil, however, does not stem from the character of the planes involved nor the precise position in respect to national boundaries. It is the fact that Red planes and antiaircraft shoot first and ask questions later.

If there is to be peace in the skies, some more civilized method of regulating air traffic will simply have to be accepted by the Communist regimes. The alternative is the special alerting of all Western military planes in the neighborhood of Red borders, with orders to shoot if threatened and, presumably, the convoying of all civil aircraft flying similar routes. The West can no longer condone murder in the air, even if it is accompanied by Communist crocodile tears.

There are methods available of exchanging recognition signals, of conveying warnings to planes off course, of escorting them in the right direction. If genuine violations of airspace become too common, redress and correction can be obtained through diplomatic channels. But when peaceful travelers on their lawful occasions are shot down in flames, no words, no payment, are adequate requital.

There should be an international convention drawn up to provide a code of international behavior in the air, with appeal to the International Court of Justice or some similar tribunal in case of violation of boundaries. But no piratical attacks will be tolerated.

Were the Facts on the Beria Death Given the President by Zhukov the Same as Those Given the Congress Over a Year Ago?

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1955

Mr. SIEMINSKI. Mr. Speaker, in the New York Times of Thursday, July 28, 1955, reference is made to information given the President at Geneva by Zhukov.

One wonders whether the facts on the death of Beria, former NKVD chief under Stalin, were the same as those to which I referred in my extension of remarks reported in the CONGRESSIONAL RECORD on page 154 in the issue of January 12, 1954. Both articles follow:

THE MAN WHO SENTENCED BERIA

(Extension of remarks of Hon. ALFRED D. SIEMINSKI, of New Jersey, in the House of Representatives, Monday, January 11, 1954)

Mr. SIEMINSKI. Mr. Speaker, can the man who sentenced Beria give us a clue to what might happen in Russia? Liquidation of the Bolshevik clique by the professional military?

Reports indicate Beria was sentenced to death by the man he made eat crow in 1945–46, General Konev, Soviet opposite number to Gen. Mark Clark, on the allied commission in Austria. Konev, proud, old-time professional, took his orders from Zheltov, bullnecked Beria hatchetman in Vienna.

Konev, short, well liked by his troops, was friendly to the West. He didn't last long in Vienna. Zheltov saw to that. Then, the tables turned. Stalin died (?), Beria is tried. Konev sentences him. Where's Zheltov?

Does this mean that the professional military of Russia has had its fill of the crumbums in the Kremlin? Does it spell a better break for the Russian, his wife and family—for all the men and women whose kin spilled blood in the hopes of a better tomorrow? One wonders. One hopes. One prays.

[From the New York Times of July 28, 1955]

KREMLIN FACTS GIVEN PRESIDENT BY ZHUKOV

(By Harrison E. Salisbury)

WASHINGTON, July 27.—President Eisenhower has received an amazing personal briefing on inside Kremlin secrets from Marshal Georgi K. Zhukov.

The President revealed at his White House news conference today that the Soviet Minister of Defense had offered him a first-hand account of what had been going on within the inner barriers of the Iron Curtain.

General Eisenhower did not outline in detail the report Marshal Zhukov made to him. But he implied it had been a persuasive account, particularly in the stress it laid on the current doctrine of collective leadership.

The President referred specifically to the four at Geneva—Marshal Zhukov, Marshal Nikolai A. Bulganin, Soviet Premier; Nikita S. Khrushchev, First Secretary of the Soviet Communist Party; and Vyacheslav M. Molotov, Foreign Minister. All of these except Marshal Zhukov are members of the Presidium of the Central Committee of the Communist Party.

ZHUKOV PLAYS LEADING ROLE

It seemed clear from President Eisenhower's account that Marshal Zhukov was playing a leading role in the present leadership of the Soviet Union. It also was plain that the President placed considerable credence in Marshal Zhukov's report, particularly so far as collective leadership was concerned.

As the President described this system, a method of rule by committee or junta has been substituted in the Soviet Union for the one-man dictatorship of Stalin.

General Eisenhower said that the new system had been demonstrated under working conditions in Geneva, where he noted the Soviet group of 3 or 4 men had conferred constantly and produced a common viewpoint.

The President—as has been his consistent practice—spoke with some warmth of Marshal Zhukov as his old friend and postwar military associate in Berlin. He left little doubt that Marshal Zhukov's intimate picture of what was going on behind the scenes in the Soviet Union—and what had gone on there in recent years—played a major role in the administration's current appreciation of the Soviet's "new look" as something more than skin deep.

SEVERAL CONVERSATIONS HELD

The President had a number of conversations with Marshal Zhukov in Geneva. He indicated, however, that the principal briefing he had received was in the course of a private 2½-hour talk that apparently covered the whole scope of Soviet affairs from Marshal Zhukov's personal fortunes to the present policy of the Soviet Government.

The President was asked how he had got along with Marshal Zhukov. He replied with a smile that he had got along excellently, of course, and went on to emphasize the good manners and good personal relationships of the Geneva discussions.

Naturally, he noted, his relations with Marshal Zhukov were colored by their 6 months of association in Berlin—cooperative work in Berlin, was the way he put it.

He explained that Marshal Zhukov had been desirous of talking about the general situation in the Soviet Union, about his own personal life, and about the course of Soviet developments.

The President assured Marshal Zhukov that he would regard the conversation as completely confidential and that it would not become a part of the official records of the conference. However, Marshal Zhukov replied that General Eisenhower was perfectly free to repeat any part of the conversation, that he had not come to talk in secrecy.

The general purpose of the conversations was to impress upon him the deep desire of the Soviet Union for peace, President Eisenhower said.

The discussion went on to many topics, among them the question of collective leadership, the President added. This particular subject occupied about an hour of Marshal Zhukov's time, he said.

While the President gave no more than general hints of the nature of his talks with Marshal Zhukov it is possible on a basis of what is known—and not known—about the Soviet political situation to reconstruct some of the ground they must have covered.

The President implied that Marshal Zhukov had brought him up to date on his own personal situation in the Soviet Government.

While the concept of "collective leadership" began to be emphasized by the Soviet press within 2 or 3 weeks after Stalin's death it is not believed to have been firmly established until after the trial and execution of Laurente P. Beria, head of the Ministry of Internal Affairs. Marshal Zhukov's briefing could hardly fail to cover the surprising events of last February when George M. Malenkov was deposed as Premier and Marshal Nikolai A. Bulganin was named as his successor. The marshal, morever, hardly would be able to describe "collective leadership" in realistic terms without explaining the nature of the relationships which now exist between himself and Bulganin, Mr. Khrushchev, Mr. Molotov, and the other leading members of the Soviet Government.

Pledges and Hedges

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, July 29, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from the Democratic Digest of June 1955, entitled "Pledges and Hedges."

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

ASSURE AGRICULTURE ITS "FAIR SHARE"

THE PLEDGE

"I firmly believe that agriculture is entitled to a fair, full share of the national income and it must be a policy of the Government to help * * *achieve this goal * * *" (Eisenhower, Kasson, Minn., September 6, 1952.)

THE HEDGE

"Secretary of Agriculture Ezra T. Benson said today 'farmers are not sharing fully in the prosperity which the Nation as a whole is enjoying'." (United Press dispatch, April 12, 1955.)

ASSURE RIGHT TO FACE YOUR ACCUSER

THE PLEDGE

"* * * If we are going to continue to be proud that we are Americans, there must be no weakening of the code by which we have lived; by the right to meet your accuser face to face * * *" (Eisenhower, November 23, 1953.)

THE HEDGE

"He [Eisenhower] believes it would not be possible in every case to let Government employees who are tagged as security risks face their accusers." (United Press Dispatch, March 16, 1955.)

WELCOME "TENS OF THOUSANDS" OF REFUGEES

THE PLEDGE

"We have promised that our country will welcome tens of thousands of refugees from the terror of enslavement." (Eisenhower, Boston, Mass., September 21, 1953.)

THE HEDGE

"Only 821 immigrants were admitted under this [refugee relief] act in fiscal 1954, and the rate of entry has not increased materially." (Congressional Quarterly, March 28, 1955.)

THE ROLE OF THE SEVENTH FLEET

THE PLEDGE

"I am issuing instructions that the Seventh Fleet no longer be employed to shield Communist China." (Eisenhower state of the Union message, February 2, 1953.)

THE HEDGE

"Our Government was prompt * * * in June 1950 to direct our Seventh Fleet to defend Formosa from possible invasion from the Communist mainland." (Eisenhower message to Congress on Formosa resolution, January 24, 1955.)

STATEHOOD FOR ALASKA

THE PLEDGE

"Quick admission of Alaska and Hawaii to statehood will show the world that 'America practices what it preaches,' General Eisenhower said Saturday night. * * * Admission of the two Territories is 'in conformity with the American way of life granting them self-government and equal voice in national affairs." (Denver Post, September 17, 1950.)

THE HEDGE

"President Eisenhower maintained his stand against Alaskan statehood at present. He told a news conference there are national security considerations that must be catered to before he could remove his objection to statehood for Alaska." (United Press dispatch, March 16, 1955.)

RESPONSIBILITY OF THE PRESIDENT

THE PLEDGE

"Here I must repeat something that I have often stated before. The ultimate responsibility for the conduct of all parts of the executive branch of the Government rests with the President of the United States." (Eisenhower, March 4, 1954.)

THE HEDGE

"But remember this: Stassen had to stand responsible [for hiring Ladejinsky] and Stassen, if something would turn up to show that his judgment was wrong, then he [Stassen] was the one that was held responsible." (Eisenhower, January 12, 1955.)

Chapter 13 of the Bankruptcy Act

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, July 21, 1955

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an extremely able and helpful article on chapter 13 of the Bankruptcy Act by the Honorable Clarence W. Allgood, referee in bankruptcy, United States District Court for the Northern District of Alabama.

The article is reprinted from the July 1955 issue of the Credit World, and was originally an address by Judge Allgood for a joint conference of districts 3 and 4 of the National Retail Credit Association held in Birmingham, Ala., on April 19 of this year.

No one speaks with greater authority on the subject than does Judge Allgood, based on his outstanding record in the use of chapter 13 as a means of reducing bankruptcy cases in Birmingham. Judge Allgood's record has been acclaimed throughout the Nation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT'S WRONG WITH CHAPTER XIII OF THE BANKRUPTCY ACT?

(By Clarence W. Allgood)

After consulting a number of the members of your fine organization, we have chosen as the subject of my talk to you today: What's Wrong With Chapter XIII. Considering our successful experience in this district with wage-earner amortizations, you might well conclude that this is a strange approach for your speaker to take. And the statistics are indeed impressive: Debtor petitions have been filed in the Birmingham district since 1933, and a large majority of these cases have been successfully concluded; $11,719,.50 has been paid to creditors since October of 1933; thousands of our families have been saved from bankruptcy and financial ruin; and we have significantly reduced wage-earner bankruptcies to a minimum. Despite these accomplishments, chapter XIII is not being used as widely as we originally hoped, and we still have our troubles.

FORESIGHT OF AUTHORS OF ACT

In the beginning, utilizing the meager experience gained from a few cases filed under sections 12 and 74 of the old Bankruptcy Act, and the special procedure molded here in Birmingham, the authors of chapter XIII did a truly remarkable job. I am constantly reminded of their foresighted wisdom. The few amendments and suggested amendments, together with the relatively few reviews or appeals from decisions of referees and district judges, fully demonstrate the fundamental strength of this section of the Chandler Act as it was originally enacted.

Due largely to the efforts of the National Retail Credit Association, each year finds more and more chapter XIII cases being filed in other judicial districts; however, progress has been slow, and the percentage of failures has been entirely too high. Many referees, conscientiously and sincerely, do not believe in the use of wage-earner petitions. They feel that bankruptcy is the proper remedy for a wage earner in serious financial difficulties. Some feel that the administration of debtor cases has a tendency to make a collection agency out of the court. Others feel that a referee should not be required to assume the combined roles of guardian and father confessor to a lot of improvident individuals who give them a bad time with their trials and tribulations * * *

If, for whatever reason, the referee is not sold on this type case, neither the lawyer nor the credit man will get very far in trying to promote the use of chapter XIII as a means of reducing the number of bankruptcies in his district. If the referee is unsympathetic, the credit man's only hope is to sell him a bill of goods on giving debtor cases a trial. We feel that in trying to get our cases properly set up with proposals, fair to the debtor and reasonable to the creditor, on a basis that will ultimately insure the creditor payment in full of his account and rehabilitate the debtor to the extent that he will again become a good credit risk, we are doing a constructive job that will greatly benefit our community, and, in itself, justify all the worries and headaches that we encounter in our work—and I assure you that they are numerous.

* * * * *

PROVISIONS OF SECTION 656

Section 656 (b) of the Bankruptcy Act provides that "Before confirming a plan, the court shall require from each creditor proof that the claim filed by him is free from usury under the laws of the State in which the debt was contracted." This provision makes many of our creditors in the loan business very unhappy with us. In most cases, as unsecured creditors, they find that it takes, at best, many months for their claims to be paid. When, under our State laws, they are allowed no interest, and when, in many instances, they are required to credit their claims with interest paid on previous loans, you cannot expect them to like it. Nevertheless, here again, although we cause loan companies in our territory to lose at least a quarter of a million dollars a year in interest, we find the group as a whole giving us their full cooperation. They work with us splendidly, and I am sure that most of them realize that while we cut them out of a lot of interest, we more than make up for it in the number of principal claims we save for them.

Even if the referee is able and willing to do his part, we still have an even greater problem in the trustee, or supervisor, as he is called in many districts. The act provides for the appointment of a trustee in each case whose duties shall primarily be the collection and disbursement of payments by the debtor as provided for in the plan submitted by the debtor to his creditors and confirmed by the referee. If the trustee does a good job, the referee's job is made immeasurably easier. If creditors receive their money regularly and promptly, creditor resistance is reduced to a minimum, and people who find themselves with unmanageable financial problems are encouraged by credit managers and employers to file wage-earner petitions. We find that a large number of these people who come into our court do so upon the advice of some credit manager of one of their creditors and to whom they have gone to discuss their account. On the other hand, I have known of cases where a creditor has agreed to sell an individual on the condition that he file a wage-earner petition. I cannot say that I approve of the procedure, but it does happen.

PROVISIONS FOR COMPENSATION

The act provides that the trustee shall be compensated by payment of 5 percent of moneys paid to creditors, plus his actual and necessary expenses. This in itself causes many problems. In a district where only a few cases are filed the return is so meager that it does not justify the services of a full-time man. In many such districts attorneys are appointed, but, with rare exceptions, this arrangement is not satisfactory. Nor does

the appointment of more than one trustee to serve in a district prove wise; it always works a hardship on both referee and creditors.

* * * * *

It is my opinion that, while it is vital to the success of debtor cases to keep the costs of such cases to a reasonable figure, the cost should never be so low that an individual could file a wage-earner petition and, in effect, group and refinance his obligations at a lesser cost than he could arrange through regular credit resources. While payment by the debtor of costs and attorneys' fees does in some cases work a hardship on some creditors, it would prove, in the long run, a far greater hardship if costs were to be eliminated or reduced to such a low figure that it would encourage the filing of cases by those who do not absolutely need to do so.

EXPERIENCES OF OTHER DISTRICTS

On the other hand, we knew of districts where chapter XIII cases have been discouraged and almost eliminated by excessive attorneys' fees and costs. We have never put the full cost provided under the act on these cases and our scale of attorneys' fees, beginning at a minimum of $15 per case and scaled upward in proportion to liabilities listed and time spent on the case, is, we think, very reasonable. The referee always sets the fee and in many cases we provide in the confirmation order for payment of these fees along with creditors—in some cases, after creditors. In such cases the same order is made as to court costs. We think it only fair that if payment of attorneys' fees is to be made out of its order of priority costs should be treated in the same manner. The act calls for payment of costs first, attorneys' fees next, and then creditors. To do this in all cases would, at times, make the plan offered to creditors unworkable and unreasonable; for that reason we frequently modify the rule. Attorneys do not object, and we do not believe that the Administrative Office of the United States Courts will seriously do so. The law definitely should be changed to allow the referee to order payment of costs and attorneys' fees in debtor cases along with creditors or even after creditors have been paid, if, in his judgment, he feels that the case justifies it. The biggest complaint we have from creditors is the delay in receiving disbursements due to the necessity of paying costs and attorneys' fees before creditors, and, in cases where dismissal is necessary before all creditors are paid due to failure of the plan for any reason, creditors take the loss.

EMPLOYERS' COOPERATION WITH COURT

In our district most large employers cooperate fully with the court and make deductions from the employees' earnings for the court payments. These deductions are usually remitted to the court by monthly payment which has to be posted to each debtor's account and then disbursed to creditors in accordance with the confirmation. Many of the employers prefer to send the debtor's entire earnings to the court and do so promptly upon receipt of a proper court order. This, of course, requires the debtor to come to the court for his pay day, and the supervisor's office must make a check to the debtor for the balance of his wages, over and above the court payment. While this plan is more complicated and expensive to handle than the deduction plan, we always go along with the employer and use either plan that he might prefer. In many cases where the employer does not make deductions we allow the debtor to make his payments direct and a surprisingly large number of them do so promptly. The supervisor has a rule that if a debtor who is making his payments into court direct, misses one monthly payment without excuse, the debtor's entire check is then ordered into court.

* * *

Our main problem has always been the subsequent creditor—what to do with him? We have tried everything in the book and nothing does the job. Weinstein in his analysis of the Bankruptcy Law of 1938, prepared for the National Association of Credit Men, in discussing Section 658, states: "This is a new provision. The plan which is conclusive upon all parties binds not only the past creditors but is equally effective against subsequent creditors." For the purpose of enforcing the provisions of the plan, the court is given exclusive jurisdiction of the debtor, his property, and his future earnings. If a subsequent creditor, in his efforts to collect his account, interferes with the debtor's earnings to the extent that the debtor cannot make his payments to the court, or in any way places the debtor's employment in jeopardy, such creditor can be enjoined and restrained. We started out adhering strictly to this procedure. We soon found that this not only caused the court to do a large amount of extra work, but also worked a severe hardship on many innocent creditors. The small grocery man who could not afford credit reports, or at least thought he could not (a new credit report always pays for itself); the doctor called in an emergency who most certainly would not be expected to inquire whether his patient was in the court; and many other such creditors, were, we thought, being unduly penalized by restraining orders, which, in effect, forced them to wait without payment for a year or more. We then adopted procedures which enabled the debtor to amend his petition adding the subsequent creditor, requiring the debtor to increase his payments into court to take care of the creditors added by amendments. We soon found a few creditors taking advantage of this procedure to the extent that they actually solicited people who were in the court, knowing that if the debtor did not pay them direct, they could threaten garnishment proceedings against him or actually garnish his wages, thus causing him to file an amendment and include them in the case. Then, some of our debtors, finding that they are comparatively safe from garnishment while in the court, apparently go out and buy anything and everything they can. The amount of credit that some of them are able to get while they are in the court amazes me.

* * * * *

We have found from bitter experience that neither restraining orders nor amendments are a complete solution to the problem. Each case is different and no set rule can be adopted that will fit every case. We have reached the conclusion that we should use restraining orders in cases where we find creditors selling debtors indiscriminately. In other instances, where the debtor is largely at fault, payments are increased to provide payments for the subsequent creditors. In some cases this finally reaches a breaking point and the debtor's payments cannot be further increased. We then find it necessary either to enjoin any additional creditors or to allow them to file claims to be paid after prior listed creditors. A few of these cases get completely out of hand and there is no proper solution. We could, of course, dismiss the case or convert it to bankruptcy; however, both of these courses are highly objectionable to us. We make every effort to see that this type of debtor is forced to pay his creditors in full. Debtors who are not honest, or those who turn out to be chronic credit seekers, when this becomes known to the court, are placed on a list and we refuse to confirm any further wage earner petition for them. This also applies to debtors who have proved to us in the past that no feasible plan can be worked out for them. It is my thought that an amendment to the act would be in order which would prevent a debtor who has had a case dismissed for failure to comply, from filing a new petition for a period of at least 1 year. We have a local rule of court to this effect. Due to the fact that this rule is local it was thought wise to provide that such cases could be filed only with the approval of one of the referees. This puts an unnecessary burden on the referee and should not be included.

FEW COMPOSITIONS REQUESTED

While the act provides for them, we have few compositions. We do not encourage them as we feel that very few cases justify a plan that would not, in time, pay all creditors in full. Occasionally we have a wage earner trying to pay, out of his earnings, debts accumulated through a business failure. In these cases where the debts are completely out of reach, we feel that a composition is in order. They are few, however. I do not recall confirming more than three cases last year where a composition, or scaling down of the debts, was a part of the plan.

Section 606 (8) which prevents a wage earner whose income is in excess of $5,000, from filing a debtor petition, should be increased to $10,000, or removed entirely. In my opinion, this section should be completely deleted. Why discriminate? If a man is a wage earner and in financial difficulties, he is in trouble regardless of what his income might be. Why force him into bankruptcy because he has an income in excess of $5,000? By agreement with creditors we have confirmed many cases which would have been barred by this section, and they work out better than the average case. * * *

You can readily see from what has been said that, insofar as the act itself is concerned, we find nothing fundamentally wrong, and not too many changes that are really needed. Our trouble is primarily in the administration of the act.

It has been my extreme good fortune to serve under district judges and with referees who have been learned in the law and at the same time have had a thorough and sympathetic understanding of wage earner amortizations. Their combined efforts have enabled us to combat bankruptcy in north Alabama with marked results.

The following statistics compiled from our records demonstrate clearly that the successful employment of chapter XIII results in a reduction of wage-earner bankruptcies. For 1938, the first year in which chapter XIII was in existence, cases filed under the chapter constituted 33.8 percent of all cases filed—66.2 percent, or 2,200 cases were filed in the bankruptcy division. Each year from 1938 to 1949, with one exception, saw an annual reduction in bankruptcies and an increase in the use of wage-earner petitions.

In 1939 only 52.7 percent of the cases filed were bankruptcies.

In 1940 another reduction to 42.6 percent.

In 1941, 38 percent of the total

In 1942, 37 percent of the total

In 1943 (a year of low total filings) the percentage of bankruptcies increased to 42.8 percent of the total; however, in 1944 we again find a decrease to 34.8 percent and in 1945 a further decrease to 33 percent of the total cases filed. The reduction in 1946 was to 28 percent; in 1947, 20.7 percent; in 1948, 12.2 percent; and in 1949, 10.3 percent of the total cases filed were bankruptcies, the balance being debtor cases. Since 1949 the bankruptcy cases have leveled off to between 9 percent and 11 percent of the total of all cases filed, the balance of cases filed being debtor cases. This represents a reduction in the bankruptcies and other cases from 2,220 in 1938 to a level varying slightly above or below 600 cases a year—this during a period when bankruptcy cases generally are showing a great increase. Considering that this

figure of 600 bankruptcies a year includes both individual bankruptcies and asset cases, it is apparent that the wage-earner bankruptcies have been brought to an irreducible minimum, obviously about one-sixth or one-seventh of the number that would be filed if chapter XIII filings had not arisen to replace them.

Quite often misinformed individuals refer to Birmingham as the Bankruptcy Capital of America. No more incorrect statement was ever made. We feel that the record made in Birmingham in the use of chapter XIII is one to be proud of. For a large industrial district, made up of seven counties, one of which is recognized as one of the poorest in the State and designated as a disaster area, the percentage of bankruptcies by wage earners is far below the average for such a similar district.

Collaboration Between Local and State Governments

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Friday, July 29, 1955

Mr. BUTLER. Mr. President, I ask unanimous consent to have included in the Appendix of the RECORD an article appearing in the July 25, 1955 issue of the Baltimore Evening Sun, entitled "For Cooperative Federalism."

This article, by William B. Pendergast, concerns the recent study and report of the Commission on Intergovernmental Relations, on which I was privileged to serve, and I therefore commend it to my colleagues for their thoughtful consideration.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOR COOPERATIVE FEDERALISM—COMMISSION ADVISES COLLABORATION WITH LOCAL AND STATE GOVERNMENTS

(By William B. Pendergast)

During the early stages of the work of the Commission on Intergovernmental Relations, which reported recently to President Eisenhower, it was generally anticipated that the final report would run along the lines indicated by the following propositions:

1. The National Government is too big and too active.

2. State and local governments are withering because of action on the part of the National Government. Activities which should be performed by the less inclusive levels of government have been wrested from them by the Federal Government, and their revenue sources have been preempted by the Federal tax collector.

3. From the foregoing findings of fact, the conclusion follows that the restoration of our traditional Federal system can be accomplished only by a retreat by the National Government on a number of fronts—curtailment of activities performed at the national level, reduction of Federal assistance to State and local governments, and abandonment of some types of Federation taxation (the Federal gas tax being the most likely choice for repeal).

The report that has been made, subscribed to by all but 2 of the 25 Commission members, has little of the flavor of these propositions. The majority of the Commission does not find our Federal system in peril from big Government at the national level. The weaknesses in the system which are given greatest emphasis are weaknesses for which State or local governments are responsible. The report does not find that the National Government has elbowed State or local governments out of fields of activity in which they were rendering satisfactory service. On the contrary, it strongly implies that, when activities have been shifted to the national level, the shift has resulted from inability or unwillingness of the smaller jurisdictions to respond to popular demand for governmental action.

In the field of taxation, there is recognition that the magnitude and the variety of Federal taxes spell difficulties for State and local governments. Yet, the emphasis is placed not on these difficulties but on the failure of most State and local jurisdictions to make the most of their revenue potential.

The prescription offered by the Commission for strengthening American federalism is not a dismantling of Government in Washington and a wholesale transfer of its activities to States and localities. In very few fields of activity does the Commission recommend withdrawal by the National Government. It calls for elimination of the cash grant-in-aid (but not the donation of agricultural commodities) for the school-lunch program. It urges that direct national administration of the technical assistance given to soil-conservation districts give way to State administration under a Federal grant-in-aid in States which wish to have a part in the operation of this program and which can satisfy the Department of Agriculture that they are ready to play their part.

These recommendations are counterbalanced by others calling for increased Federal activity in such areas as civil defense, highway construction, and public health. If all the recommendations made by the Commission were carried out, no net reduction in the volume of Federal activity or in the weight of Federal taxation would follow from them.

Though the Commission on Intergovernmental Relations does not advise abandonment of any sizable sector of the ground now occupied by the National Government, it does urge that further extensions of national activity be made only after it has been established by careful inquiry that State and local governments are unable or unwilling to render some needed public service. In effect the Commission is not attempting to reverse the direction in which American federalism has been going; it contents itself with posting a "Go slow" sign for the future.

Some will find it hard to reconcile the Commission's endorsement of decentralization with its failure to recommend that the Federal Government unburden itself of a substantial part of its present responsibilities. But decentralization need not mean complete abdication of a field of governmental activity by the National Government. It can be achieved by admitting the States and their local subdivisions to partnership of some sort in a number of fields in which the National Government now goes it alone.

In general, it can be said that the majority of the Commission had as their goal the achievement of as much decentralization as is compatible with the social and economic realities of the mid-20th century. They did not believe that the way to decentralize successfully is for the National Government merely to pull out. Many suggestions—none of them novel—were made for the invigoration of State and local institutions and procedures. But the keynote of the report of the Commission is its plea for greater cooperation among all levels of government as the method of attaining and maintaining decentralized political institutions and processes. The report urges broadening and deepening the areas in which Washington works in harness with Phoenix and Sacramento, Hartford and Richmond. It calls for alertness on the part of the National Government to avoid conducting its activities in such a way as to impose hardship on State and local governments. On the positive side, it recommends admitting representatives of the lower levels of government to national councils when policy affecting them is framed, and wider use of State facilities in the execution of national policy.

The Commission does not translate its general exhortations for a more cooperative federalism into specific recommendations at many points. There is little in its report to indicate what type of cooperation should be employed in given situations or in given activities. Perhaps the most important concrete recommendation looking toward its goal is one for the creation of agencies responsible for devising new forms of intergovernmental cooperation and extending and perfecting the old forms. The recommendation referred to advocates the creation of permanent machinery headed by a special assistant in the Executive Office of the President to give continuing attention to intergovernmental relationships.

Throughout American history the belief has been widely held that nation and states are jealous competitors and that one can gain strength only by the enfeeblement of the other. Closely allied with these beliefs has been a feeling that the preservation of a Federal system requires the building of a high fence separating the domain of the national Government from that of the States to prohibit trespassing. The report of the Commission on Intergovernmental Relations should hasten the passing of this school of thought. Basically what it preaches is the doctrine of cooperation. It argues that all levels of government in the United States exist to promote the welfare of the people. It concludes that with mutual support and assistance, all are better able to contribute to the achievement of their common aim.

(EDITORS NOTE.—The author of this article was assistant director of research for the Commission on Intergovernmental Relations and is a member of the Department of English, History, and Government at the U. S. Naval Academy.)

Crowded Days for George Bender

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, July 29, 1955

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting article written by one of our colleagues, which appeared in the Clevelander of July 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CROWDED DAYS FOR GEORGE BENDER

(By Larston D. Farrar)

When exuberant GEORGE BENDER, one of Cleveland's most noted native sons, squeaked through to victory in the hot Senate race last year, Republicans from coast to coast cheered. He had performed a feat that seemed almost incredible, considering how the Democratic tide rolled through New York, Pennsylvania, and even sloshed over into Michigan, where a veteran Republican

Senator, Homer Ferguson, became part of the flotsam and jetsam.

The Democrats, chagrined at the loss of an expected Senate seat, turned to jeering. They referred to "laughing boy BENDER," and "giggling GEORGE," and said that he would make a clown of himself in the Senate as many of them had said he had become in the House of Representatives by perennially plugging for the late Senator Robert A. Taft, Republican, of Ohio, for the Republican presidential nomination. (Senator BENDER gained national fame in two presidential elections by leading the Taft band that played I'm Looking Over a Four-Leaf Clover, and many Democrats said that proved he should be in a circus).

But those who had watched GEORGE BENDER at work for years in Ohio were less surprised than people outside the State. His fellow-Ohioans—friend and foe alike—knew that underneath the curly pompadour and behind his smiling—almost puckish—countenance, there was a determined mind at work, and plenty of pituitary fluid to give him the energy that modern politics demands.

A PERSONAL VICTORY

Also, they knew, he had had to measure his financial resources in thousands of dollars, instead of millions, as many winners in other years had done. They realized that his victory, however narrow, was more in the nature of a tribute to his long years of activity and his tremendous capacity for friendship than because of other major political considerations. GEORGE BENDER always has won personal victories since he first entered politics. He has been a party man, particularly in late years, but there were times when he ran one way and the Republican Party ran another. He won and the party lost, and he steadily built a bigger and bigger following. Finally, he took over the party—in Cuyahoga County, at least—by dint of his own skill and hard work, helped by friends who were imbued with the same ideas of government as he held.

His interest in public affairs began when he was in high school—when Theodore Roosevelt visited Cleveland in 1912. GEORGE was one of the youngsters privileged to meet with Theodore Roosevelt, and when "Teddy" said he was planning to run for President again, GEORGE enlisted in his cause and became a zealous school-boy orator for that famous campaign. From that time, young BENDER went everywhere and did everything to learn the art of politics. In 1920, he ran for the State Senate and, at 23, became one of the youngest men ever elected for that body.

THE MAN FOR THE OFFICE

In 1930, he sought election to Congress from his home district, but lost to a veteran Democratic Congressman by a very small margin. In 1938, when Robert A. Taft first was elected to the United States Senate, GEORGE BENDER was at his side running for Congressman-at-large. The two men had met—and had become friends—in the Ohio Senate, and GEORGE had lent every effort to Taft's election.

Again and again, GEORGE BENDER ran for Congress and won. Only in 1948, when a Democratic tide was running, were his hopes dashed. But in all those years—as chairman of the Cuyahoga County Republican Central Committee—he was a powerful figure in Cleveland and in Ohio, and it was taken for granted that, when the office of Senator Taft was vacated by death, GEORGE BENDER was the man to hold high the Republican banner.

Surprisingly agile and fit for a man of 58, Senator BENDER today looks very little older than he did in 1938. A few more gray hairs fleck his temples, and he is not quite as bouncy as he once was but GEORGE BENDER still enjoys remarkably good health. He is 5 feet, 11 inches tall, weighs a normal 210 pounds ("I haven't gained or lost weight for years") and his blue eyes are clear as ever.

Senator BENDER's life today is crowded—and it's all work, although he enjoys every moment of it. He hasn't had time for golf, fishing, or other recreation for years, preferring to spend his time in building his political and business fences and keeping them in good repair. Long years ago, he founded the George H. Bender Co., general insurance, in Cleveland, and it has become one of the leaders in the general insurance field there. At the same time he has been rearing a family—two lovely daughters, both now married, who live on the 14-acre Bender estate at Chagrin Falls.

He meets regularly at breakfasts with the Ohio delegation in Congress, and he also spends an inordinate amount of time sitting in committee meetings. Lately his has been the voice of an outraged and long-suffering public on the Senate Permanent Investigations Subcommittee, which has delved into graft and corruption in connection with operations of the Quartermaster Corps. Time and time again Senator BENDER has expressed in short, ugly words the feeling of revulsion toward the graft payers and the graft getters in high places, thus making his name known to millions of other people over the Nation who feel as he does.

"I've always known that political life was demanding," he said recently. "But life in the Senate takes far more study and energy than even in the House of Representatives. My day is not my own from morning until late evening. I strive to do all that is required of me, as does every other Senator, but I am certain that they agree with me that it isn't possible for a man in this building to do everything he ought to do."

Senator BENDER gives the impression—whether speaking to a large audience or to a friend in his office—that he has great inner reserves that have helped him in his steady rise to fame and fortune, and on which he draws for the carrying out of his duties today. It's not surprising, therefore, to learn that GEORGE BENDER began his life and lived his early years in a large family headed by religious parents. He was 1 of 5 boys, all of whom have made their mark in the civic life of Cleveland. They were reared in the vicinity of 40th near Woodland, and their parents took the boys to the Congregational Church across town for morning church services and to the closer Presbyterian Church for evening services. GEORGE later became an elder in the Presbyterian Church. But when he married and had a home of his own in Cleveland Heights, he and his family attended the Church of the Savior (Methodist), where he became a steward. A vital interest in the things of the spirit always has served as one of the inner resources on which GEORGE BENDER has called in either political victory or defeat.

To those who want to know what kind of a Senator GEORGE BENDER is making, the answer is ready: He is making the good showing that his House service presaged. He is outstripping his fellow freshmen Senators in work and he is revealing a far-above-average capacity for leadership.

To many in Ohio, this will be no news. They keep up with GEORGE BENDER through his weekly newsletter, This Week In Washington, in which he clarifies many of the national and international issues that cry for his simple expression. His "Question of the Week," carried as the last item in this newsletter, has captured its own audience. Newsmen have quoted it more than once, and people have smiled, or sobered, depending upon the question. Some of the typical questions asked are: "Now that the Democrats have renominated Stevenson, who will be his running mate?" "Can the Four Power meeting be held in Hiroshima?" "Whatever happened to color TV?" "American families are paying 20 percent of their income for debts. Are you paying your share?" Have you booked your passage in an atom ship, plane or submarine?"

If you can answer these questions, don't send the replies to him. GEORGE BENDER already is overworked. But he has the drive to go on. Clevelanders can be proud of GEORGE. They may yet be even prouder.

WHO IS LARSON D. FARRAR?

Mr. Farrar has been covering news from Washington, D. C., for the last 13 years. He is employed by the American Press magazine as its Washington correspondent.

He first came to Washington in 1945 as Washington correspondent for the Gannett newspapers. He has written for many magazines and trade papers, including the Reader's Digest and the Saturday Evening Post. Before becoming a Washington correspondent, he was associate editor of the Nation's Business and was secretary of the chambers of commerce in Corinth, Miss., and Johnson City, Tenn.

Capital Transit's Death Would Profit Wolfsons

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, July 29, 1955

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able and timely article entitled "Four Million Four Hundred Thousand Dollars Last Ride—Capital Transit's Death Would Profit Wolfsons," written by S. Oliver Goodman, and published in the Washington Post and Times Herald of today.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOUR MILLION FOUR HUNDRED THOUSAND DOLLARS LAST RIDE—CAPITAL TRANSIT'S DEATH WOULD PROFIT WOLFSONS

(By S. Oliver Goodman)

The latest liquidation offer of the Wolfsons is the simple and very profitable way for them to get rid of their Capital Transit Co. headache, informed observers pointed out last night.

Louis E. Wolfson, the Florida financier and CTC chairman, yesterday estimated that liquidation of the transit system would yield stockholders not less than $10 a share.

This presumably is a net figure, after an estimated cost to the company of about $5 million for removing streetcar tracks and repaving the streets.

Neutral sources place the yield to stockholders at more than $16 a share and base their estimate on figures in the company's balance sheet as of December 31, 1954.

Stockholders' equity is put at a conservative $20,967,912 figure. Less the $5 million cost of track removal, there still would be an equity of nearly $16 million.

Divided by the 960,000 outstanding shares, this would mean that shareholders should realize about $16.66 a share.

Of the remaining equity of $16 million, the Wolfsons still own approximately a 28-percent interest, or a neat $4.4 million.

As previously reported, the Wolfsons in their 5 years of CTC management already have reaped more than $5.3 million in dividends and sale of stock, while still holding

a 28-percent interest in the company. All this came from an original investment of $2.2 million in 1949.

Liquidation of the company would be right up their alley. Their 28-percent interest in CTC at current market value is worth about $2.7 million—but in liquidation about $4.4 million.

Neutral sources also point out that the book value of CTC assets probably is far under what actually could be realized in liquidation.

In liquidation, observers emphasize, properties such as the M Street headquarters building and land, plus bus garages, would bring a fancy price in today's real-estate market.

Liquidation apparently has been an objective of the Wolfsons for many months.

Back in the spring of 1954, the Florida financier was quoted by a Senate subcommittee as follows:

"I have a responsibility to see that stockholders of Capital Transit Co. get a fair return. If there is no fair return, then I will have to take other action to protect their equity. If necessary, I will even go so far as to liquidate the company. I'll protect the shareholders, within the limits of the law, in spite of anything—including Congress and the Public Utilities Commission."

Many months ago a local investment banker told this newspaper's financial editor that Capital Transit Co. is worth more dead than alive—to the stockholders.

South Dakota Paces the Uranium Industry

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, July 29, 1955

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared, entitled "South Dakota Paces the Uranium Industry," together with some material relating thereto.

There being no objection, the statement and material were ordered to be printed in the RECORD, as follows:

SOUTH DAKOTA PACES THE URANIUM INDUSTRY

Mr. MUNDT. At this time I should like to call to the attention of my colleagues in the Senate the newest development of America's rapidly growing uranium mining industry. I am referring to the groundbreaking ceremonies held recently at Edgemont, S. Dak., for construction of a $2½ million uranium-processing mill—the first in the Nation to be built outside the Colorado Plateau area.

And I should like to comment, in particular on vision, patience, and perseverance shown by the citizens of Edgemont and the surrounding area in South Dakota's Southern Black Hills. Only a couple of years ago the vision of South Dakota's uranium possibilities was tenaciously held by the handful of pioneer prospectors from Edgemont who laboriously worked their claims and constantly explored the ever-expanding limits of known uranium-bearing ore deposits.

Their patience through these early years of prospecting, and their perseverance in spite of all subsequent obstacles, has now resulted in construction of this new processing mill. Surely this will stand as a monument to the untiring efforts of many, many people in the Black Hills area of western South Dakota and eastern Wyoming.

To further document the tremendous progress of this new uranium mining industry in recent years, I want to place in the RECORD two specific items.

The first is an editorial appearing in the Hot Springs Star, of Hot Springs, S. Dak., which comments on the future potential of uranium development in the Black Hills.

The second item is an article entitled "Black Hills Seen as a Top U-Ore Producer" as written by LeRoy F. Holst, public relations director of the Edgemont Mining & Uranium Corp., and as published in a recent issue of the Uranium Information Digest.

[From the Hot Springs (S. Dak.) Star]

A BRIGHT FUTURE NOW EVEN BRIGHTER

Friday, June 23, is destined to be a memorable day for Fall River County—in fact for all of South Dakota.

It is on that day that Gov. Joe Foss will break the ground and construction of the uranium processing mill at Edgemont will begin. We are among those who believe that uranium mining and processing are destined to become vital forces in South Dakota's economy—not only in the southwestern section of the State but in other parts as well. With the surface barely scratched, the mining industry alone brought added prosperity to this area, and it is noticeable not only in Edgemont, but in Hot Springs and other nearby cities as well. With new and richer fields being uncovered every day, with new mining corporations being formed almost weekly, and now with construction beginning on the processing mill, the bright future we have to face in this area becomes even brighter. As the prospectors, the miners, and the stockholders continue to prosper, so will we all, from this new-found source of wealth.

Already new jobs have been created, and with the development of the mill we may expect that trend to continue. More jobs will mean more people, and hand-in-hand will come additional business for all of us, as well as the development of new enterprises.

The battle for the location of the uranium processing mill was a long and a bitter one with every resource in Wyoming used to promote the location at Newcastle. There is no doubt but what the known rich ore-bearing fields of the Edgemont area and the established stockpile had its effect on determining the location of the mill, but not to be forgotten are the efforts of the people of the county and the State who recognized this new industry for what it is and expended time and energy in selling the Edgemont area. Of no little consequence in the blessing of this enterprise were the efforts of Senators Mundt and Case, Congressman Berry and Gov. Joe Foss. Theirs was the selling job at the top level and the proof is with us Friday of their accomplishment.

This, it is said, is the land of opportunity. In the uranium story there certainly is the proof, as much of what was once thought to be barren, rocky hillsides, are found to be rich, carnotite-bearing ore bodies with a potential of millions of dollars. Yes, the future is a bright one for southwestern South Dakota.

In Edgemont they say, "Like the horseless carriage, uranium is here to stay." Of that there is no doubt. The ground-breaking for the mill at Edgemont Friday serves as a welcoming celebration, not only for the mill but for the entire new industry that is uranium. It is as important to Hot Springs as it is to Edgemont, and this city should turn out en masse.

BLACK HILLS SEEN AS A TOP UNITED STATES U-ORE PRODUCER

(By Leroy F. Holst)

With the uranium potential of the carnotite-rich Edgemont area, in the Southern Hills, supplemented by that of the radioactive lignite deposits to the north, operators of the Black Hills feel that these age-old geological formations may well prove to be one of the Nation's top sources of uranium.

Although the Northern Hills ore occurs in such vast quantities that engineers use acre-feet for measurement, instead of tons, and the average grade for the field has been estimated at 0.40 percent, it may be some time before operations will be feasible. Classified as a coal reserve by the Department of the Interior under Public Law 585, this agency and the AEC are holding conferences to determine whether new legislation is required to handle uranium mining or whether this can be done by administrative ruling.

The AEC is confident that a process will be developed to satisfactorily and economically procure uranium from lignite, according to Senator FRANCIS CASE, Republican, of South Dakota, and that a plant will be constructed in Harding County to handle uranium production for the commission. With 10 companies doing exploration and development work in this area, a recent core drilling on one of 1,500 claims revealed a 2-foot vein which assayed 7.16 percent.

Operators in the Edgemont area, however, have surmounted most of their problems and, with half a dozen mining companies in production, continuous stockpiling at the Edgemont buying station was one of the major factors favoring this city's apparently successful bid for a 200-ton processing mill.

Senator KARL E. MUNDT, Republican, of South Dakota, and Congressman E. Y. BERRY, Republican, of South Dakota, were active in presenting Edgemont's case before the Commission, based on the substantial uranium potential of the area, ideal transportation facilities, and the stockpiling at the buying station.

Contract for the mill is being negotiated with Mines Development Inc., of Denver, who will finance construction and operation of the plant. Cost of and location of the mill will be disclosed as soon as the contract is signed.

Upon completion, the mill will have approximately 100 employees and will process 200 tons of ore a day. With continued stockpiling from the area's producers, the mill will have a considerable reserve which may preclude any shutdowns.

Art Ludwig and E. J. Brockman, pioneer prospectors and operators of the Edgemont area, have been active in exploration, development ,and production since early in 1952. Watching the transition of the Edgemont area from cattle country to a highly important center of the uranium industry, they have a justifiable pride in the roles they have played in this dramatic metamorphosis.

In the late spring of 1952, the partners hit the well-known jackpot.

With a steady stream of ore, which assayed as high as 0.50 percent, on its way to the nearest processing mill at Rifle, Colo., their income climbed steadily. Expansion of old operations began and new ones were started with installations of modern mining equipment.

A new strike was made last summer which received nationwide publicity. Called the Gould Strike, it is located in the Chilson Canyon area about 12 miles northeast of Edgemont and may well prove to be one of the richest carnotite ore-bearing properties in the Black Hills. With but 10 of the lease's 960 acres drilled for exploratory purposes, some assays show uranium oxide content as high as 2 percent.

Reorganization of the Edgemont Mining Co., Inc., was effected last October with the issuance of 3 million shares of common stock for public offering. The entire issue was oversubscribed within 24 hours and it is now being traded on the open market. The officers of the new organization, Edge-

month Mining & Uranium Corp., are: E. J. Brockman, Edgemont, chairman of the board; Art Ludwig, Edgemont, president; Ray C. Ludwig, of Englewood, Colo., executive vice president; Walter D. Jorgensen, Aurora, Colo., secretary-treasurer with William W. Schoonmaker, and Harold D. Stickney, Edgemont, directors.

Included in the firm's expansion plans are purchases, totaling $225,000, of new equipment and $75,000 earmarked for airborne reconnaisance of all its properties, to ascertain the most profitable sites for new operations.

Edgemont Mining & Uranium Corp., has interests in approximately 2,400 acres in Fall River and Custer Counties, located in the southern Black Hills of the southwestern corner of South Dakota. Holdings of the company have grossed approximately $400,000 to date.

The ore body on the Gould lease is being mined by the Pictograph Mining & Uranium Co., Inc., under a profit-sharing contract, made in June 1954 to run a maximum of 2¼ years.

The Virginia C group, which comprises six lode mining claims, is under lease to EMU to August 1957 with option to extend to 1962. One of the largest producers in the Black Hills, the ore shipped from the Virginia C operation has averaged 0.30 percent uranium oxide and 0.75 vanadium oxide. Both stripping and underground operations have been used at the C.

Another of Edgemont Mining's large producers is the Lundberg lease, situated about 1 mile northeast of the Virginia C, which covers 11 claims. These claims are leased to March 1957 and renewable for an additional 5 years. About 50 percent of the tonnage produced and shipped from this property was strip mined from surface deposits ranging in thickness from 1 to 6 feet. Present production is being mined from a sandstone bed about 1 foot thick and averaging 0.24 percent in uranium oxide.

The Pilsner group, comprising 16 lode claims owned by Edgemont Mining, is the only property of the corporation in Custer County. Production on the Pilsner holdings has been accomplished through stripping operations and the ore has assayed as high as 0.33 percent uranium oxide.

Comprising a full section, the Taylor lease is held by EMU under two 5-year leases, dated September 1952 and May 1953, with options to renew for an additional 5-year period. Sixty of the 640 acres have been explored by drilling and bulldozing and many carnotite deposits have been found in many areas of the entire northern half of the section.

Averaging 0.20 percent, the ore from this property has been produced from an ore body just a few feet below the surface. Discontinued during the winter months, operations will be resumed in late spring. Because of the shallow stripping, production costs on this operation have been low, averaging $5 per ton of ore.

The Cradall group of 4 lode claims, of approximately 80 acres, is an Edgemont Mining & Uranium Corp., owned property. Assessment work in March of last year resulted in a shipment of strip mined carnotite ore from surface deposits, which assayed 0.26 in uranium oxide and 0.43 percent in vanadium oxide. The corporation plans extensive exploratory drilling and development of this property during the summer.

One other property, the Hamilton lease, is held under a 5-year lease by the corporation with option to renew for an additional 5 years. Three miles north of the Virginia C, very little exploratory drilling has been effected on this lease but the 5 claims of 100 acres show great promise.

Pictograph Mining Co., another pioneer mining operation in the Edgemont district, was reorganized and incorporated early this year as Pictograph Mining & Uranium Co., Inc. The holdings of the new corporation include the original carnotite discovery site in the southern hills. Known as the Pictograph claim, this property is located in the Craven Canyon area of Fall River County. Within 4 years, this discovery has certainly changed the economic picture of the Edgemont district. With a total of 4,500 acres, all in Fall River County, Pictograph is planning exploratory drilling on an extensive scale, to start late this spring.

One of the properties adjoins the well-known Virginia C mine and the corporation holds great expectations of rich production from this holding. Officers of Pictograph Mining & Uranium Co., Inc., are: Matthew J. Brown, president; Lawrence Rhodes, vice president; Marvin Cummings, secretary and treasurer; and Art Ludwig, director.

Sodak Uranium & Mining Co., Inc., was incorporated under the laws of Delaware on November 15, 1954, with the following officers: C. J. Ortmayer, chairman of the board; Clyde R. Boyle, president; W. E. Haldane, vice president; Paul H. Russell, secretary and treasurer; with directors Jack O. Jones and Munroe F. Pofcher completing the directorate.

Formerly a partnership, in which Ortmayer and Boyle were interested, the new corporation plans considerable expansion of its exploratory drilling program, previously carried on by the partners. During 1955, Sodak expects to complete 100,000 feet of drilling in the Edgemont area as well as in Butte and Cooke Counties, Wyo. The corporation has approximately 16,000 acres in these 3 regions and, with 2 additional drills on order, the expanded program should be under way in the near future. Sodak also plans additional surveys by airborne reconnaissance in South Dakota, Wyoming, and Colorado.

The Black Hills Uranium Corp. was incorporated in January of this year by pioneer prospectors and operators of the area, who make up the new corporation's group of officers. They are: Roy E. Chord, president; Eugenia Chord, vice president; Charles M. Weber, secretary and treasurer; and Gordon Kamerer, director.

Although properties of the corporation have not been completely explored, a substantial tonnage has been mined and a very considerable tonnage remains to be mind, as evidenced by drilling data and over 50 surface exposures.

At the present time, Black Hills has two operations which have been in continuous production, Hold Up No. 15 and Hot Point No. 3, with the ore assaying 0.24 percent uranium oxide. The corporation also has Kados No. 3, Hot Point, Nos. 1–2 and 7, High Pockets No. 6, Green Slipper No. 5, Shamrock No. 4, and Clarabelle, Nos. 1, 2, 3, 4, and 5. Most of these will be under production by the end of the summer.

Mining operations and reconnaisance on the corporation's Red Canyon and Craven Canyon holdings have been under the supervision of Carl Bayes, consulting engineer of Urbana, Ill., and this spring will find much exploratory activity on Black Hills Uranium Corp.'s properties.

The corporation's claims were recently involved in a claim-jumping suit that was given widespread publicity. Judgment in the suit, heard in the district court at Hot Springs, S. Dak., in January, was in favor of the plaintiffs, Roy E. Chord and the Black Hills Uranium Corp.

The first load of carnotite ore to be sold from South Dakota was taken from Hot Point No. 2 and shipped to Rifle, Colo., by Roy Chord on January 28, 1952. This test load averaged 0.75 percent uranium oxide and, like most of the ore in the Edgemont district, was very low in lime content.

Mining Research Corp., headed by Clifton W. Livingston, president, was formed to conduct research on in-situ leaching of uranium ores and to develop processes for treating low-grade uranium ores. The corporation acquired leases in the Edgemont area from various landowners and consolidated its holdings in a block comprising approximately 7,000 acres. In association with Shannon Oil and Freemont Oil Co.'s Mining Research Corp. also acquired nearly 100,000 acres of unexplored land in the Carlyle, Aladdin, New Haven, Hulette, and Missouri Buttes areas along the outcrops of the Fall River, Fuson, and Lakota formations, on the north west flank of the Black Hills uplift.

The rapid development of the Edgemont district forced the corporation either to abandon the research program it had consistently pursued, or to restrict itself to research. Accordingly, milling agreements were entered into with Edgemont Mining & Black Hills Uranium Corp. These agreements affect the major portion of the ore reserves of the district. A study was then made, covering the economic factors that determined the proper location for an Edgemont mill. As a result of this survey, the best available mill site was purchased. The services of E. C. Bitzer, former metallurgical consultants to the Atomic Energy Commission, were obtained, and Knowles & Associates, of New York City, were engaged to undertake the preliminary design of the mill.

An agreement was then entered into with Climax Molybdenum Co. in which Livingston Metals Corp. (to be controlled by Climax) was formed for the purpose of constructing a mill at Edgemont, if a satisfactory contract could be secured from the Atomic Energy Commission. Land acquired in the Black Hills by Mining Research is included under the Livingston Metals agreement.

Rosebud Oil, Inc., on February 1, 1955, took over 76 full claims in the Edgemont mining district, held by the McLeod Mining Co. A South Dakota corporation, capitalized for $50,000, Rosebud has 900 acres of proven oil properties in Weston County, Wyo., with 11 producing wells. The corporation has far-flung uranium properties, with 1,900 acres under lease near Santa Fe, N. Mex.; 650 claims in Grand and San Juan Counties, Utah, and 111 claims in Harding County, in the Northern Hills.

Rosebud has outlined considerable exploratory drilling on the former McLeod Mining Co. claims this spring. A Dry Forks Canyon mine, in the Moab district of Utah, was opened the latter part of March.

The McLeod Co. was under profit-sharing contract to Edgemont Mining to work EMU's Freeze Out No. 4 mine, in the Pilsner Group, until weather conditions precluded further operations, on February 1. Rosebud will resume work on the contract as soon as weather permits, according to word from the firm's headquarters at Huron, S. Dak. Ore from the Freeze Out No. 4, located about 22 miles from Edgemont, has averaged 0.20 percent uranium oxide, with occasional assays of 0.33 percent.

Sacred to the Sioux for centuries, their Paha Sapa, or Black Hills, were to be forever kept free of white settlement under the famous treaty of 1868. Nullification of this treaty, drawn up between Agalala Sioux Chief Red Cloud and the Federal Government, was affected through the steady encroachment of the whites, following discovery of gold on French Creek, in 1874. Much blood was shed, as a result of this gold, climaxed by the Custer massacre on the Little Big Horn, June 25, 1876.

Today, producers in the Black Hills continue to mine and sell, to the Government, exceptionally high-grade ore, samples of which have run as high as 12.67 percent (chemical assay by AEC) in uranium oxide.

Are We Losing Japan?

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. FEIGHAN. Mr. Speaker, in the July 17 issue of Parade magazine, a very significant article written by our distinguished colleague from Connecticut, the Honorable THOMAS J. DODD, appeared under the heading, "Are We Losing Japan?" This article is a brief, concise, and factual analysis of what has happened in Japan from the point of view of Communist subversion and long range planning during the approximately 10 years since V–J Day.

The author of this article has had long experience with tyrants and tyranny and knows from his hard, cold experience gained as chief prosecutor at the Nurnberg trials, the dangers which Red colonialism presents to our free way of life. Congressman DODD points out that "we have the ability, the courage, and the know-how to save Japan from being neutralized or, worse yet, turned against us, but time is running out." This highly informative article will be of interest to all the Members of Congress because Congressman DODD indicates what we ought to do with what time we have left if we want to save Japan from going neutral or being turned against us.

Under leave obtained, I insert the article in the RECORD:

ARE WE LOSING JAPAN?

(By Hon. THOMAS J. DODD, of Connecticut; member, House Committee on Communist Aggression)

The United States is in real trouble in Japan. The onetime enemy we had counted upon as the chief bulwark of freedom in the Far East is drifting farther and farther from the free world camp, closer and closer to the Communists and the neutralists. This was apparent in the recent Japanese election, when an assortment of leftwing, Communist-directed parties picked up enough seats to defeat our hope of Japanese rearmament. Now we are confronted with a rising tide of anti-Americanism, plus Russian-Japanese conferences that may drive a deeper wedge between the two nations.

Shocking things have been going on in Japan since World War II ended—things that have been kept from the American people by military government and censorship. As a result, our position on the critical Asian front is in jeopardy.

On the basis of personal conversations with informed Government officials abroad, testimony before congressional committees, and statements of Japanese, here are the facts as I see them:

Japan could be completely paralyzed within 24 hours by a Kremlin-called general strike.

Of 5 million organized workers, 3,500,000 are under the control of Communist-dominated unions. They are all in key industries and are directed by Moscow-trained experts.

Communists influence in education ranges from nearly 100 percent control of elementary-school teachers to 10 percent of the university graduates.

Japanese Diet (parliament) members who have been wooed and won on visits to Red China would take a neutral or anti-American stand in a crisis.

Japanese prisoners of war held for years by the Reds were given super-Communist training and are one of the best trained party cadres in the world.

All these Communist gains were scored while our Army of Occupation controlled Japan. How? Responsible members of government say the infiltration began when we permitted Russians aboard the U. S. S. *Missouri* for the signing of the Japanese surrender. That was the signal for Kremlin-directed agents to move in. They have made their biggest strides in the fields of labor, education and propaganda.

Under the noses of Gen. Douglas MacArthur and his staff, the Reds wormed into the labor unions on the pretext of broadening the base. This "broadening" process has now reached the point where 70 percent of organized labor is Communist-dominated. Only the farmers have resisted, and even with them the Reds have made headway. Their left wing "Japan Farmers' Union"—partly through confusion with the conservative "Old Japan Farmers' Union"—now has almost half a million members and rivals the older union in numbers.

The most tightly controlled Red union is the Japanese Teachers Union. Its devoted members, with practically complete control of the schools, drum into children the lessons of the party line: Japan wants peace—but the United States is an enemy of peace and the Chinese Nationalists have "sold out" to the enemies of peace.

The teachers further use their positions to electioneer, instructing children to urge their parents to vote for left-wing, pro-Communist candidates. This tactic helped the Reds gain strength in the recent Diet elections.

In the propaganda field, more than 20 of Japan's most popular and widely read publications are sponsored, published, owned or controlled by Communists. Thus, the two primary sources of education—schools and the press—are under Kremlin control.

Can we halt Japan's leftward drift, or even reverse it? What is the best the United States can hope for in Japan?

We can control the Red threat only by meeting it where it began—on the local level. Our propaganda program in Japan—and throughout the Far East—should be improved and increased. Truth is our strongest weapon. We should present it so that the teeming millions of Asia can understand it .

There is a vague hope that the recent upheavals in Moscow may reflect themselves in a struggle for control of the Japanese Reds. But that is wishful thinking. We need a positive, vigorous program that will help bring about economic recovery in Japan with resulting financial and political stability. Something must be done right now to take up the slack in heavy industry created by the recent election loss of the rearmament program.

A JAPANESE MARSHALL PLAN?

If the Marshall plan could meet and defeat communism in Western Europe, a similar plan can do it in Japan. We must start thinking and working now toward the day when Japan will be able to take her place in the Southeast Asia Treaty Organization.

Another weapon in our battle for Japan is the tariff. Recently, Congress gave President Eisenhower the power to lower tariffs over the next 3 years. Perhaps, in the great need to rehabilitate Japanese economy and trade, he will find that special measures must be taken to defeat Communist expansion there.

And the turbulent political situation in Indochina also affects Japan, for that country long has been Japan's breadbasket. Now that half of Indochina has gone to the Communists and the other half is menaced, the problem of Japanese communism is tightly tied to the problem of communism in Indochina. The fall of southern Vietnam to the Reds might nullify all the progress made in Japan since the war.

I believe that we have the ability, the courage, and the know-how to save Japan from being neutralized or, worse yet, turned against us. But time is running out. While we mark time, Communist propaganda goes unchecked and the Red octopus spreads its tentacles ever farther into the economic and social life of Japan.

The Future of the Natural Gas Exemption Bill

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

Mr. HESELTON. Mr. Speaker, now that the House has been forced to make its decision on the natural gas exemption bill (H. R. 6645) under unusual circumstances, the question as to its future is an important one—not only to Members of the House, but to the producers of this gas, who have waged such a vigorous fight to be exempted from Federal regulation, and to the scores of millions of users of this gas.

In my opinion, it is crystal clear that so far as the opponents of this bill are concerned, a battle was lost by the thinnest of margins, but the war can and should be won.

When a controversial bill of this nature is first defeated by the legislative committee on a vote of 14 to 14, after weeks of hearings and executive sessions, that is significant.

It is even more significant that, upon reconsideration, the bill was reported by the committee by the margin of only a single vote, 16 to 15, with the full committee voting.

I think everyone here is fully aware of what followed, culminating in a hearing before the Rules Committee almost on the eve of adjournment, after weeks of jockeying for position. Yet a rule was reported, again by a 1-vote margin, 6 to 5.

The haste with which floor consideration was scheduled after the rule issued indicated considerable confidence that the House would pass the bill by a safe margin.

It must have been most disappointing that the motion to recommit was defeated by only 7 votes, 210 to 203, and very discouraging that on final passage the margin of victory was only 6 votes, 209 to 203.

These exemption efforts have been before the House committee and the House for years but no defeat has been accepted by the producers who apparently are determined to have their way.

It will be recalled that in 1950 an exemption attempt passed the House by a 2-vote margin, 176 to 174. Whether this accounted for the fact that no move was

made to override the Presidential veto which followed is a matter of opinion. But it cannot be disputed that it did not end the determined drive for exemption from regulation. It would be folly to assume that the House action this week would have any such effect.

I do not believe that any useful purpose would be served by reviewing the arguments pro and con. They are set out fully in the majority and minority reports of the House committee and in the debate in the House on July 28, which will be supplemented by any debate in the other body where the bill is considered there. It was finally and conclusively shelved for this year today, just as was predicted frequently during the House debate. In the light of this, and particularly of the repeated statements during the House debate that adequate information was not available, it seems more regrettable now than it did before the vote on July 28 that the Members of the House were not given the benefit of the results of the Harris resolution, amended by the Wolverton resolution, for an investigation of the facts.

Therefore, two immediate courses of action seem to be vitally important.

First, Members of the House can make a most important contribution toward an ultimate and sound solution of this vexing and complex problem by securing the fullest possible reliable information as to the situation in their respective areas. I believe that such information would be welcomed by the House committee, irrespective of the fate of the Harris-Wolverton resolutions at the hands of those who control such matters.

Second, I hope every Member of the House will see to it that any action directed toward increasing the prices of natural gas to the users of such fuel in his area is examined as fully as possible and the results reported promptly to the House committee. Again, I feel confident that such information would be welcomed by that committee.

I am certain that the vast majority of Americans want and will demand a fair, open, and intelligible solution of this problem by Congress. That cannot be brought about unless all the available and pertinent facts are presented. Certainly the industry has a very real obligation to make that possible.

The Smog Problem

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. McDONOUGH. Mr. Speaker, Los Angeles and the whole of southern California is confronted with one major problem which so personally affects every man, woman, and child living in the area that I believe the average man on the street, if asked to name the one problem he considers most serious in Los Angeles as it affects him individually, would reply without hesitation "The smog problem."

Smog, the result of a complex and little understood air pollution, has descended upon southern California like a plague blotting out the usual sunny skies which were the pride of all Californians a few short years ago. It has come, most experts agree, as a result of the tremendous expansion of population and industrial growth with all the increases in motor vehicle traffic, waste disposal, and other necesary community processes which, unless properly supervised and controlled, can contribute to the serious contamination of the air such as we are now experiencing.

I sponsored H. R. 3680 in the House to authorize the Department of Health, Education, and Welfare to conduct an intensified research into the causes, hazards, and effects upon the health and welfare of the people of air pollution, and to develop effective methods for its prevention and control. Senator THOMAS KUCHEL sponsored a similar bill in the Senate.

Because the Senate acted on this legislation before the House considered the bill I introduced and other House legislation relating to this subject, the Senate bill was brought to the House floor for consideration and passed, becoming Public Law 159 of the 84th Congress.

This legislation which I sponsored and supported is the first major step on a nationwide scale toward solving the smog problem and eliminating one of the most serious threats to the health and well-being of the people, not only in southern California, but in all parts of our Nation. It also definitely establishes the responsibility of the Federal Government to join with State and local governments in the fight to control and eliminate dangerous air pollution.

Under the provisions of the Smog Act, a 5-year program of research has been established which will be carried on for the entire period under the supervision of the Department of Health, Education, and Welfare. The act also includes an appropriation of $5 million a year to carry on the meticulous research necessary to determine the causes of air pollution such as smog, and its effects on the health of the people, as well as to develop methods to control and eradicate dangerous air pollution. The total appropriation for the 5-year period will total $25 million.

This is an incidental expense when consideration is given to the enormous benefits to each and every citizen which can result if we solve the problem of effective control and elimination of air pollution. In fact the county of Los Angeles alone has reported appropriations of more than $2½ millions toward research in its effort to control air pollution since 1947, and is now maintaining more than 200 employees in this work at an annual cost of nearly $2 million.

The program set up under the Smog Act will make possible technical and financial aid for a joint effort by the Federal Government and the States and local governments and will provide for the collection and dissemination of information resulting from research which will be valuable to local agencies in their efforts to eliminate pollution from the air.

It is my hope that as a result of the scientific research and exhaustive investigation which will be carried on in all parts of the Nation under the new program, we will finally find an effective method of controlling and eliminating smog and other conditions caused by air pollution.

When the problem of air pollution is finally solved, we will have overcome one of the most serious threats to human health and welfare which has resulted from the tremendous expansion of both population and industry in this atomic age of the 20th century.

Treasury Department Report Relating to Cooperatives

EXTENSION OF REMARKS
OF
HON. JERE COOPER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. COOPER. Mr. Speaker, due to the wide interest in the tax treatment of cooperatives, I am including in the Appendix of the RECORD a letter dated July 26, 1955, which I have received from the Secretary of the Treasury, wherein he sets forth some problems which have arisen relative to the tax treatment of cooperatives and his suggestions for meeting these problems:

THE SECRETARY OF THE TREASURY,
Washington, July 26, 1955.

Hon. JERE COOPER,
Chairman, Committee on Ways and Means, House of Representatives, House Office Building, Washington, D. C.

MY DEAR MR. CHAIRMAN: Recent Court decisions have made it clear that certain tax legislation which the Congress enacted in 1951 is not working out as the Congress intended.

Public Law 183, 82d Congress, 1st session (now embodied in secs. 521 and 522 of the Internal Revenue Code of 1954) eliminated the tax exemption of cooperatives which had existed previously. A study of the legislative history of this law shows that it had the clearly intended objective of taxing all cooperatives' income in the year earned, either to the cooperative or to the individual member.

Prior law had permitted cooperatives to accumulate necessary reserves tax free. In the 1951 law the Congress removed the allowance for tax-free reserves and provided that cooperatives were to be taxed on earnings at the regular corporate rates. However, in computing taxable income they were allowed deductions not only for cash distributions to their patrons but also for allocations made to patrons of their proportionate shares of the income of the cooperative. The allocations could take any of many forms, including certificates of beneficial interest, and promissory notes with or without due dates or interest.

In taking this action in 1951, the Congress apparently relied on rulings of the Internal Revenue Service that patronage allocations were taxable to patrons when made, regardless of their form. Accordingly, the 1951 act made no specific reference to the taxa-

bility of refunds in the hands of patrons. Congress apparently assumed that the rulings of the Internal Revenue Service were valid, that cash refunds would be taxable currently to the patrons in full, and that noncash allocations, in whatever form, also would be taxable currently to the patrons at face amounts.

It thus was intended in 1951 that the cooperative income should be taxable as it was earned either to the cooperative itself, or to its members. Such income was to be taxable to the cooperative as a corporation unless paid in cash or otherwise allocated as patronage refunds, in which cases it was assumed to be taxable to the patrons or members.

However, several courts now have held that when allocation certificates issued to patron-members have no fair market value, they are not properly includible in the taxable income of the patron-members when issued. Notwithstanding the nontaxibility of these allocations to the members, they remain currently deductible by the cooperative under the clear terms of the 1951 act. It therefore is possible for cooperatives to take current tax deductions for certificates which are nontransferable, nonredeemable, and noninterest bearing, and not taxable to anyone. Cooperatives thereby may retain earnings, for indefinite periods of time, with no liability for income tax by either the cooperative or its members. Thus, the 1951 act has failed to accomplish its purpose and, contrary to Congressional intent, in at least some instances cooperatives may retain earnings with no tax imposed either on them or their members.

The general plan of the 1951 legislation, to tax all income from cooperatives' operations as it is earned either to the cooperative or to its patron-members, might now be made effective by appropriate action of Congress in the following manner.

It could be provided that cooperatives could take deductions in computing their taxable income only for (a) cash distributions and (b) noncash allocations issued in such form or under such circumstances as would make them currently taxable to the patron-members receiving them, and (c) the amount deductible by the cooperative itself should not exceed the amount so currently taxable to patron-members.

This would not interfere with the proper function or financing of cooperatives, but would make it certain that all income is taxed in one place or the other as it is earned. The traditional handling of cooperative affairs would not be impeded.

Some difficulties are involved in requiring patron-members to pay tax currently on noncash allocations. Where the patron-member gets no cash distribution, he may not have funds to pay the tax. The Internal Revenue Service has received numerous complaints from individual patron-members who object to paying tax on noncash allocations. Many people naturally consider only cash receipts and expenditures in making their income-tax returns.

These difficulties can be eliminated by the adoption of a withholding system comparable to that on wages and salaries. The tax could be withheld at the bottom rate for individuals (now 20 percent). As in the case of wages and salaries, refunds automatically would be made to those entitled to them and additional taxes paid by those subject to higher tax rates. Withholding at source would help both patron-members in payment of their taxes and the Treasury in its enforcement and administration problems.

The preceding changes would implement the intent and purposes of the act of 1951. They would make it sure that noncash allocations would be taxable, and that tax would actually be paid on behalf of the recipients. Further wholly-tax-free additions to the capital of cooperatives would be prevented.

Cooperatives still would be able to retain for their business use the entire amount of their earnings, subject only to the 20 percent withheld and paid on the tax liabilities of patron-members, by allocating all earnings to their patron-members in the form of taxable certificates. At some appropriate time your committee may desire to undertake a careful study to determine whether or not this result is in the public interest, in view of the alleged competitive situation existing between cooperatives in competition with corporate businesses which can expand their activities by retained earnings only after paying tax at the full corporate rate, or by sale of securities to the investing public.

The Treasury Department will be glad to be of such assistance as we can to you and your staffs in any consideration that you may give to the various aspects of this subject.

Sincerely yours,

G. M. HUMPHREY,
Secretary of the Treasury.

The Promise of International Television

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, July 29, 1955

Mr. WILEY. Mr. President, on a number of occasions I have spoken of the great promise of a linkup of international television—spanning the continents through the miracle of video.

I had long been in favor of the Congress doing all that is possible to spur global television work. The educational, cultural, economic, political possibilities which would accrue from joining of the continents through video are so exciting and promising as to require that we do everything possible toward this end, particularly in view of the continued East-West struggle for the allegiance of men.

I was pleased to see in the May 1955 issue of the Reader's Digest a very interesting article describing pioneering work which has been performed toward this end—work toward which our distinguished colleague, the senior Senator from South Dakota [Mr. MUNDT], has contributed greatly, and which I, personally, on the Senate Foreign Relations Committee, have been glad to help along to the extent that it is possible.

I ask unanimous consent that this Reader's Digest article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GLOBAL TV IS ON THE WAY—AN AMERICAN ENGINEER PIONEERS AN AROUND-THE-WORLD ELECTRONIC NETWORK

(By A. E. Hotchner)

Seven years ago television on an international scale was only a dream in the mind of engineer William S. Halstead. Today it is a growing reality. Judging by current progress Europe will be TV-linked to the United States within the next few years; before too long an international network will girdle the earth.

Some of the units which will make up this global chain have already emerged. The anchor station of Japan's Nippon Television Network, which Halstead helped set up, celebrated its first anniversary a few months ago with an estimated audience of over a million viewers. An experimental station in Thailand will soon be transmitting programs. Last summer a network of eight European countries operated successfully over an experimental 4-week period. Seven million Europeans saw Pope Pius at the Vatican, a Belgian ballet, Queen Elizabeth reviewing the naval reserve. The integration of these networks with others yet to be established will eventually provide a worldwide TV system.

In setting up United States engineered TV in other nations, Halstead was in what amounted to a technical race with the Soviet Union. The system used in Russia is different from ours, and when a nation adopts one system, its sets, in normal operation, cannot pick up images beamed by the other.

"Back in 1947," Halstead says, "Henry Holthusen, former consultant in establishing the Voice of America, talked to me about how Russia was getting the jump on us in TV. Japan had already adopted the system used in Russia and some European countries; her neighbors were expected to follow. This was vitally important to the United States, for television is more than a medium for education and entertainment—its relay systems can also provide telephone, telegraph and, in time of war, radar and other military services."

Today microwave relay carries sounds and TV images across this country by FM radio beams which, unlike the AM waves of ordinary radio, are static-free and seldom fade. The one drawback to microwave transmission is its short range. However, a system of relay towers has, since 1951, provided a transcontinental microwave network which carries not only television, but telegrams, phone calls, and news photos.

In 1948 such a system was still a vision. Long-distance FM relays were being experimented with and some had been set up, but on a limited scale. Halstead was then a consulting engineer for the Rural Radio Network of New York State, trying to see what he could do to improve radio reception in the mountainous upstate region.

For weeks Halstead and a crew of engineers hauled portable test equipment to the mountaintops. "From this experience," he says, "we discovered the fallacy of an engineering shibboleth that FM towers had to be within line of sight—usually about 60 miles—to afford proper reception." These mountaintop relay stations gave perfect reception for distances of 100 miles in all directions. There was no reason, Halstead decided, why this system could not do for television what it had done for radio.

Remembering his talks with Holthusen, Halstead now wondered if by using the New York mountaintop system, he could bring TV to a mountainous country like Japan. He got a topographical map of Japan and plotted it.

Holthusen was enthusiastic. He took a leave of absence from his law practice, and with Halstead's plans in his brief case, went on a round-the-world trip. He found that before their plans could be adopted they had to lick the problem of who would look at television in countries where only a few could afford TV sets.

Mass viewing in public places, Halstead decided, was the answer. "At strategic places throughout a city like Tokyo," he told Holthusen, "large TV sets can be put up. Mobile units on trailers can be parked in front of outdoor audiences."

Halstead and Holthusen outlined their ideas at a meeting with Senator KARL MUNDT and other Government officials. The first step in making global television possible, they said, was to induce other countries to install American-style TV. Then by using

long-range relay stations a global network would be feasible, for Halstead had discovered a startling geographical fact: he had drawn a path around the world, starting from New York and going through Canada, across Greenland and Iceland, on to Scotland via the Faeroes and Shetland Islands, then across Europe, Southern Asia and Pacific islands to Japan, and across the Pacific via the various island groups to San Francisco. At no place on that path is there more than 290 miles between land masses. And the newest relay methods give TV beams a range of at least 300 miles.

A report of Senator MUNDT's speech in the Senate, describing Halstead's plan, was carried by the wire services. One of Japan's leading publishers, Matsutaro Shoriki, read it and invited Halstead and Holthusen to Tokyo to present their ideas to Japanese business leaders. "You must show us," he pointed out, "why we should change the TV system we already have."

Halstead outlined four reasons why the American way was better. First, the system used in Russia and some European countries produced an irritating flicker. Second, American TV sets cost less than Russian and European sets, which offered small screens, while we had 27-inch receivers available. Third, interest in television was spreading throughout the Orient, which meant that Japan could open up a new industry. Fourth, in the event of a military emergency, Japan could be linked to the United States in a vast radar warning screen that would stretch across the Pacific and be of enormous value to both countries.

Television in Japan was Government-owned. Shoriki and his group favored private ownership. After furious debate in the Diet, Shoriki's forces won and in 1952 the Nippon Television Network received its license. In 1953, under supervision of Halstead's engineering firm, anchor station JOAX went into operation.

In parks, public squares, and railroad stations, huge throngs gathered to watch large-screen TV sets. Among the programs' sponsors were beer companies, rice concerns, and kimono manufacturers. The cost of a 17-inch set dropped from $550 to $200. (Halstead estimates that Japan now has 40,000 sets. Seventeen Japanese manufacturing concerns are producing them—another aid in Japan's economic rehabilitation.) Halstead's overall plan provides 18 mountain-top stations which will eventually bring TV to all Japan.

The Japanese success has attracted widespread attention. Last October, Thailand appropriated about $12 million for a Halstead-planned national radio-and-telephone relay network. Later this will include TV. While making TV-reception tests in Mexico, Halstead completed plans for a nine-station Caribbean network that would link the Americas. He and Holthusen also have provided the Turkish Government with a plan which may swing them to United States television instead of the system previously favored. By putting mountain-top stations in only four regions, Halstead's system would provide television to most of Turkey.

India is considering Halstead's plan to erect its first TV station at Allahabad. Its programs will be devoted almost exclusively to education, including teaching the population in the outlying villages to read and write. Ultimately a TV network may serve all India. Prof. Humayun Kabir, India's Secretary of Education, says, "We fully expect that television will advance the cultural level of rural India 500 years."

Halstead's interest in electronics goes back to his boyhood in White Plains, N. Y. By the time he was 17 he had built one of the first ham radiotelephone stations in America. In 1923, as a student at Haverford College, he set up the first student-operated campus broadcasting station in the United States. Later he worked in the office of the Army's Chief Signal Officer, and in the late thirties was one of the pioneers in developing FM radio and telephones for trains and boats.

He is now president of Unitel, Inc., a global television enterprise. One of his current projects is a system of North Atlantic relay communications, called NARCOM, which will link the United States with Europe. Halstead estimates that the relay stations, equipped with their own powerplants, should cost around $60 million. The idea of an international relay network such as NARCOM, joining the free nations of the world, has been endorsed by the Senate Foreign Relations Committee on Overseas Information Programs; Congress has authorized a Commission on Governmental Use of International Telecommunications.

One problem still to be solved is the establishment of a single broadcast standard in place of the four now used in Europe. France, for example, broadcasts both a 412-line picture and an 819-line; Holland, Belgium, and Germany use 625 lines; England uses 405. The United States standard, on the other hand, is 525 lines. Since a TV set designed for one standard cannot receive pictures broadcast on a standard with more lines, this means complications.

Though it is possible (as with last year's eight-nation network) for a TV station to receive images on one standard, convert them to a new standard and rebroadcast, this requires expensive extra equipment and picture quality is lost in the process. But in spite of such technical difficulties, David Sarnoff, head of RCA, thinks that a North Atlantic TV system will probably be an actuality within 5 years.

Need for a High School Textbook on Democracy and Communism

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, July 29, 1955

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks, I wish to include an address, Need for a High School Textbook on Democracy and Communism, by Dr. Kenneth Colegrove, professor emeritus of political science at Northwestern University, which he made at Queen City Club, Cincinnati, on June 8, 1955:

The trustees of the Institute of Fiscal and Political Education as well as myself are grateful to the thoughtful citizens of Cincinnati for arranging this luncheon to discuss our project for a high school textbook comparing democracy and communism.

The purpose of our discussion this afternoon is: "Why should we have such a textbook?" The answer is two-fold. First, communism is today the greatest danger to Democracy. Second, there is no high school textbook on the subject.

When parents ask school boards to teach in the public schools the dangers of Communism, two objections are generally raised. Parents are told: "There is no textbook, and the schools cannot teach such a course without one." If parents persist, they are often told that the curriculum is too crowded.

The initial purpose of the Institute of Fiscal and Political Education is to remove the first of these two objections.

The second objection, namely, the answer that the curriculum is too crowded, has unusual significance. Many Americans have come to believe that the cause of the overcrowding of the curriculum has resulted from the overemphsis on progressive education. There has been, they believe, too much insistence on new forms of social play at the expense of history, language, arithmetic and elementary classroom discipline. Homework has been somewhat belittled, if not actually discouraged. At the same time, a climate of socialism has pervaded many of our textbooks. All of this seems to have been done in the name of mass education.

The decision regarding the curriculum of the public schools should rest on the American principle that the American people have the right and the duty to control the public schools. It is true that the people in a school district should seek the advice of an expert. The superintendent of schools in each school district is the professional expert to be consulted. But we should never forget that, in American tradition, the public schools belong to the people in each State or each school district, and not to the superintendent, nor to the teachers, nor to the politicians, nor to any self-constituted authority.

American tradition is thus contrary to the practice in Italy, Germany and Soviet Russia, where the administration of education belongs to the central government and is subjected to bureaucratic control from the national capital.

There is a movement in the United States today which could result in centralizing American education. This movement could easily result in taking the public schools out of control of the people in each school district. It would give us Federal supervision of public education.

Fortunately, the public schools are still legally in the hands of the people. One of the many utilitarian reasons supporting the continuance of the American principle of local control of elementary and secondary education is the need for reminding parents and grandparents of children regarding their responsibility for maintaining the public schools. The salaries of school teachers should be sufficient to attrack competent educators. The school buildings and apparatus should be modern and adequate. Again, there is the problem of moral guidance and juvenile delinquency. Discipline is one of the toughest problems of the public schools. Unfortunately, parents are now throwing too much responsibility upon the public schools. There should be, in this field, complete cooperation between parents and the school authorities.

I wish to refer again to the second objection against teaching a comparison of democracy and communism in the public schools. This objection is the claim that the school curriculum is now too crowded to introduce a new course comparing democracy with communism. The high school curriculum is indeed overcrowded. But if the people in each district want to change the curriculum, they have the power to change it, and the schools will loyally accept this decision.

At this point I wish to explain the use of the term "democracy" in the title of our textbook on Democracy Versus Communism. Personally, I would prefer to call our American Government a "Representative Republic." This is more in keeping with the thought of the fathers of the Constitution. But after hundreds of talks with schoolmen, politicians, and scholars I am persuaded that any textbook or new course in the curriculum under any other name than "democracy" would have little or no chance of adoption in the American school system. Whether all of us like it or not, the term "democracy" has become so embedded in the public school instruction that it is useless

to attempt to promote the adoption of a substitute symbol. By the use of the term "democracy," however, our textbook will seek to show our boys and girls that American democracy means a Representative Republic, governed by a Constitution and Bill of Rights, which citizens, Presidents, Congressmen, and judges will respect and must obey.

Many people today are saying that communism is no longer a danger to the United States. This is what the Communist Party wants them to believe and say. Many well-meaning liberals thus become unconscious agents of the Moscow Presidium. They spread the propaganda that the Communist danger has passed. They remind us that the 11 top Communists were placed behind prison bars; that a thousand Communists and subversives have been expelled from the Federal Government; that scores of Communists have been driven from the schools and universities; and that the labor unions have been widely improved. As a result, they tell us that communism is now dead in America.

All this the Communist Party wants us to believe as a conclusion to the subject in order to cause us to relax our guard. But we should remember that the Communist Party never gives up, never admits defeat. The Communist conspiracy still seeks to destroy America. Hidden Communists and subversives still remain in Government, mass communications, education, and labor unions. Communism, internally and externally, is a growing, not a declining, menace to the American people.

I know that some of our guests at this table have had personal experience with Communists or subversives in Federal Government. They understand that what has occurred and is occurring is unbelievable, unless one has actually witnessed it.

Permit me a personal observation. When I served as consultant in the Office of Strategic Services in Washington during the Second World War, I, with many others, witnessed the operations of pro-Communists and other subversives in the Federal Government, tending to betray our country. Our protests fell on apathetic ears.

After the war, when I served in General MacArthur's headquarters in Japan, I witnessed an amazing situation. Month after month, pro-Communists whom I had known in Washington, were sent out to Tokyo to aid in the "democratization" of Japan.

General MacArthur had little part in selecting all of his 3,000 civilian personnel. For choosing the personnel of the occupation of Japan, the War Department depended largely on the advice of the Institute of Pacific Relations, which, as the McCarran subcommittee in the United States Senate subsequently showed in 1951, had long been captured by Communist agents and fellow travelers. Controlling the Institute of Pacific Relations, these agents used this research institution to spread propaganda to hoodwink the American people, to staff Federal agencies with pro-Communists and to guide the State Department into the promotion of foreign policies favorable to Soviet Russia. A large part of General MacArthur's civilian personnel was selected by this pro-Communist-infiltrated Institute of Pacific Relations.

Thanks to the alertness of General MacArthur, the dozens of these pro-Communists sent to Japan by the War Department were able to do little damage. General MacArthur was the first top-ranking American statesman in 1945 to resist Soviet Russia. Alone, he balked the attempt of Stalin to occupy with Soviet troops a large section of the Japanese isles. As to the pro-Communists sent out to Japan, Gen. Charles A. Willoughby (chief of G–2 or Army Intelligence) spotted practically every subversive in the occupation personnel. They were boxed into restricted posts and eventually sent home.

Today many people say that all this belongs to the past; that the Communist danger is over. Such views ignore realities. There is evidence that some Communists, pro-Communists and Marxian Socialists are still in Government employ, in the schools, in labor unions and in mass communications. In spite of false propaganda for "peaceful coexistence," the United States and the Western democracies are still face to face with one of the most ruthless dictatorships in the history of mankind. This dictatorship is bent on the destruction of constitutional government everywhere. Our foreign policy confronts a Soviet conspiracy which expects to destroy our constitutional government.

Part of the tactics of the Communist Party today is to educate the young folks to the use of violence. At the same time the Moscow dictators expect to edge the American Nation into "creeping" socialism, then into Marxian socialism and finally into the revolution and the Communist dictatorship. Socialistic planned economy is indeed the road to Soviet serfdom. That road can begin right in the heart of America.

There are many things that the United States must do in order to resist this Communist conspiracy. We must build up our national defense. We must encourage other republics to defend themselves. But internally we must do more. The Communist dictatorship is determined to capture by propaganda the minds of our boys and girls.

Thus, our public schools should teach our youth exactly what communism is. The schools must show the menace of communism. To fail to do this will be treason to our sons and daughters and their children.

There is no question in my mind that the 1,200,000 loyal schoolteachers in the United States are able and willing to teach the difference between democracy and communism. There is no more loyal and devoted group of public servants in this country than the great group of teachers in our primary and secondary schools. Many parents are unaware of the devotion that their children's teachers bring to their daily work. Many parents have little knowledge of the sacrifices, often beyond the call of duty, which they render on behalf of the pupils entrusted to their care.

The teaching of the menace of communism should be twofold. First of all, communism is a competitor of our representative democracy; therefore, representative democracy must also be studied. Second, the achievements of the American Nation must be explained. The devastating results of communism must be compared with the achievements of democracy. American democracy can well stand such comparison.

Our textbook must make crystal clear (1) That American democracy means a representative government which supports liberty and free enterprise; (2) that communism means lack of freedom; it means brutality and the police state; and (3) that communism seeks to destroy all freedom in all countries. The textbook should call attention to such facts as that Communist education teaches schoolboys and girls to denounce their own parents for any deviation from the party line, which denunciation causes their fathers and mothers to be sentenced to slave-labor camps.

It is necessary to teach these things in high school, since not more than 25 percent of the pupils who enter high school ever go to college. This teaching should become a part of our so-called mass education.

Our textbook on democracy and communism must follow the best pedagogical methods. It must avoid rigid indoctrination. It must be accurate in its statement of facts. It must refrain from forcing conclusions upon pupils. It must present facts and principles, and allow pupils to form their own conclusions. It must not inculcate hatred of other nations as does Soviet education. It should teach sympathy for and understanding of all peoples. It should not ignore the spiritual values in American tradition.

In teaching democracy, this textbook should remedy the defects of many other textbooks. It should not only explain and defend the United States Constitution, but also it should defend all the constitutional freedoms—not merely freedom of speech, the press and religion. Among other rights, the textbook should explain and defend our constitutional liberty to acquire and possess property.

How many parents examine their children's textbooks? The number of such parents is surprisingly few. If they inspected these textbooks they would find that their boys and girls go through public school without adequate instruction regarding one of our constitutional liberities, namely, the right of property which is the foundation of our free enterprise system.

The Institute plans to publish also a teacher's guide. This handbook for teachers will have a twofold purpose. The first purpose is to assist teachers in teaching the textbook. It will give them educational aids for the classroom and broaden the teacher's knowledge of the subject. The second purpose is to protect the loyal teacher from attack by Communists and Communist sympathizers who smear a teacher as a Fasicist or a Nazi if she says anything against the Soviet Union. Such a teacher, if called before a school board on charges, can say: "You see, I am instructed on page so-and-so of the teacher's guide to say these things about Soviet Russia." In almost every community Communists, pro-Communists and Marxian socialists are lurking to brand any honest teacher with fascism or nazism who says anything detrimental about Soviet Russia, communism or Marxian socialism.

Many millions of dollars have been spent on many worthy privately financed projects devoted to education of opinion leaders such as editors, teachers, and newsmen in "liberterian" economics and American free enterprise. Many millions more have been spent in disseminating articles and speeches written by these opinion leaders among the workers in industry and among the voters generally. This has all been needed and is all to the good.

But it is not difficult to visualize how tremendously more effective these efforts would be if they could reach a more intelligently informed mass audience who had been exposed in high school to a basic course showing the empty promises of communism and socialism as compared with the actually delivered benefits of American constitutional democracy. How much more effective such efforts would be if our 2 million loyal teachers and ministers of the gospel had a dependable and objective source of information on this subject, such as the proposed textbook should provide.

Some guests at this table may wonder why the task of publishing a high school textbook on communism has fallen upon a small organization like the Institute of Fiscal and Political Education. The answer is significant. None of the great school textbook publishing companies now care to publish such a book. Considering the time and extensive research involved in creating a good product, it would involve a considerable financial risk. If not compiled with precise objectivity and truthfulness, it would be banned by those in the educational field who determine the selection of textbooks.

If the textbook of the Institute is a success, undoubtedly many publishing houses will hasten to imitate the Institute. But a beginning has to be made. The Institute proposes to make the beginning.

In closing, Mr. Chairman, may I pay a tribute to the Institute of Fiscal and Political Education? As Daniel Webster said of Dartmouth College, this institute is a small institution, but it merits our profound respect. Its record has no blemish.

In comparison with many of the foundations, it is a very small institution. While the great foundations operate on billions of dollars, the institute has no capital assets whatever. Nevertheless, with all the wisdom and wealth represented in the great foundations, none of them has come forward with a project to tell American boys and girls about the evils of communism.

It has remained for this small institute to supply the vision and patriotism necessary to undertake the task of publishing this much-needed textbook and to initiate the effort to place the subject in the high-school curriculum.

I am proud to be associated with the Institute of Fiscal and Political Education. The fact that such statesmen as Robert A. Taft and John W. Davis were intimately connected with its founding led me to accept the assignment of preparing its textbook. John Marshall, the president of the institute, is a statesman of vision and intellectual honesty. Its trustees are well known to you. Many have rendered great services in the fields of diplomacy, public administration, and education.

As for myself, Mr. Chairman, I wish to say this. After some 30 years of service in public and college education, and after service to my Government in various capacities at home and abroad, I am happy to end my career with the development of this high-school textbook. I am writing it for the boys and girls of America. I am writing it, gentlemen, for your sons and daughters and for your grandchildren.

Far Western Growth Makes Utility History

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, July 26, 1955

Mr. BENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Far Western Growth Makes Utility History," delivered by Mr. James B. Black, chairman of the board of the Pacific Gas & Electric Co., before the 23d annual convention of the Edison Electric Institute, at Los Angeles, Calif., on June 14, 1955.

I am informed by the Public Printer that the manuscript is estimated to make approximately 2⅔ pages, at a cost of $214.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FAR WESTERN GROWTH MAKES UTILITY HISTORY

(By James B. Black)

It is a pleasure and a matter of pride for us here in the West that we are privileged to be your hosts. There is significance in the selection of California for this 23d annual convention of the Edison Electric Institute, for nowhere did the electric industry gain an earlier start, and nowhere has its growth in this postwar decade been greater.

You would be surprised, I suspect, if you were not greeted here in California with a little regional tub-thumping. We seem to have acquired a reputation for a certain lack of reticence about our natural attractions and our accomplishments. At any rate, the California Electric Light Co. began serving arc lamp lighting customers in San Francisco from the industry's first central station in September 1879. That was a few months before Thomas A. Edison applied for a patent on his first incandescent lamp, from which our industry has grown.

It would be tempting to dwell on details of our development over the past 75 years if there were time. The unceasing growth of the Pacific Southwest has reached such proportions in the postwar decade, however, that it is pertinent to review this recent period. In the great tradition of the industry, the utility companies of our region have been in the forefront of this growth and we believe have served it well.

In the light of what is now fact, it is a little difficult to recall that at the end of World War II there were many alarmed predictions of a severe slump in the war-stimulated economy. Here in the West it was questioned whether there would be jobs to sustain the vast new population, or whether it would melt away. It is fortunate for the region that the utility companies took an optimistic view and at once prepared to build new capacity as quickly as we could, for each year since 1945 tens of thousands of newcomers have arrived to settle in our midst.

The Pacific Southwest is the fastest growing region of the United States. Never has the Nation witnessed a greater migration of population than the movement into this area in recent years. The postwar rate of population increase in Arizona, Nevada, and California has been more than half again as fast as that of the country as a whole, while California in a single decade jumped from fifth to second most populous State in the Nation. The State's gain for the 12 months ending July 1 is estimated at 560,000 inhabitants. Optimists place California first among the States in population by 1965.

This record growth naturally has brought about substantial changes in our economy. Agriculture retains its top position with an annual value in the 3 States of $3 billion. From a dominant role, however, it has given way to a balanced economy marked by large and growing industry.

Residential construction in our area is phenomenal. During the postwar decade it has represented about 17 percent of the national housing construction for less than 8 percent of the national population. If you flew into Los Angeles you may have glimpsed from the air how new suburbs have spread in all directions. Houses now cover tens of thousands of acres of former farmland. There is of course a chain reaction from this construction on business of all kinds.

Commercial and industrial construction is hardly less notable. It is a development with national significance that the West now has a population large enough to support all types of commercial and industrial enterprise. For example, a growing steel industry is established, and our aircraft and electronic industries can be counted among the leaders of the Nation. New commitments were made throughout California, Arizona and Nevada during last year alone for more than 1,200 new plants and expansions totaling almost half a billion dollars in value.

I hope you will bear with me for resorting to statistics. Having undertaken the topic Far Western Growth Makes Utility History, I find no other means of working, as we used to do in geometry, toward a "Q. E. D.." The figures that pertain to our own industry, however, impress even those of us who have had a part in making them.

Since World War II our investor-owned utility companies here in the Pacific Southwest have added nearly 1,400,000 electric customers to their lines, about a two-thirds increase in nine years.

Kilowatt hour sales and the area peak load, to which both investor-owned and other systems contributed, have more than doubled since the war. Last year area sales reached a level of 38 billion kilowatt hours and the area peak load served was 8 million kilowatts.

Now let us look at how generating capacity has been increased. In nine years more than 5 million kilowatts of dependable capacity has been added in our region. Last December the total dependable capacity in the 3 States was nearly 10 million kilowatts, double what it was at the end of the war. Nor is this all. Construction already planned for completion before 1960 amounts to more than 5 million kilowatts additional.

I need not emphasize in this assembly that construction on such a huge scale could not have been undertaken without the confidence of both individual and institutional investors and the assistance of the investment bankers. The investor-owned companies of this area have been almost constantly in the market for new capital. Together we have spent a total of nearly $2 billion on electric plant since the war, and to finance this construction have successfully marketed nearly $1½ billion of securities. My own company for all purposes has raised over $1 billion of new money since the end of the war. Our combined achievement reflects a confidence of investors in the future of our region and the companies as a group in which we of the industry take legitimate pride.

At the close of 1954 ownership of the companies was vested in more than 386,000 stockholders, a gain of 142,000 in 9 years. A high degree of local ownership of the stock is characteristic. Again referring to Pacific Gas & Electric Co. for example, nearly two-thirds of our 217,000 stockholders are Californians, and they own about half of our outstanding stock. Such widespread ownership of the stock of utilities under regulation truly is public ownership in the highest sense.

In this connection you will recall the much-repeated claim of government power zealots that the investor-financed utilities are not capable of providing alone all the power the country needs. They have sought to foster a belief that here in our area we must be dependent in major degree on government hydroelectric projects to supply demands for energy. The record of the industry in this region of greatest growth in the United States refutes this specious claim. In my own company's service area the Federal Government from 1945 through 1954 added only 300,000 kilowatts of installed capacity. In the same postwar period we have installed 2½ million kilowatts in an expansion program on which we have spent, for all purposes, $1½ billion. In terms of total capacity, our system alone has almost double the kilowatts installed in Federal plants in the Central Valley and Colorado River developments combined.

Before we leave the subject of power expansion in this region, note may be taken of a change in the character of total resources. Historically we have been known for our hydroelectric development, and at the end of World War II the area had twice as much dependable hydroelectric capacity as it had in steam. Today steam capacity exceeds hydro by more than a million kilowatts, and over the years the preponderance of steam will grow.

We have turned to steam partly because steam plants could be built more quickly to meet the rapid growth in demand. More significantly, relative costs per kilowatt of steam and hydroelectric capacity have be-

come moving targets going in opposite directions, and we have had to draw a fresh bead at every step in our expansion. While steam plant efficiencies have been steadily rising, the quality of remaining hydroelectric sites has progressively declined. In our territory, for instance, about a third of the total hydroelectric potential has been or is being developed and another third is actively projected for development in the next 10 years. The remaining potential beyond that is of doubtful economic value. There will, therefore, be increasing reliance on steam generation to meet future demands.

The early development and substantial growth of hydroelectric generation in California sprang from the elaborate system of mining waterways constructed during the gold rush. These same waterways stimulated the practice of irrigation, which has had such profound effect on the development of the West. Electric pumping for irrigation had been tried successfully in California by the early 1890's. This was the real beginning of farm electrification in America.

In the past 15 years irrigated acreage in Arizona, California, and Nevada has increased by more than one-half, primarily through electric pumping. In California nearly three-quarters of all irrigation water is electrically pumped. Underground water tables have dropped markedly and it is recognized that pumping is an inadequate answer to the increasing problem of supply. Under the sharp spur of necessity, large new conservation projects are being advanced. The most comprehensive development of water in California can be achieved if our Government and private agencies willing and able to share the financial burden become working partners in these projects.

Partnership is not a new concept here in the West. In the course of irrigation and water storage development in my own company's service area, a pioneering partnership arrangement grew up between us and irrigation districts and other Government agencies, going back to World War I. In some cases the company has installed powerplants at the water conservation projects of these public agencies and has paid for the use of falling water for generation. In other instances the company, by contracting to purchase the power output, has helped finance construction by assuring a market for the power generated by project plants. A current example is our cooperation to help finance the Tri-Dam water storage project of two irrigation districts through a 50-year agreement for company purchase of power from the project plants. Aside from our cooperative participation in water development, we have 57 reservoirs of our own with a storage capacity of nearly 1½ million acre-feet of water which is used not only for power generation but also for irrigation and other beneficial purposes in the central valley.

Rural Electrification Administration cooperatives are a minor factor in California, Arizona and Nevada. Among the more than 1,000 cooperatives in the United States there are only 16 active organizations in the 3 States, and in Pacific Gas & Electric Co. territory there is none. The reason there are so few is that the major work of extending service to rural areas has been done by utilities of their own accord. Electricity has always been available to more farms than used it. And I have always found our low rates disconcerting to the promoters of REA's.

In California there has been no real grassroots demand for the Federal Government to go into the commercial power business. Such agitation as there has been was inspired in Washington and has been abetted by the ambitions of a few local groups and politicians to thrust Federal power upon an unreceptive people. It must be said, however, that their clamor has been furthered by unfamiliarity in the East with conditions in the West. Water, not power, is the problem in the West. Those who have made the need for water a vehicle to promote Government ownership and distribution of electric power seek to rule, not serve.

Construction of Hoover Dam on the Colorado River marked the entry of the Federal Government in large multiplepurpose water development projects in the West. The concept, policies and operation of the Boulder Canyon project are in striking contrast with those that have since prevailed in other Federal projects.

In authorizing the Boulder project, Congress required that before any money could be appropriated, the Secretary of the Interior must have executed contracts for the storage and delivery of water for irrigation and domestic use and for generation of electrical energy. These contracts were to provide revenues at least adequate to cover expenses of operation and maintenance, and repayment, with interest, within 50 years, of the project cost, with the proviso that a longer period was permitted for the repayment of $25 million allocated to flood control.

The full realization of the potentialities of the West will require continuing development of our water resources wherever feasible, including development by the Federal Government as well as by State and local agencies. Where economical, byproduct electric power should be developed on these water projects in order that the cost of water and the burden on the taxpayers may be reduced to a minimum. Most emphatically, however, such power should be made to add to, and not subtract from, the project's feasibility. It should be marketed through existing power systems for maximum benefit to the project and the largest possible number of taxpaying consumers.

The investor-owned utility companies of California, Arizona, and Nevada paid a total tax bill last year of $138 million on their electric properties alone. My company paid $79 million, and on all of its operations paid $104 million. For many years we have been the largest property taxpayer in California. Also for a number of years, taxes have been the largest single item of cost in providing service to our customers. Last year taxes charged to income absorbed a quarter of every dollar of gross operating revenues. They exceeded wages and salaries paid to all operating employees by $47 million and exceeded by $46 million the dividends paid to the 217,000 stockholders whose invested savings make possible the existence of the company.

In contrast with the heavy burden of taxes borne by investor-owned utilities, Government power installations are almost wholly exempt from taxation. Those who hawk their deceptive ware of "cheap public power" cannot honestly dispute this fact. It is little wonder that with a tremendously unfair tax advantage the Government is often able to undercut its own citizens in the marketing of power. Instead, the wonder is that so many taxpayers allow themselves to be misled.

There can be no moral justification for burdening the taxpayers of the entire Nation with the construction of unnecessary, tax-free electric systems to serve a privileged few. Exempting Government power installations from taxation discriminates between citizens. Further, it denies to local governments and schools the tax support they would receive if the power installations were built by power companies. Government power should be taxed equally with the investor-owned utility industry. Such taxation would end forever the myth that Government power is cheap.

Substantially different from the Hoover Dam operation is the Federal Central Valley project, which lies within the service area of Pacific Gas & Electric Co. Advocates of a socialized electric industry made of it a major testing ground. Fortunately, they failed in their ultimate objective.

The Central Valley project is primarily a water project. It was created to develop and store water in the area of plentiful supply in the northern part of our State and to make water available to the fertile lands to the south. The project was designed also to control floods, aid navigation and control salinity in the rich delta region of the Sacramento and San Joaquin Rivers. Powerplants at the project's Shasta and Keswick Dams have a total dependable capacity of 300,000 kilowatts of byproduct power. Nothing in the enabling legislation, either Federal or State, contemplated that this power should be used to launch the Government in a commercial power business. That, however, was no deterrent to bureaucratic policymakers who descended on California during the project's construction.

In keeping with our long-established policy of cooperation, Pacific Gas & Electric Co. until 1951 provided a market for the CVP power near the point of generation at Shasta Dam. Our purchase there gave the project power its highest value and yielded maximum return to the project. In 7 years dating from 1944, when power was first produced, our payments discharged all operating costs and provided $38 million net toward repayment of the project costs. Had this arrangement continued, the charge for water to farmers could have been cut in half and still all costs would have been repaid within the period established by reclamation law.

Despite these advantages, unneeded Government transmission lines were built to transmit the power to project pumps at Tracy, 200 miles distant from Shasta Dam. Repeatedly we exposed the obvious purpose of bringing CVP power within range of customers served by the company and pointed out the damage that would result to the project and the water users.

This unnecessary transmission system, involving fixed charges on the additional investment, added operating costs, and line losses over a distance of 200 miles, reduced the Central Valley project's net revenue by $2 million a year from that realized from sale of power near the dam.

If all firm commercial power from the project were delivered to preference customers through our system under an exchange agreement instead of being sold to the company at Tracy, there would be a further loss to the project of $2,700,000 a year.

If the Bureau of Reclamation were to build an independent electric system, complete with steam generation, as it proposed in the past, and were to sell all of its power direct, the loss would grow by another $2,400,000 a year.

The total loss to the project, the taxpayers, and the water users from such a commercial power operation, even if successful, would be about $7 million a year. Here, indeed, is an enlightening glimpse of the lengths to which advocates of tax-subsidized electric systems have been willing to go.

We have now before the people of California and before Congress a proposal to cooperate in the development of the Trinity River, one of the major undeveloped water resources of the State, as a part of the Central Valley project.

The Trinity is in the extreme north of California, and much of its water runs waste to the sea. For many years Californians have talked of and planned to carry some of that water into the thirsty interior valleys. Legislation is before the present Congress to enable the Bureau of Reclamation to bring the dream to reality by a system of dams and tunnels through the Trinity Mountains. Byproduct electric power would be developed to help finance the water project. The Bureau estimates the overall cost at $219 million, including power facilities to be built and operated by the Bureau.

Pacific Gas & Electric Co. more than a year ago offered to purchase the falling water of the Trinity project and to build and pay for

the power facilities in a partnership arrangement with the Bureau. Early this year we made such a proposal formally. A month ago the House Committee on Interior and Insular Affairs, after the appearance of company representatives, amended the Trinity project bill. The amendment enables the Secretary of the Interior to negotiate for the sale of falling water for power generation on this project.

Our partnership proposal to the Bureau of Reclamation would save the Federal taxpayers $50 million initially in capital outlay, and we would pay $3,500,000 a year for the falling water. That amount is its full value based on the present cost of alternative steam power. We would develop half again as much power capacity as the Bureau proposes to build. Furthermore, we would pay taxes amounting to $1,400,000 a year to the Federal treasury and $1,300,000 a year to State and local governments. Over the project repayment period our payments for water and in taxes would yield $171 million more net revenue to the Federal, State and local governments than would construction and operation of the project and its power features entirely by the Federal Government.

Clearly, our participation will make possible the construction of this needed water project with the least cost to taxpayers and maximum benefits to water users.

Approximately 200 California organizations, including statewide farm and business associations, labor unions, irrigation districts, boards of county supervisors, city councils, and civic organizations have endorsed construction of the Trinity power facilities by local enterprise. It is quite evident that the more our partnership proposal is understood by the public the more support it wins.

In this connection, let me recall for a moment the terms in which President Eisenhower reaffirmed the partnership principle in his state of the Union message to Congress last January:

"At the foundation of our economic growth," said the President, "are the raw materials and energy produced from our minerals and fuels, lands and forests, and water resources. With respect to them, I believe the Nation must adhere to three fundamental policies:

"First, to develop, wisely use, and compare basic resources from generation to generation;

"Second, to follow the historic pattern of developing these resources primarily by private citizens under fair provisions of law, including restraints for proper conservation; and

"Third, to treat resource development as a partnership undertaking—a partnership in which the participation of private citizens and State and local governments is as necessary as Federal participation."

These principles should not fall on our ears as something new and strange. They are wholly in the American tradition.

If they needed to be spelled out by the President, it is only because the Nation has strayed so far from its historic path.

America was not built by government. It was built by the energies of a self-reliant people who long ago learned the lesson of cooperation. It was built by a people who created homes in the wilderness through log-raising bees, who pushed across the western plains in organized wagon trains, who began the reclamation of arid lands by their own efforts, constantly demonstrating their capacity to fend for themselves. Today's problems are but a projection of such experiences on a vastly greater scale.

Government as a partner enlarges and strengthens the abilities of its citizens. Government as a remote and bureaucratic overseer can only weaken and subject its citizens to a demoralizing control. It is not a coincidence that the only areas of potential power scarcity in the United States are those in which the Government has assumed to itself a dominant role.

The administration's policy seeks to restore local powers that had been yielded too weakly and to unleash energies for the progress of the Nation. I believe an awakened people welcomes and will embrace this opportunity to regain a measure of self-direction that had been all but lost. I am certain the electric utility industry will continue to shoulder the responsibility of cooperating to the fullest for the common good.

This year the electric industry enters the final quarter of its first century of service to mankind. Its growth has been marked from the beginning by continuing technological advance, ever-increasing efficiency in operation, steady improvement in service and continued reduction in real costs to our consumers.

My own experience of 43 years began in the period when the automobile and the airplane were just beginning to be significant factors in our civilization, and when our industry was making its first great forward surge. Many of the wonders of the electrical age that are commonplace today were only dreams then.

Now we are working in a new area of development—nuclear power—which promises in this next quarter century to unfold as a further remarkable achievement of our industry. We also are investigating anew the potentials of harnessing solar energy for beneficial use.

Less than 10 years ago the possibility of applying nuclear energy to commercial generation of electricity still was in the realm of laboratory speculation. Today the industry is moving ahead rapidly in the search for means to make it economically competitive with conventional methods of generating power.

We are mindful, however, that the efficiency of conventional plants is improving, and that when and if atomic plants become economically feasible, in perhaps 10 years or so, they must complete with the more efficient conventional plants of that day. The latter will continue to be an important source of new generating capacity for the foreseeable future.

Cost and operating data which can be obtained only by construction of large plants will be necessary for evaluation of the economy of the nuclear-electric plants.

As most of you may know, my company has been engaged with others in the study of nuclear-electric power since early in 1951. Our nuclear power group has made a proposal to the Atomic Energy Commission to construct a 180,000-kilowatt nuclear power-plant. The plant would be owned by the Commonwealth Edison Co. and would be a part of its system. Details of its financing are well advanced. It will be built without Government subsidy. Other companies are making similar progress in this field.

We believe that if nuclear power does become competitive, it will fit into existing integrated power systems in the same manner as new and more efficient conventional plants are added today.

Those of us who are becoming senior citizens in the utility field have passed through some exciting and occasionally trying times in the past quarter century. We have experienced war, depression, attempts at planned economy, inflation and the incessant attack of the socialist ideology on our industry. We have been a whipping boy for cranks, crackpots, demagogues, and even men in high office. We have navigated some heavy seas.

I am confident that our own achievements and our diligence in doing our job of public service have brought us through this period stronger in character and higher in public esteem.

As we look to the future we can't help feeling that today we may be witnessing along with our own lengthening shadows, the advancing twilight of the threat of socialism. The siren song of the promiser of pie in the sky no longer is on the Hit Parade.

There is heartening evidence of a public reawakening to the realities of the facts of American life. Young applicants for employment today seem less preoccupied with the adequacy of our pension plans and the state of our vice presidents' health, and more interested in the opportunity for solid advancement based on individual effort.

There is a rebirth of faith in the wisdom of our forefathers; renewed pride in our American philosophy, our creed of individual dignity and integrity and in the accomplishments of men who have forged our Nation's history.

Two contributions to our national life from the State of Tennessee hold considerable current public attention. I submit that for future generations of Americans, the better yardstick of the two, by far, is Davy Crockett.

Dedication of General John J. Pershing Plaque

EXTENSION OF REMARKS

OF

HON. ROMAN L. HRUSKA

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, July 29, 1955

Mr. HRUSKA. Mr. President, I ask unanimous consent that there be printed in the Appendix of the CONGRESSIONAL RECORD my remarks as made in Los Angeles, Calif., on July 25, 1955. The occasion was the dedication of a memorial plaque on Pershing Square, in that city, honoring Gen. John J. Pershing, after whom the square was named.

The program was under the sponsorship of Woodmen of the World Life Insurance Society, of Omaha, Nebr. It was holding its national convention in Los Angeles at the time, under the leadership of its president, Farrar Newberry.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS OF UNITED STATES SENATOR ROMAN L. HRUSKA AT DEDICATION OF GENERAL JOHN J. PERSHING PLAQUE, PERSHING SQUARE, LOS ANGELES, CALIF., JULY 25, 1955

The American people are grateful for the safe return of our President Eisenhower to the Nation's Capital. They are grateful, too, for his most recent efforts in the incessant search for peace, which has been pursued by him and his administration so capably and persistently.

While there are optimistic statements on the outcome of the Geneva Conferences, it is much too early to properly appraise them. This inability to judge so early is something which thoughtful people had in mind even before Geneva talks started. We were told, and rightly so, that a readymade, beribboned, and complete solution to the world's ills could not and would not be expected. It will still be a long, torturous process before the goal is reached.

In spite of all this, great gains were made in Geneva.

First, leaders of the nations at the conference recognized the terrific force of the universal, common desire for peace held by the rank and file of the peoples of the world. These leaders recognize that their people

expect and demand that something be done by them. They have responded to this desire for peace.

Our President was right when he stated that he came to Geneva with something more powerful than the Army, Navy, and Air Forces which he commanded in Europe 11 years ago. This something was the good will of America, the great hopes of America—the aspirations of America for peace.

Secondly, the Geneva talks proved that there is foundation for some hope that war is not necessarily inevitable. There is hope that the leaders of nations will realize and act upon the stern truth which every thinking individual knows, to wit: the futility of armed conflict, and the fact that everyone loses and no one gains from it.

Geneva in itself may not have solved much. It does lay foundation for much. It will be followed by further conferences on lower levels where further progress can be made.

President Eisenhower acted and spoke boldly. It is heartening to know that he did so fully aware of the dangers of meeting with Soviet Russia's leaders, who have so often in the past proved themselves to be unreliable, deceitful, and treacherous. They must be and will be dealt with accordingly.

But the stakes of gains toward peace are so great, that every avenue and hope for peace, however faint they may be, should be fully and thoroughly explored and pursued. We can be confident that they will be in the same stable and capable and farseeing fashion which has characterized our foreign policy under President Eisenhower to date.

America's position in world leadership which exists, whether we like it or not and whether we strive for it or not, was a long time in formation. One of the big features of that growth was our entry into World War I and the military successes which this country had in it.

General John J. Pershing whom we honor here today was one of the most potent of all the personalities who were active in that period. His ability and leadership did much for America's standing in the eyes of the world. When we consider our fortunate position on the world scene it is fitting that we give General Pershing due credit and that we honor him as we do.

The placing of historical markers serves several purposes. Among them are these: to inform, to remind, and to inspire.

Today as we dedicate this plaque honoring Gen. John J. Pershing, there is a wealth of material for fulfilling all of these purposes, for this general is one of the most outstanding of Americas. His life and works arouse not only feelings of gratitude for service rendered in time of crisis, but admiration for the variety and duration of his activities for his country.

This great patriot died at the age of 88 in the year 1948. His life span had then covered more than one-half of the duration of our Republic under the Federal Constitution. And what a jampacked, thrilling, and significant life was packed into those fourscore and 8 years.

It was exclusively a military career. His first taste of the art and the hellishness of war was at the age of 4 when he stood in the doorway of his home in Linn County, Mo., and watched the sweaty, weary, blood-streaked men stagger home from Appomattox. Seventeen years later, he entered the United States Military Academy at West Point. He remained in active military service continuously and without interruption until his retirement in 1924, a period of 43 years.

This career from cadet to commander in chief of the American Expeditionary Forces, to Chief of Staff, and to the General of the Armies sought a wide range of activity. He led his men through almost every kind of campaign: Indian wars in the Southwest, the Moros in the Philippines, against Pancho Villa in Mexico, and finally as Commander in Chief of the AEF in Europe against the German Armies. The slogan of "Join the Navy and see the world" was not in Pershing's case considered the sole property of one branch of the armed services.

Perhaps the first time he came in wide and popular notice was in 1914–15 during the Mexican border troubles. He was sent out after Pancho Villa after a number of raids by the illusive and colorful figure. Pershing caught up with the culprit, only to get orders to let him go. It was this campaign which did much to result in his appointment as head of the AEF.

In addition to the service in the Spanish-American War, in the Indian hostilities in the the southwest country of the United States, in Mexico, in the Philippines, in Hawaii, and other places, he was assigned and served briefly in Europe as early as 1908 as observer of the Balkan military activities.

The background, training, and experience which he got in the military field campaigns, as well as teacher at West Point and the University of Nebraska, and as administrator at desk work in Washington and elsewhere, all built up to qualifications which served in mighty good stead in later years.

In 1905 and after his brilliantly effective Moro campaign in the Phillipines, he was promoted by President Theodore Roosevelt from captain to brigadier general over 862 officers. This brought about a great storm of comment and criticism even though some of his contemporaries were similarly promoted: Gen. Leonard Wood, for example, who was promoted over 91 seniors; Gen. J. F. Bell over 1,031 seniors; William Crozier over 493 seniors, and others. Later events, of course, justified the choice and preference thus extended.

All of his powers and talents were called for to full limit when he assumed command of the American Expeditionary Forces in Europe. His first great trial and battle was not with the enemy, but with the generals and the military forces of the Allies. They wanted the American soldiers to serve as replacements within the Allied Forces rather than as a force of their own. This was stubbornly resisted by General Pershing because he knew that the effect of such a policy would be disastrous upon the morale of the men and to the place of our Nation in the eyes of the world. He stubbornly held out until the American forces were trained and mobilized in full force at which time they entered the conflict under their own flag, although under the supreme command of Marshall Foch.

After the war he served as Chief of Staff at home and was made General of the Armies. Even after his retirement from active service in 1924, he continued his role of adviser and counselor in military affairs and one of the biographers states:

"His service to his country was beyond measure; the strategy of today's United States Army is, in large part, his concept."

It is so fitting that the Omaha Woodmen Life Insurance Co. with its home offices in Omaha, Nebr., should sponsor this significant and meaningful occasion of dedication. Pershing shortly after his graduation from West Point was assigned to the University of Nebraska as professor of military science. Those were tough years for any military organization and especially so in the Middle West, but he breathed new life into the classes and into his drill companies. Shortly after his arrival in Nebraska, National Competitive Drills for college military organizations were held in nearby Omaha, the home office city of Omaha Woodmen Life Insurance Society, incidentally. With great effort he assembled enough support from faculty as well as his student body to enter a drill company into that competition. That company won the Omaha Cup and a cash prize of $1,500. While in Nebraska University he attended classes in the law school and graduated law school in the year 1893 there. It had beeen one of his early ambitions to study the law and this was fulfilled in Nebraska's capitol city. It is significant to note that during all the years which followed, he maintained his legal residence in Lincoln, Nebr, at 1748 B Street.

One of the memorials to his affiliation with and affection for Nebraska is the "Pershing Rifles" which has its national headquarters at the University of Nebraska in Lincoln. It is a national honorary military society founded in 1894.

There is another reason why it is fitting that this occasion should be under the auspices of the Omaha Woodmen Life Insurance Society. This great patriotic and fraternal orgnization has long had its policy the honoring of great Americans and the encouragement and promotion of the study of American history.

In the past it has honored notable Americans such as Presidents John Tyler, Zachary Taylor, Andrew Johnson, James K. Polk, and William Howard Taft by suitable placement and dedication of plaques and markers. Two other generals have been similarly honored. Namely Grenville Dodge and Nathan Bedford Forest.

The leadership of the Omaha Woodmen Life Insurance Society is to be highly commended for the patriotic program which they have developed and which they are following so well. The membership of this great organization is likewise to be commended for supporting this program so enthusiastically and so loyally. The entire Nation is the recipient of a great deal of benefit as a result.

In the name of the public generally, I extend our thanks together with our appreciation.

The Right To Live

EXTENSION OF REMARKS
OF
HON. HERMAN WELKER
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Friday, July 29, 1955

Mr. WELKER. Mr. President, I have before me a very fine editorial entitled "The Right To Live," published in the Southern Cross. The editorial was sent to me by one of Idaho's distinguished students and philosophers, a man who is interested in other States as well as in his own State. The editorial and the facts appearing thereafter have to do with the dilemma of the tuna fishing industry as it exists today.

I ask unanimous consent to insert in the Appendix of the RECORD the editorial to which I have referred, and a postscript to the editorial. I commend the editorial and the postscript to the reading of Senators.

There being no objection, the editorial and postscript were ordered to be printed in the RECORD, as follows:

[From the Southern Cross of June 30, 1955)

THE RIGHT TO LIVE

The first of man's inalienable rights enumerated in the Declaration of Independence is the right to life and this must include the right to make a living. At the present moment around 1,500 families in the city of San Diego are in grave danger of being deprived of this right. We refer to the families of the tuna fishermen.

Tuna fishing has been for a long time an important part of San Diego's economy. The industry has had its ups and down, periods of high prosperity and periods of depression. In the thirties it began to thrive. Then came the war for which the United States Government requisitioned most of the tuna boats. (It is well to remember that with the boats went the greater part of the crews, voluntarily, including a number who were over draft age.) When the war ended the boats were returned to their owners and compensation paid for their use.

Then came 4 years of prosperity, with good fishing and good prices for fish, ending in 1951. During this time the merchants of San Diego as well as those in the boat buildings and boat repairing business benefited mightily from the fishing boom. In fact, it was the fishermen's willingness to risk their savings—a thing for which they are sometimes criticized—in new and bigger boats, which made possible the growth of this multi-million dollar industry in our city.

In 1951 a depression set in, which did not greatly worry the fishermen at first. (They know their life to be a hazardous one and fishing to be a precarious means of livelihood). First there was scarcity of fish; then the canneries became overstocked and were forced to assign a quota to each boat; then fish caught by foreign boats began to arrive in San Diego, underselling the catch of the American boats. Our fishermen do not wish to exclude Japanese fish entirely; they merely ask that it should not be allowed to come here in such quantity as to cripple and ultimately destroy the local fishing industry.

This is the present situation. Our Government permits Japanese frozen tuna to enter this country in unlimited quantities. Because of low wages and the low cost of living in Japan, this imported fish can be delivered to San Diego canneries for $70 a ton less than the same quality of fish caught by American fishing boats. (The canneries are now asking the fishermen to accept $40 a ton less than is specified in the present contract but, even at this price, the Japanese boats will easily undersell the local ones).

Under prevailing conditions San Diego fishermen cannot continue to make a living, even if they use every possible means of economizing. It's a question of retaining or losing this means of livelihood.

Most of the boatowners have debts contracted in the building or repair of their boats. When the debts cannot be met the boats are sold by auction—who would want to buy one under present circumstances?—and the owners are liable to lose their homes, their savings, everything they have, to meet their obligations. Since fishermen are seldom qualified for other work, this means that their right to live will be taken from them.

POSTSCRIPT TO ABOVE EDITORIAL

This is written to clarify certain points on which inquiries were made by readers of the Southern Cross editorial.

The present tuna fishing crisis is not just an ordinary depression such as the industry has experienced from time to time. It is something unique. This is the first time that it has been threatened with extinction through foreign competition, a competition rendered formidable and unfair by low wages and a low standard of living. Men who speak with authority on Japan's economic planning tell us that the Japanese are building a fleet of tuna clippers which by 1958 will supply the full demand for this product on the American market. Unless the United States Government gives some form of protection against this ruinous competition, the tuna fleets of San Diego and San Pedro, representing an investment of more than $100 million, will have passed into history within 3 years from today.

In the early thirties, when the whole country was suffering from a major depression, the tuna fishermen of the Pacific coast endured the common lot of their fellow countrymen. But the investment in the industry at that time was small, probably not more than $3 million. Besides the fishermen felt that, when the whole national economy was in the doldrums, there was no reason why they should not suffer with the rest. The situation is quite different now, when the Nation in general is prosperous and the threat of destruction to an American industry comes from foreign competition which could be regulated by our Federal Government.

The tuna fishermen do not ask that foreign tuna be excluded from the United States or that a prohibitive tariff be imposed on it. They merely ask that a quota be placed on it, so that it cannot capture more than 35 percent of the American market. American boats would then have the remaining 65 percent, and competition with salmon and other kinds of canned fish would keep the price at a reasonable level and protect the consuming public.

The objection is raised that, when the industry was booming, tuna fishermen squandered their money. Some of them did but these were the rare exceptions. The worst offenders were kids of from 20 to 25, who were still unmarried and had no family responsibility. The big money went to their heads and they had to let the world know about it. But the same thing would have happened to young men of that age in any other occupation or profession if they were making more money than they knew what to do with. Old heads seldom grow on young shoulders.

It is well known the world over that sailors are free spenders, and fishermen are no exception. The average trip for the medium and large tuna boats takes about 10 weeks, during which there is little opportunity to spend money. Only those who know nothing of human nature will blame the fishermen if they make up for lost time when they reach the home port. The merchants of San Diego, at least have no reason to blame them.

Even so, by far the greater part of the money made on tuna fishing went into the building of new and bigger boats. In this sense we may say that the fishermen were gamblers but it was their willingness to risk their savings that made possible the growth of a multimillion dollar industry on the Pacific coast. If they had saved their money putting it into gilt-edged bonds instead of reinvesting it, the whole Pacific Coast would have been poorer in consequence. It would be a sad day for America if the pioneering spirit were to disappear from our national life, to be replaced by a desire for sheltered security.

The question is sometimes asked: Why do not the canneries and boat owners get together and impose a quota on foreign tuna, without asking for Government intervention? The trouble is that the canneries which handle the catch of American tuna boats are in competition with other canneries, on the east and west coasts, which handle only the tuna brought in by foreign boats. In order to meet this competition they have to can a large percentage of the foreign fish. This is the reason why our tuna boats are held in the harbor for an average of 70 days before unloading. (This adds to their overhead expense as refrigeration has to be constant and guards kept on the boats.)

The canneries are now asking the boat owners and the fishermen to accept a $40 a ton reduction below the current price for tuna. Most of the owners and fishermen would be glad to agree to this, if given a guarantee that their boats could unload immediately on arrival at the home port. But no such guaranty is given. They still face the probability of having to wait an average of 70 days before unloading. This means that a boat, even with luck, cannot expect to make more than two good trips during the year, whereas three trips a year are necessary to make any profit whatever. (The fisherman who has no investment in a boat may make a living for a time, while the boat is losing money fast.)

People who hear about the large amount of money paid by the canneries for a load of, say, 300 tons of tuna, and who know nothing about the cost of running the boats wonder why every fisherman is not a millionaire and in a position to retire at the age of 35. In addition to the fuel bill, which is always high, there are charges for insurance, taxes, and payment for the right to fish demanded by foreign governments in those waters the tuna fleet fishes. Within a few years after it is launched the average boat will require repairs, which may run into thousands and sometimes tens of thousands of dollars. Not infrequently all the profit of a good trip is eaten up by the repair bill. Finally there is the cost of depreciation which must be met from profits.

It is well to remember, too, that not every trip is a good trip. The world outside of the fishing community usually hears about the full loads, but seldom hears of the trips that bring home only a half or a quarter load. Since January 1, 1955, not more than 10 percent of the San Diego tuna boats have been making a profit on the money invested in them. (The Japanese competition became serious in 1951 and has become progressively more crippling since then.)

A final point: The tuna fleet of San Diego and San Pedro provided an important and sorely needed auxiliary to the United States Navy in World War II. If another war comes in the Pacific—which God forbid—it will be needed again. Needed but not available, if the present crisis wipes it out.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The People of the United States Stand on the Threshold of Great Danger and Possible Disaster

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. DODD. Mr. Speaker, as we approach adjournment of this 1st session of the 84th Congress, the people of the United States, swept up in a wave of boundless optimism and almost pathetic hopefulness, and nearly hysterical in their efforts to wish themselves into a peaceful world situation, stand on the threshold of great danger and of possible disaster.

Factually, there is no foundation for this synthetic optimism. Therefore it seems proper to soberly review recent developments and to examine our own posture in this uneasy world.

Let it be clearly understood that no fault is found with the President's pronouncements at Geneva concerning the desire of the American people for peace.

Because it can never be said too often, it may be considered unjust to remind ourselves that this same declaration has been made over and over again by other Presidents of the United States and by every responsible official of this country since the close of World War II.

The enemies of peace in the world would now have it appear that until the President spoke at Geneva, there was actually a warlike intention on the part of the people of America. Nothing could be further from the truth.

All of us are happy too that the President of the United States in Geneva again assured the world that we have no aggressive plans against the people or the property of any other nation. It is good that this was said again and certainly it can only help us.

But the Communists are already suggesting that until these statements were made at Geneva, they and others really believed that America was planning an attack somewhere in the world.

The Communists have never actually feared an attack by the United States because they know the true character of this Nation.

What the Communists really fear is that the United States and her friends are prepared to defend themselves.

It is the building of our defense system and of our alliances, starting several years ago and continuing to the present time, which has caused a change in tactics on the part of the international Communist conspirators.

This is the outstanding fact in the international situation and this is the only thing that can honestly be said to be a change.

If those responsible for our security and for our relations with other nations understand and bear this outstanding fact in mind, there is some reason to hope that we may enter a period in which there is no shooting and ultimately a time when there is neither war nor fear of war.

There are signs, however, on the horizon that the aggressive Communists are using our good intentions for their own evil purposes.

Recently I tried to warn the Members of this House and the American people of grave danger.

Because this may be a last opportunity to speak in this forum until next year, duty compels us to make a record of our fears, and conscience requires that we speak up before it is too late.

Parenthetically, and on the subject of frank talk, my colleagues will recall that on July 11, 1955, I suggested in this House that there has been a studied effort made to silence all in this Congress, and indeed outside of it, who have been bold enough to make suggestions and criticisms with respect to our foreign policy.

A distinguished Member of the other body, who has been acting as trial balloon man for the national administration in foreign affairs, within the past week may have unintentionally made more difficult the release of American citizens now held in Red Chinese prisons by suggesting that after Congress adjourns conversations should be conducted on the Foreign Minister level between the United States and the criminal Red Chinese Government.

This statement may very well encourage the Chinese Communists to hold onto our prisoners in the belief that they can raise the ante and increase the ransom.

Within a few days, another Member of the other body, well-known for his unfailing support of the national administration and its foreign policy, approached the height of folly by suggesting that we bomb the Chinese mainland with bags of wheat, thus potentially supplying the Chinese Communists with a tremendous propaganda weapon in the form of accusations against us concerning poisoned food and germ warfare.

It strikes me that the national administration has been attempting to muzzle the wrong people in Congress, and it should take a long careful look at the recklessness of its own highly touted friends.

I believe that there is a powerful element in the United States which wants to bring about the admission of Red China to the United Nations, and the recognition of the Red Chinese government by the United States of America. This must not happen.

In the past 18 months these people have made progress with respect to their aims without the full knowledge of the American people.

In the disastrous Berlin conference, held in the early winter of 1954, the United States agreed to meet with the Red Chinese at Geneva. This was the opening move toward a kind of diplomatic recognition.

At the Geneva meetings the representatives of the United States, Mr. John Foster Dulles and Mr. Walter Bedell Smith, did business with the Red Chinese Communists on the question of Indochina and of Korea, and did not discuss the plight of innocent Americans who were held in Red Chinese jails.

Now, more than a year later, on the wings of new optimism generated at Geneva, an American Ambassador, U. Alexis Johnson, is scheduled to meet next week with a Red Chinese diplomatic official in Geneva.

We have been told that our American Ambassador and the Red Chinese official will talk about the release of the American prisoners, but in addition, according to the State Department, about other practical questions involving Asia.

Now no one can object to conversations about our citizens who are prisoners, but everyone should object to a discussion of other practical questions involving Asia before every last American is home free.

Thus, we have taken the second giant step down the road of diplomatic recognition of the wholly aggressive, warmaking criminal Red Chinese government.

A distinguished Member of the other body, to whom I have referred above as the trial balloon-man for the foreign policymakers of the national administration, has twice within a period of 4 months, and as recently as this week, suggested that the United States and the Red Chinese should meet on a foreign minister level. And thus we have moved still further down the road toward official diplomatic recognition of the Red Chinese government by the United States.

Some idea of the extent to which we have strayed from right reason, good taste, and sound judgment may be obtained when we consider the outrageous suggestions of the past several days that the President or the Vice President or some other leading national representatives of the United States make an official visit to Red Russia.

To compound the nonsense and further mislead the American people, it has even been suggested that the Russian

Communists be officially invited to make a state visit to Washington.

This would be like the mayor of Chicago inviting Al Capone and his mob to the Chicago City Hall for an official visit and party during the lawless gangster era of the late twenties, and it would have the same effect on law and order and peace.

All of us who are concerned should speak up now before it is too late.

Likewise, we want our leaders to know that it is not enough to piously pronounce that we have not forgotten about the plight of the captive Eastern European nations which are occupied at this hour, through force and violence by the Russian Communists. The forced and continued occupation of these countries is naked aggression in violation of the United Nations Charter and all of the agreements made during and since World War II.

On March 22, 1955, I introduced a resolution—House Resolution 183—in this House which requested our Secretary of State to instruct the United States representative to the United Nations to draw up and present a resolution to the United Nations naming the U. S. S. R. as an aggressor against the captive satellite nations.

This resolution passed through the House Foreign Affairs Committee by a large majority and today it is bottled up in the House Rules Committee at the request of the national administration and with the acquiescence of and concerted action of people on both sides of the aisle of this House.

So that this matter will be made a part of the permanent RECORD of this day, let me report that I have been told by both Republicans and Democrats who maneuvered this legislative shutoff that it was necessary to do so because they believed that if this resolution reached the floor of this House, it would be overwhelmingly approved by the membership.

This is not the climate in which free representative government flourishes.

To place shackles on truth and freedom can only result in dishonor and slavery.

But this is the atmosphere in which we are living.

Unless we mend our ways, historians may say of us that as we opened up the secrets of nature and of science, and as we lived in unparalleled material wealth, we lost the struggle and fell in our own ruins, because we turned our backs on truth and we compromised our honor.

This need not be the awful verdict of history for within our reach and our grasp is the opportunity to lead the world to a better day of peace built on truth and honor and freedom.

But the path will not be easy and the journey will be long and difficult. To those who lead us I respectfully suggest that the great leaders of the past have not flinched from the truth of hard decisions in times of peril. This is the true mark of great leadership.

May Almighty God give our leaders of this hour the same courage of their convictions.

Let's Give President's Highway Program a Green Light

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. MACK of Washington. Mr. Speaker, editors of the Nation in their editorials in the daily press are expressing deep disappointment over the failure of this Congress to give a green light to President Eisenhower's expanded highway program in order to provide the Nation more, better, and safer highways.

The editors and the people generally are and should be disappointed. The failure of the Congress to provide for safer highways in effect sentences several thousand Americans to die needlessly each year in traffic accidents, who, were better highways provided, would live out longer lives.

Testimony before the Public Works Committee during the road hearings was to the effect that the President's highway program, at a minimum, would cut the death and accident toll on our highways by at least 10 percent. This means that 3,500 to 4,000 American lives a year would be saved if adequate highways were provided. Also, that the million Americans now injured in traffic accidents each year conservatively would be reduced by at least 100,000.

This great unnecessary waste in life and limb, with its misery, pain, and wasteful costs, which if stopped or even lessened by better roads, would more than pay for the cost of building these better and safer highways.

President Eisenhower showed himself a great humanitarian when he, after the defeat of the highway bill, told Congress and the country that he "devoutly hoped" Congress would reconsider the action by which it scuttled the much-needed expanded highway program.

Editorials in newspapers coming into the Nation's Capital indicate the editors of the Nation agree with the President and not with the Congress which has turned a deaf ear to the President's humanitarian pleas for better and safer roads.

Appended here is a typical editorial deploring the failure of Congress to act affirmatively on the President's highway program.

The editor of the Herald Tribune, of New York City, writing on the failure of the Democratic Party to act on highway legislation, editorially said:

RED LIGHT ON ROADS

The Democratic Party climbed to marvelously high moral ground to wage its battle against President Eisenhower's highway program. Its members were a little unaccustomed to the altitude. All through the legislative session, however, they managed to make noises indicating that its provisions for extrabudgetary financing were deceptive and conveying the impression that—perish the thought—a spendthrift had found his way into the White House.

It would be funny if we didn't need the roads so badly.

President Eisenhower's program recognized that highway construction had never recovered ground lost during the war and that this fact, combined wtih annual gains in the number of vehicles registered, was bringing us face to face with a real emergency. Automobiles are basic to the American economy, and if roads are not provided for them to operate on every one is going to suffer.

The President's plan was for a massive effort to catch up, financed in part by the issuance of $21 billion in bonds that would not be part of the national debt, and that would be paid off by the revenues from certain taxes.

Although the Democrats opposed it on the aforesaid moral grounds, one suspects that the proposal's really fatal flaw was that it was too good, that the opposition couldn't bear to help the President solve the problem so cleanly and get the credit for it.

At any rate, their counterproposal was for vastly more of the same old Federal aid, accompanied by increased taxes on fuels, tires, and heavy vehicles. The only trouble was that their own members didn't have what it took to stand up against the vocal opponents of the new levies and the whole business collapsed—and much to the leaders' surprise—on the floor of the House.

All of which leaves the country stalled in the traffic, with plenty of time to mull over how to vote next time.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Supplemental Appropriations, 1956

SPEECH

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 30, 1955

Mr. CANNON. Mr. Speaker, it is always a matter of regret when it becomes necessary to answer unwarranted statements made by a colleague and especially those of a personal nature.

The gentleman from Iowa [Mr. JENSEN], during hearings relating to purchase and sale of electric power by REA cooperatives, asked to be heard. Tentative dates were set for his convenience but he did not appear. Finally he sent in a written statement which precluded personal interrogation or reply. As the statement criticized me by name I submitted an answer showing the fallacy of Mr. JENSEN's criticism. The committee printed both Mr. JENSEN's statement and my reply in the published hearings.

Later, the private utilities, known in Missouri as the Power Trust, which had twice brought suit in the Federal courts against the farm REA cooperatives and against which the courts had both times handed down decisions in favor of the farmers, had Mr. JENSEN's statement printed as a private pamphlet and widely distributed through the mails and otherwise at their expense.

On June 15, 1955, during debate in the House, Mr. JENSEN held one of these trust-printed pamphlets aloft and shouted:

> I would like to have someone stand in his place and deny a single thing in that statement.

I immediately rose and asked:

> Will the gentleman also include the reply made to it? All that I ask is that the gentleman put in immediately following his statement the reply to that statement.

Mr. JENSEN refused to put in the reply and gave me no opportunity to answer. And when I got the floor and asked to have the reply included in the RECORD, Mr. HOFFMAN of Michigan, standing beside him, objected, and it was impossible for me to answer the charges against me in the pamphlet.

Not only was I denied an opportunity to reply but when the transcript of the colloquy was delivered to Mr. JENSEN that afternoon he did not submit it to me and the Government Printing Office messenger did not submit it to me. Although I have served here on the floor for many years that is the only time I was not allowed an opportunity to check my remarks in any colloquy made on the floor in debate.

I was personally attacked and not allowed to reply and was denied an opportunity even to read the transcript before it went to the printer.

The Committee on Appropriations had several bills coming before the House and I dismissed the matter from mind. Everybody knew BEN JENSEN.

But for the third time, on July 26, 1955, he appeared before a subcommittee of the Committee on Government Operations, and without notice to me, and in my absence, again put the trust-printed and trust-distributed statement, criticizing me, in the record of the hearings.

There is a point, Mr. Speaker, at which tolerance ceases to be a virtue, and I am today taking the time to lay before the House and the country the statement which the enemies of REA who brought suit to wreck the farmer REA cooperatives paid to have printed and paid to have distributed. Both the Power Trust and Mr. JENSEN approved its distribution through the mails but Mr. JENSEN has refused my request to have it printed in the RECORD.

Here it is:

STATEMENT OF CONGRESSMAN BEN F. JENSEN

I have spent considerable time going over part 2 of the printed hearings on the central section of the public works appropriations for fiscal 1956. The first half of this record, pages 1 to 56, which was made the evening of May 5, 1955, is filled with misleading and questionable statements and testimony. I cannot stand idly by and permit real facts and issues to be hidden, and I want to register an emphatic protest against the members of the House and Senate committees being called gullible. It was entirely uncalled for and ill becoming of Mr. CANNON, the chairman of the full Appropriations Committee of the House, to make such erroneous and insulting remarks about any Member of Congress, let alone members of his own committee. All the misleading statements and testimony point to an attemped buildup to justify an appropriation to activate a series of contracts that were designed to further the empire building of power-hungry bureaucrats; contracts that should never have seen the light of day.

Let's look at the record, to see how these contracts were developed and just what they were supposed to do. First of all, we have to go back to 1946 when Douglas Wright, Southwestern Power Administrator, presented to Congress his grandiose scheme to create a gigantic Federal power empire with nearly 15,000 miles of transmission lines, and 770,000 kilowatts in steam plants, at an estimated cost, as of November 1945, of $200 million. At today's costs this would be nearer $300 million. Think of it, 15,000 miles of transmission lines, enough to go more than three-fifths around the world and enough steam plants to generate nearly 4 times the potential energy of all the multipurpose projects whose output SPA is now marketing? Wright even went so far as to tell the committee that he should have the whole program or none. Congress refused to go along with this fantastic proposal. The House committee at that time said in its report, "The committee does not favor the initiation of a power-development program in this area the cost of which would approximate such an enormous sum."

There can be no doubt that SPA under Douglas Wright has had through the years a burning and insatiable obsession to obtain, without regard to method, the consummation of this "comprehensive plan of power distribution" whereby he would build a gigantic power empire.

This is evident when, after the turndown by the Congress of the plan for widespread transmission-line construction and steam-plant installations, the scheme was developed by having the G. and T.'s act as cat's-paws to obtain by the back door what Congress had denied through the front door. These fantastic "lease-option" takeover contracts were dreamed up by SPA and Interior. It is apparent that the REA cooperatives were sold a bill of goods in some instances and in others were coerced into signing the contracts. Had the REA's taken the time to fully analyze the fine print in the contracts or to read between the lines they would have realized that they were being used as cat's paws and would get burned in the process.

As has been testified to by REA cooperatives officials the REA Act provides that REA funds could not be used to construct lines to serve towns of over 1,500 population, nor to serve any person that is receiving central-station service. Now would it be morally and legally proper for SPA to take over these lines constructed by REA funds, which under the law cannot be used by the REA cooperatives to serve towns of over 1,500 population or persons now receiving central-station service, and for SPA then to serve such restricted loads? I do not think the REA cooperatives are today hankering to be a party to that kind of a deal and never were. It was a reprehensible action by SPA to try to get by subterfuge that which is contrary to law, and which has resulted in a great detriment to the cooperatives and the farmers.

There can be no question but that SPA put this "takeover option" in the generating and transmission co-ops' contracts for the purpose of making possible the acquisition by spa of that proposed great network of major transmission lines to be constructed by the G. and T. cooperatives. This was but another step toward the goal of building an electric empire.

The SPA surely knew that the proposed rates would not provide for full repayment of that portion of the investment cost of the multipurpose projects, properly allocable to power, and for operation, maintenance, administration, and other costs of the overall power and transmission system. The law, quite properly, provides for the necessary revision of rates to assure payment of these costs, so SPA, after the G. and T. lines were built, would be free to raise the rates to whatever was necessary. All protestations of Mr. Wright to the contrary notwithstanding, it now appears quite likely that power rates for SPA power will have to be raised a substantial amount, rates which may well be as high as 8 mills per kilowatt-hour of power delivered to the G. and T. cooperatives. The ultimate cost to the G. and T.'s member cooperatives will be dependent on the additional G. and T. cost of delivering the power to such member co-

operatives. Rates of 10 to 13 mills per kilowatt-hour may occur. (Later I will discuss the project costs, cost allocation, and lack of proper basis for the original SPA rate and proposed method of power disposal.)

Managers of several of these G. and T. cooperatives sat in my office some time after the committee in fiscal year 1954 had refused to approve funds for implementing these "lease-option" contracts, and let me say here and now, they were far from unhappy. They said they knew they would now be in a hole, so to speak, for a while but at least they would be able to keep control of the facilities which they had borrowed REA funds to construct. They had no wanted to sign away their property. It was also admitted that there was a question as to whether they had the legal authority to enter into contracts signing away the G. and T. property without formal and legal approval of the member cooperatives.

Now let's read between the lines of the "lease-option" contract and see just what can and would happen to the REA cooperatives in regard to costs. As is now evident, the 5.6 mill rate which SPA had promised could be given to the member cooperatives is as fleeting as the morning mist when the sunlight of truth shines upon it. Of course, SPA had very generously written into the contracts that the cooperatives could make other ararngements for a power supply if they did not want to pay any increase in rates resulting from a periodic review. That was so nice of SPA. But remember the G. and T.'s had been nailed to the mast by the insidious part of the contracts which provided that SPA could take over and own the cooperatives' transmission lines at any time by paying off the balance of the REA debt or by paying $10 to the REA's at the end of 40 years when such debt had been paid up. It can readily be seen that the REA cooperatives would be at the mercy of the SPA—it would be a question of take it or leave it. While all the questionable aspects of the contract were contributory, this "option" proviso was one very good reason for the language put in the committee report in fiscal year 1954, denying use of funds to implement the lease-option takeover contracts.

The then REA Administrator certainly had read the REA Act and knew the limitation on the use of REA loan funds with respect to not being available to construct transmission facilities to serve towns of over 1,500 population or to serve persons receiving central-station service. Surely he was aware that SPA intended to use the REA lines they proposed to lease for these prohibited uses.

It seems to me that he and his Deputy Administrator, who signed some of these contracts were very derelict in their duty and have been guilty of approving questionable loans for the REA cooperatives to construct facilities way beyond their needs and present ability to use or to pay without great difficulty.

The REA Administrator and his Deputy could hardly have failed to realize that the G. and T.'s would be saddled with an excessive burden if Congress refused to provide the funds required by SPA to pay the lease and operating and amortization expense on the G. and T. lines.

Now one would think, having gotten the cooperatives and the farmers into this untenable position, that the parties primarily responsible would use some effort to get them out, but no, we find several of these key figures in the forefront in trying to reinstate the old contracts and to counsel against any other proposal to get the G. and T.'s out of the predicament. Surely the G. and T. representative now knows full well that Mr. Wright has not been trying to find an alternate solution, apparently hoping his original scheme can be reinstated. Former Federal employees are now working on these matters, evading the moral if not the legal restrictions on handling matters they previously handled or obtained knowledge of while in Federal employment. Of course, that is something for their own conscience and possibly the courts to decide.

Let me make it clear here and now that I am a friend of the REA as is every Member of Congress and I know full well the needs of the farmers for adequate electric service at reasonable rates, because I was brought up on a farm. But let us look at this canned dialogue between Mr. Wright and Mr. Cannon reiterated over and over in the May 5 hearing referred to above. Were or are the distribution cooperatives in the SPA area so bad off in comparison to many other areas of the United States as Mr. Wright and Mr. Cannon would have us believe?

Let's take Missouri, for instance, and the four REA cooperatives purchasing power from the Union Electric Co. Incidentally, the Union Electric Co., far from having a monopoly on the service of electric power throughout the State of Missouri, as Mr. Cannon so emphatically proclaimed or inferred, only serves 4 percent of the area of the State and its 2 subsidiary companies an additional 20 percent or a total of 24 percent of the area of the State. I would hardly call this a statewide monopoly when 10 other private utilities operate in the balance of the State.

The REA published record for fiscal year 1953 shows that Union Electric Co. in that year sold 165 million kilowatt-hours to 4 REA's in Missouri; 13,500,000 kilowatt-hours at 9.4 mills, 67 million kilowatt-hours at 8.7 mills, 73,400,000 kilowatt-hours at 8.2 mills, and 11,100,000 kilowatt-hours at 9.7 mills.

An analysis of the loads served by these four cooperatives and the relative price per kilowatt-hour paid in 1953 by the farm and nonfarm residential customers of these and other cooperatives is very revealing and is discussed below.

The first cooperative, in addition to buying from the Union Electric Co., also purchased electric energy from the Arkansas-Missouri Power Co. (5,860,000 kilowatt-hours) and the M. & A. Electric Power Cooperative (3,865,000 kilowatt-hours) at 11.8 mills per kilowatt-hour. Of the total power purchased, 8,150,000 kilowatt-hours was sold to farm and nonfarm residential users at an average rate of 486. mills per kilowatt-hour, while 14 million kilowatt-hours was sold to commercial and industrial customers at an average rate of 15.7 mills per kilowatt-hour. In effect, all the power purchased from the Union Electric Co. was delivered to commercial and industrial customers instead of to the farmers.

The second cooperative sold a little less than 10 million kilowatt-hours for farm and nonfarm residential use at 40.3 mills, 5,700,000 kilowatt-hours to commercial and industrial customers at 26.1 mills, 28 million kilowatt-hours for service to Fort Leonard Wood at 10.6 mills, and 16,700,000 kilowatt-hours to other REA's for resale at about 9.6 mills.

The third REA purchasing power from Union Electric resold 17,150,000 kilowatt-hours for farm and nonfarm residential service at an average rate of 32.0 mills per kilowatt-hour.

The fourth REA, in addition to the purchase from Union Electric, purchased 51 million kilowatt-hours from the Southwestern Administration at 5.3 mills and generated 6,300,000 kilowatt-hours in its own plants. Of the total supply of 133 million kilowatt-hours, 9,500,000 kilowatt-hours was sold for farm and nonfarm residential service at a rate of 32.4 mills per kilowatt-hour, 10,700,000 to commercial and industrial users at 26.6 mills per kilowatt-hour, 86,700,000 kilowatt hours to other REA's at 10.1 mills, and 24 million kilowatt-hours to other utility systems at 14.4 mills.

As to whether the cooperatives in Missouri are paying excessive prices to the private utilities, comparison can be made to the rates charged the REA's in the State of Nebraska, where there can be little question that a statewide public power monopoly exists that pays no Federal taxes. Yet we hear no cries of anguish from our distinguished chairman over this monopoly. The Nebraska Public Power system sales to REA's in fiscal year 1953 total about 300 million kilowatt-hours at rates varying from a low of 8.6 mills to a high of 9.2 mills in Nebraska proper and 12.6 for 1 sale made to a South Dakota cooperative. Union electric rates to REA's also can be compared with the rates charged by the Dairyland Power Cooperative, an extensive generating and transmission cooperative operating in Wisconsin and other adjacent States. This G. and T. cooperative generated and sold 369 million kilowatt-hours to member or other cooperatives at an average rate of 13.5 mills per kilowatt-hour.

It can easily be seen by the above figures or by an examination of the REA statistical reports that the Missouri distribution cooperatives and their farmer customers are not as bad off as some folks would have you believe. In fact, they compare favorably with numerous other sections of the country and are much better off than in many of the other States.

There is considerable evidence that the cost of power to the distribution cooperatives is a relatively small part of the rate paid by the farmer. Whether the wholesale cost is 5 mills or 10 or 12 mills seems to have little bearing on the average price paid by the farmer as shown by the following figures based on a 1953 REA published report and taken at random therefrom:

State	Price per kilowatt-hour paid by REA for energy purchased	Average charge per kilowatt-hour by REA's for farm and nonfarm residential service
Arkansas	5.2	46.8
	5.4	37.7
	10.1	45.9
Delaware	12.2	35.4
Idaho	10.0	28.5
Illinois	8.4	51.5
	8.5	30.0
Iowa	13.0	32.4
	14.3	31.5
Kansas	5.7	41.9
	7.6	37.7
Minnesota	17.4	39.8
Missouri	10.1	53.0
	7.4	26.2
Nebraska	9.1	31.2
	7.0	38.4
New York	11.1	36.0
	11.0	35.5
North Dakota	15.3	40.0
	5.2	45.6

As has been pointed out the wholesale price of electric power is a small part of the price the farmers are paying for the electric power they use. An analysis of REA reports show that the number of customers per mile of line in Missouri is relatively high yet the kilowatt-hour use per customer is comparatively low. Testimony has been given that most of the REA rates to the farmers in this area provide for the minimum used to pay 8.1 cents per kilowatt-hour for 40 kilowatt-hours per month or $3.24, while a farmer using 250 kilowatt-hours per month would pay only 3.6 cents per kilowatt-hour or $9. If this is the case, then adding as much as 4 or 5 mills to the wholesale cost of power would add but 16 to 20 cents to the monthly bill of a minimum user and $1 to $1.25 to the monthly bill of the farmer with a 250-kilowatt-hour use. In either case it would appear that there is an attempt to make a mountain out of a mole-

bill as there is no doubling of the farmers' costs as has been inferred.

When I analyze the operations and costs of REA over the country I cannot see the justification for the numerous statements or inferences that the G. and T. and other REA cooperatives in the SPA area on the verge of going bankrupt and will do so if the rates are raised above the existing SPA rate. Surely if other areas can pay higher wholesale costs and operate efficiently in the black there should be no reason why, with proper and efficient management, the Missouri and other SPA area cooperatives should operate in the red. Of course, if there are drought and other economic conditions which have made it impossible for some of the less prosperous farmers in the SPA area to pay their bills, among them the electric-light bill, that is not a matter to be solved by subsidizing their electric-light bill by from $2 to $15 a year with Federal taxes paid by the folks in my district or in any other section of the United States.

Let us examine this lease-option business a little further. Suppose a Federal act permitted the REA to loan money to a farmer to construct a powerplant on his farm for his use only. Now along comes SPA and says, "We have some hydropower that is available part of the time which we can sell you at a price that is less than you can generate it yourself in your proposed small plant and you are entitled to buy some of it. Now, SPA continues, you borrow enough money to build a plant many times larger than necessary for your own use. After you construct the plant, we, SPA, will lease, operate and take the entire output of the plant. We, SPA, will pay all operating costs, interest, and principal payments on the loan and sell back to you whatever power you need for your own use, at a very low price, less than you can get elsewhere. Of course, you will have to give us, SPA, an option to pay for and take over the plant at any time, and we also reserve the right to raise the rates later on. (This latter item is, of course, soft-pedaled.) Now, the reason we, SPA, want to do this is to be able to serve electric power to town A which you, by law, cannot do, and to serve Farmers Brown and Jones up the road a bit, who now get power from company B, you, of course, cannot legally sell them power directly."

Now I ask each of my colleagues, how can we justify aiding and abetting this sort of thing. Is it not time that we consider the moral and legal aspect of our actions? Are we not guilty of compounding a felony when we, by our appropriations, permit by subterfuge, the doing of those things prohibited by acts of the Congress? I, for one, think it time to set an example at least for the young people of our Nation, and show them that we have a moral and spiritual obligation to uphold the law of the land and the precepts of our forefathers who fought to establish the freedom we enjoy today. If we continue to permit the further illegal extension of these Federal bureaucracies soon we will find our cherished freedoms gone.

I want to call attention to the fact that under the lease-option contracts SPA was to pick up the entire check for operation, maintenance, replacement, interest, and repayment of the transmission facilities, and would pay for the entire output of the G. and T. steam-electric plant regardless of whether SPA could find a market for such energy. Then SPA was to turn right around and deliver back to the member cooperatives of the G. and T.'s all the power they might need at an average rate of 5.6 mills per kilowatt-hour; note the year, 1946.

There can be little wonder that Mr. Wright, the SPA Administrator, testified, "I think they would have one of the best contracts any group of REA ever dreamed of in their fondest moments." And why not, with Uncle Sam picking up the check and delivering power at less than cost.

I am sure the farmers themselves in SPA area do not want subsidized power rates at the expense of the other taxpayers of the Nation. I say again and say it advisedly they were pressured into these contracts in question.

The bait used by SPA was the low rate promised, which could not be justified on the basis of proper cost figures, cost allocations, and the amount of hydropower for sale, according to information provided me by expert rate engineers who have no personal interest in this matter.

The farmers are well able to run their own systems as has been proven and I am sure they would like to continue to run their own business. The G. and T.'s are of course in a difficult position, having been enticed into expanding their facilities considerably beyond their needs for the near future.

Now what power and what energy do we have available from these multipurpose projects in the SPA area? First there is the installed capacity of the generating units, and second, the electric energy that such units can produce from the available water. As has been testified to time and time again these projects have a variable supply of water and on the average can only operate at full capacity a portion of the time varying up to about 30 percent of the time, with the average around 20 or 25 percent.

How can such power best be utilized? It has been explained to me, and the records through the years have disclosed that the greatest value for this variable or peaking capacity and energy is realized when it is used by utility systems, public or private, that are large enough to use all the capacity and energy to serve the peak portion of the loads.

SPA knew this to be true, but as there were very few public bodies or cooperatives which had generation or other sources of power large enough to permit using more than a very small part of this peaking capacity, SPA knew it had to be sold to the existing major utilities who could readily absorb it and who had offered to take all such power and pay a rate sufficient to assure repayment of all costs of the power and to pass on any benefits to the preference and other customers. SPA, knowing that this was disposing of the power under sound business principles, nevertheless knew it would not permit SPA to create the power empire it envisaged. Therefore, SPA would not agree to such a logical use of the power, claiming that it all had to be sold directly to the preference customers. Of course it strayed quite a little way from this precept when it made the contract to sell under a long-term contract a major portion of the power from Bull Shoals Dam for use by an industrial customer. Certainly this does not jibe with the SPA "line" that the power must be sold to preference customers.

Many statements have been made and much testimony given about the legal rights and obligations of SPA to assume a utility responsibility to supply all the electric energy requirements of the so-called preference customers. Here again it is my firm conviction that Mr. Wright and the other proponents of his plans for a Federal power empire are in an untenable position.

Let us look at the act that resulted in SPA being set up.

SECTION 5 OF THE FLOOD CONTROL ACT OF 1944

"Electric power and energy generated at reservoir projects under the control of the War Department and in the opinion of the Secretary of War not required in the operation of such projects shall be delivered to the Secretary of the Interior, who shall transmit and dispose of such power and energy in such manner as to encourage the most widespread use thereof at the lowest possible rates to consumers consistent with sound business principles, the rate schedules to become effective upon confirmation and approval by the Federal Power Commission. Rate schedules shall be drawn having regard to the recovery (upon the basis of the application of such rate schedules to the capacity of the electric facilities of the projects) of the cost of producing and transmitting such electric energy, including the amortization of the capital investment allocated to power over a reasonable period of years. Preference in the sale of such power and energy shall be given to public bodies and cooperatives. The Secretary of the Interior is authorized, from funds to be appropriated by the Congress, to construct or acquire, by purchase or other agreement, only such transmission lines and related facilities as may be necessary in order to make the power and energy generated at said projects available in wholesale quantities for sale on fair and reasonable terms and conditions to facilities owned by the Federal Government, public bodies, cooperatives, and privately owned companies. All moneys received from such sales shall be deposited in the Treasury of the United States as miscellaneous receipts."

If you will note, there is continued references throughout this section of the act to "such power and energy," "such energy," "power and energy generated as such projects." Note particularly the preference language which says "preference in the sale of such power and energy shall be given to public bodies and cooperatives." I maintain that the intent of the Congress is crystal clear, that the act only provides for the disposal of power generated by the multipurpose projects. There is no reference whatsoever to any other power. Surely if the Congress thought it had constitutional authority to authorize Interior to construct steam plants or to purchase steam power for resale it would have spelled out that intent in clear language.

It is realized, of course, that those persons want for obvious reasons to promote their dream of a Federal power empire are trying to read into the language of the act meanings that are not there and were never intended to be there. Mr. Wright would have you believe that because the available power and energy is not of the type to supply the normal requirements of the potential preference customers he has on obligation to obtain other power to supplement the surplus hydropower and energy. He will have you believe that definitive court action has proclaimed that right. There is no question, in my mind, nor should there be in the mind of any clear-thinking person, that the right of the Federal Government to purchase steam electric power for resale or to construct steam electric generating stations to make power for resale has not been argued on its merits all the way through to the Supreme Court of the land. Until that is done, it is poppycock for Mr. Wright or anyone else to say that this issue has been settled and the legal right to do these things are clear. In my estimation this also applies to TVA the Bureau of Reclamation and all other Federal power agencies.

It it were not so serious, it would be humorous to see the mental gymnastics and warped thinking of the protagonists of Federal electric-power empires go through in trying to justify actions that clearly have no legal authority. One of the farfetched arguments used in an attempt to justify SPA rights to construct steam plants or purchase electric energy from others for resale was given back in 1946 in the hearings on the fiscal year 1947 Interior Department appropriation bill, page 71, in an opinion presented by the SPA Chief Counsel, which was supplemented by the opinion of the Solicitor of the Department of the Interior. Section 5 of the Flood Control Act of 1944 quoted previously contains the proviso that "the Secretary of the Interior is authorized from funds to be appropriated by the Congress, to construct or acquire, by purchase or other agreement, only such transmission lines and

related facilities as may be necessary in order to make the power and energy generated at said projects available in wholesale quantities for sale on fair and reasonable terms and conditions to facilities owned by the Federal Government, public bodies, cooperative and privately owned companies."

It is impossible for me to believe that anyone could argue without tongue in cheek that the authority "to construct or acquire transmission lines and related facilities as may be necessary in order to make the power and energy to be generated at said projects available to facilities owned by the Federal Government, public bodies, cooperatives, and privately owned companies," confers the authority to construct steam plants or to purchase electric energy for resale. To claim as did the SPA, Chief Counsel, that the term "related facilities" was meant to or can properly be used to cover steam electric plants is farfetched to say the least. Claims that steam electric power is needed and required by law in order to be able "to market the hydropower on a businesslike basis, and to make such power and energy available in wholesale quantities for sale on fair and reasonable terms" are other examples of the fuzzy thinking of so many Federal power proponents.

There has been much loose talk about the tremendous need for additional power in the area and at the same time statements are made that SPA power cannot otherwise be sold without integration with the G. and T. facilities and steam plants. These misstatements are so obvious that they do not merit answering. In all the testimony and discussions that I have seen to date there has not been any discussion as to what happens when the growing electric loads of the REA's and other preference customers use up all the presently available capacity. Has a real analysis been made as to just what the loads of the G. and T. cooperatives and their member cooperatives amount to as of this date and what are the estimates of future loads, I think not. Full information also is lacking as to just what loads are presently receiving central station service, and so forth.

Rough approximations given seem to indicate the G. and T. cooperatives in the SPA area may have total peak loads of about 87,000 kilowatts which is slightly over the capacity of their steam plants. I understand that REA estimates for these 5 G. and T. cooperatives show an expected load of 214,000 kilowatts by 1965. On this basis it will be 10 years before the 130,000 kilowatts of SPA hydro capacity now being held for these 5 G. and T.'s will be fully utilized. Transmission capacity may have been overbuilt to an even greater extent.

Pamphlets that have been mailed to me which say that by taking the SPA hydro and adding it to the G. and T. steam it will produce more power and more revenue than by integrating the SPA hydro and G. and T. steam with the private utility systems facilities. Now this is a good trick if you can do it, but it sure sounds like a shell game to me.

Now, let's be specific and get away from generalities, which I dislike. I have reliable information that the G. and T.'s have 85,000 kilowatts of steam and SPA was supposed to have 195,000 kilowatts of peaking hydro contracted to the G. and T.'s, or which would give a total of 280,000 kilowatts available to the G. and T.'s. With an average load factor of the REA load of around 50 percent would require, for a peak load of 280,000 kilowatts, 100,800,000 kilowatt-hours of energy for a 30-day month. I am told that the hydro peaking carries with it 150 hours of firm energy per month for each kilowatt, or a total of 29,250,000 kilowatt-hours. Adding the 85,000-kilowatt steam-plant output at 90 percent load factor (this is on the high side) would give an additional 55,080,000 kilowatt-hours, or a total of 84,330,000 kilowatt-hours. This is 16,470,000 kilowatt-hours short of supplying all the load. Where are the G. and T.'s going to get the balance? If there is an increase in the load factor above 50 percent (which is quite probable) there will be an additional 2 million kilowatt-hours short for each percent above 50 percent.

On the basis of 130,000 kilowatts of hydro allocated to the G. and T.'s together with the 85,000 kilowatts of steam there would be a deficit of about 2 million kilowatt-hours for a month having a peak of 215,000 kilowatts.

The pamphlet Local Power Partnership in Reverse put out by the Central Electric Power Cooperative and Western Farmers Cooperative, and sent to Members of Congress, is a prime example of some of the irrational thinking and misleading and erroneous figures being used to try to persuade the Congress to reactivate the lease-option contracts between SPA and G. and T.'s The pamphlet is so replete with questionable figures and statements that I will take time to point out only a few. I am sure this pamphlet could not have been written by the clear-thinking farmers of the area, but must have been prepared by some of the same people who got the G. and T.'s into their present predicament.

I have already referred to the erroneous statement that SPA must obtain energy from steam generating plants to be able to sell the capacity available from the hydro plants. This is of course so patently false as to not warrant denial.

On page 7 of the pamphlet referred to, is a table that purports to show power and revenue available to SPA with and without the G. and T. contracts. This is the most misleading and unwarranted tabulation that could be imagined. First is the column headed "Power Available Without G. and T. Contracts" and the revenue purported to be derived therefrom. SPA firm capacity is shown to be 170,000 kilowatts.

The G. and T.'s in the February hearings reported the SPA dependable capacity to be 378,000 kilowatts. At the present time only 130,000 kilowatts of SPA hydro capacity are reported available to the G. and T.'s. Such capacity is said to carry a firm energy commitment of only 150 kilowatt-hours per kilowatt per month. If SPA sells the 130,000 kilowatts of peaking power to the G. and T.'s and the G. and T.'s use their own steam to carry 85,000 kilowatts of base load, the G. and T.'s then could carry a total of about 215,000 kilowatts without reserve. On the other hand if SPA were to buy the output of the G. and T. plants as proposed under the lease-option contracts and then resell the steam and the hydro combined back to the G. and T.'s it would produce the same results and would not add one kilowatt of dependable capacity to the load-carrying ability of the two systems. With an annual potential generation of less than 700 million kilowatt-hours from the steamplants it is difficult to understand how the firm energy can be increased by 836 million; in fact there is no increase whatsoever in the energy available to the area. The revenue comparison is even more fantastic. Without the G. and T. contract the revenue is shown to be based on a 5.6 mill rate for firm energy and 1.25 mills for nonfirm energy, while by some legerdemain, the power if used under the G. and T. contracts is to bring in revenue based on 7.16 mills for firm energy and 1.50 mills for nonfirm. This sleight of hand alone accounts for over $2,500,000 of the purported increase in revenue. Deducting the cost of generating the steam energy and the cost of leasing and operating the G. and T. transmission lines, which together cannot conceivably be less than 6 or 7 million dollars, in revenue, it can be seen that there will be a substantial annual deficit instead of the implied gain of $7,057,970. Of course the pamphlet does not say the purported gain in revenue is a net gain yet if the author had wanted to be honest this would have been made clear and he would not have used a different rate with or without the G. and T. contract and would have shown for both cases all the other costs to be incurred.

Two other statements in the pamphlet follow:

"Opponents to rural electrification have stated that SPA could construct transmission lines and do just about anything it wanted to out of this fund, thereby obviating the will of Congress. This interpretation of the continuing fund is not correct. Under the broadest language of the continuing fund, SPA could use it for only three purposes—namely (1) to take care of emergencies, (2) to purchase power, and (3) to make payments for rental.

"The restoration of the continuing fund of SPA would make it possible to restore the partnership arrangement without any annual appropriations by the Congress. It will not cost the taxpayers because the continuing fund is provided out of the operating revenue of SPA."

Now, does it matter whether SPA constructs transmission lines direct, or arranges for their construction through the medium of lease-option contracts paid for out of the continuing fund. The net result is the same. It is specious reasoning to say otherwise. To say the use of money from the continuing fund will not cost the taxpayers is just doubletalk. There can be no question that present rates will not repay cost of power projects and operating costs. So far no figures have been given to conclusively show that it will not cost more to generate power in the G. and T. steam plants and deliver it 200 miles away to member cooperatives than the rate to be charged.

Now let's talk about the rates for SPA power. Mr. Wright attempted to lay the blame for rate increases on the rise in construction costs of the multipurpose projects constructed by the Corps of Engineers. The inference was left by Wright and Chairman CANNON that the Corps of Engineers were incredibly mistaken in their estimates. The corps was able the next day to present the real facts, showing that the figures presented by Wright were full of errors.

The following excerpt from a report relative to SPA's Comprehensive Plan for Power Development that was filed by a nationally prominent engineer in the fiscal year 1947 hearings (p. 338–339) seem to indicate that SPA had no sound base for the power rate it was setting up:

"Although the Flood Control Act of 1944 requires the authorized agent for the Secretary of the Interior to base rate schedules on the cost of producing and transmitting hydroelectric power, including the amortization of the capital investment allocated to power, the authors of the report (the SPA Comprehensive Plan for Power Development) have developed a rate schedule which fails entirely to consider such costs. The excuse is given that 'cost figures' are not available at this time for proposed reservoir projects in a number of river basins, and the cost figures that are available even for authorized projects are subject to change as the design of the several projects is developed and the construction is carried out."

"It is believed that for the purposes of the report which is dated November 1945, the authors, representing a governmental agency, would have available to them the cost estimates prepared by the Army engineers for the proposed projects on the Arkansas River (survey report on Arkansas River and tributaries in Arkansas and Oklahoma, dated December 1943) and on the White River (survey report on White River and tributaries, Missouri and Arkansas, dated May 1945). The projects proposed under these two survey reports added to existing and presently au-

thorized projects in the region will account for about 90 percent of the total annual average energy output utilized and studied under the subject report. It is to be admitted that final 'as constructed' cost figures will be different than the estimated costs and it must be understood that the estimated costs must be continuously reviewed in the light of ever-changing construction costs in order that a true economic analysis can be made. However, it is believed that the use of such estimates as do exist, corrected where necessary to reflect trends of advancing construction costs, provide a sound and, in fact, the only means of determining the cost for the production of hydroelectric capacity and energy and most certainly would result in compliance with the terms of the Flood Control Act of 1944. If the above-mentioned statement in the SPA report is accepted and no determination made of the estimated cost of hydropower until projects were completed, Congress would certainly be confronted with requests for appropriations, without any means of knowing whether or not the projects were sound."

Five years later in 1952 we still find the SPA trying to maintain a fictitious rate based on untenable cost allocation. It is only too clear that SPA and not the Corps of Engineers is responsible for the use of an erroneous rate base with the resulting need to raise SPA rates. This also is indicated by the following material taken from the House committee print No. 23 of the 82d Congress, 2d session:

"The conflicting solutions of the problem of allocation of costs of 12 dams in the Southwest are noteworthy. The Interior Department, acting through the Southwestern Power Administration, is the agency of the Government designated under section 5 of the Flood Control Act of 1944 to dispose of excess electric energy produced at projects built by the Corps of Engineers in Texas, Arkansas, Oklahoma, and Missouri.

"In January 1952, the Secretary of the Interior filed with Federal Power Commission for rate approval a long-term contract for sale of a block of power from the 12 dams. Accompanying this were studies including the proposed allocation of costs for the 12 projects. The Federal Power Commission then requested the construction agency, the Corps of Engineers, to furnish its views on the amounts of costs and annual charges properly chargeable to power for the 12 projects. The estimates of the Southwestern Power Administration and of the corps as to the amounts which should be allocated are set forth in detail on pages 409 to 415 of the subcommittee hearings and are summarized in table 1 of this report. The Bureau of Power, Federal Power Commission, generally agreed with the methods used by the corps in allocating these costs.

"The total project construction cost was agreed generally to approximate $750 million. Including interest during construction, the total project investment was estimated at approximately $776 million. The Southwestern Power Administration recommended an allocation to power of $218 million while the Corps of Engineers recommended $418 million.

"One difference between the two computations came from the Southwestern Power Administration's failure to include interest during construction, an item amounting to over $24 million in the Corps of Engineers' allocation to power.

"Interest during construction is a valid part of the cost of the project to the Government and, therefore, should ordinarily be included in any computation of total investment costs. If exact figures are not available at the time an allocation of cost is made, a reasonable estimate could always be made subject to later revision.

"The other differences can best be understood by an examination of the different cost-allocation methods used for the 12 projects involved. Detailed statements appear on pages 406 to 426 of the published transcript of subcommittee hearings, Study of Civil Works, part 3.

"It can be seen from table 1 that the difference in allocated costs creates a large difference in the annual power charges. The greater percentage of difference in annual costs as compared to the allocated total cost comes from the fact that Southwestern Power Administration has chosen 100 years as the amortization period while the Corps of Engineers has chosen 50 years. The annual charges developed indicate that the Southwestern Power Administration can justify power rates which are less than one-half of those that would appear sound based on the methods advocated by the Corps of Engineers."

The present proposal of the G. and T.'s is not to reactivate the fantastic lease-option takeover contracts but to substitute what would be entirely different contracts and in addition they want to change existing contracts with other SPA customers to "substantially equalize the rates to all SPA customers in the area." This means, of course, to raise the rates to the other customers to pay for the required subsidy. The $64 question may be, How will the other customers react to such a deal?

Surely the Congress will not want to appropriate money for nebulous contracts without knowing the terms, effects, and cost thereof. I for one think the logical thing to do would be to extend a moratorium to these G. and T. cooperatives for say a couple or more of years. This would give them time to build up their loads and/or to make arrangements for greater utilization of the facilities through interchange contracts between themselves and the other utilities of the region. This to my notion would be preferable to a continued direct subsidizing of the G. and T.'s. There is one fact that I think the G. and T.'s should realize by now which is, that there is no possibility of the member cooperatives obtaining energy from SPA at the old rate of 5.6 mills, and that even under the lease-option contracts a rate of 8 to 10 mills was inevitable under the required rate review provision of the contract.

It also appears quite clear to me that the G. and T.'s could make some rate adjustments for justified increases in wholesale power cost and that this could be passed on to the member cooperatives. Some slight increase in cost to the farmer might be necessary, but on the basis of the rate structure reported it would appear that a concerted effort to increase the kilowatt-hour use per customer might result in lower unit costs for energy that would more than offset the increase in the wholesale rate.

In any event, I believe the Congress is ill-advised to appropriate any funds at this time to implement or reactivate any lease-option contracts. An independent investigation and report by a board of prominent and competent engineers is indicated in order that a complete professional true story on the matter be made available to the committee.

And here, Mr. Speaker, is the reply they have been keeping out of the RECORD:

STATEMENT OF CHAIRMAN CLARENCE CANNON

When Mr. BEN F. JENSEN, a member of the Appropriations Committee, requested permission to appear before the central section of the same committee, I gladly granted the request since I deemed Mr. JENSEN had some facts that he thought would be helpful to the central section. Mr. JENSEN did not appear before the committee and after some delay he submitted a written statement and requested it be placed in the record. I granted the request for the same reasons I had previously granted permission for him to appear in person.

Now let's take a look at some of the matters in his statement. First, he has gone to the graveyard to dig up some dead horses. The old comprehensive plan of SPA has been dead for years and like many other issues disposed of in the past, its consideration is not pertinent to the issues at hand. The next dead issue he debates is the opinion in original contracts whereby SPA could purchase G. and T. transmission lines. This has long since been relegated to the scrap heap, as is made clear in the testimony in the foregoing hearings. There will of course be no purchase of G. and T. lines by SPA.

Mr. JENSEN admits that the G. and T.'s were asking for reactivation of their contracts without the lease-option in them. He says this would make the contracts "nebulous." These contracts are written, and executed, and have been made a matter of public record. Would any fair-minded man say they are "nebulous"? Mr. JENSEN advocates contracts between the private power companies and the G. and T.'s. Is there a copy of one of these proposed contracts in the record? Does Mr. JENSEN have one? I challenge him to present one for the record. Who is advocating something "nebulous"?

I am surprised to find Mr. JENSEN pitched in the role of advocating higher power rates for our farmers. He says so long as these higher rates come out of the pockets of the farmers it's all right. He says, and I quote, "* * * adding as much as 4 or 5 mills to the wholesale cost of power would add but 16 to 20 cents to the monthly bill of a minimum user (small farmer) and $1 to $1.25 to the monthly bill of the farmer with a 250 kilowatt-hour use." He professes to be a friend of the REA, while at the same time he is advocating higher rates for farmers and strangulation contracts for the G. and T.'s with private power companies.

Mr. JENSEN has hand-picked a few situations to show it doesn't matter what the wholesale cost is, it won't affect the retail rates to farmers. Cooperative managers, in their testimony, showed that 30 to 45 percent of their total costs was for purchased power. They testified that in many instances a slight increase in wholesale power costs would throw them in the red and render them unable to pay debt service to REA.

I have always believed that Mr. JENSEN has a high regard for our American courts. Surely Members of Congress, above all, should respect the opinions of our courts, but again he says, "Mr. Wright, would have you believe that because the available power and energy is not of the type to supply the normal requirements of the potential preference customers, he has an obligation to obtain other power to supplement the surplus hydro power and energy. He will have you believe that definitive court action has proclaimed that right."

Now let's see what the district court of the District of Columbia had to say when these contracts were challenged in that court by the Power Trust.

"In like manner it is clear to the court, in view of the rule laid down in *Ashwander* v. *T. V. A.*,[1] that the purchase of thermal energy generated at the steam plants of the cooperatives, which purchase is reasonably incidental to the integration of hydroelectric power generated at the reservoir projects, is not prohibited by the provisions of the Flood Control Act but rather is within the scope of its provisions and in accord with its purpose. Consequently, the court finds that authority to purchase power and to pay rentals for the use of transmission facilities by SPA is contained in the terms of the Flood Control Act. The court holds, therefore, that the lease and power contracts do

[1] *Ashwander* v. *Tennessee Valley Authority*, *supra* (n. 24). (See infra 7, pp. 26-29.)

not violate the provisions of the Flood Control Act."

Mr. JENSEN says that SPA has no right or need to lease the G. and T. lines. Here's what Judge Charles F. McLaughlin of the Federal district court said:

"The court is of the opinion that the language of the statute justifies a holding that the Secretary of the Interior, through his marketing agent, may acquire by a lease agreement such transmission lines as may be necessary in order to accomplish the objectives of the act. Within the authority of the Secretary 'to contract or acquire by purchase or other agreement' is embraced, in the court's opinion, not only the power of acquisition by purchase, but also the power of acquisition by lease agreement. Not only is this conclusion justified by the wording of the act, but, in view of the context, any other conclusion would thwart the proper exercise of authority reposed in the Secretary of the Interior.

"In connection with the foregoing, the court has also taken into consideration the question raised by plaintiffs as to whether the leasing of these facilities is 'necessary' within the meaning of the act. It would appear that the answer to this question, initially, must be determined administratively since the Congress has imposed upon the administrative agency involved the duty to 'transmit and dispose of* * * power and energy in such a manner as to encourage the most widespread use thereof at the lowest possible rates to consumers thereof consistent with sound business principles.' The court finds that there is warrant in the record and reasonable basis in law for the Administrator's determination of the means to be adopted, that is to say, the leasing of transmission lines and accompanying facilities, for the carrying out of the congressional mandate contained in the act. Consequently, the court holds that the leasing of these facilities is 'necessary' within the terms of the act."[2]

When this case was appealed to the circuit court the judges there threw the power trust out of the court saying they had no grounds for a suit against the G. and T.'s.

Mr. JENSEN claims the G. and T.'s were forced into these contracts against their wishes. Again he says they were not too "unhappy" in their present sad plight. Look at the record. The officials of the G. and T.'s who worked hard to get these contracts set up were present at the recent hearing and to a man testified that they not only entered into the contracts without coercion but worked hard to get them and now wanted them reactivated.

It is claimed that the farmers will be subsidized $2 to $15 a year on their power bill if the original contracts are reactivated. He says they were baited into the contracts with low rates which will be increased to 10–13 mills. There is no evidence in the record to support these figures.

Let's see who is being subsidized. Mr. Wright says SPA hydropower is worth $17.85 per kilowatt-year and 1.5 mills per kilowatt-hour. Allowing 2,100 hours use the total value per year would be $21. To bait the G. and T.'s to illegally use their preference rights to buy this power for the power trust, Mr. Aandahl is offering this same power for $10.58 or $10.42 less than it is worth. On 130,000 kilowatts programed for the K. C. P. & L. under the new proposed contract between N. W. Co-op and SPA this would amount to a subsidy of $1,354,600. It could also be demonstrated that through similar contracts the Federal Government is subsidizing private companies in the Texas, Oklahoma, Aluminum and Narrows contracts.

A moratorium on the G. and T. payments of debt service to REA is proposed. This would pile up the debt resulting in heavier payments in later years. He says "This would give them time to * * * make arrangements for greater utilization of the facilities through interchange contracts between themselves and the other utilities of the region." The testimony before the committee is to the effect that further negotiations would be fruitless. In addition, the testimony of the Administrator of the REA in the hearings on the Supplemental Appropriations Act, 1955, makes it clear that this would be extremely poor management of the affairs entrusted to him.

Mr. Speaker, the gentleman from Iowa [Mr. JENSEN] waved this Power Trust-printed pamphlet around and asked anyone to deny a single thing in it. In conformity with his request, I will take it statement by statement and point out the errors he requests.

First several pages of the Power Trust-printed statement recite history back to 1946 when SPA proposed construction of steam plants for its own system and draw a picture of Mr. Wright as an empire builder.

The statements are mere personal opinions and include no evidence whatever to support ascribed motive. It is long well recognized that steam power is needed to firm up hydropower to provide firm power—in order to meet the intent of the Flood Control Act in serving preference customers. This is a dead issue and has no application to the question before us.

The trust-distributed statement accuses Wright of coercing G. and T.'s into building and leasing steam plants.

This is completely refuted by testimony on the part of the G. and T. managers in hearings on page 858, part 3, of the central section on public works.

The Power Trust-approved statement charges that the G. and T. systems would serve towns of over 1,500 in violation of REA Act.

This is a ridiculous deduction to the effect that G. and T. steam power would flow into the SPA system which is by law allowed to serve municipalities as preference customers. It is the same as saying that SPA system may not serve certain preference customers with firm power unless it buys the firming power from private utilities.

The courts have dismissed this contention. It is a matter of record.

The power-trust-cooperated statement infers that rates will go as high as 12 to 13 mills if the G. and T.'s are integrated under the original contracts.

The Administrator of SPA says 8.05 mills at most on page 64 of part 2 of hearings. And that is a maximum rate. It could be much lower.

The power-trust-sponsored statement claims the G. and T.'s signed away their property under a lease-option provision.

This is no longer an issue. The option provision is out. The statment is begging the question and seeking to divert attention from the real issues.

The Jensen statement attacks the representatives of the G. and T.'s for evading the moral, if not the legal restriction on activities of persons previously on the Federal payroll.

This is wholly unwarranted. The reference is to the Administrative Procedure Act. But it has been long since interpreted by courts as applicable only when such ex-employee is engaged in prosecuting a claim for money.

Mr. JENSEN (and presumably the power trust which cooperated in distributing the statement) insist that they are friends of REA's.

But Mr. JENSEN has voted against every motion to increase the REA appropriations. And he reported out the bill which revoked the SPA continuing fund and repudiated the Government's contract with the farm cooperatives.

The Power Trust-endorsed statement uses 1953 figures to show that Union Electric sold power to 4 co-ops in Missouri for 8.2 to 9.7 mills.

These figures are out of date and, of course, mean nothing. Union Electric was asking 10.2 in recent negotiations with Central. It is because of such figures as those quoted that G. and T.'s want to build their own steam plants or integrate with SPA.

The trust-printed and approved statement says there is no justification for talk about G. and T.'s being on the verge of bankruptcy.

Testimony—page 362 of hearings on second supplemental, 1955—of REA is that all of them operated at a deficit last year. Financial statements on pages 374 through 378 also show this.

The trust-printed statement claims that power generated at SPA dams can best be used by the large private or public systems.

This is exactly right. It is the reason Mr. Jensen and the Power Trust try, in court and otherwise, to show that the Federal Government has no legal authority to buy steam power. If such purchase could be prevented, most of the hydropower in the SPA system would have no market except to private utilities. Preference customers could not be served as intended by the flood control act. This is the crux of the campaign against the farm cooperatives.

Mr. JENSEN and his friends try to interpret the flood control act to mean that the sale of power by the Federal Government must be limited to hydropower produced at the dam, and the question of the right to buy steam power is not clear until tested in the Supreme Court.

No credence is given at all to the court decision already handed down to the effect that steam power may be purchased. It must be, of course, if the provisions of the flood control act are to be effective. But what is a court decision among friends?

He next goes through a lot of gymnastics with figures on power production and power rates.

This is extremely technical and must have been prepared. It is doubtful if any unbriefed layman understands them.

The combined statement seeks to attack the allocation of costs to the power features of dams.

All this is purely academic since FPC is responsible for and is thoroughly competent to evaluate figures given them

---

[2] See *American Power & Light Co.* v. *Securities & Exchange Commission, supra. Ashwander* v. *Tennessee Valley Authority* (297 U. S. 288 (1936)).

and approve rates accordingly. Possibly he can scare some people into thinking Federal rates would be higher if FPC understood the facts as well as he does, but it is doubtful.

Summing up the whole purport of this statement, reprinted by the utility companies, Mr. JENSEN points out that the hydroelectric power generated at Federal dams in the SPA system can best be used "by utility systems, public or private, that are large enough to use all capacity and energy to serve the peak portion loads." This is correct, of course, but as he also points out there are few if any preference customers, that is public bodies or cooperatives, which have the facilities or are large enough to use this peaking power.

Mr. Wright, the Administrator of the Southwestern Power Administration said the same thing on page 79, part 2, of the Central Section Hearings on Public Works, as follows:

The Government had built projects, multipurpose projects, in the Southwest which produced a commodity which we refer to as peaking power. That is what it produces. It doesn't have any other commodity.

At the same time the Flood Control Act of 1944 provided that in the sale of that power you must give preference to cooperatives, public bodies, and Government agencies and private companies, in that order. You had a commodity that they couldn't use. They couldn't use that commodity. You had exchanges, integrations, or you had to do something with it before they could use it in the judgment of people who were trying to do something with it.

With all this in mind it becomes quite clear why Mr. JENSEN and the private utilities continue to attack, in and out of the courts, on the authority of the Federal Government to purchase steam firming power. If this point could be established, and the courts have said it cannot be established, it would then be possible for the large private utilities to take almost all of the power from Federal dams and practically none would be left for preference customers as intended by the Flood Control Act of 1944.

Mr. Speaker, we are dealing here with one of the vital issues of the day. Too much cannot be said in emphasizing the service rendered rural America through the establishment and operation of the Rural Electrification Administration.

It has completely reversed living conditions on the farm; it has changed the drift of population from the country to the city. It has especially brought health, happiness, and prosperity to the farm wife and mother.

REA has been practically effective in Missouri and the Southwest. Farm cooperatives were organized there and a contract was negotiated with the Southwestern Power Administration under which SPA contracted to buy the thermal power generated by the co-ops, rent their facilities, operate those facilities, firm up SPA waterpower with co-op steam power, and sell the firmed power to the distributing farm cooperatives at a price the farmer could afford to pay. With this contract as security the co-ops borrowed $70 million from the Government—good loans at a fair rate of interest and payable in installments in 40 years. This system was remarkably successful and under this contract every cooperative was meeting its annual amortization installments and service was extended to practically every farm and farm home in the territory.

But in the 1st session of the 83d Congress, the gentleman from Iowa [Mr. JENSEN] reported a bill under which money was denied Southwestern for the purpose of complying with the Government's contract and buying thermal power to firm up hydropower, and leasing the facilities, transmission lines, and plants in order to provide funds for the amortization payments.

As a result all these cooperatives are now operating at a deficit and it is merely a question of time before they will be unable to make their payments and in default will be thrown into bankruptcy. When they are put up and sold they will be taken over by the private utilities which have been bringing suits against them and paying for the printing and distribution of statements submitted by the gentleman from Iowa. It is these statements which I am now answering after the gentleman from Iowa declined to yield to me for that purpose.

Mr. JENSEN. Mr. Speaker, the gentleman says I declined to yield to him. I certainly did not decline to yield to the gentleman. I asked him to point out any place in the statement that he thought were not the facts, and the gentleman did not do it.

Mr. CANNON. Mr. Speaker, I will read the exact quotations here:

I would like to have someone stand in his place and deny a single thing in this statement.

As I said, the statement was full of erroneous references to me. At least that was the inference thrown out by the gentleman from Iowa. I said:

Will the gentleman also include the reply in which I did the very thing he asked someone to deny?

Mr. JENSEN said:

That is your business. Your reply said nothing. It did not answer a single statement in my statement.

Mr. CANNON. All I ask is that the gentleman put in immediately following his statement the reply to that statement.

The reply contradicted most of his statement.

Mr. JENSEN. Mr. Speaker, will the gentleman yield?

Mr. CANNON. I yield to the gentleman.

Mr. JENSEN. The gentleman is possibly the best parliamentarian in the House, with the exception of our House Parliamentarian. The gentleman knew that he could insert his statement any time he wanted to in the RECORD any place he wanted to. The gentleman should not stand on the floor of this House and say that I denied him the opportunity of putting his statement in the RECORD. The gentleman did not make the request to have his statement put in the RECORD. The gentleman certainly knows that I would not have objected to having his statement put in the RECORD. Let us be fair about this thing.

Mr. CANNON. That is right, let us be fair about it.

Mr. JENSEN. Yes, indeed.

Mr. CANNON. He was inserting a statement attacking me. I asked him to put in the RECORD the reply in the committee hearings. He declined. Then I made this request:

I ask unanimous consent to put in the RECORD his statement and my statement appearing in the hearings on pages 866 through 877 of the volume entitled "Central Section, No. 3."

Mr. JENSEN. Mr. Speaker, will the gentleman yield?

Mr. CANNON. I yield to the gentleman from Iowa.

Mr. JENSEN. I did not object if the gentleman from Missouri wanted my statement and his answer to my statement in the RECORD. I hope he puts them in right now.

Mr. CANNON. At the time when the statement was made, he declined.

Mr. JENSEN. The gentleman is making a mountain out of a mole hill. The gentleman knows that he could have asked unanimous consent to put both my statement and his answer in the RECORD.

Mr. CANNON. That is exactly what I did. Here is my request:

I ask unanimous consent to insert in the RECORD immediately following the remarks of the gentleman from Iowa his statement and my statement.

And I was denied that privilege.

Mr. JENSEN. I did not deny the gentleman that privilege. I did not object to having him put the statements in the RECORD.

Mr. CANNON. The gentleman from Michigan [Mr. HOFFMAN] objected, and the gentleman did not intercede.

Mr. JENSEN. Now, the gentleman knows when Mr. HOFFMAN objected to that, that I had no recourse.

Mr. CANNON. The gentleman was standing there like Saul at the stoning of Stephen, consenting.

Mr. JENSEN. What could I have done? Tell me, what could I have done?

Mr. CANNON. It was only fair to permit me to be heard.

Mr. JENSEN. Tell me what I could have done.

Mr. CANNON. Did the gentleman suggest to Mr. HOFFMAN that I be allowed to be heard?

Yesterday the gentleman again produces the trust-print statement before the Committee on Government Operations. And when asked who prepared it and who printed it, who paid for it, the gentleman from Iowa could not remember who had it printed or who supplied the copies he was handing out.

Mr. JENSEN. Mr. Speaker, there is a limit to all things.

Mr. CANNON. There certainly is.

Mr. JENSEN. Now, the testimony that I gave before the committee is all printed for everybody to read, and I deny what the gentleman has said. If the gentleman will not twist my words around, I will get the statement and put it in the RECORD and show the House exactly what I said. The gentleman from Missouri is a professional, as every-

one knows, in twisting words to suit himself.

Mr. CANNON. I will not ask that the gentleman's words be taken down because everybody knows the man who makes the charge. But, he was asked about it, and he said that it was reprinted by a utility company; that they paid for it; that they circulated it. But, he refused to say——

Mr. JENSEN. Now, Mr. Speaker, will the gentleman yield?

Mr. CANNON. I yield.

Mr. JENSEN. I thought the gentleman just got through saying—and the whole House heard him—that I said before the committee that I did not know who had it printed. Now the gentleman says I told the committee who had it printed.

Mr. CANNON. The gentleman said before this committee that he did not know who had it printed; he could not name all of the utilities that joined in. He said he did not know how much it cost. He said he did not know how many were circulated.

Mr. JENSEN. And that is the truth.

Mr. CANNON. It is remarkable that the gentleman did not know. He had this treasured report which he has carried around with him and showed on every possible occasion and which he held up here in the House and said: "Now, if that is not the truth, let someone rise and deny it," and then denied me the right to answer and explain it was not true.

Mr. JENSEN. The gentleman, Mr. CANNON, did not deny or take exception to a single statement in my statement of facts regarding APA, nor has anyone else, to my knowledge.

Mr. CANNON. Oh, the statement which I printed following it in the committee took issue with statement after statement in it.

Mr. JENSEN. No; it did not.

Mr. CANNON. That is all right. We are going to print it in the RECORD, print your statement and my answer to it, and let the House judge for itself.

Mr. JENSEN. Certainly. That is what I want.

Mr. CANNON. But the gentleman had a bad memory. He could not remember. He could not remember anybody that had it printed. He could not remember how much it cost. He could not remember how many copies were printed, and he could not remember who circulated it or to whom it was distributed or where he got his copies. Now, that is a remarkable lapse of memory on the part of my good friend, the gentleman from Iowa.

Mr. JENSEN. Mr. Speaker, will the gentleman yield?

Mr. CANNON. I yield.

Mr. JENSEN. Will the gentleman give me just a little time to answer him?

Mr. CANNON. Proceed, I will yield to the gentleman. I hope the gentleman has remembered in the meantime the answer to these questions which he could not remember when he was before the legislative committee.

Mr. JENSEN. The gentleman from Iowa always remembers facts. The gentleman from Iowa does not twist words to suit the occasion. The gentleman from Iowa inserted that statement in the hearings as the gentleman from Missouri [Mr. CANNON] says. A few days after the hearings were printed, a gentleman, a member of the private utilities of the Southwest area, called me and asked if I cared if they reprinted the statement which I had made before the committee. I think it was May 5.

Mr. CANNON. Who was that who asked you that over the telephone?

Mr. JENSEN. I told the committee, I tell you today, and I swear to God that I do not remember who the man was, because if I did I would tell you.

Mr. CANNON. That is rather remarkable, that he asked if they could have it reprinted and the gentleman does not remember who it was.

Mr. JENSEN. It was a passing incident. He said to me, "Do you care if we have this statement reprinted?" I said, "It is a public document, and of course I have no objection to it at all." He said, "All right." That was the end of the conversation.

I have been a pretty busy man, as has the gentleman from Missouri. We have had a lot of things to do.

Mr. CANNON. That is all I want to know. The gentleman does not remember who asked him to have the speech reprinted or why they wanted to spend money on it.

Mr. JENSEN. I will tell the gentleman what I will do, since he has gone this far. I will run it down and find out just who that gentleman was; because the officials of the private utilities in that area in my estimation are honorable gentleman. They are hired men for a few million people, that is all. They do not own the private utility. They have nothing to cover up. They appeared before the Committees of the House and the Senate for years.

Mr. FULTON. Mr. Speaker, a point of order.

The SPEAKER. The gentleman will state it.

Mr. FULTON. I ask for the regular order. These gentlemen are certainly not on the subject before the House. Is this a private fight or can anybody else get in it?

The SPEAKER. The gentleman from Missouri [Mr. CANNON] asked unanimous consent to speak out of order, and that consent was granted.

Mr. FULTON. He is certainly speaking out of order.

Mr. CANNON. But I am not making unfounded charges against a colleague and then refusing to give him an opportunity to reply. And none of the expenses are being paid by the Power Trust.

Mr. JENSEN. This is a private fight between us. The gentleman from Missouri [Mr. CANNON] and I have had a good many of them and we still respect each other. But as far as this question concerning private enterprises and Government ownership, we have some differences. But I wish the gentleman would stay with the facts.

Mr. CANNON. Mr. Speaker, these private utilities brought suit against REA to declare the contract of the Government with REA invalid. The courts twice decided that the contract was valid. These private utilities that sought to destroy the contract are the people who reprinted the gentleman's statement. The statement undoubtedly was very favorable to the utilities and very unfavorable to REA or they would not have gone to the expense of paying for the printing and distribution.

Mr. JENSEN. Mr. Speaker, will the gentleman yield?

Mr. CANNON. Yes.

Mr. JENSEN. In this contract the gentleman from Missouri speaks of between Southwestern Power Administration and the REA there was a provision which read like this.

Mr. CANNON. Mr. Speaker——

Mr. JENSEN. I know the gentleman does not want to hear this.

Mr. CANNON. I would be glad to hear anything the gentleman says, specially why the power trust is printing his speeches.

Mr. JENSEN. All right. The gentleman has criticized the committee because we did not go along with a provision in the contract that he speaks of which provided that any time the Southwestern Power Administration paid the unpaid loan of the REA they could take over thousands of miles of transmission lines which were built by the REA generating and transmission companies of that area. Then it further provided that after the 40-year pay-out period and the REA had paid off their REA loan in full, the Southwestern Power Administration could pay the REA $10, and all of those thousands of miles of REA transmission lines would belong to the Government. That was the provision we objected to, and every member of the committee will tell you that is the truth. Then Mr. CANNON called the committee gullible. I looked up Webster and "gullible" according to Webster means easily duped.

Mr. CANNON. The gentleman would like to get away from the provisions of that contract. I will tell you what the contract provided. The contract provided in these words——

Mr. JENSEN. Well, listen, did not the contract have those provisions in it?

The SPEAKER. Both gentlemen in the well of the House have great respect for the House and are good parliamentarians. The Chair does trust that this matter may soon be finished.

Mr. JENSEN. I am very well satisfied, thank you Mr. Speaker.

Mr. CANNON. I will tell you what the contract provided. The contract provided that Southwestern should lease the facilities and provide power at a rate the farmers could pay. It provided that REA have enough income to meet its amortization payments; but after we adopted the provision offered in the first session of the last Congress, the REA immediately began to lose money. Every one of them is running today at a deficit. Why? Because of a bill brought in by the gentleman from Iowa.

Mr. JENSEN. If the gentleman will yield, Ancher Nelsen the Administrator of REA just recently testified before our committee that every REA in the Southwestern Power area was current in pay-

ments. Congress has appropriated money to help them out over the past several years.

Mr. CANNON. Yes. They appropriated the money under a Democratic Administration, and now they are paying out. But the testimony was that every REA was running at a deficit because of this change in the bill brought in by the gentleman from Iowa.

Mr. JENSEN. Yes, and by Senator HAYDEN's committee. Is Senator HAYDEN gullible? Is Congressman MIKE KIRWAN gullible? Is Congressman WM. NORRELL gullible? Is Congressman FENTON gullible?

Mr. CANNON. Mr. Speaker, I am not going to take up more time of the House. The gentleman is circulating statements printed by the utilities which brought suit in the courts against REA in order to destroy REA.

I will extend my remarks by inserting here material which shows conclusively that was the intent.

Mr. JENSEN. Will the gentleman include my statement and his answer?

Mr. CANNON. I asked to have it inserted in the RECORD, and the gentleman objected.

In addition to pointing out the errors in the statement, I will also call attention to the discrepancies in the testimony before the Committee on Government Operations.

This necessarily includes matters previously discussed in connection with the analysis of the statement above.

At page 216 of the transcript of his testimony before the Subcommittee on Public Works and Resources, on July 26, 1955, the gentleman from Iowa [Mr. JENSEN] said:

He (Mr. Wright) induced the five G. and T. cooperatives in the Southwest area to sign a contract, that contract for leasing of all of the transmission lines which the G. and T.'s owned, to the Southwestern Power Administration.

On page 858 of part 3 of central section hearings on public works, under questioning by Mr. PHILLIPS, presidents of the G. and T. boards specifically denied there was coercion of any kind and explained that the contracts offered their organizations the best alternative of those available for providing service to their farmer customers.

At pages 216 and 217 Mr. JENSEN is quoted as insisting that the option-to-purchase clause is given as the reason for setting the contracts aside when Mr. JENSEN was chairman of the subcommittee.

This provision could very easily have been changed by action of the Congress without destroying the entire contract. Further, this provision, while it has now been deleted, could be considered as only reasonable protection for the Government investment. It has been taken out of the contract and need be given no further attention.

On page 218 Mr. JENSEN says: "May I say that Ancher Nelsen, the Administrator of REA, testified before our Public Works Committee about 2 months ago that all the REAs in the Southwestern Power area were current in their payment."

This does not give the whole story. On pages 374 through 378 of the hearings on the second supplemental appropriation bill, 1955, the financial status of the G. and T.'s is clearly shown. All were operating with an accrued deficit. And on page 362 of the same hearings, Mr. Cole, of the REA, testified as follows:

All of the G. and T. borrowers in the SPA area operated at a deficit last year.

At page 220 the statement is made that until the question of authority of Federal Government to purchase steam power and build steam plants is argued in the Supreme Court, Mr. JENSEN said, "It is poppycock for Mr. Wright or anyone else to say that this issue has been settled and the legal right to do these things is clear."

The district court has ruled that authority of SPA to purchase steam power is clear and unequivocal. The United States court of appeals said utilities had no right to raise the issue. REA Act in section 4 authorizes the Administrator "to make loans for the purpose of financing the construction of generating plants." The G. and T.'s built the plants—not the Federal Government.

No objection has been made to any existing contracts between SPA and the private utilities under which SPA purchases steam power from the private utility.

On pages 220–221 Mr. JENSEN's testimony implies that the only questions in suits brought by utility companies was on the matter of purchasing of steam power and building of steam plants.

The court decision in the 10-company suit is found on pages 729 through 740 of section 3 of the Central Section Hearings on Public Works. The court ruled on the following points:

First. That the contracts do not violate the Central Station Service provision of the REA Act.

Second. That the contracts do not violate the rural area provision of the REA Act.

Third. That the loan contracts were not executed for the sole benefit of SPA.

Fourth. That the loan contracts do not violate the self-liquidating provision of section 4 of the REA Act.

Fifth. That the loan contract between REA and M. & A. Electric Power Co-op is legal.

Sixth. That the lease and power contracts do not violate the provisions of the Flood Control Act.

Seventh. That the lease and power contracts are not illegal on any other grounds mentioned in the suit.

At page 221 Mr. JENSEN stated:

I don't want the Federal Government or anyone else to attempt to run their business or to acquire their property by subterfuge or any other manner, illegal manner.

However, on pages 763 and 764 of part 3, Central Section hearings on Public Works, Mr. Green, manager of Central Electric Co-op, says:

The power company (Union Electric) proposal provided that all control over the use of the capacity in the cooperatives' 161-kilowatt transmission lines and power plant be surrendered to the power company as if these facilities were leased. Earlier we had severe criticism for leasing our lines (to SPA), even from the power companies themselves. In fact, we were taken to the courts by these power companies, and one of the issues was that leasing of the lines was not a legal and proper method, but now we found in these negotiations that the power companies themselves wanted to take the place of SPA.

At pages 237 and 238 Mr. JENSEN explains that Minority Clerk George Green helped to prepare pamphlet of Mr. JENSEN's testimony in part 3 of Central Section Hearings on Public Works, and that it was printed by private utilities in Southwest area, but he cannot recall name of any of them.

Comment is unnecessary.

On page 246 Mr. JENSEN reiterates:

In that connection, since that statement was made by me and put into the hearing, not one person in this America of ours has taken exception to one statement of facts or figures in that statement, to my knowledge.

But my statement immediately following Mr. JENSEN's in the hearings at page 875, part 3. Central Section, Public Works, and which I repeatedy called to the attention of the gentleman from Iowa on the floor conclusively refutes the major points in the statement.

At pages 246 and 252 many figures are used to show there is wide difference in cost of power to ultimate consumers and the wholesale rate to the co-op. Implication is that a small difference in wholesale rate (i. e., 5.6 mils to 10.2 mils) would have no bearing on ultimate cost to consumers.

This is seriously misleading, since there will of necessity be variations in the spread between wholesale and retail prices because of customer density, terrain, average customer consumption, and other factors unique to the area served by any given co-op. And since they operate without profit, a small change in wholesale cost per kilowatt must be passed on in total to the consumer. The small charge per kilowatt becomes a substantial sum when multiplied by the number of kilowatt-hours the farmer uses.

It is precisely this small difference at the point of ultimate use that brought about the REA's in the first place.

Mr. Speaker, these proceedings have not gone unnoticed by the press. And under leave granted me to insert material in the RECORD in this connection, I include an article from the Washington Post and Times Herald of July 29, 1955, as follows:

POWER PAMPHLET HELD VIOLATION

(By Warren Unna)

One House committee yesterday took the unusual step of subpenaing another committee's staff member in an attempt to find out if an anonymously printed pamphlet on Midwest power problems was in violation of the lobbying act.

But George S. Green, 10211 Lorain Avenue, Silver Spring, minority clerk to the House Appropriations Committee, proved to be of no help.

Green, subpenaed by the House Government Operations Public Works Subcommittee, said he had "assisted" Representative BEN F. JENSEN, Republican, Iowa, in writing the "technical aspects" of the 17-page pamphlet. But he added that the first he knew that possibly hundreds of thousands of copies had been circulated in the Arkansas-Missouri-Oklahoma area was when JENSEN gave him one.

Representative EARL CHUDOFF, Democrat, Pennsylvania, subcommittee chairman, said after the hearing: "There is no question about it; this is a violation of the lobbying act."

CHUDOFF explained that the law provides that anyone spending more than $10 "for the purpose of influencing legislation" must register with the Clerk of the House. He estimated "many thousands of dollars" had been spent on this pamphlet, Facts About the Southwestern Power Problem, and said its purpose was clearly to "influence Congress and its legislation."

The pamphlet reprints remarks JENSEN made before the House Appropriations Public Works Subcommittee May 19. In it he accuses Southwestern Power Administrator Douglas G. Wright of "a burning and insatiable obsession to obtain, without regard to method * * * a gigantic power empire."

The pamphlet, under JENSEN's name, characterizes as "canned dialog" question-and-answer testimony between Representative CLARENCE CANNON (Democrat, of Missouri), House Appropriations Committee chairman, and Wright.

JENSEN's pamphlet came to public light Tuesday when he submitted it in testifying before CHUDOFF's hearing on administration power policies. He was immediately asked about its origin.

He said Green had written most of the remarks for him and then a representative of 12 private utilities in SPA's Arkansas-Missouri-Oklahoma area had phoned him for permission to reprint his speech in pamphlet form.

"It was a public document. I cannot tell anyone not to reprint it," JENSEN testified at the time. "(But) so help me God, if I die on this spot, I do not know all the private utilities that contributed to it. Maybe all of them did, I do not know."

Green was asked yesterday if he was the only one who had helped JENSEN.

"I couldn't say," he replied.

Asked if he had obtained any of his data from the 12 private utilities in the SPA area, Green answered: "I don't believe so—in connection with this particular pamphlet."

Green, a former Federal Power Commission employee who has been working with Representative JOHN TABER (Republican, of New York), on the House Appropriations Committee staff since 1953, said JENSEN had requested his help—"I assume it was in my capacity as a minority clerk. I was instructed by Mr. TABER to assist any members of the minority of the committee."

I also include editorial comment from Labor's Daily of Saturday, July 30, 1955, as follows:

The private utilities of the Southwest have very definitely violated the Lobby Act by printing pamphlets which Representative BEN J. JENSEN (Republican, of Iowa) distributed to all Congressman, a House committee has decided. But the pamphlets contained a statement by JENSEN in opposition to certain funds for the Southwestern Power Administration.

Also reported in the New York Times of July 28, 1955:

HOUSE UNIT SEEKS PAMPHLET BACKER—PRO-PRIVATE POWER PAPER PROMPTS ONE GROUP TO CALL CLERK OF ANOTHER

(By C. T. Trussell)

WASHINGTON, July 27.—A subpena was issued by one congressional committee today to require sworn testimony from a clerk of another.

This unusual action was taken in an effort to discover who prepared, financed, and attained Congresswide circulation of a pamphlet favorable to private utilities. It appeared just before a vote was taken on appropriations concerning both public and private power interests in the Southwest.

It appeared to be the opening of an investigation into the power of lobbies of the private power interests.

The pamphlet now at issue indicated that its author was Representative BEN F. JENSEN, Republican, of Iowa. Mr. JENSEN formerly was chairman of the Appropriations Subcommittee handling public utilities funds. It was identified, however, as having been almost wholly a reprint of a statement he had filed with a House Government Operations Subcommittee earlier this year.

Mr. JENSEN asked to be heard by the Government Operations Subcommittee now examining public-power policy. He said he had agreed to the distribution of his statement among colleagues at the request of someone he could not identify.

The subcommittee, headed by Representative EARL CHUDOFF, Democrat, of Pennsylvania, wanted to know more about this. Examination of the 17-page pamphlet gave no hint as to who financed it or who printed it. Mr. JENSEN said he did not finance it and did not know who published it.

It came out, though, under the title, "Facts About the Southwestern Power Problem * * * by BEN F. JENSEN." It dealt, to the advantage of private utilities, with the sales of power by public projects.

Suspicion seemed to center upon George Green, a minority clerk of the Appropriations Committee. Mr. Green was in the room. Representative JOHN E. MOSS, JR., Democrat, of California, asked that he be called to the stand. Representative JENSEN protested. Never, he held, had one congressional committee intruded upon the operations of the staff of another.

The chairman of the full Government Operations Committee, Representative WILLIAM L. DAWSON, Democrat, of Illinois, nevertheless, issued a subpena for Mr. Green.

And the following article from the American Public Power Association Newsletter of July 29, 1955:

POWER MYSTERY: WHO PAID FOR JENSEN PAMPHLET BLASTING SPA?

The Chudoff subcommittee this week questioned Representative BEN F. JENSEN, Republican, Iowa, and a member of the House Appropriations Committee staff regarding authorship and financial backing of an anti-public-power pamphlet which Representative EARL CHUDOFF said was distributed by the "hundreds of thousands."

The 17-page pamphlet Facts About the Southwestern Power Problem, bears not indication of its source other than that it reprints testimony by Representative JENSEN before the Appropriations Committee with respect to SPA funds.

The Iowa Congressman told the committee that he received a telephone call asking permission to reprint the testimony and that he assumed "the private utilities in the Southwest area had that statement reprinted:" He provided a copy to every Member of the House and Senate, he added.

In answer to questions from Chairman CHUDOFF, whose subcommittee has jurisdiction over public works and resources within the House Committee on Government Operations, Representative JENSEN declared, "So help me God, if I die on this spot, I don't know all the private utilities that contributed to it."

Following the Jensen testimony, Representative CHUDOFF told reporters that "there is no question about it; this is a violation of the lobbying act." He admitted the possibility that the utilities which footed the bill for the pamphlet may be registered as lobbyists and thus have complied with the law.

In an effort to track down authorship of the pamphlet, Representative CHUDOFF drew from Representative JENSEN the fact that George S. Green, minority clerk of the House Appropriations Committee, aided in its preparation. "BEN JENSEN, the old lumberman, would not be capable of going into all those details so far as rates are concerned," he explained.

The pamphlet attacks Southwestern Power Administration, whose policies are under investigation by the Chudoff group, and charges SPA Administrator Douglas Wright with "a burning and insatiable obsession to obtain, without regard to method, the 'comprehensive plan of power distribution' whereby he would build a gigantic power empire."

Letters From the Department of Health, Education, and Welfare Relating to Provisions of the Social-Security Laws Dealing With Sharecroppers and Migrant Agricultural Laborers

EXTENSION OF REMARKS

OF

HON. JERE COOPER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, July 29, 1955

Mr. COOPER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am inserting two letters which I have received from the Commissioner of Social Security relating to crop-sharing arrangements and migrant agricultural labor:

DEPARTMENT OF HEALTH,
EDUCATION AND LABOR,
SOCIAL SECURITY ADMINISTRATION,
Washington, D. C., July 5, 1955.

Hon JERE COOPER,
Chairman, Ways and Means Committee, House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: This is to confirm, as requested by you, the informal discussions that have been held with you and Congressman MILLS by representatives of the Department of the Treasury and representatives of this Department on the interpretation of normal crop-share arrangements for coverage purposes under the Federal Insurance Contributions Act and the Social Security Act. You requested that prompt consideration be given to this matter so that information would be available in the near future to persons entering into crop-sharing arrangements.

In accordance with your request, we are glad to confirm your understanding of the provisions as they apply to crop-sharing arrangements. Under the interpretation agreed upon between the two agencies, an individual who undertakes to produce a crop or livestock on land belonging to another for a proportionate share of the crop produced or of the proceeds from the crop will be considered an independent contractor and not an employee. His net earnings from the crop-share arrangement will be creditable for social security purposes if they amount to $400 or more for the year. On the other hand, a landowner receiving a crop share, or the proceeds thereof, from such an arrangement will be considered as receiving rentals from real estate. Since such rentals are excluded from coverage under the Social Security Act, the landowner will not receive social security credits as a result of the crop-share arrangement. This interpretation accords with views as expressed by you and Congressman MILLS in our informal discussions.

It is proposed to underwrite this interpretation through the promulgation of regulations by both this Department and the Department of the Treasury. Fundamental agreement has been reached regarding all essential aspects of this matter. Phraseology designed to implement the agreed-upon interpretation will be incorporated in the body

of the regulations now being developed covering the amendments to the Social Security Act and the Internal Revenue Code which were amended during the year 1954. In the meantime, both agencies propose to follow in current rulings the effect of the proposed regulations.

We must point out, however, that this interpretation is restricted to crop-sharing arrangements where the share-farmer agrees to do substantially all of the physical labor incident to the production of the crop or livestock during substantially all of its growing period for a proportionate share thereof. Where the agreement between the parties provides that the individual undertaking the physical labor incident to the production of the crop is to be compensated at a specified rate of pay or is to receive a fixed sum of money or a stipulated quantity of the commodities produced (as distinguished from a percentage share of the crop, or the proceeds therefrom), the regulations will not apply. The regulations also will not be applicable, of course, where the parties enter into a valid partnership agreement or joint venture in regard to the farming enterprise.

Whenever the circumstances of any case make the agreed-upon interpretation inapplicable, the case will be disposed of upon the basis of such principles and interpretations as will be pertinent to determination of the social security status of the parties.

If you wish additional information or if we can be of further service, please call upon us.

Sincerely your,

CHARLES I. SCHOTTLAND,
Commissioner.

JULY 5, 1955.

Hon. JERE COOPER,
Chairman, Committee on Ways and Means, House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: On April 28, 1955, when we talked with you and Congressman MILLS about certain farm coverage questions, you requested information dealing with the administration of the social-security amendments of 1954 and their application to farm laborers in general and particularly to migrant and short-term employees.

As you well know, the amended law liberalized the tests for determining whether or not remuneration for agricultural labor is wages after 1954. The test is now on a yearly basis and requires that an employee be paid $100 cash wages in a calendar year by one employer. Payments in kind, such as board and lodging, do not count for social-security purposes. Under the new law, only the cash wage is considered with respect to agricultural labor and such factors as the period or the regularity of the service, previously in the law, are of no concern or consequence. Thus, migrant workers, day haul workers, and other intermittent or short-term farm workers are not covered unless they are paid at least $100 in cash wages for agricultural labor in the year by one employer.

The $100 annual cash wage test for farm employees, as you will recall, was established by Congress to cover additional farm workers and, at the same time, keep the reporting and recordkeeping problems for farm employers to a minimum by excluding the most casual and incidental employment. This test, of course, differs from the coverage requirements in business and industry where all earnings up to $4,200, including certain payments in kind, are counted for social-security purposes.

The purpose of the $100 cash wage test in respect to minimizing record-keeping difficulties was kept fully in mind in designing the record-keeping and reporting requirements. These requirements have been worked out jointly by the Internal Revenue Service and this Bureau and are outlined in Internal Revenue Circulars A and Ag, which are tax guides for agricultural employers.

On page 7, of Circular Ag, item 8 states, in part:

"You should keep the following records on each employee to whom you pay, or expect to pay, $100 or more cash wages in the year for agricultural labor;

"(a) The name and social security account number of the employee;

"(b) The payments to the employee of cash wages for agricultural labor; and

"(c) The amount, if any, deducted as employee tax.

"If a record was not required to be kept because you did not expect to pay the employee as much as $100 in a year (for example, a migrant harvester or other short-term worker), but it develops that he will be paid that much, you should begin keeping records for that employee including, as a starting point, the best available information or estimate of the amount you previously paid him in the year."

The same instructions are included in Circular A.

Circular A, item 7 on pages 5 and 6, provides instructions for the filing of returns involving agricultural employees. This item states, in part:

"Every employer who pays taxable cash wages after 1954 for agricultural labor will make a return on form 943 for each calendar year, beginning with the first year in which he pays such wages. In January following each calendar year the employer must report on Form 943 the taxes, if any, payable with the return, and must list on such return the social security account number and name of each employee to whom he paid taxable wages in the year for agricultural labor, and the total amount of such wages paid to the employee * * *.

The return on form 943 is the only return the employer will file for a calendar year if he incurs less than $100 total liability in the first 9 months of the year for employer tax and employee tax on wages for agricultural labor. * * *

"An employer whose tax liability on wages for agricultural labor amounts to as much as $100 at the end of the first, second, or third quarter of the year must also file a return on form 943A after the close of the quarter in which the $100 liability is reached. Form 943A is a tax return only, and does not include any listing of employee's names, account numbers, and wages. Any taxes required to be reported in a return on form 943A are payable with such return and are not to be included in the return on form 943 due after the close of the year."

We are aware that some special problems arise in identifying and keeping earnings records for migrant, day haul, and other intermittent and short-term workers, especially where payment is made on an item or piecework basis. We have discussed these problems with a number of farm employers in different parts of the country and have made available to them simple techniques of identity and earnings accumulations.

One of the simpler systems used by employers in recording the taxable wages paid consists of cards which contain space for entering each employee's social-security account number and name, with a three-column arrangement for entering the cash payments. As the employee is paid, the amount is entered in the appropriate space. When the employee leaves, at the end of the day or at some other designated time, he presents the card to his employer who retains it for use in preparing his annual tax return.

Descriptions of this and of other systems have been made available to the district offices of the Bureau of Old-Age and Survivors Insurance for use in answering specific inquiries regarding record-keeping devices. Record-keeping forms have been made available to, and may be obtained from, State agricultural extension services, and business firms and agencies that publish farm record-keeping aids.

With regard to the employee tax deductions, the law gives the employer a choice of deducting the employee tax for all wages, or he can begin making the required deductions as employees reach the $100 cash wage amount. If the employer deducts the employee tax and the $100 wage test is not met, or deducts more than the correct amount, he should repay the employee. Where the employer is unable to locate the employee or for other reasons cannot repay the worker, circular Ag, page 7, item 7, paragraph 3, contains the following instructions:

"If you are unable for any reason to repay an overcollection to the employee by the end of the year, you must pay the amount of the overcollection to the district director in January following the year. You should furnish the district director a statement, explaining the overcollection, and showing the employee's account number (if known), name, and the amount you overcollected and did not repay to him. If you are required to file a return on form 943 for the year, your payment and statement should accompany the return. Please write the statement on a separate sheet of paper and not on the form 943."

Since the employer is not required to trace the worker for purposes of making a refund of tax contributions, the worker can secure his refund directly from the Internal Revenue Service if he cannot locate the employer.

Progress has been made in developing criteria for determining the identity of the employer for reporting and tax liability purposes, where the workers are recruited by third persons known, for example as labor contractors, crew leaders, row bosses, and the like.

The identification of the employer responsible for paying the tax is made by determining whether the farm operator or the labor contractor has final authority to control the workers as to when, where, and how the job is to be done. Thus the labor contractor would be the employer when he agrees to perform all or a designated part of the farming operations, free of direction and control by the farm operator, for a stipulated sum or portion of the crop. As an employer, any workers he might hire to carry out the terms of his contract would be his employees. In this instance, his tax-paying, reporting, and recordkeeping responsibilities would be the same as those of any other employer of farm employees.

Of course, where the labor contractor simply makes workers available to the farmer and receives a stipulated fee for that service, he would be acting, in effect, as an independent labor broker and the farm operator would be the employer of the labor. Where he recruits the labor force on behalf of the farm operator and assists him in the work on the farm, under the general supervision of the farm operator, he is an employee the same as the farm workers he recruits.

We have received excellent cooperation from farm organizations throughout the country in the dissemination of information about the program, and on the whole the administration of the new coverage provision is progressing well. While there are still problems to be met in recordkeeping for migrant and other short-term farm employees, we are confident that these problems can be solved satisfactorily. Our experience shows that the continued protection of these workers under social security is not only desirable but entirely practical.

If we can be of further service to you, please call on us.

Sincerely yours,

CHARLES I. SCHOTTLAND,
Commissioner.

Parliamentary Conference of the North Atlantic Treaty Organization

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. BECKER. Mr. Speaker, on the date of July 12 you paid me the honor of appointing me one of the six Members of the House of Representatives to attend the First Parliamentary Conference of the NATO countries to be held in Paris, France, from July 18 to 22, inclusive.

The other members of the delegation appointed were Congressmen HAYS of Ohio; ANFUSO, of New York; UDALL, of Arizona; JOHNSON of California; and CRUMPACKER, of Indiana. In accordance with the resolutions adopted by the House, we left for France on Saturday July 16. Starting on Monday morning, July 18, we attended the first session held at the Palais Chaillot.

Mr. Speaker, I believe it very important that Members of the Congress know what took place and the results of this Conference, as well as the feelings and individual reactions of the six Members of the House of Representatives who attended.

The Conference was called to order and selected Senator Wishart Robertson, of Canada, as president.

After the meeting was organized in the conference room where the 15 NATO countries were represented, the conference got underway with a discussion of the amount of good arising from such meetings of the parliamentarians of the NATO countries.

It was agreed that no particular subject matter would be discussed other than this until such time as an approval could be had by the various Parliaments and Congress to set up a permanent Parliamentary Conference to meet once a year.

After listening to these discussions for several days and having the opportunity of off-the-record discussions after the formal sessions were over, I came to the absolute conclusion that a permanent organized conference of this kind would serve a great purpose, as all matters affecting NATO could be discussed by the members of Parliaments and Congress, and a report made to the Congress by the delegates rather than the second-hand reports that we are now receiving.

I also had the opportunity to meet in a friendly way with the members of the various Parliaments putting everything on a very friendly basis.

One whole morning was spent at the headquarters of SHAPE where a complete briefing was given us by the following:

The Supreme Military Commander of NATO: Gen. Alfred Gruenther.

The deputy commanders: Field Marshal Bernard Montgomery, Gen. Pierre Brissac, Adm. Georgio Gay.

I could not help being extremely satisfied that this is a competent military defense organization for the free countries of Europe and the United States and that great strides have been made to prevent any aggression. I believe the organization of NATO and its military organization SHAPE under NATO is doing a very competent job of preserving the peace as well as promoting the economic welfare of the countries involved.

The final windup of the Conference was to adopt a resolution making the parliamentary conference a permanent organization. This resolution is to be submitted by the various delegates to their parliaments and congress. Quite a discussion arose for the admittance of Spain into the NATO organization, and there was much favor in this regard.

The delegates of Portugal were going to press this point and there were several other matters the delegates believed were important to discuss, just as it was my firm intention to take up the matter of article VII of the Status of Forces Treaty whereby the agreement permits the prosecution of American GI's in foreign courts. However, due to the unanimous opinion of the parliamentarians that no discussion take place on matters affecting the treaty until a permanent organization was established, the other delegates and I agreed to set these matters aside.

In private discussions, however, I explored the matter and hope that sometime in the near future this matter will be discussed and some favorable action can be taken so that our GI's serving in foreign lands will have the full protection of the United States Constitution to which they are justly entitled.

I am sure this has the backing of the American people.

All 15 countries of NATO were represented by large delegations of their members of parliament, and there is no doubt in my mind whatever when I say to you in all sincerity that as members of legislative bodies everyone spoke very frankly. As the conference developed ,one could readily observe that any slight tensions that may have existed at the beginning of the Conference had completely disappeared. One could readily see that there was understanding and appreciation of the various parliaments of the member countries.

During the course of the week a special committee was appointed with one member from each delegation to draw up a resolution requesting their various parliaments to form a permanent NATO parliamentary organization, and several different resolutions were introduced. Out of these the committee reported unanimously a resolution which was adopted by the 15 delegations present. I am incorporating thas resolution at this point:

This meeting of members of parliament from NATO countries:

Recalling that the aim of the North Atlantic Treaty is both to ensure the defense of member states and to contribute to the economic, social, and cultural development of the peoples united within the framework of the Atlantic Community;

Considering that achievement of the aims would be facilitated by closer relations between the members of the representative assemblies of the different countries and considering that this is particularly desirable in the case of the legislative branches of the member states who have by solemn treaty pledged themselves to the mutual defense and welfare of their respective peoples through the far-reaching initiative in international relations that is NATO;

Believing that these discussions between members and the NATO authorities and between members themselves have already been of great value;

Invites the speakers of the various parliaments concerned, according to the procedure which they think appropriate, to send delegations to a similar meeting each year.

Expresses the wish that the governments of the countries here represented facilitate through the NATO council further meetings.

Considers further that before we separate a continuing committee should be selected composed of the present officers and other members of the steering committee, 15 in number, to include 1 from each NATO nation and with the right of substitution to make arrangements for the next meeting.

This meeting further considers that such a continuing committee would require some secretarial assistance of its own. This should be, for the time being, on a part-time basis. The necessary finance, which should be quite small should be provided by the participating governments or parliaments concerned on a basis to be mutually agreed.

Mr. Speaker, it is my very firm conviction and belief that we should participate in these parliamentary conferences where member delegates may hear the views and discuss the many problems that are in conflict today, even among the NATO countries. I feel positive that our delegates who attend these conferences would be in a very excellent position to explain to Congress, when legislation comes up whether it be in matters military or economic, the feeling of the parliaments of the other countries. A first-hand report on these matters at the proper time on the floor of the House, I am sure, will be helpful to all of the Members. I cannot help but feel that these discussions, ultimately, will bring about not only a fine relationship between the member countries but also gain the one and only desire, to halt Communist aggression.

I deeply appreciate the privilege that was given to me to represent this great House of Representatives at the NATO Parliamentary Conference.

A New Highway Bill

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. MACK of Washington. Mr. Speaker, failure of Congress to enact highway legislation to provide the Nation with more, better, and safer highways is a disappointment and a disgrace.

This major mistake can be corrected only by Congress taking prompt action to enact a highway bill that will get the Nation's proposed expanded highway program on the road at the earliest possible date. Death on the highways does

not wait while Congress procrastinates. While Congressmen vacation, death goes ahead killing an average of 100 persons a day, 3,000 a month, or 36,000 a year in highway traffic accidents.

Congressmen may have a vacation but death on the highways takes no holiday.

Because of the seriousness and urgency of the Nation's highway needs, I have introduced today a new highway bill as the basis for a compromise to obtain highway legislation at an early date.

President Eisenhower and the Republicans proposed to finance the greatly expanded highway program by bonds to be paid off with the present and anticipated receipts from the present 2-cent-a-gallon gasoline tax. That plan involves no new or additional taxes. Federal Treasury fiscal experts and most of the Nation's governors pronounced this plan to be fiscally sound and feasible.

The Democratic leadership, however, called this plan "fiscally irresponsible" and said the Democrats wanted nothing to do with any bonding plan to finance building highways.

The Democratic leadership, after weeks of working on a substitute for the Eisenhower-Republican bond financing plan, introduced a bill which proposed a finance highway building with new and additional taxes that would collect $13 billion in 15 years through new and additional taxes levied on motorists and truckers.

Two choices thus were before Congress: First, the President's bonding plan or, second, the Democratic high-tax plan.

When the two plans were put to a vote, both plans were rejected.

On the vote on the President's bonding plan, 216 Democrats voted against it and only 5 Democrats supported it.

Then when the high-tax plan of the Democrats came to a vote a majority of both the Democrats and the Republicans voted against it. These actions left Congress and the country without a highway bill. The Democrats voted against the President's bonding plan and then against the pay-as-you-go tax plan of the Democratic leadership. The Democrats seemingly wanted no highway bill.

It is imperative, it seems to me, that an expanded highway program be started just as soon as possible. Every day of delay means more persons killed or maimed needlessly.

There must be some ground on which the Republicans who want a bonding plan and the Democrats who want a tax plan can reconcile their differences. If Congress is to enact a highway bill, Republicans, who like myself have fought for the President's bonding plan, must agree to take some taxes as a means of raising some revenue for highways as wanted by the Democrats, and the Democrats who have opposed any bonding must agree to take some bonding, as desired by the Republicans. A blending of the two ideas of bonds and taxes, in my opinion, is the best compromise which can be had.

Because I am convinced there can be no highway legislation without compromise, I, today, introduce a new highway bill which proposes to finance the expanded highway program which all profess to desire by blending the two plans, the Republican bond financing plan and the Democratic tax plan. My bill would raise about half of the money to finance the highway program by taxes, as the Democrats prefer, and half by the bond issue method, favored by the Republicans.

The bond issue idea of the President is set up in my bill just as it was in the Dondero bill and would involve the sale of about $5 billion in bonds. Most of these bonds, however, would not have to be sold until the latter years of the highway construction program.

If Congress, later, extends the taxes levied by my highway bill for 4 to 5 years beyond completion of the highway building undertaking, the added revenues from the extra years would pay off this bond issue in 4 to 5 years after the highway program was completed. Thus, under my compromise bonding-tax bill proposal, the entire cost of the $48½ billion gigantic expanded highway program would be paid off in 20 to 21 years after enactment of the legislation.

The new taxes which I propose in my new highway bill are:

An additional one-half cent-a-gallon tax on gasoline which over a 16-year period would yield an estimated $4,324,000,000.

A 1 cent-a-gallon increase in the diesel fuel tax which over a 16-year period would yield $118,500,000.

A 4-cent-a-pound additional tax on large sized truck tires of the 8½ by 18 size which, it is estimated over 16 years, would yield $400 million.

A 2-cent-a-pound tax on tires of all sizes smaller than 8½ by 18, meaning those used on smaller trucks and pleasure automobiles, estimated to yield $1,447,000,000; and,

A 2-percent increase in the present excise tax on trucks at the wholesale level, estimated to yield in 16 years a total of $885 million.

The five taxes proposed in my bill would yield the Government an estimated additional $7,622,500,000 in revenue in 16 years or an average of about $475 million a year.

My bill exempts all off-highway users of tires and gasoline or diesel fuel from the taxes in the bill including farmers, on off-highway vehicles, and fishing boats and aircraft.

My bill does not make any provision for payments to utilities for removal of their facilities from highway rights-of-way but leaves the matter of whether such compensation should be made entirely to the States.

My bill does not exempt city transit companies from having to pay the taxes on tires, gas and diesel fuel that are in my bill.

My bill is different in another respect from all other bills thus far considered in the House in that it imposes no additional taxes on automobile and truck tubes or upon camelback used in tire retreading.

Tubes are rapidly becoming obsolete and the number manufactured is decreasing. A tax on tubes provides only an uncertain source of revenue. Furthermore, tubes already are taxed 9 cents a pound which is higher than the tax on any type of tires that is now in effect or than is proposed in my bill. Also, a few cents of additional tax on tubes would not produce any great amount of revenue.

I abandoned any idea of taxing camelback because the revenue from this source would not be large and also because camelback is essentially a repair material used almost exclusively by small businessmen, 10,000 of them, who operate small tire repair businesses and who would be injured, and in many cases forced out of business, by any substantial additional tax levied on them.

I have offered my new bill in the hope that it may become the basis for reopening consideration of highway legislation and of soon arriving at some reasonable, practical and acceptable compromise that will get a grand program of highway building started soon.

With 36,000 Americans being killed on our highways annually, with another million or more being injured each year in traffic accidents and with the economic benefits of an expanded highway program estimated at more than $4 million a year, Congress ought to act affirmatively to enact needed highway legislation. We ought not to procrastinate and shun our responsibilities as congressmen and thereby force the President to call us into special session to do that which we should have done before we adjourned.

World Domination Still No. 1 Soviet Aim With United States the Big Obstacle

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1955

Mr. FEIGHAN. Mr. Speaker, Mr. William Philip Simms, a very distinguished journalist and one of our most experienced analysts of foreign affairs, has contributed a special article to the Scripps-Howard newspapers on the meaning of the Big Four Conference at the so-called summit.

Mr. Simms warns that we are now engaged in a new course which presents graver dangers than we, as a Nation, have ever had to face in our history.

I agree with Mr. Simms on his forecast on the dangers of the future and I recommend that every Member of the House give a very careful reading of this forthright analysis of the meetings at the so-called conference at the summit.

Under leave obtained, I insert the article in the RECORD:

WORLD DOMINATION STILL NO. 1 SOVIET AIM WITH UNITED STATES THE BIG OBSTACLE

(By William Philip Simms)

The United Sates and the West today face the most hazardous period since the end of World War II.

Russian never has been as dangerous as she is right now.

At this moment—with the exception of a scant half dozen men inside the Kremlin—even the best informed can do no more than guess at Russia's real intentions.

Everybody is saying: "Russia has changed." And so she has. Until a few weeks ago her face wore a perpetual scowl. Today it is all smiles.

But why?

Nobody outside the Kremlin can say for sure. But there is every reason to believe her real, ultimate objective remains the same as always—to set up a universal communist dictatorship run from Moscow.

RUSSIA REALIZES NOW SHE MUST CHANGE HER SGNALS

Also that the destruction of the United States, the big obstacle in her road to world domination, remains Russia's No. 1 aim.

That the Red conspiracy to destroy us by hot war, cold war, regional wars, fifth columns, lying propaganda and bankruptcy having failed, she now realizes she must change her signals.

That she thinks she can make better progress by concealing her bloodstained bludgeon under a pile of olive branches and trying the more subtle art of poison.

That she is convinced that henceforth neither side will dare resort to nuclear war because both sides know to do so probably would result in mutual annihilation.

That because of this atomic stalemate, conventional weapons will come back into their own and hers might be decisive—at least in Europe.

That by lulling the West to sleep she can revert to her early plot to gain control of the world by infiltration, through her fifth columns and similar subversive agents trained in Moscow. And that we can't prevent it.

That by adopting a New Look she can hasten the isolation of the United States and the more easily beguile our European allies into believing Soviet Russia is more sinned against that sinning.

That she thus can elbow the United States out of the Eastern Hemisphere, dismember NATO, neutralize and disarm Western Europe and put across her fake peace-and disarmament plan which, once completed, would leave her mistress of the world.

IKE SEES THROUGH THE PERIL FORTUNATELY AND QUITE CLEARLY

Such is the peril.

Fortunately, President Eisenhower sees it quite clearly.

He knows Russia's new face most likely is merely a mask and that her recently adopted white robes may have been donned the better to conceal her weapons.

But he already has accomplished two historically vital things:

First, taking Russia at her word, he has provided her, in all sincerity, with a chance to prove she means what she says about peace, and

Second, by a single dramatic stroke at Geneva he has recaptured for America the moral leadership without which western unity and the West itself hardly would stand a chance.

RUSSIA IS NOT OBLIGED TO FOLLOW IKE'S PROPOSALS

Yet, Russia is not obliged to conform, in toto, with the President's Geneva suggestions—like swapping blueprints, aerial reconnaissances, and so forth. She could show her sincerity, for example, by two very simple measures:

Opening up her frontiers to Russian and foreign travel—no more and no less than western countries have done since time immemorial—and,

Quit interfering with the right of other countries to live their own lives in their own way under governments of their own free choice.

As long as she refuses to do these things; as long as she persists in hiding what is going on behind an impenetrable wall and declines to disavow her fifth columns operating inside other countries, she cannot be trusted, no matter how sweet she makes her song.

REAL TEST HAS NOW BEGUN, THANKS TO THE PRESIDENT

The real test, thanks to President Eisenhower, now has begun. It began on July 21, at Geneva. From that moment on, until something gives inside the Kremlin, it is definitely up to Russia.

By the same token, July 21 ushered in a perilous period for the free world. Peoples everywhere—on this side of the Iron Curtain, at least—are so tired of tension, so eager to relax, and return to normal life, that the temptation is to jump at the first rosy mirage.

And therein lies the danger.

The Bogey of Yankee Imperialism Exposed by Panamanian Statesman

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Friday, July 29, 1955

Mr. MARTIN of Iowa. Mr. President, from time to time there appear in certain sectors of the Latin-American press statements and comments critical of the policies of the United States with respect to the Latin-American countries. Generally speaking, those making such criticisms are inspired by local political considerations, more or less demagogic in character. In all history no nation has been so uniformly generous in its dealing with other countries—big and small—as our own—all of which is well recognized by the well-informed and thoughtful men and women everywhere, especially in the countries of the western world to the southward. The attitude and influence of the United States during the period—more than 100 years ago—touching the struggles for independence of the lands of Latin-America, were of the most outstanding character; and today there are no names more greatly revered in the republics of Central and South America, than those of Henry Clay and James Monroe, whose official acts played so large a part in bringing about and maintaining that independence. The people of the United States and its Government yet hold in affectionate regard and esteem the peoples of these neighbor nations, and, in consistent manner, continue, to practice the deeds of goodwill in numberless ways.

Touching the subject, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the Christian Science Monitor of July 16, 1955, which quotes from the illuminating address of Dr. Jose Narciso de la Vega, of Panama, to what is described the largest radio audience in the history of Panama. The speaker is an outstanding lawyer and publicist of the Isthmian Republic, and he effectually disposes of the charges of North American imperialism directed against the most generous nation in history by designing or ill-advised writers and speakers of our sister nations of the Western Hemisphere.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LATIN AMERICAN PRESS HOAX

(By Ralph K. Skinner)

PANAMA CITY, PANAMA.—Latin American attacks on North American imperialism often are attempts to cover up the inadequacies of South and Central American governments in dealing with problems in their own countries. This statement, made some time ago by Dr. Lasso de la Vega to the largest radio audience in the history of Panama, is a partial explanation of something that puzzles many visitors traveling south of the Rio Grande. The confusion comes from the frequent attacks on, or unfair criticisms of, the United States in the Latin American press.

This may be in editorials condemning (North) American imperialism. They may be in slanted news stories. Often the medium is a satirical cartoon.

"Why should this be?" ask American travelers. "Aren't the United States and Latin American countries good friends and neighbors?"

Yes; they are. The attacks are the exception rather than the rule in the area. The explanation of the seeming anti-American attitude is usually threefold.

First, to sell more papers to nationalists. Nearly every Latin American country has a strong nationalistic group. This may exist as a section of the over-all population or may be a well-established political party.

In some instances, these parties honestly believe that the United States, commonly referred to as the Colossus of the North, is a great threat to their welfare. They resent point 4, economic aid, etc., and spurn any offer extended by the United States. Since they are minority groups, the aid is accepted. In deference to them, however, the newspaper may include with the announcement of the aid some deterrent statement.

Second, many Latin American newspapers are openly critical of the considerable amount of financial and other aid given to European and Asian nations as contrasted with the miserly aid apportioned to South and Central America. Readers may see in the numerous references to this in the Latin American press a condemnation of the whole United States Government which does not, in fact, exist.

Last, by deliberately focusing attention on Uncle Sam and the alleged imperialism of the United States, local politicos use the press to divert attention from their own failures and improper acts.

Local ineptitude in dealing with situations, failure to comply with international obligations and misuse of funds; all are buried under accusations that the United States has mistreated the subject nation, has insulted her "dignidad" as an equal nation, etc.

In this connection it is enlightening to read a portion of the statement made by Dr. José Narciso Lasso de la Vega in this city this year. The occasion was the trial in March of ex-President Guizado. Dr. Lasso de la Vega was the prosecuting attorney. As in so many other instances, the United States had been mentioned publicly as having done injury and damage to the Republic of Panama. Over a nationwide radio hookup, Dr. Lasso de la Vega spoke substantially as follows:

"The Republic of Panama has never suffered damages of any kind from the Government of the United States. The maliciously introduced idea that Panama has been victimized by the United States Government, nevertheless, still persists in Panamanian public opinion.

"From 1903 (founding year of Panama) to date, we have never been the recipients of

any concrete act on the part of the Government of the United States which we can in all honesty say did damage or injury to us. It is erroneous and absurd to even think that the Panama Canal could have been detrimental to our nation. The Panama Canal has been greatly favorable to our country and thanks to its existence and its operation our country has been able to develop itself, little by little, into one of the most advanced countries in Latin America.

"The ugly truth is that in our relationships with the United States the Latin American oligarchies have traditionally attempted to cover up their real impotency to solve everyday problems by blaming North American 'imperialism' for the sad state of affairs in their countries, and therefore, deliberately misleading public opinion.

"We are no exception; this happens here in Panama as well as in the other Latin American countries. Because of this typical oligarchical outlook, we are still subjugated to a hoax which dupes us into viewing the North American Government as an enemy, an adversary, as a group hostile to our development, and which pictures the individual North American as if he were incompatible with us.

"The masters of this venom describe him in such a way that it appears the most we could do with the North American would be to tolerate him, and this is simply not true."

Now Talks With Red China

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. ZABLOCKI. Mr. Speaker, extreme statements and suggestions are being made by individuals, including those in responsible positions, about the anticipated meeting in Geneva between representatives of our Government and of the Chinese Communist regime. In my opinion, Mr. Speaker, the following editorial from the Christian Science Monitor provides some of the balance needed for a proper appraisal of this difficult situation. Therefore, I commend the article to the attention of my colleagues:

NOW TALKS WITH RED CHINA

If the summit conference has succeeded in relaxing East-West tensions across the Atlantic, there has been almost equal need and urgency to relax the tautness between Communist and non-Communist countries across the Pacific.

And the Geneva meeting between heads of governments is no more than completed before Washington and Peking announce that something is to be done about that, too—if possible.

The approach to a solution of grievances between the United States and Red China will be in some respects, however, quite opposite to the method invoked by the Big Four nations to get their diplomacy off dead center.

Where the summit spokesmen handed down an agenda and a directive to their foreign ministers to initiate new negotiations, the preparation of American-Chinese contacts has been more like a scouting at ground level by field parties to see if negotiations can be worked up to the foreign ministers' level.

Beginning with talks between consuls, the meetings, also at Geneva, have dealt with return of American civilian prisoners in Red China. Now those talks are to be continued between ambassadors, and with hope that they will extend to the return of 11 American airmen. United Nations, British, Indian, and other officials have aided the contacts.

Now, the question is whether the ambassadorial meeting beginning August 1 at Geneva will show sufficient resiliency and civility on the part of the Chinese Communists to warrant going further. If so, even Secretary Dulles has indicated that they may lead in time to a meeting between him and Premier Chou En-lai.

It is too early to assume that Peking is ready to return the imprisoned airmen and civilians merely on request. But if some progress on that issue can be anticipated, then it may be fruitful to take up the prospect of a cease-fire between Communist and Nationalist China in the Formosa Strait. The United States insists that the Chiang Kai-shek Government be represented at any negotiations affecting its future status. A mere renunciation by Peking of intent to use force would help matters.

Of course, what the followers of Mao Tse-tung most want is recognition in the United Nations as successor to the seat assigned to China. This the United States certainly will continue to resist. The scheduled negotiations constitute no diplomatic recognition of Communist China, nor would American sentiment remotely countenance establishment of diplomatic relations with Peking.

There is, among other counts, a matter of aggression against United Nations forces in Korea to be squared before even any compromise formula for participation in U. N. could be acceptable. But that is far away. The immediate question is return of military and civilian prisoners.

Communist Control in Hawaii

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. PILLION. Mr. Speaker, I am pleased to call to the attention of the Members of Congress the following article which appeared in the Buffalo (N. Y.) Courier-Express on July 27, 1955. The article is by Victor Riesel, the well-known writer and exposer of Communists in labor unions.

The article substantiates many of the facts stated to the House during the debate of the Hawaiian-Alaska statehood bill:

PRO-RED BRIDGES HOLDS TIGHT GRIP ON ALL HAWAII

(By Victor Riesel)

HONOLULU.—I stood on Kau Kau corner, where Kapiolani Boulevard meets Kalakua Avenue, some 5,000 miles from New York and little more than 5 miles from Pearl Harbor—and suddenly realized that we'll all have to stop being playboys of the Western World if we want our kind of world to survive.

It is in these lush islands, where they use Cadillacs for taxis, and the trade winds, the sea, and the dramatic mountains conspire to make us forget that our national existence may depend on this defense outpost—that you see most graphically the pro-Communist apparatus at work.

What makes this apparatus so dangerous is that it is not a cloak and dagger outfit. It is legal. It is above ground. It has given Harry Bridges and his pro-Soviet high command real control of these islands. Only the Army, Navy, and Air Force can match the power wielded by the man who has worked with the world Soviet apparatus for over 20 years. Harry can shut this outpost down any time he wants—in an hour. How?

By controlling just 1,300 workers, the longshoremen, most of whom are Filipinos. On Harry's order, nothing could move in or out of these islands. He could literally make 490,000 people go hungry. He could put hundred-million-dollar corporations out of business. Only our Armed Forces could break him if those 1,300 members of his International Longshoremen and Warehousemen's Union struck—and the other 21,000 sugar, pineapple, and allied workers quit in sympathy.

What's his hold over these Filipinos, Japanese, and Polynesian workers?

They're loyal only to him and his regional chief, Jack Hall, because these pro-Commies have delivered to the Asiatic and low-income workers.

The Sovieteers deliver to this minority bloc of workers every day. Bridges' powerful propaganda machine never lets the native workers forget it.

Bridges completely services his polyglot people—virtually all of whom are honest workingmen, anxious to get their families out of the slums and to turn their children into white-collar workers.

Bridges and his pro-Commie clique supply everything from medical to marriage advice.

The pro-Commie union here, which now has about $1 million in assets, provides doctors, medicine, legal advice, and domestic counseling.

Go into the office of the pro-Communist attorneys here and you see native workers waiting for their turn to consult a lawyer—at $2.50 a week as a fee. One of these lawyers has boasted of handling 1,300 divorces for union people or their family members—at $25 to $50 a divorce.

The leftwing union helps its people to buy furniture and household appliances at cut-rate prices. The stuff is bought wholesale on the mainland and shipped here.

Soon these workers may even be able to buy automobiles wholesale through the Longshoremen's Union.

This union works night and day out of the most imposing labor headquarters on the islands. It has the hardest hitting union propaganda machine outside of the CIO Auto Workers Union.

There are several newspapers. There are two public relations offices, one for English language operations and another for the Filipinos.

There is an early morning radio broadcast to the Filipinos 5 days a week to catch the workers at breakfast before they hit the docks and fields.

There is a 5-day-a-week evening broadcast in English.

Every Sunday morning the Bridges' crowd puts a half-hour Japanese broadcast on the airways.

All this costs the leftwingers some $250,000 annually.

Cheap enough for control of this romantic military outpost. More than that is spent by tourists across the bars at Waikiki.

Isn't that always so? The opposition always works while we play. If we want the western world to survive, we'd better take some time out and do a little more for the peoples of the eastern world. Right now their aren't exactly fond of us.

And as they go so goes civilization.

The Harris Natural Gas Bill

EXTENSION OF REMARKS
OF
HON. E. KEITH THOMSON
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. THOMSON of Wyoming. Mr. Speaker, in all honesty and sincerity, I believe that the Members of Congress, who voted for the Harris natural gas bill (H. R. 6645) can take justifiable pride in having protected the best interest of the consumer by their action. In the limited time that was available to me during the debate, I pointed out a few of the many practical reasons why this is true, and anyone who has worked closely with the industry, either representing the industry or representing the public, realizes that it is true.

There is one additional matter that I think should be called to the attention of those who stood for private enterprise as opposed to Government controls, that pertains not only to the best interest of the consumer, but also to the matter of States rights. It is a real example of how a State regulatory body, close to the people whom it serves and unconfused by diversified pressure, can best serve them.

Under the Phillips decision was without the Harris bill, the State regulatory commission in my State, called the Wyoming Public Service Commission, was completely divested of the necessary authority to protect its people. Remember, we operated for 16 years from passage of the Natural Gas Act to June of 1954 under the theory that the Federal Power Commission had no authority whatsoever over the price of gas at the wellhead or at any other time until it entered the interstate transmission line. It was not until after the Phillips case that many of us received increases due to the increased cost of the gas as it entered the transmission line. Why was this true? Simply because of this. It is well settled public utility law that the regulatory body will not award the utility for the utility's own improvidence if the regulatory agency is doing its duty to the public. It is also well settled that confiscation does not begin as long as the utility is allowed some return, even though smaller than the court might think fair. This gave to the State or local regulatory bodies, a wide area in which to operate, generally considered at some place between 4 percent and 10 percent in determining the rate of return that they would allow the utility to make in profits. Now prior to the Phillips case when the Cheyenne Light Fuel & Power Co., the utility which imports its gas from Texas to sell to my constituents, asked for a rate increase because they had contracted to buy gas for 10 cents, the Public Service Commission of Wyoming could say to them, "New York City buys its gas for 7.8 cents per thousand cubic feet. Other sales are made for even below 7 cents. If you are such an imprudent operator as to be paying 10 cents, we will penalize you by only allowing you to earn at the rate of 4 percent on your overall investment." If, on the other hand, the utility was successful in purchasing gas for 5 cents per thousand cubic feet, the Commission could say to them, "Because of your good operation and prudence, we will let you earn at 10 percent."

Until the Phillips case, this permitted effective control by the people really interested in the consumer and closest to the consumer. After the Phillips case, what happened? The Federal Power Commission, in effect, said that 11 cents per thousand cubic feet was a fair and reasonable price to pay at the source for the natural gas. The public utility commission was powerless to look behind this decision. It had to allow this 11 cents as a part of the cost of operation to the utility. It had to allow a rate increase based to some extent upon this increased cost of operation. It just so happens in the case of the local utility, that they have the complete affiliate setup. Think what this would have made possible if carried to the ultimate. Had we not passed the Harris bill and thereby returned to the Public Service Commission in our own States and the regulatory bodies in some instances in our own cities, the right and authority to protect our best interest and the best interest of the consuming public, there might have been no end to cost of gas rate increases.

The Harris bill is a good bill for all of America. It is a triumph for free enterprise and the American system that has given us the best standard of living in the world. It is a triumph for States rights. It will redound to the benefit of the consumer.

Mr. Speaker, this is certainly in no way intended to be critical of those fine Members who, in good faith, voted against passage of the Harris bill. Those whose purpose was to mislead by misinformation did a methodical and masterful job.

The only one who will be disappointed when all the facts are on the table is the person who stands for Government control, for big centralized Federal Government, and for ultimate ownership of our natural resources by the Federal Government. This I believe in all sincerity.

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1955

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include my newspaper column, Keenotes, which follows:

KEENOTES

(By Representative ELIZABETH KEE)

Few really large American cities could survive a month-long strike of public mass transportation as well as Washington has done it. It has been a remarkable demonstration of a city going about its business almost as usual—but, of course, with a lot of personal inconvenience for many people.

From the very start of the transit stoppage on July 1, business and Government proceeded without any real hitch. Many were late at first getting to work or home, but they did get to work and they did get home. Traffic at peak hours was frightful, but thinned out fast, even though just about everything on wheels that was in shape to drive seemed to be on the downtown streets.

Washington was able to coexist so well with a transit strike only because of a number of distinctive features about the city and those who live and work in the Nation's Capital. (Just imagine New York without subways, buses, or street cars.)

For instance, for years Washington had more taxicabs than any city in the country, including New York City. It still has an unusually large number compared to other cities, and rates are comparatively low—particularly for group riding.

Group riding—not only in cabs but in private passenger car pools—has been an accepted and very popular thing in Washington since early in World War II. Every large Government agency has its car pools of workers living in the same part of town and taking turns driving a full car to work each day. When the strike began, car pool notices—rides needed or rides available—began going up on corner drug store bulletin boards (another Washington neighborhood phenomenon).

Many Washington workers commute by train to within walking distance of both home and work and never use the transit system.

Washington's main traffic arteries are unusually wide, accommodating greater traffic flow and providing lots more room for parking than most cities. With the start of the strike, cars were permitted to park on the trolley tracks in the middle of such wide thoroughfares as Pennsylvania and Connecticut Avenues, and parking meter restrictions were lifted to permit all-day parking in 1-hour zones. This was a bonanza for motorists who usually parked in lots or garages; if they got into town early enough, they could park free all day. So garage and lot space they used to fill then became available for shoppers and others.

Although hours in Government agencies are staggered to some extent, the city is used to a concentrated, heavy influx of private cars each morning and an equally heavy outflow each evening—usually on turn-about 1-way streets with fast-paced traffic lights and few bottlenecks. The strike merely intensified the flow.

With most traffic headed in one direction, it was customary to be offered a ride if you were waiting at the curb for a taxi. Motorists went blocks and even miles out of their way to be helpful.

But for those who traveled at other than rush hours, or were headed away from the direction of traffic, the only answer for those who did not have their own cars was the ubiquitous taxi—and that can be expensive even in a city where taxi rates are low.

One group above all others made it possible for Washington to get along so well during the strike—the city's magnificent police force. The men worked 12-hour shifts each day—in 95 and 100-degree temperatures—keeping traffic moving and streets fairly clear. The police became the city's heroes overnight.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Russia's Achilles' Heel

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 20, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the first installment of an article entitled "Russia's Achilles' Heel," appearing in the Marine Corps Gazette for February 1953. The article was written by our good friend, Col. J. D. Hittle, legislative assistant to the Commandant. I commend it to the attention of the Senate for its very pertinent background information on Russia's strengths and weaknesses.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RUSSIA'S ACHILLES' HEEL

(By Col. J. D. Hittle)

PART I

Soviet Russia of today is a vast and complex nation—the product of important historical and geographical influences. In size she is a veritable titan of contemporary states, and in her vastness she is both powerful and weak.

Her power and weaknesses can be evaluated by a study of basic geographic facts which should be considered in any strategic appraisal of the Soviet Union—geographic facts that make her a powerful nation while she flaunts a vulnerable Achilles' heel.

In addition to Russia's size, apparent to anyone glancing at the map, there are some other important general considerations. First, there is the matter of isolation. Surrounded by the Arctic in the north, the Pacific and mountains to the east, and by more mountains and deserts in the south, the Soviet Union is open only to the west. These physical barriers in the north, east, and south, compared with the relatively open approaches to the west, would at first glance seem to suggest that, for geographic reasons, Russia would be oriented westward rather than to the east. However, this is a clear example of the paradoxical character of Russia, for Russia is by history oriented to the east rather than to the west.

* * * * *

Perhaps nothing better illustrates the topsy-turvy nature of Russian geography than the rivers, for from the standpoint of usage, they either run in the wrong direction or, for the most part, are landlocked. Rivers flowing into the Arctic are icebound from 8 to 12 months per year, which means, obviously, that some years there is no period of open water at the mouths. Thus the lower rivers and their mouths, still icebound while the upper drainage system carries off melted snows and ice, form natural dams, forcing the waters from the south to flood vast Arctic plain areas. On such occasions, it is reported that the lower Yenisei is over 40 miles wide.

Ice is not only a problem of the rivers flowing toward the north. The southern Ukrainian rivers, such as the Dnieper and the Don, are icebound on the average of 2 months per year; rivers in the Moscow area are icebound about 6 months a year; even the rivers flowing into the Aral Sea, in the southern part of the country, are icebound about 2 months each year. Needless to say, such ice conditions would have an important influence on military operations in the U. S. S. R., both operationally and logistically, particularly in view of the fact that waterways are a major means of transportation.

Continual effort has gone into the development of the rivers as important means of freight transport. Not only have the channels been deepened, but an extensive system of canals connects the various major rivers. At the present time, the Baltic-White Sea Canal, the Marlinsk Canals, and the Moscow-Volga and the Don-Volga Canals connect major river transport systems, permitting continuous water travel from the White Sea on the Arctic Circle to the Caspian. With good reason, Russian writers often refer to Moscow as the "Port of Five Seas." Completion of the great Volga scheme will make it possible for large seagoing vessels to carry cargo from Astrakhan to Archangel and from Rostov to Murmansk.

As stated above, Russia's climatic character is a direct expression of her continental nature and her latitudinal position. Five conditions exert basic influences on the climate throughout Russia: (1) it is open to the Arctic; (2) the world's cold pole is located in Siberia; (3) Atlantic air masses; (4) extreme distances from warm water; and (5) the deserts in the south.

The cold pole of the world is located in the vicinity of Verkhoyansk, Siberia. What is probably the world's lowest temperature reading of minus 90 degrees has been recorded there. This cold pole, located as it is in northeastern Siberia, exerts a broad and severe influence on practically all Soviet weather for a good portion of the year. During the winters a stable and widespread high-pressure area, centering on the cold pole, becomes the dominant factor in Russian weather. Because the winter cold emanates from the region of Verkhoyansk in Siberia, we find that temperatures generally decrease, not from south to north, as is the case in the United States and most other major regions, but rather from west to east.

* * * * *

From the military standpoint, this west to east decrease in temperatures would have great strategic and logistic significance. For one thing, it means that troops in the field would be exposed to the same cold intensity in many parts of southern Russia as they would above the Arctic Circle. A campaign, such as Napoleon's invasion or that of the Germans, would be faced with constantly decreasing temperatures the deeper the forces pushed eastward into Russia, even though, from the standpoint of geography, the forces move on a direct west to east axis, and consequently never head north. Conversely, in a winter campaign against Western Europe, Russian forces moving eastward would move continually toward warmer temperature zones as they moved on.

Adding to its peculiar characteristics, the cold pole disappears in the summer, as a cast low-pressure area supplants the winter high-pressure area. At the same time as the cold pole, dominant influence in winter weather, fades, a new factor takes over as the major influence on summer weather in most of the Soviet Union. This influence is the Atlantic Ocean, and it causes summer temperatures to vary in a normal manner, decreasing generally from south to north.

Rainfall, like some other features of Russian climate, possesses characteristics peculiar to Russia. Rainfall in most of the Soviet Union varies from 12 (approximate minimum adequate for Soviet nonirrigated agriculture) to 30 inches per year. At the same time, there are extreme differences encountered throughout the country. Most of Siberia has less than 12 inches a year, while in the Trans-Caucasus region the total rises to 60 inches, and in the area of Batumi, due to the mountains, there is an annual rainfall of 90 inches.

Atlantic air masses are the source of most of the precipitation. Consequently, the rainfall diminishes progressively, as the winds move toward the interior. Also, it explains why the bulk of precipitation occurs during the summer months of July and August. A study of Russian rainfall statistics dispels the all too prevalent myth of the military importance of "General Mud" during the fall season in Russia. Fall is a period of relatively less rain, and this is one of the principal reasons why, for instance, Hitler launched his attack on Poland—having a precipitation pattern similar to Russia—in September. Of the two short seasons, more mud would be encountered in the spring due to the melting of winter snows. German experience underlines the importance of this consideration in Russian military operations. The matter of rainfall is relatively more important to logistic planning in Russia due to the shortage of all-weather roads, a condition to be noted later. Only in the southern Crimea and the Black Sea shore areas is the winter precipitation heavier than in the summer.

Snow has an understandably important influence on military operations. The length of time snow is on the ground varies according to locality, but generally bears a close relation to the January isotherms. Some appreciation of snow duration can be gained from the following: along the Arctic coast snow is on the ground about 260 days per year. This decreases to about 140 days in the Leningrad-Moscow area, about 60 in the southern Ukraine and northern Caspian shore regions, but increases to about 80 days per year in the Trans-Caucasian Mountains between the Black and Caspian Seas, extending as far south as the Iranian border. On the Pacific, snow duration ranges from 220 days in the northeast coastal area to about 100 days in the Vladivostok region.

As the German Luftwaffe found out, winter in western Russia is characterized by cloudy skies. Leningrad, for instance, has on the average only 39 days of clear skies per year. With as much of a clear season as there is coming in the summer months, it means practically continuous cloud cover during the winter. This obviously would have real significance in the execution of air operations against European Russia in the bleak winter months.

The first fundamental that must be appreciated by anyone trying to understand

the true nature of the Russian nation is that the Soviet Union is today a nation of many nationalities. There are about 150 identifiable national groups in Russia, ranging in size from the greater Russians, numbering about 100 million, down to the native tribes in bleak northeastern Siberia, whose ranks are counted in the hundreds.

How this cast conglomeration of peoples has been brought within the national borders of the Soviet Union is explained largely by one word—conquest. While it may be realistic to suspect that many of the raciol minorities were brought under Russian rule by methods other than entirely voluntary, the western students of political science must, of necessity, recognize the cleverness with which the Reds used the racial minorities to gain acceptance of communism and enhance Red control. Initially, the Communists wooed the minority groups by appealing to their national pride and promising independence if they would join in the revolution against the tsarist government, a promise yet unkept.

In setting up their geographic political structure, the Soviet officials have sought to gain added support of the various major racial groups. Generally, each major group has its own political unit, called a union republic. There are 16 of these union republics in Russia. As usual, the Communist leaders can point with pride to the fact that, under the Soviet governmental system, the major nationalistic groups have been, in fact, given their independence, and that they remain within the Soviet Union by free choice. To substantiate such an assertion, they have but to invite attention to the 1936 constitution (often referred to as the Stalin constitution) which gives these republics the right of secession.

So far there is no record of any union republic successfully exercising its right of secession. One can readily imagine the reaction of the Kremlin if, for instance, the Azerbaijan Republic, in which are located the geat Baku oilfields, should announce that it had decided to secede and become a part of neighboring Iran.

In keeping with the pure democracy (Communist interpretation) of the Soviet system, there is equality of all races and nationalities. But here again the facts and the theory do not always coincide. The distinction between the true Russians, largely located within the R. S. F. S. R. (Russian Socialist Federated Soviet Republic, the largest political unit) and the many national minority groups is not openly defined. Yet the result is apparent. The true Russians are frequently referred to as the "Greater Russians," and the rest of the vast population, comprised of many national groups, are called the "Little Russians." The relationship is more apparent when viewed in light of the fact that, while all Russians are brothers, the Greater (true) Russian is the big brother and the others are all the little ones. Although the Greater Russians may consider themselves the brothers of the other nationalities under Soviet rule, the fact remains that the brothers do not associate and mingle very freely.

* * * * *

The bulk of the Russians in these various Republics are encountered in the capitals and major cities. There they function largely as the trusted Soviet political and industrial leaders.

Since the Russians are clustered in the cities, enjoying a standard of living far above that of the local national group in the rural areas, a situation is created that encourages the local groups to feel they are being exploited by their big brothers. This situation, quite naturally, could not help but create a feeling of insecurity on the part of the Soviet rulers.

One needs but recall the reaction in the Ukraine in World War II. When the German forces advanced into that area, they were frequently welcomed by cheering crowds throwing flowers and bread to the advancing Nazis. So strong was this anti-Russian feeling that it is reported that the Germans were able to employ captured Ukrainian divisions in the war against the Soviet Government. According to some reports, all that was necessary to formalize the transfer of allegiance was a change of insignia. As it is widely known, what the German military accomplished in gaining the support of the Ukrainians was destroyed by Hitler's military government personnel whose cruelty and oppression alienated the Ukrainians, driving them back to the support of the Soviet Government.

Obviously, a desire for independence that could manifest itself so forcefully in World War II must still exist in the Ukraine, and even though such wish for political freedom may now be latent, it must be reckoned with as a potent element in evaluating Soviet strength and weakness.

Unassimilated national minorities must of necessity assume great importance in evaluating the true military strength of the Soviet Union. Whether they join the Soviet Union's enemies or are forced into an alliance with the Soviet, as were the Ukrainians as the result of Nazi stupidity in the last war, would be determined largely by the extent to which an antagonist of Russia understood the nature and significance of the national groups comprising, in fact, the majority of the Soviet Union's population. Should those minorities join the enemies of the Soviet Union, it could well prove disastrous for the Red leaders. Yet, should an enemy, for instance, conduct a kind of war that would alienate the minority groups, forcing them into alliance with the Soviet in defense against a common enemy, it would be a major victory for the Russian rulers and a distinct reversal to the enemy. That is precisely why talk of an all-out war calling for the mass destruction of cities is so questionable. Mass destruction directed against the populace would be against the national groups and would undoubtedly force them into an unwilling alliance with their Soviet rulers, thus presenting the Communists with a major strategic victory. The strength of Soviet Russia may well be determined in terms of the degree of cohesiveness demonstrated by the various nationalties.

In addition to the national groups composing the Soviet Union, another important population factor that must be considered in evaluating Soviet strength is found in the distribution of the peoples within the borders of modern Communist Russia. In Russia, as in most other nations, the regional density of population is a fairly sure indicator of the importance of that area from the industrial, agricultural, and military standpoint. Analysis of the relative population densities of the various areas of the Soviet Union illustrates how fallacious it is to evaluate Russian strength solely on the basis of geographic size.

In way of comparison it should be realized that Russia is not as densely populated as the United States. Average density of population for all of the Soviet Union is about 22 persons per square mile. In the United States the figure is about 42 persons per square mile. In one sense, in particular, the population distribution of the Soviet Union is similar to that of the United States; it is extremely uneven, having areas of very high density, and other areas of sparse population spotted throughout.

The fundamental feature of Russian population is the concentration of Soviet peoples in European Russia, the area west of the Urals. In this area, due to its tolerable temperature, landform, and adequate rainfall, is 80 percent of all the Soviet population. This concentration, obviously, points up the sparseness of some other vast areas eastward beyond the Urals. It also points up the fact that European Russia is today, as in the days of Peter the Great, the heart of Russian power.

In addition to this inhabited area, as the geographers often refer to European Russia, there are only two other areas of relatively high population density. These areas are a narrow ribbon along the trans-Siberian railroad with an extension southward to the Kusbas Basin, and in the irrigated river valleys of central Asia. The significance of the relatively few areas of high concentration comes into clearer focus with the realization that 95 percent of the total population is in only one-fifth of the total area.

The extremes are found in southwest Russia where population density runs 200–400 per square mile, and in Siberia, which has an extremely low population-area ratio. The Ukraine, with 40 million people, or about 25 percent of the population, has but one-fortieth of the total territory. Siberia, in contrast to southwest Russia, has only about 10 percent of the total Soviet population, and 90 percent of this 10 percent is located along the trans-Siberian railroad and in the Kusbas. That means that in all the remainder of Siberia, one of the largest land areas of the world, there are only about 1 million people. From the military standpoint, Siberia, while important to the security of the Soviet Union, is by no stretch of the imagination the critical area.

Significantly, Russia is exceeded only by the United States in the number of great cities. There are 98 great cities in Russia and 106 in the United States. If the present trend toward further concentration in urban areas continues, there is no question but the size of Russian cities will continue to grow. From 1926 to 1939 the urban population of Russia increased from 26 to 56 million. Such a phenomenal growth of cities was not an entirely voluntary process as far as the individual inhabitants were concerned, as it reflected a determined Soviet policy of expanding industrial development at the expense of agricultural production. The effect of such a policy upon agriculture will be noted later.

In addition to the national composition and distribution of the Soviet population, the continuing growth of the population is of real significance in any long-range strategic evaluation of Russian power. Not only is such growth important from solely the Soviet viewpoint, but it acquires even deeper significance when examined in relation to anticipated European population trends.

The last official Russian censuses were taken in 1926 and in 1939. Since that time there have been no official Soviet announcements of population figures for the nation as a whole. However, the present population of the country is authoritatively estimated at 230 million. By 1970 it is expected to top 270 million. If we consider the population of the Soviet Union and that of all of Europe as a whole, the comparable trends are shown as follows:

Of the total population of Russia plus Europe—1940 Europe was 70 percent, Russia was 30 percent; 1970 Europe will have 62 percent, Russia will have 38 percent.

As impressive as this trend is with respect to the population as a whole, it assumes even more strategic meaning when the figures are analyzed from the standpoint of the male population of military age. Again, taking the combined European and Russian male population of military age (15 to 34 years) as the total unit, we find that:

Of the total 15–34 age group of males in Europe plus Russia—1940 Europe's was 68 percent, Russia's was 32 percent; 1970 Europe will have 58 percent, Russia will have 42 percent.

Not only do these comparative trends in total population show a fundamentally significant shift in favor of the Soviet Union, but the strategic consequences are even

more discernible in the case of males of military age. It simply shows that the pattern of manpower is and will continue to develop in favor of the Soviet nation at the expense of the manpower reserve of the European nations.

Most certainly this is a critical feature of the changing pattern of world power, for in spite of the fact that we may be living in the so-called atomic age, the population of a nation, and the future trends in comparison with other powers, still remains and will continue to be a major essential in assessing national military capabilities. As long as manpower is an important factor in military power, the non-Communist world can take little comfort in the population trends of the Soviet Union.

But population in itself is not a final criterion of strength. Granted that Russia can produce a large population, the next question is whether Russia can produce enough food to maintain such a population. This leads directly to the next aspect of Russian geography—Agriculture.

Russia's Achilles' Heel

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 20, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the second installment of the article on "Russia's Achilles' Heel," written by Col. J. D. Hittle and appearing in the March 1953 issue of the Marine Corps Gazette. The first part of that article told of the Soviet Union's wealth in raw materials and population reserves. The second article is a most revealing description of Russia's weaknesses, and is particularly pertinent today in the light of what we now know about the failure of the Soviet's agricultural program.

The articles are a tribute to Colonel Hittle's scholarship and analysis.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RUSSIA'S ACHILLES' HEEL
(By Col. J. B. Hittle)
PART II

It's the Soviet agriculture that will, in large measure, decide how well or how poorly the nation is fed in the future. From the strategic standpoint this is important, for a nation's staying power in war is in large measure determined by the degree to which that country's agriculture can support a war effort.

Just to add to the examples of how fundamentally the Soviet Union differs from the United States, it should be pointed out that, while North American soil zones run generally north and south, Russia's soil zones, due to climatic conditions, run generally east and west. By far the best soils are in southwest Russia. There in the Ukraine are found the rich black chernozems, most productive soil type in the world. It is these highly productive soils, developed under the grasses of the Russian steppes, which are the foundation of Soviet agricultural production. The critically important chernozem soil zone is formed much like a giant wedge, with its broadest area in the southwestern Ukraine and tapering toward a poorly defined point to the eastward, where the zone disappears in the more arid wastelands of central Soviet Asia. In the Soviet Union, the rich chernozem soil area totals about 1 million square miles, or about four times the total for the similar soil area in the United States.

Strategically, the chernozem zone of the Ukraine is of major importance to Russia in peace or in war, for it provides 25 percent of the cultivated area of the Soviet Union. Its importance is even greater, for in this soil zone is produced, for example, 90 percent of Russia's sugar beets and 75 percent of her wheat. From the standpoint of food alone, loss of effective Soviet control over the Ukraine, with its rich soils, would be catastrophic to prolonged all-out war effort by Russia.

* * * * *

Here are some basic facts on the scope of agricultural activities in the Soviet Union: Due to climatic and landform limitations, the arable land amounts to about 432 million acres, which is close to 8 percent of the total Soviet area. Meadow and grassland totals 268 million acres, or about 5 percent of the total area. By combining these figures, we have a grand total of close to 700 million acres, or about 13 percent of the Soviet area devoted to agriculture in some form.

In agriculture, as in population, the important area is that west of the Urals. Not only is the bulk of the Soviet population in this area, but it also possesses 80 percent of the agricultural land of the Soviet Union. Of this region west of the Urals (excluding northern wasteland), 65 percent is devoted to agriculture. By contrast, only 2 percent of Soviet Asia is agricultural area.

On the eve of World War II, the land area actually sown for crop production totaled 373 million acres. This takes on more meaning when it is broken down into sown acres per person, compared with similar per capita figures for other nations. The per capita figure runs about 2.2 acres for Russia, 2.8 for the United States, and 0.45 for China. However, the available agricultural produce is not in direct proportion to the amount of sown area per person, as agricultural efficiency is an important contributing factor. Comparison of farm efficiency of the Soviet Union and the United States discloses that it takes about 2 Soviet farm families to produce the food for themselves and 1 nonfarm family. In the United States, 1 farm family feeds itself and 5 to 6 nonfarm families. This explains why the population of Russia is 65 percent rural (agricultural) and 35 percent urban (industrial). Reasonably acceptable figures show that there has actually been a considerable overall increase in the production of grain in the Soviet Union under the Communist regime. However, the real criterion of agricultural progress is production measured on a per capita basis. Consequently, the following table is significant:

Total Russian production in grain crops (per 100 persons)

	Tons
1913	63
1938	55
1949	39

The conclusion is evident: Soviet grain production is, in terms of the number of persons to be fed, far below that of the Czars. It would be less than realistic to contend that such a per-capita decrease has not had its effect on standards of diet. In addition to the decrease in grain production, there has also been a decrease in the production of potatoes and vegetables when measured on a per capita basis.

* * * * *

There is, on a population basis, less livestock under the Soviets that under the Czars. What is more important is that the decrease is large enough to be of major significance in evaluating the food reserve the Soviet Union would have to depend upon in event of war. In short, there is considerably less meat per person today in the Soviet Union than there was when Imperial Russia moved into World War I.

One of the principal reasons given by students of Soviet economy for the comparatively low grain and livestock production in the Soviet Union is the emphasis of the Communist rulers on industrialization. This constant striving for greater industrialization has been characterized by a planned shift of population from rural to urban areas, which in turn means more hands for industry but less on the farm. There can be little question but what Soviet agricultural efficiency is superior to that of the time of the Czars, but such technological improvement has not been able to compensate for the stepped-up movement of peoples from farm to city. Unquestionably, the agricultural economy of the country is being knowingly stretched thin. It apparently is a calculated risk by the Soviet Government. It is also a risk that could prove a serious miscalculation in event of war, because it does not provide the kind of agricultural foundation required to support a nation's wartime economy. While more a matter of speculation than geography, the question might be asked as to whether the Soviet rulers would deliberately so weaken their national agricultural base if they considered a major war imminent.

* * * * *

As is so often the case in industrial development of any nation, Russian industry is concentrated largely on the basis of proximity to coal and iron reserves. Yet it would be wrong to visualize the coal and iron centers as immediately adjacent installations, because considerable hauling is required to get coal and iron together even in the same industrial areas. For instance, in the heavily concentrated Ukraine, Donbas coal and Krivoi Rog iron are 200 miles apart; iron in the Urals is 600 miles from the Karaganda coal mines and 1,200 from the great coal fields of the Kuzbas Basin. With such extensive hauling, practically all by rail, the Russian transportation system is undoubtedly a weak feature of Soviet industry, for precision bombing of the coal and iron transportation net would immobilize Soviet steel production, the foundation of any great peace or war economy. As far as coal reserves are concerned, the Soviet Union appears to have little cause for worry, as she ranks second only to the United States in estimated reserves.

Current Soviet steel production is estimated to run about 30 million tons per year. Compared to the United States total of well over 100 million, it may seem Russia is too far behind to be a serious threat in production of steel-fabricated war materiel. However, it must be remembered that, with a much lower standard of living in the Soviet Union, far less steel is required for civilian consumer goods than in the United States. The result is that Russia obtains far more in the way of war material from each ton of steel than does this country. Any appraisal of Soviet steel adequacy should consider the fact that estimated current production is about one-third greater than Germany's World War II peak.

Neither does Russia appear to have reason to fret over the sources of metal alloys. Among the important nonferrous metals, only tin presents a major problem. Strenuous efforts are being made to eliminate this shortage by development of reserves in the Verkhoyansk region of northeastern Siberia. Russia has 20 percent of the world's chrome ores, the bulk of the world's manganese, and is the world's third largest producer of aluminum.

In the matter of nonferrous metals, as in the case of coal and iron, the key wartime

problem would not be one of resources nor even of production, but rather transportation and delivery from the points of extraction and smelting to the manufacturing areas. The great dependence of Soviet industry on maintenance of transportation can be realized from the fact that the largest production of lead in the Soviet Union is located in Kazakhstan, in south Soviet Asia, and the center of zinc production is in the Caucasus, both producing centers well removed from the heavy industrial areas of European Russia.

Oil resources and production are a crucial factor in determining the strategical capabilities of the Soviet Union. Some geographers have estimated Russia to have up to 59 percent of the world's oil reserves, a figure viewed by other as far too high. The bulk of the known oil reserves is in a relatively narrow belt along the western Urals and extending down into the Caucasus. It is this Caucasus region that is the heart of the Soviet oil production, accounting for about 75 percent of the total national output. Grozny-Maikop and Volga-Ural production amounts to 15 percent and 4 percent respectively. The military problem presented by the relatively distant and highly concentrated character of the Baku fields is readily apparent. Both the fields and the transportation of the oil from them would offer a tempting target to land- and sea-based aviation. However, in view of the relative ineffectiveness of Allied raids against the Ploesti fields in Rumania during World War II, it would seem that precision air attacks against the oil transportation system would be the most effective device for depriving Soviet industry and arms of oil. The result, from the Red standpoint, could well be catastrophic.

Production, more than reserves, is the problem of Russian oil in the foreseeable future. On the basis of comparison with other major types of production in Russia, oil is lagging far behind. In 1901, for instance, Russia, turning out 11 million tons, accounted for 50 percent of the world production of oil. In 1951, with 32 million tons, it is but 10 percent of the world total. The United States, incidentally, has from 60 to 70 percent of the total.

By United States standards, oil-transportation methods in the Soviet Union are behind the times. In this country, 79 percent of the oil is transported by pipelines, 2 percent by rail, and 19 percent by water. In Russia it is only 11 percent by pipelines, 43 percent by rail, and 46 percent by water. Such dependence on water and rail transportation again points up the vulnerability of the oil-distribution system to the proper type of precision air attack.

* * * * *

Any assessment of Russian oil adequacy as well as vulnerability should take careful account of the newly developed fields in the Volga Basin west of the Urals. This new area, result of exploration in the late thirties, has been hailed as a second Baku. Whether it rates such comparison is questionable, but there is no doubt but what it will become a major source of Soviet petroleum production. * * *

Russia, while not brimming over with oil production, can hardly be considered a have-not nation, either from the standpoint of current production or reserves. The quantitative inferiority of the Soviet Union in comparison with the United States is in the matter of oil, as in steel production, not a true criterion of Russian adequacy or inadequacy. Under a rigidly planned economy the military has prior call on available petroleum products and does not compete with heavy private civilian demands. Oil requirements for a nation whose populace rides bicycles or walks is significantly less than for one in which two cars in a family garage is commonplace. So, despite the frequent assertions to the contrary, it is doubtful if Russian petroleum production is inadequate to fill the essential needs of a strict war economy.

Not even a cursory examination of Russian resources would be complete without reference to the vast manpower pool of that nation. With a shortage of technological machinery to support the ever-increasing demands for greater industrialization, the Soviet rulers have utilized the manpower resources as a substitute for machinery. Of course, it is recognized that such use of manpower is not as efficient as well-designed mechanical equipment, but at the same time it is, in the cold calculation of Soviet leaders who are willing to sacrifice individual lives in furthering attainment of the goal of a greater Soviet Union, a workable, relatively cheap, and well-nigh inexhaustible means of developing Russian industry in spite of mechanical deficiencies. The forced-labor or concentration-camp system is the result.

By using forced labor the Soviet is able to push development of areas into which free labor would slowly, if ever, migrate. Consequently, forced labor is a major instrument for exploiting the natural resources of Siberia. * * *

In 1928 there were about 28,000 in Soviet concentration camps, and by 1931 the total zoomed to 2,200,000. By 1943 the estimated total was about 12 million. It has been further estimated that about 12 to 16 percent of all adult Soviet males are in concentration camps.

In the Soviet Union, as in any large-area nation, transportation is of primary importance to the maintenance and growth of the economy in peace as well as being an indispensable factor in determining the success or failure of a major war effort. There is no question but what the rail system of Russia is of crucial importance in estimating the strategic capabilities of that nation, for only by the rail net can the many widely dispersed resources and industrial capacity be brought together. In a large sense the rail capability of Russia is a criterion of her strategic capabilities.

By any standards Russia compares unfavorably with the United States in terms of rail transportation. In 1940, for instance, the Soviets had a total of about 60,000 miles of railroad in the entire country. This would equal about 25 percent of the United States total. Such a comparison is all the more indicative when it is realized that the Soviet Union has 2.3 times the land area of the United States.

Generally, as would be expected, rail net density corresponds with the population density (map 1). This means that the heaviest rail concentration is in the Ukraine, where the rail density runs about 52 miles of track per thousand square miles. Gradually, the rail density thins out to the eastward. In the Volga region it is down to about half of the Ukrainian density, or about 25 miles per thousand square miles. In the Far East rail density figures drop precipitously from the Ukraine and Volga totals down to about 2 miles of track per thousand square miles of area.

Again such figures have somewhat more meaning when compared with United States totals. The average rail net density of the entire Soviet Union will run about 0.6 mile per thousand square miles of area; in the United States we have 7.7 miles of railroad per thousand square miles of area.

Rail density in terms of population is another useful basis of comparison. The Soviet Union has about 2.7 miles per 10,000 persons. The United States has 18.2 for the same number of inhabitants.

* * * * *

The doubletracking of the Trans-Siberian, plus the recent route around Balkhash to Tashkent, constitute necessary and valuable additions to the strategic rail net of the Soviet Union. But while these additions to the rail system enhance Soviet war capabilities and strengthen the economy, they must be evaluated for what they are—significant improvements over previously existing facilities, but still not enough to give the Soviet Union the necessary rail net to support safely a strained wartime economy. It is at best a tenuous link militarily, and economically in peacetime; in war a link that would offer a tempting target for precision air attack.

The Trans-Siberian Railroad, indispensable as it is to maintenance of Soviet influence and power in the Far East, is but a thin ribbon of steel stretching across the greatest land expanse in the world, over steppes and deserts, through narrow mountain gates, and over rivers. Severance of the Trans-Siberian road would isolate, except for air and infrequent water shipping around the north coast of Russia, the Far East from Soviet bases of power in the west.

In a far eastern war with any great western sea power, Russia would be at a distinct strategic disadvantage. The sea power nation, by using the oceans, would have a broad highway by which to deliver men and materiel to an Asiatic fighting front. True, Russian submarines could interfere with the flow of such tools of war, but powerful balanced naval forces would inevitably protect the sea lanes from disruption by Soviet subsurface units. On the other hand, Russia's Trans-Siberian Railroad, only connecting land route with the Far East, would be highly vulnerable to air attack by carrier- and land-based air. Severance of the Trans-Siberian road, or even frequent and prolonged disruption of traffic, would isolate Russian and satellite forces in the Far East. This simply underlines again what thoughtful geopoliticians have long recognized—that the Far East is a sea power theater. Russia, greatest land power in the world, could not persevere against a great and determined sea power in Pacific Asia.

Because of the inadequacy of the Russian rail net, aviation is being rapidly expanded to provide travel and communications with the widely separated cities of the Soviet Union. At the present time it is estimated that scheduled air routes total 26,000 miles.

Highways do not hold much promise of relieving the transportation problem resulting from the sparse rail system. Of a total of about 840,000 miles of roads in Russia, only about 60,000 are hard-surfaced by either gravel or cobblestone. Less than 3,000 miles are asphalt. (These totals are based on figures at the beginning of World War II.)

Thus most of the roads are dirt—mud in summer rains, and frozen ruts in winter. It can be readily appreciated why the Soviet road system—or lack of it—would be an important factor in any Russian military operation. It would certainly influence the type and amount of motor transport and armored forces and would, as well, posses important logistical implications. It also helps explain why the Soviet Union still maintains such large horse cavalry forces.

Here is the salient fact that emerges from evaluation of the Soviet industrial and transportation system: At maximum efficiency it is probably equal to the demands of a war economy. Attainment of such maximum potential would depend on every major element of Russian economy making its timely contribution to the overall effort. The objective, therefore, of any Soviet enemy would be to prevent the smoothly coordinated meshing of the Soviet Union's industrial gears. Thus, disruption of the transportation system would be the most effective means of undermining Soviet wartime economy.

In summation, the following salient conclusions regarding Soviet strength and weakness can be deduced:

(a) Today, as in the time of Peter the Great, the vital area of Russia is the region

west of the Urals. There is located the bulk of population, industry, and usable resources.

(b) In terms of population trends, Russia is getting relatively stronger and Europe weaker.

(c) The Ukraine is the industrial and agricultural heart of European Russia.

(d) The minority national groups of the Soviet Union are a potential source of domestic trouble to the Kremlin in event of war.

(e) Russia, with a rigidly controlled economy, has adequate metal resoures and steel production to support a war effort.

(f) It would be dangerous to assume that oil output in the Soviet Union is inadequate for the armed forces. However, the oil fields and petroleum transportation lines from the Baku region are vulnerable to carrier and land-based air attack.

(g) It is highly questionable if Soviet agriculture is adequate to support a growing population and a major war.

(h) Sea power could triumph over Soviet land power in Pacific Asia.

(i) Transportation is the "Achilles' heel" of Soviet power.

In short Russia's strength lies in her tremendous raw material and population reserves coupled with a rigidly ontrolled economy which could release sufficient oil and steel for a war effort.

Her weakness lies in an inadequately developed agriculture program, and a vulnerable transportation system linking widely separated raw material sources and production centers.

Comparing the Soviet's transportation system to the nerves in a body, Russia is a giant—subject to a nervous breakdown in an all-out war.

Recognition Well Deserved

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. McDOWELL. Mr. Speaker, I was greatly pleased and proud when it came to my attention that the Virgil Wilson and Auxiliary, No. 4961, Veterans of Foreign Wars, Seaford, Del., had received numerous awards and citations both locally and nationally for their wonderful community work. I would like to enumerate a few of their achievements to give proper recognition to this very fine organization.

For the second consecutive year the auxiliary received the trophy for the outstanding Americanism program in the State and a citation for the best legislation program. Mrs. Aline Hill was awarded a citation for the best legislative study program and facts book on legislation. Last year the Post's Press Book won the top award both in the State and nationally, and this year's edition was adjudged number one in the State and is being forwarded to the national competition where it is felt that it will again be in strong contention for the national award. In a statewide competition the post and auxiliary received the third place plaque for community service. The auxiliary placed second in rehabilitation, third for the cancer program, fourth in youth activities, above general average in hospital work, cerebral palsy, and aid to Korean children, and maintained a 100 percent contribution list for the VFW veterans orphan fund.

A very lively interest and concern for veterans and veterans' problems was justly rewarded when Mr. Wright Robinson, editor of the Seaford Leader, the local newspaper, received the Ernie Pyle award at the VFW National Encampment in Philadelphia, which was awarded to the editor who devoted the most in space and content to veterans' affairs, editorials, and advertising.

On the 13th of August of this year the post will hold a citations and awards night at which time they will present to Vernon Layton, Henry Hutchinson, John McKay, and past Post Commander William Lee Cordrey, all of Seaford, citations for their quick thinking, improvising, and effective action in saving two fishermen from drowning in the icy waters of the Nanticoke River last winter.

Additional citations will be given to the Lions Club of Blades, Del., for service rendered their community; to the members of the Teen-Age Canteen of Seaford who have done a wonderful job in making useful citizens of tomorrow as well as today by conducting their canteen in an atmosphere of wholesome entertainment and to John Temple for his outstanding work for the Blades-Seaford associated charities.

These tributes to the members of the Wilson Post and Auxiliary should also be taken as a tribute to the many other VFW posts throughout the land whose civic and patriotic responsibility is so graphically shown by their many good works. Men and women who take such a serious attitude toward their endeavor to make America a better place in which to live are deserving of the prayers and thanks of us all.

Jewish War Veterans Express Views to General Bradley

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. MULTER. Mr. Speaker, the following letter written by the national commander of the Jewish War Veterans, Joseph F. Barr, to Gen. Omar M. Bradley, Chairman of the Veterans Commission on Veterans Pensions, outlines in detail JWV's views on the laws and policy regarding pensions, compensations and related nonveteran benefits for veterans and their dependents. Representing a joint endeavor, the views are based upon research and material prepared by JWV service officers under the supervision of Charles Drescher and comments submitted by PNC Maxwell Cohen, national rehabilitation officer, and Dr. Paul Guten, national hospitalization chairman:

EXPRESS VIEWS TO GENERAL BRADLEY
(By Joseph F. Barr, national commander)

Gen. OMAR M. BRADLEY,
Chairman, President's Commission on Veterans' Pensions,
Washington, D. C.

MY DEAR GENERAL BRADLEY: In the first place may I thank you, even at this late date, for your kindness in discussing at the home of our mutual friend, Myer Dorfman, past national commander of the Jewish War Veterans of the United States of America, the matter of the President's letter concerning a comprehensive study of the laws and policies pertaining to pensions, compensation, and related nonmedical benefits for our veterans and their dependents.

I drew from our conversation certain views as to your impressions on the matter which have encouraged me in making the following analysis.

As I said to you, there seems to be a rather general view in the minds of veterans and nonveterans alike, an unfortunate one, that both your committee and the Hoover Committee on Medical Services were created with the specific view that a reduction in veterans' benefits would follow. I know that nothing is further from the truth, but, frankly, your committee will have to deal with the fact that a public impression of this kind has been created.

The President directed that your committee should appraise the structure, the scope, and the administration of veterans' legislation with particular attention to:

(a) Changes in basic military, social, fiscal, and economic factors in our society affecting the role of these benefits;

(b) The conditions under which benefits should be provided for different categories of veterans; and

(c) The relationship of various veterans' benefits to each other; that is, to benefits for persons still in the military service and to the broader social security and other benefits which are provided to persons without regard to their status as veterans.

In the study there is, of course, involved a résumé of veterans' legislation.

The first veterans' act providing an allowance from Federal sources for service-connected disability was the act of 1792. Various pension measures were enacted by the Congress thereafter from time to time until in 1862 the General Pension Law was enacted. This General Pension Law which provided monetary benefits for disabilities and deaths incurred in military or naval service was the governing law until the War Risk Insurance Act of October 6, 1917.

In the interim the Congress of the United States, from time to time, enacted laws described as service pension acts which, without regard to the question of service-incurred disabilities, authorized both disability pensions to those who had a minimum period of service and death pensions to their surviving widows and children. A fixed date was set for a widow to have been married to the veteran—to be classified as "widow," children were included only if under 16 years of age, or, if incapable of self-support after that age, where the incapacity was based on conditions arising before the 16th birthday.

The act of October 6, 1917, known as the War Risk Insurance Act, departed from the system heretofore in effect. It provided for three separate benefits; a fourth was added by subequent degislation, but was incorporated into the basic system of laws governing the Veterans Bureau by the act of June 7, 1924, which codified the then existing laws for the Bureau into one basic act. These acts with their amendments provided for the following:

Allotments and allowances to dependents while the breadwinner was in service. (For World War II and the Korean period these

benefits were administered by the Service Departments.)

A monetary benefit "compensation," based on the concept of workmen's compensation for disabilities incurred in the service, as well as medical and hospital treatment therefor. Also provided was a payment described as death compensation for widows, children, and dependent parents.

War risk insurance, under which persons in service, on application, were insured for a maximum amount of $10,000, based upon a principle under which the Government assumed the cost of administration and the cost of permanent total disability. This permitted the insured to buy from $1,000 to $10,000 of insurance in multiples of $500. The premiums were, of course, adjusted to reflect the share of the Government in bearing the cost.

Vocational training: This provided for the retraining into various civilian occupations of those who by virtue of service-incurred disabilities, had become unable to carry on in their prewar occupations.

These laws were amended from time to time by the Congress of the United States (each amendment providing either for an increased benefit or enlarging the base) until in 1933 the Congress enacted what is now known as the Economy Act of 1933. This act repealed all laws providing for either compensation or pension, as they applied to military or naval service subsequent to 1898, and the President was authorized to provide by regulation (Executive order), which could be revised by him before March 20, 1935, and thereafter only by statute, the conditions for payment of compensation to veterans and their dependents.

These regulations, as amended, are in the main, today, the system of laws under which veterans and their dependents are receiving monetary benefits.

It is, in my judgment, exceedingly important to note that the fourfold concept of the War Risk Insurance Act, as amended, which has been in effect for a matter of some 38 years up to the present date, is with two important exceptions still the governing law. These exceptions are (1) that in 1951 the Congress substituted a so-called indemnity provision for the system of war risk insurance, and (2) broadening the concept of allowing education and training after discharge to other than those who had incurred a disability which interfered with pursuing their prewar occupation.

Under this Indemnity Act the survivors of a veteran, specifically named in the statute by describing kinship, unless otherwise named by the veteran, receive the sum of $10,000 in the event of his death in service, or within 120 days thereafter, in installments for a stipulated period of time thereafter. No premiums are charged for this protection. If relatives as described do not survive, no benefits are payable. This program, while designed to replace insurance is not a suitable substitute therefor and has created a great deal of discontent among veterans, and the dependents of veterans.

The result is an almost universal recommendation on the part of veterans and their representatives that the Congress of the United States should be urged to enact a law whereby veterans in the active military service of the United States today and those who had or should have had the opportunity to apply for insurance under laws which were in existence until 1951 should be given the opportunity to apply for insurance in multiples of $500 between the $1,000 minimum and the $10,000 maximum, the premium therefor to be based on the American experience of mortality tables.

One of the major difficulties arises from inadequacy of the rating schedule to reflect the facts of life.

An indication of this inadequacy is an instance which one of the JWV service officers called to my attention. An individual who served in General Patton's Tank Corps had a tank blown out from under him which resulted in complete loss of both air and bone conduction. He is rated as 10 percent disabled under the schedule. Does it not stand to reason that such a loss under any concept of disability should be considered as more than 10 percent disability?

The last complete survey of veterans' benefits conducted was in the depth of the depression, early in the year 1933. At that time the average man was lucky to be earning $20 per week. The rules and regulations set up in those times are, in the main, the rules under which disability is being evaluated today. The experience of the last 22 years is, in the main, not taken into consideration. These rules were established on a hypothesis that the generous administration of existing laws would bankrupt the country.

As a result the veteran today with an arthritis of the spine due to service may draw a minimum of 10 percent or even a zero percent on his back condition, even though he is totally disabled for his usual occupation.

It is the opinion of qualified members of this organization, who have dealt with this problem, that as it is being administered, and as the law presently provides, there seems to be a constant irritant between the idea of a consideration of disability or death, alleged to be service-incurred, other than a battle casualty, and the thinking resulting from fears arising from the depression period of 1923 to 1938.

The economic prosperity of the recent past few years has had little, if any, effect other than from sporadic and somewhat inconsistent allowances resulting from congressional action to grant monetary allowances based on specific disabilities. While this is not, and this is not intended to be a statement of disagreement with such specific allowances, one who thinks of veterans' benefits as a concept to cover the many cannot help but express a desire for a more uniform consideration, resulting in the allowances of adequate benefits to the disabled on a basis of a realization that the present allowances are in too many cases unfair and unjust.

One constantly faces the question, which is implied in the President's letter, i. e., are veterans to be considered as a class, apart from other citizens?

The answer, in our judgment, is "yes," unless and until we have universal military service. If all persons are subject to the draft, and those who are unfit to participate in the fighting effort are required to make their contributions as soldiers behind the front upon exactly the same basis, financially speaking, as the men who are asked to serve in the military service, then a different situation would exist, and a contrary answer would be in order. Under these conditions the servicemen on the war front and the civilian on the home front alike would be in more closely related positions. As a matter of fact, in this atomic age it might be advisable to provide by law that the entire country be fully mobilized for war and every person be required to render some kind of military service, thereby eliminating distinction between veteran and civilian.

This concept has been advanced heretofore by those who seek a really adequate defense for the Nation, but has not been accepted. Actually, on a proposed program of military training to provide a more adequate Reserve, the objections that have arisen are such that the House of Representatives in its very recent consideration of the Reserve bill found it necessary to withdraw the bill from consideration.

This makes all the more important the distinction between those who serve in the military forces and those who not being in military service are benefited to a large measure by the scarcity of labor because of manpower shortage and wartime inflation of wages. Some measures to adjust or to compensate for the economic disparity due to participation in military service would be appropriate therefor. If this is considered by some to be an unfair adjustment, then that must be considered as their opinion and not as a necessarily correct conclusion either morally or legally.

The Jewish War Veterans of the United States suggests the idea of adjustment in the 1945 schedule of disability ratings to be more in line with industrial evaluations of what is a disabling condition and the extent thereof. Take, for instance, a service-connected loss of a procreative organ without loss of procreative power. Such a loss is compensated by a $47 monthly statutory award.

Compare this with a coal loader who has a traumatic arthritis which is not completely disabling. The 1945 rating schedule provides a rating of 10 percent disability or 0 percent. Yet a coal loader who has even a slight traumatic arthritis is generally totally disabled from following his usual occupation.

Another suggestion to amend the 1945 schedule is that pensions for total disability be payable to hospitalized veterans suffering from tuberculosis from the date of hospitalization and not from 6 months thereafter, as is now the case. Our national hospitalization officer has advised that he has ascertained that some far advanced cases reach an arrested stage even sooner than minimal cases.

The general view which appears to be well supported is that the schedule (1945) should be completely overhauled.

There is unanimous opposition to the proposal of combining VA benefits and social security benefits. The social security system is a contributory one, in which citizens pay a share and the Government makes up any difference. On the other hand, while benefits under VA laws are a gratuity, given by the Government without a monetary premium as compensation for injuries incurred during military service, the scheme of VA legislation, since 1917, has provided such benefits on the basis of workmen's compensation laws.

Now some are raising the question of need before an award may be made, even for service-incurred disability or death. This is an alien philosophy, and it would mean a completely new approach, one which would be utterly in opposition to all of the concepts which have, at least since 1917, correctly in our judgment, served as the guide to benefits for veterans and their dependents for service-incurred disabilities. It would also raise the question as to whether those who are entitled to employees' compensation because of industrial injuries are to be similarly treated. We are completely opposed to this idea.

We now approach the question of "pension," i. e., a payment to a veteran, or his widow and/or children, based on the fact of his service, and not on disability or death incurred in or as a result of service.

In the statement by the President on August 28, 1954, accompanying his signature of H. R. 9962, he said that he had approved this bill, a measure providing an increase in benefits for non-service-connected disabilities, because "I recognize that many of the individuals who will benefit from this increase are now living under circumstances of extreme hardship."

The President further said that statistics show that many who would receive this increase need no additional assistance and that "in this respect H. R. 9962 is inconsistent with our pension system and tends to perpetuate inequities and anomalies which have arisen not only within the pension system itself but also in its relation to closely related Government programs."

A question which arises on this message is occasioned by the fifth paragraph of the statement of the President of August 28, 1954. This reads "Although additional benefits have been granted from time to time, our basic veteran laws have not changed materially in the last 30 years.

"We must also recognize the fact that, because of the inauguration and growth of closely related—and uncorrelated—Federal programs designed to provide assurances against want to all of our citizens, there are today many instances of uneven and inequitable benefits. Under the present system, for example, there are no means of taking into account the degree of a veteran's need—no relation between payments received under the veteran pension laws and payments received, for example, under our old-age and survivors insurance system."

Is not this statement inconsistent with the provisions in Veterans' Administration Regulation No. 1028 which defines payments under the old-age and survivors insurance act as income? If, therefore, the income of the applicant, with these old-age and survivors insurance payments included, exceeds the $1,400 or $2,700 limitation, which is provided before pension may be paid, the claim must be denied, even if there exists a need because of unusual conditions.

The Economy Act, Public Law 2, 73d Congress (March 20, 1933) as amended, is the basis of all allowances of pension and compensation.

The act, as amended, now provides for a presumption that tuberculosis, and certain other diseases, are presumed to be due to service if manifested within a stipulated period after discharge from active service. There is considerable dissatisfaction with these provisions. What about a disease such as muscular dystrophy?

What about tuberculosis, otherwise unexplained as to origin, becoming manifest a short time after the 3-year presumptive period?

What about the mysterious tropical diseases, hiterto unknown to American practitioners, incapable of exact diagnosis, which become identifiable after the presently provided presumptive period expires? These provisions relative to presumptions of service incurrence, require careful reanalysis by a competent group of physicians, and it is suggested that your committee either recommend such a procedure, or itself call for the study by such a group—selected from the leading medical schools and research groups, to be included with your report.

In this connection, I invite your attention to the fact that the present provisions of law and regulation concerning presumptive periods for service connection have not kept pace with medical knowledge, and do not take into account the exceptional conditions which may have existed during a particular period of service.

Another matter which has raised controversy deals with the attitude of the Veterans' Administration in determining what is sound medical judgment on the question of rebutting a presumption of service connection for such chronic constitutional diseases. This is directed to what may be described as opinion although called sound medical judgment.

It now becomes necessary to discuss other benefits, monetary in nature, provided under present law. After World War I there was a provision for vocational training for those suffering from service-connected disabilities who required training or education to fit into another occupation. For World War II, Public Law 16 provided education or training for those whose disabilities originated in the service, who needed such training to overcome a handicap due to such disabilities. During the Korean period the substance of this law was reenacted for these veterans.

During World War II the GI bill of rights was enacted. This act, among other things, provided for an opportunity to those who had served, to acquire either education or training without regard to whether disability had been incurred.

It recognized that service in the Armed Forces had interrupted such education or training and that it was the obligation of the Nation to assist the discharged veteran to equip himself with the necessary skills to make his living.

A similar benefit was provided for Korean veterans, and although hostilities in Korea terminated on July 25, 1953, those who entered service after that date and before January 31, 1955, are entitled to have their service computed in their entitlement to this benefit.

The draft laws are still in effect. There is, however, since January 31, 1955, a statutory bar since the period of emergency has expired, and those who enter service after that date are not entitled to their benefit.

It is urged that so long as only a small percentage of those actually available are being drafted for service, some measure should be provided to make up to these boys, and to those who voluntarily enter military service, for the opportunities they may be losing through the fact of this service. No one can argue, with justification, that the boy who, during peace, served before January 31, 1955, is losing any more than the one who was drafted subsequent to February 1, 1955.

Moreover, admitting the foregoing statement to be a specious argument, the fact remains that it is to the advantage of the Nation, as a whole, to offer opportunities for education in the arts, skills, etc., particularly to those whose education in this respect has been delayed beyond others of their generation who have not been faced with the requirement of such service.

I do not predicate this thought on a waving of the flag, but on the sound principle of recognition of a mutual obligation. Hence, the Jewish War Veterans of the United States urges that your Commission give careful consideraton to this matter.

While this draft would be extended unduly to discuss, in similar detail, the entire question of survivor's benefits, a few references thereto are in order.

The provision of law, whereby a 6-month gratuity is paid because of death in service, should receive careful study. If this is paid, as has been indicated, as compensation, then the matter of the recipient requires some closer analogy than that presently existing in between this benefit and benefits similar in nature paid by the Veterans' Administration. If it is an insurance benefit, then some closer relation should appear between the present provisions and those governing the Indemnity Act.

It is difficult, if not impossible, to justify those statutory provisions granting an election of rights, either to veterans or their survivors, between the Federal Employees Compensation Act and the laws administered by the Veterans' Administration. The fact that the veteran was a career military person does not signify that his dependents are any less deserving than those of a reservist. This does not mean that we oppose the greater benefit, but rather that we favor the grant of such a larger allowance to all entitled, as being in keeping with the need, and so recognized by the Employees Compensation Act.

Further, this analysis has not gone into any discussion of the provisions of the GI bill concerning guaranteed loans. So far as these measures are concerned, they have more than justified themselves in the economic benefits to the country at large.

There can be no question but that as concerns the housing situation, the veteran group which attained maturity during the period of the conflict came home to an economy not prepared to offer them adequate housing for their families.

The boost to the national economy, which flowed from these provisions of law, more than paid for the little which veterans received over and above nonveteran citizens and whatever the cost to the Government, this was, the improved economy as a whole, resulting therefrom, more than repaid in the way of a higher national income the cost thereof to the taxpayer.

In my discussion of these matters with you, General Bradley, you assured me that, as you saw it, the primary objective of the commission was to consider what measures should be provided for the veterans of the future rather than for the veterans of today. May I suggest that the commission would do very well to study the question as to whether the benefits available to veterans of today are adequate in the light of the economy of the country as a whole. Today our economy is based on a $380 billion national income. Today the general wage level is far beyond what it was in 1917, in 1933, or in 1945. Shall the veteran continue to be judged by the economy which was in existence from 20 to 40 ago?

May I in the name of the Jewish War Veterans of the United States offer to you our sincere thanks for the opportunity to make our views known. Should there be any occasion in the future wherein our further views may be desired or should it be desired that we supplement the views herein stated by oral testimony, you can rest assured that I and my staff will be available to you.

Present Situation of Home Building and Mortgages

EXTENSION OF REMARKS
OF
HON. CHARLES A. HALLECK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. HALLECK. Mr. Speaker, under leave to extend my remarks, I include a statement on the present situation of home building and mortgages, by Mr. James R. Price, president of the National Homes Corp., whose general offices and main plant are located at Lafayette, Ind., in my district. The statement follows:

The current high level of home building in the United States is not a boom phenomenon based upon excessive credit or unrealistic economics. It is an entirely normal and orderly response to a basic need for new housing.

Furthermore, the prevailing type of long-term mortgage financing with a steady amortization is very well suited to the economy of the American household today.

The present and prospective market for houses rests upon a genuine demand arising out of at least four factors: (1) Increasing population, (2) a larger percentage of the population in the middle income group, (3) the relative stability of personal incomes when compared with 2 or 3 decades ago, (4) social changes which encourage many more people to maintain homes of their own.

As to the financing, the long-term, fully amortized mortgage, with little or no downpayment, is in some respects more conservative and safer than that which prevailed prior to enactment of the National Housing Act of 1934 and creation of the FHA. In those days downpayments of 50 percent were

commonplace, and mortgages were written for no longer than 5 to 10 years. But amortization was rarely required and the high interest rates that then prevailed often invited default and foreclosure at the least economic downturn. The mortgage risk lies in the ability to maintain payments. The current type of long-term mortgage is better tailored to the pocketbook and in addition provides for growth of the owner's equity month by month.

Dr. Arthur F. Burns, Chairman of the President's Council of Economic Advisers, has put the present prospects clearly: "The widespread use of the long-term, fully amortizable mortgage is one of the great reforms of our time. As a result, mortgage foreclosures on a mass basis are much less likely than they used to be."

The appeal of the post-World War II long-term mortgage financing to former rent payers is demonstrated by the fact that owner-occupied homes outnumbered renter-occupied units for the first time in 1948.

It is frequently and rather sweepingly stated that everybody is buying too much on credit these days. Yet all interest costs today—corporate and individual, for all purposts—are less than half as big, in relation to national income, as they were in 1929. In the housing field, people are paying about 20 percent less of their disposable income for home buying, including debt charges, than in the late 1920's. And the current mortgage debt, about $75 billion, is estimated by the National Association of Home Builders to represent no more than 45 percent of the value of all mortgaged homes. Only 4 percent of these houses, according to this analysis, are mortgaged for over 80 percent of their value. Moreover, a Federal Reserve Board study last year determined that, despite the long terms of currently written mortgages, the average maturity of nonfarm mortgages in the portfolios of insurance companies was only 11 years.

The best test of this credit's soundness is, of course, the default record of home buyers, especially during dips in the national economic barometer. Dr. Burns has said there were no defaults or foreclosures "on any appreciable scale" during the contractions of 1948–49 and 1953–54. This reflects the experience of our National Homes Acceptance Corp. which was established in 1947 and today is servicing $155 million of mortgages on National homes for over 175 insurance companies, savings banks, and other lending institutions, including some of the country's largest. Going back to 1952 when NHAC took a backward look over its first 5 years' experience, it had then made more than $70 million of mortgages, representing 8,000 loans, only 6 of which were 30-day delinquents. This was a delinquency ratio of 0.075 percent.

The delinquency rate on all home mortgages seems to confirm our own experience. It reached a record low in the first quarter of this year, according to a survey of 2 million mortgages by the Mortgage Bankers Association of America. Even in the contraction of last year when foreclosures rose to 26,000 from 21,473 in the previous year, they were only about 10 percent of the number in 1933–34.

I think that on the whole the current home mortgage situation is sound, especially since the Federal mortgage insurance agencies wisely got rid of the so-called no-no down payment financing. Sometimes this even included automobiles in addition to closing costs in the principal of mortgages. Conditions will continue to be sound if available financing is used in such a manner as to protect those few home buyers who tend to prodigality in their financial commitments. In arranging mortgages on National Homes we make our own, independent investigations of loan applicants to satisfy ourselves as to their credit standing and employment prospects. No one is permitted to commit more than 20 percent of his real income, other indebtedness considered, to the cost of carrying these homes. Loans are rejected if applicants are found to have had unsatisfactory payments records on any installment credit. Moreover, our builder-dealers are told that "issuance of an FHA commitment does not bind NHAC to acceptance of the loan if applicant does not meet its requirements." Perhaps this helps to explain why buyers of National Homes have proved extraordinarily faithful in meeting their financial obligations.

As to the genuineness of the market for new homes, it is first essential that we revise the habit of measuring basic home demand by the rate of so-called household formation. The official figures are a highly questionable byproduct of annual population estimates that the Census Bureau, which issued them, is only too glad to admit have little validity. Since the rate of household formation for the current year (not yet announced) is believed to be from 600,000 to 700,000, there has been some apprehension that building over a million homes a year since 1949 (this year around 1.3 million) would saturate the market. This theory assumes erroneously that prospective home buyers are largely those establishing new households. This further distorts the picture by its assumption—again erroneous—that newlyweds, of whom there is a net annual increase currently of around 400,000, are for the most part buyers of homes.

Our experience at National Homes is that newlyweds constitute only about 5 percent of our home buyers. We recently made a survey of 1,250 of our dealer's customers in 7 cities scattered across the country to check our impression. It turned out that in only 2 of these cities did newlyweds comprise more than 5 percent of the buyers. These were Buffalo (25 percent) and Springfield, Ill. (30 percent). This is supported by a 1952 Cornell University study which found that 63.9 percent of purchasers of prefabricated homes are "founding families"; that is, young couples with children under 8 years of age. And only recently the Federal Housing Administration announced that of 6,500 home buyers sampled in the first 10 days of March, the typical buyer of a new home was 34.6 years old. Since the median age for marriage is now around 22 years, this means that the average home buyer in the FHA sample had been married over 10 years.

All of this evidence supports our belief that homes are most frequently bought when families expand to the point of having 2, 3, or more children. It would explain why the typical current home buyer in the FHA survey had been married 10 years or more.

What all this means, so far as the marriage rate goes, is that the rate of 10 years ago, not the present rate, is the one affecting the present home market. And 10 years ago the marriage rate was breaking all records. The all-time high was the 2.3 million marriages in 1946. Home builders are now undoubtedly reaping a sales harvest from the founding families resulting from those marriages. Moreover, the evidence indicates that this pressure for home buying will continue, with another upsurge after 1960 when the army of war babies, which set records during World War II, commence themselves to marry and have children of their own.

There are several other pressures for home buying: the great mobility of American families with one-fifth of the population relocating every year; the separating of doubled-up families, competent authorities claiming that 2 million homes will be needed for these situations alone; and the age and consequent deterioration of existing homes, over 24 million of which are more than 30 years old. The Twentieth Century Fund's massive survey, America's Needs and Resources, concludes in the recently revised edition that there will be a demand for 1.2 million homes a year until at least 1960, even though many more are really needed.

The third and overwhelming important consideration is the drastically altered income situation of American families. The Department of Commerce recently reported that the average annual income of nonfarm families was $6,393. Even since 1947 the families with incomes over $4,000 have increased by 70 percent. Only 14.6 percent of them earn less than $3,000 a year. This astounding revolution in income distribution led the magazine House & Home to the conclusion that it was the biggest element in the demand situation. It went on to say that each year the number of families who can afford a house costing $12,500 or more is increasing by over a million, while the number who cannot afford such a house diminishes by half a million. Whether such estimates are precisely correct is not so important as the indisputable fact that in recent years we have been having a dramatic converging of the well-known American desire for better homes and the means to buy them. This is one of the factors in the national economy which makes the home market of today an actual market of serious buyers rather than the symptom of an unhealthy boom.

Finally, there is the underlying confidence of people in the future growth of the economy. Without this the housing market could not be sustained. Fearful people don't make long-term financial commitments of the kind mortgages involve. At the same time they are buying realistically, according to their means. In a sense, they are casting a vote of confidence in themselves and their country.

Smuggling of Heroin Into the United States

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, July 29, 1955

Mr. LEHMAN. Mr. President, some weeks ago, I received a letter from Mr. Andre Fontaine, the editor of the Bluebook magazine, sending me a copy of an article published in his magazine, in which it was asserted that the Italian Government was facilitating the smuggling of a great flood of heroin into the United States.

In order to obtain some informed comment on the observations contained in this article, I wrote to the State Department. I have received from the Department a very interesting reply containing reference to some official reports on the measures the Italian Government has undertaken to inhibit and restrain the narcotics traffic and the export of illicit drugs to the United States.

I am sure we will all be pleased to know that the Italian Government is taking active and forceful steps to stamp out this evil trade, which is a source of such concern to the entire country.

I ask unanimous consent that the communication from the State Department, which I have just referred to, together with my letter to Mr. Fontaine, editor of

Bluebook magazine, be printed in the Appendix of the RECORD.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

JULY 6, 1955.

Mr. ANDRE FONTAINE,
Editor, Bluebook Magazine,
New York, N. Y.

DEAR MR. FONTAINE: As you will recall from our previous correspondence, I sent your letter and the article entitled "How Italy's Government Lets Heroin Flood United States," contained in the June issue of Bluebook, to the Department of State for its consideration and comments.

I have just received a very interesting reply from Assistant Secretary of State Thruston B. Morton, and I am enclosing Secretary Morton's letter for your information. I am pleased at the concern which is evident in Secretary Morton's reply with regard to this very important narcotics problem. Obviously the Bluebook article has been studied with great care by the State Department, and I am sure it will have a salutary effect in maintaining proper concern for meeting this vital problem.

Thank you again for sending me this very informative and provocative article. You may be sure I will continue to watch developments in this matter with great interest.

Yours very sincerely,

———— ————.

DEPARTMENT OF STATE,
Washington, June 30, 1955.

The Honorable HERBERT H. LEHMAN,
United States Senate.

DEAR SENATOR LEHMAN: I have received your communication of June 3, 1955, enclosing a letter, dated May 19, 1955, from Mr. André Fontaine, together with a copy of the June issue of the Bluebook.

As indicated in the testimony of Mr. Harry Anslinger, the United States Narcotics Commissioner, before the Senate Subcommittee on Narcotics on June 3, the Bluebook article in many respects presents a picture of the Italian narcotics situation as it existed a few years ago, but it does not reflect the present state of things. In the past 2 or 3 years very great progress has been made by the Italian Government. This is confirmed by the report of the Committee on Seizures of the United Nations Commission on Narcotic Drugs which was adopted by the Commission at its 10th session in New York on May 5, 1955. An extract from this report reads as follows:

"ITALY

"50. The observer from Italy reported to the Committee on the narcotics situation in his country. Of the 36 kilograms of narcotics seized in 1954, 35 were of foreign origin, indicating that Italy was rapidly becoming a country of transit rather than origin. He assured the Committee that the Italian Government had intensified its struggle against the illicit traffic. A central bureau of narcotics had been set up in accordance with a new law passed in November 1954, and this office would coordinate activities throughout the country.

"51. In addition, the observer reported that his Government had taken energetic measures to prevent diversion from licit drug factories. One of these measures was to institute in each drug factory a permanent control system to be enforced by the fiscal police.

"52. As regards the Migliardi case, the Committee was informed that the firm involved in the case (S. A. Schiaparelli) had lost its license to manufacture narcotic drugs and that the principal culprit, Migliardi, had recently surrendered to the authorities and had received a sentence of 11 years imprisonment.

"53. The Committee desires to record its warm appreciation of the measures introduced by the Italian Government for the suppression of the illicit traffic and recommends that these be recognized in the Commission's report."

It should be noted that the United Nations Commission on this occasion expressed deep concern over the illicit traffic centering on certain other countries. The above-expressed views of the United Nations Commission were supported by Mr. Anslinger, the United States representative on that Commission.

The Department of State, in cooperation with the United States Bureau of Narcotics, has investigated the charge made in the Bluebook article that the Italian Government condones or protects illicit heroin manufacture and trade, and finds the evidence to be to the contrary at the present time. In July 1951 the Italian Government issued an order suspending the production of heroin in Italy. This order has been in force ever since. The most flagrant violator of the order has been severely punished by the Italian courts (the Migliardi case referred to above). According to the United States Bureau of Narcotics, the Italian Government is satisfactorily cooperating with United States narcotic agents in their efforts to prevent the flow of heroin and other narcotics through illicit channels into the United States.

It is to be noted that international organizations of which most of the nations of the world are members have recommended the extension of additional safeguards against the manufacture, trade and use of heroin to countries, including Italy, which have not yet adopted these further measures. In the case of Italy the safeguard most urgently needed is the permanent prohibition of the manufacture of heroin, as recommended by the World Health Organization and the Economic and Social Council of the United Nations. The United States Government has always supported these recommendations and it will continue to do so through the medium of the international organizations which have been established for this purpose.

Mr. Fontaine's letter and the Bluebook are returned herewith.

Sincerely yours,

THRUSTON B. MORTON,
Assistant Secretary
(For the Secretary of State).

Louisiana State Vets Honor Al Labiche

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. HÉBERT. Mr. Speaker, today I want to make the House acquainted with an old friend of mine and a combat veteran who has just been elected State commander of the American Legion in Louisiana, Albert Labiche, of New Orleans.

Here is the typical American story.

Al Labiche was the father of two children when he went off to the war. He was a happy-go-lucky sort of a guy when he went away. When he came back he was a seasoned soldier who had been through the roughest and the toughest of the campaigns around the Bulge.

In typical American fashion, however, he picked up his life in the busy industrial world which he had left and became a renewed force in his community. His endeavors and his talents were given to all civic movements and he served his city as foreman of the grand jury at a time when service was not what could be called very desirable because of local political conditions. But Al Labiche did his job and did it well.

Now he has been honored by being named the State commander of the American Legion for Louisiana, an honor and a tribute which justifies my grasping this oportunity to introduce him to the entire membership of this body.

I saw Albert Labiche in Paris less than a fortnight after Germany had surrendered. Specifically it was a Sunday May 20, 1945 morning at the Hotel Rafel. This is what I wrote in my account of Europe immediately following the end of the war under the title of "I Went, I Saw, I Heard":

Albert Labiche came by and we had breakfast. He is going to have plenty to relate when he goes back to New Orleans.

When the war can make a tough, hard-boiled soldier out of a guy like Albert Labiche it can accomplish anything and there is little wonder that victory has come to us.

Carefree, gay, laughing—almost irresponsible, I have never known anybody Albert Labiche didn't like. Today I saw a hardened tough soldier who had 7 weeks in the front-lines at Aachen.

An American father of 2 children, drafted into the army when past the age of 30 and now a veteran of frontline action. That's the kind of stuff Americans are made of and the kind of stuff which wins wars for America, make no mistake about it.

That was written 10 years ago almost to the day, give a few days. That was 1945.

Now this is what the New Orleans Item wrote about Albert Labiche in an editorial only a few short days ago after he had been elected State Commander of the American Legion. This is 1955:

STATE VETS HONOR AL LABICHE, A NATURAL AS LEGION CHIEF

Albert V. Labiche is a natural for State commander of the American Legion, and the veterans who chose him at the convention in Alexandria on Sunday are to be commended.

A father of two daughters, now 21 and 19, Al went into World War II service as a buck private. He came out in 1945 as a staff sergeant with three battle stars, the combat infantry badge, and a purple heart (for shrapnel that ripped through his hand).

He fought in France, Belgium, and Holland, where he was wounded, as a doughboy in an armored division. Al was there.

On being mustered out, he became active in the Legion, helping organize the Arthur Scott post and serving on various State and national committees.

But his service to his community has extended to many other fields. He was a first-rate foreman of the Orleans Parish grand jury 2 years ago, in the very midst of the police uproar.

(In addition to its investigative work, the jury made two noteworthy recommendations: that police pay be raised and that a system be set up to provide overlapping service on grand juries so as to avoid the traditional break in continuity.)

Vice president of the store which bears the family name, Al Labiche is prominent in the community's business life.

He is a past president of the Radio and Television Association, a director of an insurance company and of a bank.

The kids of New Orleans know Al, too, for his ardent support of sandlot sports. This interest goes back to the days when Al, himself, was a star prep school fullback; a plucky one, too, who could run 106 yards for a touchdown—with a broken collarbone.

A believer in teamwork, a fine citizen, and a leader, Al Labiche will give the State Legion high-caliber service as its new commander.

Why Chinese Kids Don't Go Bad

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. KLEIN. Mr. Speaker, the New York Post, one of America's most effective liberal and crusading newspapers, has been publishing a series of articles on juvenile delinquency; and, as part of that series, several articles have appeared on Chinatown of New York, where the children do not "go bad," where they stay out of trouble, where their record is exceptional, as instanced by the fact that out of 7,700 delinquents in the Children's Court in New York City last year, only 9 were of Chinese ancestry.

It is a great satisfaction for me to submit these articles for inclusion in the Appendix of the CONGRESSIONAL RECORD. There have been many myths about Chinatown. Sensation seekers and writers of trashy fiction have done their worst to give Chinatown a bad name. The facts are quite the reverse of their sordid pictures. New York's Chinatown, while picturesque and colorful and worthy of a visit from the out-of-towner, is a community of Americans of Chinese descent, most of them citizens, possessed of a great tradition and with admirable human and social qualities. Its members follow a way of life that deserves to be known, applauded, and emulated. The sober virtues of respect for parents and teachers, of a stable and loving home life, of the desire to learn, and of peaceful adjustment are predominant in New York's Chinatown.

I am proud to be the Representative in Congress of the district that includes these fine men, women, and children:

[From the New York Post of July 11, 1955]

WHY CHINESE KIDS DON'T GO BAD

(By Henry Beckett)

Late on sunny afternoons the shadow of the huge Criminal Courts Building at 100 Centre Street falls across Chinatown children playing in Columbus Park, the only playground for Public School 23, their school.

But few of them will ever enter the building charged with crime. Out of 7,700 delinquents in Children's Court last year, only 9 were of Chinese ancestry.

The judges, police, welfare workers, and community leaders attribute this striking record to many factors, including ancient tradition, close neighborhood feeling, parental responsibility, and most of all to love in the home.

But they sometimes sum it up in one question and answer:

"How could they get into mischief? They don't have time."

That is because they attend two schools daily, in season, and help out at home more than most of the city's children do. Their loitering hours are few.

At Public School 23, Bayard and Mulberry Streets, children of Chinese ancestry make up about 85 percent of the nearly 400 pupils. Classes run through the sixth grade, so that the oldest pupils are about 12.

Attendance is above the Manhattan average and for months it may be as high as 97 percent of enrollment. Parents are so eager to have children learn that teachers have difficulty in getting them kept at home when they are ill.

PARENTS SET THE EXAMPLE

Some parents are studying in the school at the same time as their children. From 9 a. m. to 3 p. m., 4 days a week, there are 2 adult classes in English. A few mothers have their youngest children at their side. One little girl of 4 years has learned to read, by herself, in this way.

"Teaching is easy here," the principal, Marie K. Lelash, said, "because at home parents set an example in discipline and responsibility, train the children well, and teach them to tell the truth in all circumstances.

"Naturally, preaching doesn't mean much if children hear their parents tell little lies at home, in stores, in the daily round. In a Chinese household, children are important. Parents share their lives with them, have them help in shopping, take the laundry, assist in the father's business.

"These children are not on the streets at night. Their parents don't give the impression that they are glad to get rid of them, that they are indifferent, and the less seen of them the better."

THE CHILDREN POLICE THEMSELVES

Touring the old school building, in hard use for more than 60 years, Dr. Lelash noted that everything was spic and span and no walls had been defaced.

"If any child scribbled or rubbed paint on the wall," she said, "50 children would report it right away and would form a squad to clean it up. Pupils police one another. Patrols report if a child fails to wait for a green light at a street crossing. Names are taken.

"Once a child handed me a note reading like this: 'Please excuse my father for damaging my geography book. He left it on the radiator. He is willing to buy a new book. It won't happen again.' The father insisted upon paying.

"Tears rolled down a child's cheeks when he had done something naughty and I told him that I must write to his father. Children are taught not to fight. They understand that they are a minority group and will be noticed if they do not behave well."

Chinese children love to read and paint, Dr. Lelash observed. They fancy hot dogs and pizza pie and don't care for ice cream or sweets. They go for Hopalong Cassidy and Davy Crockett.

The school library was arranged to suit them, with an "artificial fireplace," and curtains their mothers made and still wash and iron. On holidays, parents give them money and the pupils of Public School 23 have had as much as $40,000 on deposit in a bank.

A PRINCIPAL'S 7 POINTS

About 200 children, or 20 percent of the total, are in Public School 130, Hester and Baxter Streets. As soon as the question of low juvenile delinquency among Chinese children was put up to him, the principal, Dr. Henry Seideman, sat down and with evident enjoyment wrote out what he considers the reasons for it.

The range in his school is from kindergarten to high school, and here are Dr. Seideman's seven points:

Stable home. Mothers don't go out to work as much as others.

Fathers have authority. Are in charge of home.

Feel responsible for their community. Have a small-town, family-close relatedness, feeling that they must uphold their neighbors' estimation of them, feeling that their neghbors' eyes are on them like an uncle's or aunt's.

Ambassador-at-large role. Feel a representative of their community, a model or ambassador by whose conduct their community is judged by others.

Natural, mature values. Unacceptance of cheap, get-rich-quick values. (Let's steal for a good time. Money is happiness.) They are rich because they don't set themselves superficial, Hollywoodish goals.

Real, not verbal, morality. No double standards between lipservice moral talk and actual adult ways. Pride in their reputation for honesty. No confusion of standards—church talk versus real adult fraud, cheapness, or evasion. (Credit given by wholesalers. Atmosphere of honest business.)

Security. Emotional, social. Belongingness, so important. (To the home. Do chores.) They are accepted and loved in their community. They are not rejected. While other children, belonging to the whole Nation, in reality may belong to nobody in particular, Chinese children have one whole community that loves them.

THEY ATTEND A SECOND SCHOOL

After attending the American public school or parochial school, most Chinese children go to what is called Chinese school.

One such school is financed by the Chinese Community Center in a one-time public-school building at 60–64 Mott Street. A drive is on now for $1 million for a new building to house both center and school.

The head of the school, Dr. Kenneth C. Chan, came from China 7 years ago. He expected to return, but the Communists took over, so he remained. He has a Ph. D. from New York University, and is editor of the China Journal.

"We have 170 pupils out of perhaps 600 attending all 3 Chinese schools," he said. "We have one American woman as a pupil, too. When public school is out, the children play in our building from 4 to 5 p. m., then attend classes from 5 to 7:10 p. m. We have nine Chinese teachers. They instruct in the Cantonese dialect, and we have a course in Mandarin. We also teach Chinese history and geography.

"We never spank a child. In case of misconduct we inform the parents and have the child copy maxims or stand in the corner. But we would expel any child who struck a teacher, because first of all we teach good citizenship."

The Church of the Transfiguration supports both a regular parochial school and a Kung Wa, or Chinese school. About 20 percent of the 357 pupils in the parochial school are Chinese, Father McLaughlin estimates. They have their regular schooling, 9 a. m. to 3 p. m., and then attend Chinese classes, 4 to 6 p. m.

THE KIDS AND THE COPS

The schools are administered by the Maryknoll Fathers and the Sisters. Some were missionaries in China until the Communists expelled them. Their present pupils, from first to eighth grade, come from Manhattan, Brooklyn and Queens.

"In China today," says Father McLaughlin, "the Communists are trying to turn children against parents and have them spy on their elders and report. So the children are extolled as individuals and trained in a youth corps to betray their parents. Some have done so.

"The Communists want the state to predominate. Therefore the family must be

broken up. This has to be a clean break from the past, because for centuries parents have been judge and jury and to bring dishonor on parents is a crime, according to their philosophy."

Father McLaughlin mentioned the expressions "Sin King Lo Sz Sin," meaning "First revere one's teacher," and "Hau King Foo Mo," meaning "Revere father and mother," as central Chinese precepts. He had heard of a Hong Kong lad who hanged himself because he failed to get passing grades.

The Chinese attitude toward the police pleases Father McLaughlin:

"The boys walk up to policemen on the beat and shake hands. You see a policeman walking down the street holding the hand of a small boy. Gradually the police have grown to understand Chinese ways and grant liberties regarding firecrackers at holiday time."

SCHOOL WITHOUT A JANITOR

The Reverend Paul Chang is principal of the Chinese school of the True Light Lutheran Church, 195 Worth Street, the largest Chinese church in the United States, with 1,500 on the rolls.

"To them obedience is the first virtue, obedience to parents," says Chang. "Their concept of religion is different. If they profess it, they live by it.

"Although ancestor worship is gone, children respect their elders. They do not call parents by first names as many American children do. They heed advice of uncles and cousins. If pupils err, parents are informed and they do the punishing.

"We have a gymnasium and 17 basketball teams. Over weekends, students clean this 5-story building. We don't need a janitor. It is true that gambling has been a Chinese vice, but the younger generation is disgusted by it, knowing how families have been impoverished. And the Bowery, with its drunks, is so close that the young people have an object lesson alcohol as well."

[From the New York Post of July 12, 1955]

WHY CHINESE KIDS DON'T GO BAD—HOW PARENTS HELP CHINESE KIDS STAY OUT OF TROUBLE

(By Henry Beckett)

Parental example and pride play a key part in the good behavior of youth of Chinese ancestry—a group that rarely appears in court for delinquency.

"Parents set the example," says Kock-Gee Lee, president of the Chinese Benevolent Association. "They must do so if children are to remain uncorrupted by bad influences around them."

When children do well, Chinese parents feel that their own lives are being fulfilled and are not ashamed to show pride over it. The association's secretary, Louis Hong, broker at 120 Broadway, has this to say:

"I am the proud father of four. All are Columbia University graduates, all in the professions. One son is an economist, another an electrical engineer, the third a civil engineer, and my daughter is a chemist.

"Our offices and meeting hall in Chinatown are headquarters for all people of Chinese ancestry in Greater New York. Some 60 associations are affiliated. Most of them are family groups.

"If there are disputes that cannot be settled within the family associations, they come to us and we decide. It is gratifying that the conduct of our children is appreciated by the city. There are reasons for it:

"First, the teachings of Confucius, thousands of years ago, have great effect even today.

"Second, parents are more mindful of the welfare of their children than American parents ordinarily are. Fatherhood is taken more seriously, the father's duty is emphasized more.

"Third our aim is to make children become ladies and gentlemen, have good character, be dutiful citizens, and the Chinese schools guide their ethics and train them to know their obligation to society and to their country. As a child grows up, he is told that it is his duty to maintain a good family, in his turn, and to serve the general good.

"This must include respect for authority and the police first of all. It is understood that the police department is here to maintain order. Since most Chinese-Americans are law-abiding, they look on policemen not as persons to be feared but as friends and protectors.

"But you have asked me what I consider the solution to the juvenile delinquency problem and I must reply that it is parental example and guidance."

Among members of the Consolidated Benevolent Association are the On Leong Merchants Association and Hip Sing Association, whose bitter rivalry some years ago led to the worst of the so-called tong wars.

Dr. Chih Meng, director of China Institute in America, at 125 East 65th Street, suggests that an ancient Chinese concept which he calls "familyism" accounts for the conduct of Chinese children, as well as adults.

He remembers an English missionary's remark that in 53 years of work in a Chinese town of 30,000, where Dr. Meng himself was born, he had never heard of a crime of violence.

The China Institute in America furthers cultural relations between the United States and China and aids students in both countries.

Dr. Meng was a leader in the first Chinese student patriotic movement, has lectured widely on traditional Chinese ways, and is himself a descendant of Meng, the Chinese scholar known in the West as Mencius.

Mencius (372–289 B. C.) is China's foremost advocate of a democratic government and his teachings have influenced Chinese thought for 20 centuries. His attitude was that people are inately compassionate, not self-seeking, but that to practice virtue they need peace of mind and to have that they must have material well-being.

"Even a fist fight was rare in the town where I grew up," Dr. Meng says. "Life centered in the family and if any member of it did wrong the entire family was disgraced.

"In orthodox Christianity, the emphasis seems to be on a future life, on that kind of immortality.

"We think of immortality as coming through our descendants, so all Chinese want children. But if one of the children should commit murder, that immortality would be ruined.

"I was trained in that way, with a liking for the traditional Chinese compliment, 'May your family name remain fragrant for generations.'

"And the family tradition is carried on in the United States. The family is a financial unit, so that one has the obligation to assist any member of it, even to a cousin in the fifth degree. We have a kind of life and family and accident insurance, with all chipping in when necessary. The family is a real insurance company.

"In my own family there are 144 members. All turn for guidance to the head of the clan and in a just manner he reserves certain funds to aid what you call a weak sister, if need be.

"But frankly I am worried. Rapid change and the world situation lead to the breaking of these family ties, this close relationship, in the second and third generations of Chinese in America.

"I am in my fifties and my generation is all right and our children will be all right for a little while, but the environment and the school associations in New York are such that there is a breakdown in the home relationship and the mutual love needed between children and teacher.

"So I am much worried about the next generation of people of Chinese ancestry in this country. All of the money spent to stop juvenile delinquency, all of the expedients, higher paid teachers, and better buildings and recreational facilities—all of this will be futile unless family life is rehabilitated here."

Discussing Chinese family life, the president of the Public School 23 Parent-Teachers' Association remarks with approval that in a Chinese household the authority is more on the father's side, going back to grandparents.

She is Mrs. Grace Mok. Her father, Lee P. Lock, an importer, put 6 daughters through college and was gratified because 4 of them had Barnard scholarships. Her husband, Lam Mok, is with the Bank of China.

"With us," Mrs. Mok says, "parents are responsible for the way their children behave. There is no excuse for parents not to know what goes on. If there is no father, it is up to the father's uncle or brother or cousin to keep a child in line and pay for his education, if necessary.

"The Chinese have respect for learning. If correction is needed that is done privately, to save face and not hurt feelings. In all Chinese homes children are told that they must be good or the family will suffer disgrace.

"On the other hand, parents are praised if children do well. If Dr. Salk were one of us, everybody would be speaking well of his parents for having such a son and we would be proud of them.

"It isn't their money, it is the achievements of children that give parents standing. And if I, even at my age, did something wrong and got into the courts, Chinese people would be asking, 'Who's daughter is she?'"

[From the New York Post of July 13, 1955]

WHY CHINESE KIDS DON'T GO BAD—SPARE THE ROD, LOVE THE CHILD

(By Henry Beckett)

The Chinese child is loved in his home. He is appreciated; he is treated with the dignity that makes him feel he belongs, and this is a positive factor in contributing to his happy disposition.

It is this family love that has combined with discipline, obedience, and a dash of Confucian presecpts to keep Chinese-American youngsters at the bottom of the juvenile delinquency rate, in the opinion of people who have worked with them.

Miss Marian Lang, since 1937 in charge of the branch public library on East Broadway, says it this way:

"Long ago the Chinese discovered what some of our psychologists are emphasizing now, that children need plenty of love and affection.

"Parents and all older people treat the very smallest almost as pets, so that they feel loved and protected. But as soon as they are old enough for it, children are given responsibility. And anyone who thinks they are plain, placid, old-poker faces is wrong. If the like you and if they are stirred emotionally, well, you should see their faces light up."

If other children make noise in the library, Chinese children walk out, Miss Lang says, and the older children see that the younger ones are quiet.

Mrs. Beatrice Dunham, public-health nurse with the Community Service Society, 24 Pell Street, notes that there's a special reason, not flattering to this Nation, which may account in part for the warmth of the family life that turns out such children.

"For so long only the Chinese men could enter the United States. Women were excluded. That was a horrible thing to do."

So men left their families, came to America to earn more, and regularly sent money home to their wives in China, hoping for reunion someday.

"This is the only place where fathers take as active an interest in the home as mothers do. They are not afraid to do women's work. I have never seen anything like the way they dig in.

"And with their wonderful sense of humor, Chinese children have become the most popular of all at summer camps. It is a new experience for them and how they take to it.

"The police have nothing to do here. The Chinese know the art of living. When we first came to this section they knew nothing about community resources, but now they are the most responsive to health education of any people. They are self-directing.

"Children have so much fun in a Chinese home. Parents are kind to the little ones and I have yet to see a parent spank a child.

"As they grow up, the girls have a natural dignity, a kind of shy reticence that is genuine and very appealing."

Until recently, boys and girls were kept separate, outside the household. A girl did not shake hands with a boy and when some object was to be given him she placed it on a table.

Mrs. Moole Eng, another CSS nurse, observed that baby sitters are not needed in Chinatown:

"Parents take children and babies along with them to parties. There are parties to introduce the new baby, haircut parties, wedding feasts and on holidays Chinese people come to Chinatown from all over the city. It is their home community, a unifying, wholesome influence."

At the Mariners Temple, 3 Henry Street, the Reverend Joseph B. Palmer has been struck by the way older children look after the younger ones.

"When Chinese girls of 13 and 14 brought 6-year-old brothers and sisters to our parties, they were told that such small children were not invited.

" 'Then we can't come,' they said. Their parents were busy in laundry and store and someone had to look after the tots. So we arranged to accommodate them, too."

The Mariners Temple is 110 years old. Dr. Harry Emerson Fosdick did community work there in his student days and gained his fondness for the Chinese. It is a Baptist Church and the famous Riverside Church helps to support the manifold activities among the 13 nationality groups.

THE CHANGE FOR THE GOOD

Recently many Chinese-Americans have moved across Chatham Square from Chinatown proper, into the Mariners Temple precinct. Apparently their influence has not been bad.

"Ten years ago," the minister remarked, "this precinct was one of the city's most lawless. Now it is about the best."

Mrs. Irwin J. Cohen described the Chinese children as being better behaved than others when parents bring them to the law office of her husband, who formerly had a Chinese partner and has specialized in immigration and refugee problems.

"They are quiet as mice in the office," Mrs. Cohen declared. "Their elders are gentle, soft-spoken, rarely on relief. They do not like to be seen in court. And they stick together. Over in Dover, N. J., there are three households, including in-laws, sharing one home, eating and working together.

"In the past, gambling has been the traditional Chinese vice, but the big gamblers were mainly seamen, without wives, on shore leave."

Dr. Tan Chi-ming, executive secretary of the Chinese Community Center, who came here from Canton in 1948, points out that although three Chinese boys were arrested for disorderly conduct in the Chinatown precinct last year, all were acquitted.

"It was only mischief," he said, "but that was enough to cause parents to lose face, a punishment they can't bear. When a child goes wrong there is a family conference. The family is the unit. If the wrong continues, he is expelled from the group and none will accept him."

"Too many American parents have failed to guide and discipline youth," says Raymond Wu, the first Chinese to sell $1 million insurance for the New York Life.

"And life seems to have no constructive meaning for too many young Americans. Chinese elders, in fact the entire community, hold parents to account if children go wrong."

P. H. Chang, Chinese consul general adds, "Before a Chinese child makes a move, he stops to think what the reaction on his parents will be. Will they be proud or ashamed?"

Wayne Wu, editor of a forth coming Freedom Daily, in both English and Chinese, attributes Chinese child behavior to heredity, culture, and environment:

"When young people see that their elders care only for a good time, and are not interested in the general welfare, they are not likely to respect them. Chinatown youth is fortunate in not being subjected to so much bad American influence."

"Chinatown is the only area in the city that has this strong home discipline," insists the Reverend Stephen Murany, Church of the Sea and Land. The building, at 61 Henry Street, is shared by the Chinese Presbyterian Church.

Dr. Sun Yat-sen, founder of modern China, wrote the new nation's constitution on Chinese Presbyterian premises here, when he was a young student.

A spokesman for the Chinese Christian Center, 21 Pell Street, said that the church is dedicated to "mutual understanding of parents and youth, both confused by the customs of a strange land."

This understanding exists in Chinatown, he adds, and it accounts for what the children do.

But Americans closest to the people of Chinese ancestry feel that understanding and appreciation of their virtues in this country has been too slow.

It was only 11 years ago that a Chinese physician became an American citizen, the first in this area to achieve naturalized citizenship through repeal of the Chinese Exclusion Act.

It was only 4 years ago that Thomas H. Lee, brother of the late Shong Lee, mayor of Chinatown, became the first New Yorker of Chinese descent to receive an important political appointment. He was made an assistant United States attorney.

But in 1951, also, William S. Y. Wang, 18, who began his American life as a dishwasher, received a Columbia University scholarship established by Sou Chan, restaurateur, "because America has been good to me."

And in 1952, Mrs. Toy Len Goon, mother of eight, and herself a laundry owner, was honored as Maine's mother of the year.

I'M A SINISTER CHINESE—MY NAME'S FU MANCHU

One American who has tried to help his fellow countrymen understand the Chinese is Carl Glick, author of Shake Hands With the Dragon, and he says it's well to remember that the Chinese have a rougish, insatiable sense of humor.

For awhile, as Church of All Nations athletic director, Glick was in despair, feeling that the Chinese boys didn't like him. But they admired his patience and were trying him out.

"I'm a sinister Chinese," was the deadpan greeting of one of them one day. "My name's Fu Manchu. What's your name?"

"Jesse James," Glick retorted.

Although Chinese authorities believe that Sax Rohmer's imaginary Chinese villain, Fu Manchu, has made life much harder for the Chinese here, the young Chinese could be ironic about it.

Glick, now so close to many of the city's 40,000 residents of Chinese ancestry that children have been named for him, quotes a father's plea to a court:

"Kindly send me to prison for a long term in place of my unknowing son. I am at fault. I have lost much face. I thank you."

The boy of 10 had only stayed away from school a couple of days and there was no penalty.

OPIUM AND THE CHINESE

Perhaps the most common misconception that still afflicts the Chinese is the one that makes them out to be opium smokers.

"Social education and happier circumstances have almost stopped what opium smoking there was," says a prominent citizen of Chinese origin. "And the Chinese have always been the victims of outsiders in this regard.

"Remember that it was the British who introduced opium to China. They, and more recently, the Japanese, used it deliberately to demoralize the Chinese.

"In this country the lonely Chinese, separated from their families and persecuted by Americans who didn't try to understand them, took to opium to forget and to win temporary bliss. That developed after the 1882 exclusion laws stopped immigration."

Both Americans and Chinese who know most about it agree that residents of Chinese ancestry are a growing American asset precisely because they are able to be themselves.

The real Confucius has said:

"When the heart is set right then the personal life is cultivated, when personal life is cultivated, then the family life is regulated; when the family life is regulated, then the national life is orderly; when the national life is orderly, then there is peace in the world."

[From the New York Post of July 14, 1955]

WHY CHINESE KIDS DON'T GO BAD—THE CHINESE IN NEW YORK

(By Henry Beckett)

Sightseers on a guided tour of Chinatown walk warily through the crooked streets, wondering where the opium dens are and asking whether it is safe to go into the shops with their bright jumble of Oriental wares.

They want to believe that they are adventuring into a place of mystery and evil and the guide seldom disillusions them. Patrolmen, overhearing lurid spiels about tong wars, drugs, and white slavery, sometimes suggest that the guide mix some fact with his fiction.

"Chinatown is safer than Park Avenue," says Lt. William Nevins of the Fifth Detective Squad, Elizabeth Street station. "We never get a case of juvenile delinquency. It's because they have a happy home life. And there's no such thing as a youth gang here."

But romantic legend, dating from the time of the tong wars, dies hard. And not all who believe Chinatown is a dark place of depravity are out-of-town tourists, eager to believe the worst of New York.

Recently an acquaintance spoke with apologetic hesitancy of Mrs. Beatrice Dunham, public health nurse with the Community Service Society. Her office is at 24 Pell Street.

"I don't want to insult you even by asking," he said, "but somebody told me that you work with the Chinese in Chinatown. Is that so?"

He said that as if it must mean, if true, that Mrs. Dunham was connected with something illegal.

Quiet influences, along with the march of history, have made it possible for the Chinese in New York and other cities to be

themselves and to grow out of a bad situation not of their own making.

The tongs, for example, developed in the United States, not China, for the protection of Chinese men who could turn only to one another.

"The first Chinese coming to this country," explained Dr. Chih Meng, director of China Institute in America, 125 East 65th Street, "were brought over as laborers in the western mines and on the transcontinental railways.

"European immigrants did not like them because they were different and would work for almost nothing. They had to. So the Europeans mobbed the Chinese, burned their wretched huts, killed them. In nine Western States the Chinese were leading a very unhappy life.

"In the eighties they organized the tongs to fight back. Drifting east, not even knowing their ABC's, with no way to make a living except as laundrymen and in running restaurants, they had to live together.

"They competed with one another for the best locations. One would muscle in early, another would try to scare him off and occasionally a gun would be used. Then as the struggle became worse racketeers were hired and there was real warefare."

GROWTH OF THE TONGS

A detailed account of the tongs was given in 1930 in a speech by Eddie Gong, president of the Hip Sing Tong, then a bitter rival of the On Leong Tong.

It was the first time a member of the so-called Chinese secret societies had ever discussed them publicly and he likened them, in origin, to American vigilantes.

"The tongs," he said, "had their beginning in the same spirit of justice in freedom that moved the Americans of 1776 to throw off the oppression of an unjust ruler.

"In the early days of California the immigrants were grouped by families. The big oppressed the small, who could not appeal to the law of the land and were subject to race prejudice. They could present grievances only through interpreters who were invariably on the side of the rich oppressors.

"The tongs spread all over the United States to maintain justice. They became business associations, with counsel. But bad traditions developed and tong executives have not yet solved the mystery to bring an end to what your newspapers call tong wars.

"We have not yet been able to find out why, when a member of one tong is injured by a member of another tong, it is not a matter of individuals, but every member of the injured man's tong goes on the warpath looking for vengeance, seeking it from every member of the other tong.

"What you may never have heard is this: When an atrocious crime is committed within the circle of membership of one tong there is a trial within the tong, leading to a verdict and appropriate punishment.

"In time, perhaps, we will be able to persuade our members to take that verdict to the city and to the courts for ratification. I hope so.

"What are we doing to abolish tong wars?

"We have established the Chinese Consolidated Benevolent Association, a court of arbitration. I believe that today, with this court, the Hip Sing Tong and the On Leong Tong—at present our friends—are great influences for good in this community."

But Eddie Gong was premature. Six months after he spoke, police seized pistols, an ax, knives and four men, leaders in a scheme to recruit gunmen from the unemployed approached in city parks. Recruits were offered $500 apiece for dead Chinese of a hostile tong. Seven were marked for death.

Three days later, when a fusillade of bullets wounded 4 of 30 tongmen playing pool, Eddie Gong himself told police it was a deliberate attempt to kill as many members of the rival tong as possible.

Fear of wholesale deportations prevented more extensive tong warfare in 1930. Influential leaders reminded tong members of what happened in 1925.

Then, after 60 killings in 5 States, 1,200 Chinese were rounded up, 264 deported, and there were threats to raze the Chinese settlements in several cities.

Even so, in those 5 years, there were intermittent flareups. The strife continued in 1928 although a Chinese Consul General wired 40 tong headquarters, ordering that it stop.

In 1 case, 4 men had been killed and nearly a dozen wounded, all because 2 members of a family, belonging to different tongs, disputed over a debt and 1 killed the other.

Those tong encounters were really written up, too. This is from one story about that slaying:

"Around the edge of the door appeared a face. It was pale with a cold, ruthless hatred. The lips, displaying one gold eyetooth, were set in a mocking grin. And the black, menacing eyes sought and held the eyes of Wong Chun. The song of the Seven Petals was abruptly stopped."

[From the New York Post of July 15, 1955]

WHY CHINESE KIDS DON'T GO BAD—HOW CHINATOWN HAS CHANGED

(By Henry Beckett)

Only 25 years ago Chinatown was the city's problem community, with its not infrequent tong conflicts, it gambling, its traffic in narcotics—all exaggerated by the press.

Now police call it the most law-abiding of all and Americans who know are saying that its children set a fine example for children throughout the metropolitan area.

The change has come gradually, as a result of better treatment by citizens in general, growth in understanding, economic depression, the war between Japan and China and World War II.

For too long it was the fashion to make fun of the Chinese or depict them as a cruel, sinister people. Coney Island wax exhibits showed Chinese figures smoking opium and indulging in torture and public executions.

As a new tong war threatened, in 1931, this is the way a newspaper described the situation:

"Dark figures are darting mysteriously from drab doorways, grim and sardonic faces peer from shuttered windows, mysterious signals flash from hithter to yon."

With rival tongs denouncing and perhaps slandering one another, some Americans were ready to believe the worst. Killers were reported as taking terrible oaths, putting this curse on themselves in case of failure:

"And if I go to the mountains I will be bitten by bears and torn by fiery horses, if I go to the sea I will be drowned."

In 1931 the two most powerful tongs had conventions, simultaneously, in Chinatown. At a Chinese Theater party police frisked 200 men hanging around. On three they found loaded pistols.

After 3 killings in 3 weeks in 1933, police called on Federal authorities for help. The United States attorney called in the tong secretaries, told them that he was investigating narcotics and immigration violations and they would have to bring in their tong books. That worried the Chinese more than the simple deportation proceedings in earlier years.

A peace treaty was signed pledging the tongs "to maintain peace and quiet and to engage in no acts of lawlessness from this day on" and to submit disputes to the Chinese Consolidated Benevolent Association, as well as to public officials.

That was for United States authorities. Another peace treaty was signed at the behest of the Chinese consul general.

THE TRAFFIC IN NARCOTICS

Nothing deserving the name of tong war has broken out since 1933, but the Government has had to cope with a Chinese narcotics traffic.

A Government agent, planting a story about a rich uncle wishing to make a lot more in narcotics, managed to get initiated into a tong. He got the facts, there was a quite drive, 23 were arrested and a former tong president and 16 members were indicted.

"It meant," the press reported, "collapse of an alliance between the underworld of the Orient and the West that had monopolized the annual $1 million trade."

A few days later, agents found opium smoker in back rooms of tenements on Ludlow, Elizabeth, Mulberry, Rivington, and Madison Streets. White string soaked in heroin was selling at $1 an inch. Chewing heroin, that was. Same for a heroin-soaked letter.

LIKE REPUBLICANS AND DEMOCRATS

Faith in the tong peace was shown by the absence of a heavy police detail when 1 of the 2 rival tongs held a convention. Nine years before, 200 police were on guard, but in 1941, 1 patrolman had little to do but look at a street banner bearing words in English and Chinese and urging Chinatown to buy war bonds.

"We meet just as the Elks do," a secretary insisted, "and talk over relief for China and aid to the Red Cross. We used to have parades and things like that, but we cut it out because of the war. Now, since the Japanese attack, we help one another. It is just like Republicans and Democrats."

In another instance that year, at a minute before midnight, on the final day for income-tax payments, a Chinese girl took a position at the cash-payment window and went on talking, keeping the window open, while a huddle of Chinese men grew in the corridor.

Scarcely any of them needed to pay a tax, but they filed returns, paying a total of $1,600. It was explained that no Chinese could enter his club until he could show that he had paid a tax.

Such incidents, indicating a growing awareness of American citizenship and a desire to aid a government—their own—which also was coming to the rescue of the land of their forefathers, occurred more and more often.

By 1946 the Chinese who had been a police problem were complaining that the police were a problem to them. One of their leaders charged a reign of police terror through arrests without warrant.

Magistrate Kross backed him up, saying that hundreds of Chinese were brought into night court every Monday after unwarranted raids. Mah Jong was the offense, disorderly conduct the charge.

POLICE RAIDS CRITICIZED

"I send them home," she remarked.

"For years," a Chinese benevolent society spokesman said, "police have had the habit of walking into private Chinese homes without warrants. If the Chinese refuse to open, the door is broken. Most of the fear is because the Chinese do not understand English."

One Chinese editor added that "police invade homes at all hours," and another said that in their ignorance the Chinese did not know the police were breaking the law when they did that.

At the same time, young non-Chinese hoodlums were attacking Chinese in and near Chinatown and with the victims not even reporting it, because they did not epxect protection. It was estimated that in 6 months there had been at least 400 incidents of the kind.

The latest threat of tong war was 5 years ago. One Chinese man in Brooklyn killed another and then took his own life, following a fight over transfer of a Raleigh, N. C., restaurant. Police conferred with the Chinese consulate and tong executives. This was the edict of the late Shavey Lee, "mayor of Chinatown":

"Any tong conflict will be obstructed and opposed by the Chinese here, who want wartime unity continued. We live in the American way and will settle our differences in the American way. There won't ever be another tong war here."

And still Chinatown is not perfect. As recently as last August, police broke up a $1 million lottery ring and confiscated hundreds of thousands of pay slips and much equipment.

Eight-Hour Laws

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 30, 1955

Mr. WAINWRIGHT. Mr. Speaker, recently the public has been fed a steady diet of statements and news items, originating with the majority party, which purport to show that the majority party will have passed into legislation most of the administration's program before this session of Congress adjourns.

Pardon me if I have a few reservations. For example, on April 20 I introduced a bill, H. R. 5758, which would revise and replace the present group of complicated, overlapping and ambiguous statutes known as the 8-hour laws, with a single general hours law. No action whatsoever has been taken on this bill.

Under the provisions of the present set of 8-hour laws, some of which have not been changed since the last century, contractors on Government jobs have been free to work their employees seven 8-hour days—56 hours—in a week without paying them overtime compensation. Other contractors have adopted the standard 40-hour week, established by Congress for Federal employment, and for work covered by the Federal wage-hour law and the Public Contracts Act, in their collective bargaining agreements with the unions representing their employees. They pay overtime compensation for hours worked in excess of 40 in the week. Thus, some contractors suffer an unfair competitive disadvantage when bidding for Federal contracts.

One of the 8-hour statutes permits employers to work their employees more than 8 hours a day if they pay time and one-half for the extra hours. The courts and the Comptroller General, however, have taken different views as to whether the present language of the law also gives the employees who work overtime the right to collect the overtime pay if the employer fails to pay it.

Even a casual glance at the laws as they exist today will convince anyone of their utter inadequacy. The Federal Government should set an example in good employment practices on projects proposed under Federal programs. As long as these archaic laws are on the books, we may set an example, but it won't always be a good one.

H. R. 5758 would eliminate the confusion and correct the abuses stemming from the present set of laws by doing the following things: First, it would replace the text of the present 8-hour laws with improved provisions; second, it would cover not only direct Government contracts, but also contracts for work financed in whole or in part with Federal assistance; and third, it would provide in addition to the present standard work day of 8 hours, a standard work week of 40 hours with not less than time and one-half pay for overtime work.

The bill is part of the President's program—the same program for which the majority party is claiming so much credit. How many here are against a 40-hour week for employees on Government contracts? How many here are for a set of outmoded laws which permit some operators to work their employees overtime without paying the standard compensation? How many here are willing to say that they are against a law which would help do away with unfair competition in the bidding of Government contracts? Does anybody on the majority side of the House disagree with the contention that the Federal Government should have a law which states clearly that workers on Government contracts must be paid overtime compensation for all hours worked over 40 in a workweek?

At the present time, the bill lies uselessly in the files of this body's Education and Labor Committee. Apparently, the majority party considers the bill unimportant. It is a small thing, this business of giving workers a 40-hour week. It would hardly cause a ripple of publicity. Social security and personal income tax reduction are far greater attention-getters.

During next year's campaign, I hope that a few of the majority party's candidates drop by the sites of Government projects which may be located in their home districts. Drop by when Saturday or Sunday work is being performed, and ask the workers if they consider the bill important. Perhaps, then, we will get some action.

Secretary Shapiro Lauded

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, July 29, 1955

Mr. FLOOD. Mr. Speaker, it is with pride and pleasure that I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial which appeared on July 26 in the Temple Daily Telegram, of Temple, Tex., lauding the program and policies of the Honorable Harry Shapiro, secretary of welfare for the State of Pennsylvania.

For many years it has been my privilege to know Harry Shapiro. He is a man of integrity, ability and large experience. As the Temple Daily Telegram editorial points out, Mr. Shapiro worked hard in his youth, building these values which come from industrious application and earnest effort. Later he obtained a fine education and became a practicing member of the bar. As a lawyer, a Philadelphia lawyer, if you please, Mr. Speaker, Mr. Shapiro was an outstanding success. His interest in the public welfare prompted him to engage in politics and for 12 years he served with distinction in the Pennsylvania Senate.

Along the line, Mr. Speaker, Mr. Shapiro became interested in the problems and welfare of the mentally ill. With characteristic thoroughness he plunged into this subject and his own kinship with humanity served him admirably as he delved into this subject. It was typical of Harry Shapiro that he was not just a theorist in the matter, but he went out and got first-hand information and then was resolved to do something about it. Last January when Governor-Elect George Leader took over the office of Governor of Pennsylvania he surrounded himself with an excellent cabinet, men of character, all of whom were highly qualified for their respective posts. It was the Governor's good fortune to enlist the services of Harry Shapiro as secretary of welfare.

That Secretary Shapiro is justifying the Governor's confidence in him is amply borne out, Mr. Speaker, in the wide, favorable attention the Shapiro program for Pennsylvania's mentally ill is attracting. We all know, Mr. Speaker, that the question of mental illness is one of the most challenging questions of our times and that any contribution to its solution is indeed a national blessing. Harry Shapiro's fellow Pennsylvanians, without regard to partisan affiliation, are delighted therefore that he is getting on with his program for the mentally ill in such a way that all of America is aware of what is being done in this field in the Keystone State. Mr. Speaker, I consider it a privilege to ask unanimous consent to have this editorial from the great State of Texas inserted in the RECORD acclaiming, as it does, one of Pennsylvania's first citizens and one of humanity's benefactors.

The editorial follows:

ONE STATE, AT LEAST, DOING MUCH TO IMPROVE MENTAL INSTITUTIONS

Human progress, since the beginning of man, has been an unending relay race. In each succeeding generation, the best minds have passed on to the most promising of the upcoming youngsters the torch of understanding and the injunction to carry it further.

Many years ago as an impressionable youth, Harry Shapiro, a Philadelphia Jewish boy read a Catholic priest's story of the life of Dorothea Dix, a Protestant nurse who devoted her life to improving the miserable lot of the mentally ill. When she started her great work, she found the mentally deranged chained like animals in foul dungeons. By the time her work and her life ended, almost simultaneously, the world was beginning to understand that insanity is sickness, and not the wrath of God visited on the unworthy.

Young Shapiro, who had left school at the age of 10 to earn his way in the world, and who was then working in a paperbox factory, made up his mind he would somehow carry on Miss Dix's gallant crusade. Years later, after he had made his fortune, gone back to school to study law and was well on his way to a brilliant professional career, he accepted membership on various hospital boards and the presidency of a hospital with this early ambition in mind. Still later, for 12 years in the Pennsylvania Senate, he

fought tirelessly for improved care for the mentally ill.

Last year, Pennsylvania's Democratic Governor George M. Leader gave Harry Shapiro his big chance, appointed him secretary for welfare. Immediately Shapiro began putting his long-nurtured plans to work. Unheralded inspections of State hospitals uncovered some deplorable conditions, resulted in instant dismissals. Partisan politics was banned in the department. Efficient, dedicated, hospital superintendents, whom Shapiro found to be in the majority, were retained regardless of their politics, and given added authority to meet their responsibilities. While he made it plain there were no roosts in his department for party hacks and the faithful, he has asked for higher salaries all along the line to attract the qualified, experienced people he wants. He has gathered together the best medical brains of the State into an advisory committee and needled medical colleges and hospitals into research and training programs on mental illness. He is establishing outpatient departments and following through on discharged patients in line with his theory that sick minds, too, can largely be cured.

Harry Shapiro's program is costing Pennsylvania taxpayers some money, but he's getting results, and they seem to like it. His projection of the Dix crusade in his own State has only begun, but it seems safe to say that when Harry Shapiro is ready to pass on the lamp of inspired leadership that lights his way, worthy hands will be ready to receive it. Maybe we should invite him to Texas to inspire our efforts.

Beet Sugar Industry Very Important to California

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. JOHNSON of California. Mr. Speaker, on July 13, I made a short speech entitled "Excellent Food With Low Caloric Content Now Available to Everyone." This statement illustrated the ingenuity of American industry. It was not intended, directly or indirectly, to cast any reflection on the beneficial uses of sugar and especially its importance as an energy-producing food necessary to the health and vigor of all normal persons.

Sugar is a tremendously important part of the normal diet. Its production is an important American industry. As the Representative of the people of one of California's foremost beet sugar-producing districts, I am, and long have been, well aware of these facts.

During my seven terms in the House of Representatives, I have been fully aware of the importance of the beet sugar industry. For 10 years, I had 4 sugar refineries in my congressional district—third. Following the redistricting after the census of 1950, my district has been the 11th and it contains two sugar refineries; the Spreckels Sugar Co. at Manteca, and the Holly Sugar Corp. at Tracy, both successful and prosperous plants.

When consideration is given to the fact that 85 to 90 percent of all food taken into the body is used for energy expenditure, the importance of carbohydrates—particularly sugar—is evident. These are the quick energy foods which play an important role as intermediates in protein manufacture as well as in the growth process.

The production of sugar in the United States is a major industry. In California, the income to sugar beet farmers from their 1954 crop alone amounted to more than $65 million. Payrolls in our 11 California beet sugar processing factories amounted to an additional $13 million. Our beet sugar industry, one of the most important consumers of natural gas in California, paid gas companies in excess of $3 million last year, and more than $8½ million was received by the railroads from our California beet sugar industry. Exclusive of Federal taxes, expenditures of the industry reached the very significant total of $100 million in California in 1954.

This year, more than 170,000 acres of sugar beets are being grown in 34 counties of California.

This year we are writing a sugar bill. I believe I can modestly say that I had a part in getting the Rules Committee to reverse its stand, and consent to put out a rule to make the sugar bill in order.

I have a vivid recollection of how in 1920 when I was married, my bride paid 32 cents a pound for sugar. Later, a Sugar Act was enacted and at no time since we have had a Sugar Act, has the price risen above 8.5 cents a pound.

All during my congressional career I have given complete support to the beet sugar industry and to the legislation pertaining to the industry, and expect to continue to do so.

United States Drops Cotton Plan

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. SIKES. Mr. Speaker, disturbing indeed is the announcement by the United States Department of Agriculture canceling plans to place 8 million bales of Government owned surplus cotton on the world market at competitive prices.

We find ourselves in a situation where we have virtually forced our farmers out of the world market by a parity price program which bottles up our agricultural produce in our own country. It is the only farm program we have and I have supported it. But it is based on a mistaken philosophy which can only take our farmers out of the world market and eventually out of the American market also. There is little future for the American farmer today under the present price support program whether fixed or flexible. He produces much more than we can consume at home and he has little access to world markets. The United States Department of Agriculture had aroused hopes that at long last it was awakening to the gravity of this situation and that it would take steps to meet it. Now those hopes are dashed as the department resumes its long slumber. I include herein an article by Mr. Aubrey Graves on the Government's announcement:

UNITED STATES DROPS COTTON PLAN
(By Aubrey Graves)

Opposition by other Administration agencies has forced the Department of Agriculture to cancel its plans to place eight million bales of Government-owned surplus cotton on the world market at "competitive prices."

The President's Council of Foreign Economic Policy and the State Department threw the successful block. Other cotton-growing countries have been vigorously protesting this Government's impending move to "dump" its surplus stocks.

CFEP and State are understood to have convinced the President that to proceed in the face of their attitude would damage international relations when crucial diplomatic negotiations are underway.

Foreign producers have been steadily taking over former United States cotton markets through the simple device of pegging their prices just under the Government-supported United States price.

Withdrawal of the USDA plan means that this country will enter the 1955–56 cotton marketing year, beginning August 1, with the old one-price system for foreign and domestic sales still in effect. As a result, foreign growers will retain their hold on former United States markets, while our surplus fiber continues to pile up.

Agriculture Secretary Ezra T. Benson announced last May his intention to make an export policy statement "well in advance" of August 1. Such a statement was actually drawn up 10 days ago, but never released. It was to have announced an export subsidy for United States growers, which would have enabled them to sell their staple abroad at a lower price.

Explanation of H. R. 3600 and H. R. 3601, Relating to Budgetary and Fiscal Matters of the Federal Government

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. LIPSCOMB. Mr. Speaker, there has long been a critical need for the Congress to know to what extend the taxpayer has been committed to expenditures annually, over long periods of time. Prudent management of governmental affairs would appear to require at the time of consideration of each legislative proposal, the availability of the probable cost of carrying out the legislation proposed over the period of its operation or if such legislation will be effective for move than 5 years, over the first 5-year period of its operation.

On February 3, 1955, I introduced two bills, H. R. 3600 and H. R. 3601 relating to the budgetary and fiscal matters of our Government.

The committees to which these bills were referred have not held hearings on the bills, and I believe that it was most

unfortunate that they were not considered during the first session of the 84th Congress. I respectfully urge that they be given consideration as soon as possible after the reconvening of the Congress in its second session next year.

H. R. 3600 requires that estimates of cost be included in committee reports on proposed legislation which authorizes an appropriation. The estimate of costs shall cover the life of the operation, or a five-year period if that is shorter. Estimates will be made by the department or other agency concerned, and reviewed by the Bureau of the Budget at request of the congressional committee which reports the bill. The problem of keeping the information sufficiently current to guide Congress in extension of programs and enactment of new programs is the subject of H. R. 3601. That bill proposes to require incorporation in the Budget of "a special analysis of all active long-term construction and development programs and projects authorized by the Congress." This special analysis would show estimated total cost, and information about cost in both priod and subsequent years.

The bills would provide an increased amount of information of a sort that now is available in departmental proposals of legislation and in the budget. In the present budget estimates of the cost of proposed legislation are included in chapter summaries. Estimates for civil functions, Army, appear at page 613; and for Health, Education, and Welfare, at page 669. In a few earlier budgets, e. g., 1950 and 1951, the estimated costs of all proposed legislation were tabulated at the end of the President's Budget Message. The programs for which estimates appeared were described in more detail than in budgets subsequent to that for 1951. The estimates are deficient, from the standpoint of H. R. 3600, in referring only to 1 year. This deficiency is crucial if a program is expanding.

The public works programs are summarized in a special analysis in current budgets. Information shows estimated total cost, costs to date, and projected costs to complete the works. That analysis shows the name of the program or agency—Corps of Engineers, Reclamation, TVA, Veterans' Hospitals, Air Navigation facilities, grants in aid and kind of work—continuing, new projects, new features. Information is shown for the 1956 program, both authorized and proposed. The special analysis required by H. R. 3601 would include estimates of amounts for each of 5 years, in addition to data now provided, and presumably would require data to be shown for each project—which is now shown in the current special analysis.

The requirement in H. R. 3600 that cost estimates be made for all authorizations of appropriations would end indefinite authorizations. Of the 78 acts of the 2d session of the 83d Congress in which appropriations were authorized, 36 were indefinite in amount. Among them was Public Law 768, establishing insurance and other benefits for Federal employees. Definite amounts were authorized in 42 of the acts. Appropriations were made for 17 of the acts, including 4 for which authorizations were indefinite. Appropriations were made in 4 instances for only a portion of programs which are likely to continue 5 years or more.

The provisions of H. R. 3600 would not prevent year to year authorization of continuing programs such as ECA and MSA. The bill requires only that estimates be made for the period authorized unless it exceeds 5 years. The bill does not alter the content of authorizing legislation, but only requires definite financial statements in relevant reports. The adaptability of authorizations to current needs, and the bargaining strength gained by limiting commitments to 1 year, would not be impaired by this bill.

The additional information contained in reports is expected to make some substantial changes in what is authorized. Positive benefits would be obtained. The availability of cost estimates covering a period of years for each program authorized would enable the Congress to exercise better control over appropriations and expenditures, and better control over the civil benefits programs and the impact on industry of defense—protection—expenditures. The biggest and most difficult problem of controlling expenditures could be kept in sight of all the Congress by the reports prepared under these bills. The biggest problem is to control the number of programs and magnitude of responsibilities under those programs, for which money will be spent. The economies available through deciding not to enact a program, or through enacting a program of modest size, dwarf the economies that can be attained through such actions as replacing two GS–5 clerks with one GS–7, or other trimming of administrative costs. Statements of the cost of a program over its life or over a 5 year period would help the legislative branch to make a continually up-to-date approximation of the total of expenditures in future years, of the needs for revenue in those years, and of the portion of the Budget on which expenditures can be reduced without breaking commitments established by law.

The schedules of expenditures for construction and for armaments programs would enable the Congress to formulate a better estimate of when the industries included will be drawn on. A better picture of the effect of programs on the entire economy would be presented, and the economic feasibility of civil-benefits programs—grants-in-aid, air, farm, and other subsidy programs—could be better estimated if the demands of the programs were better known.

The substance of H. R. 3600 has passed the Senate in earlier Congresses. During the 82d Congress, S. 913 was passed. It was supported also by Frederick J. Lawton when he was Director of the Bureau of the Budget. In his remarks on a proposed Joint Committee on the Budget, he stated that—

> Still more important is the review of the fiscal effects—the effects upon following budgets—of authorizing legislation which is introduced and considered at any given session of Congress. Such a review is at present beyond the purview of the Appropriations Committees or any other single committee in either House. It would seem fundamental that in appraising the soundness of pending legislation from the standpoint of public policy, the Congress should do so with a knowledge of its effect upon future fiscal policies. * * *
>
> Large segments of the Federal budget are required by authorizing legislation. * * * To illustrate the effect which such authorizing legislation produces upon the budget, * * * the 1952 budget, excluding the military programs which represent more than half of the budget, include more than $7.5 billion in expenditures to meet the requirements of legislation enacted by the 80th and 81st Congresses alone. * * *
>
> Some authorizing legislation makes certain expenditures mandatory, as in the cases of the Federal-aid highway program. Still other authorizing legislation makes available permanent appropriations sometimes without regard to the need for these moneys in any single budget year, as in the case of the permanent appropriation of an amount equal to 30 percent of the customs' receipts for expenditure on certain agricultural programs.

The bill H. R. 3600 provides that reviewing of the departmental cost estimates by the Bureau of the Budget may be requested by the committee reporting a bill. The Bureau presumably will have passed on the estimates before the agency has transmitted them to Congress. Its review will extend to a legislative committee aid of the sort which it has given over the year to committees on appropriations.

I would respectfully urge prompt and careful consideration of these bills upon the convening of the second session of this Congress.

History of State Fair of West Virginia

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1955

Mrs. KEE. Mr. Speaker, the July 29 issue of the White Sulphur Sentinel, a very fine weekly newspaper published in White Sulphur Springs, W. Va., included a most interesting article entitled "History of State Fair of West Virginia."

Under unanimous consent, I insert this article in the Appendix of the RECORD and at the same time extend an invitation to any Member of the House or Senate who may have an opportunity to stop by Greenbrier County between August 22 and 27 to enjoy this most delightful affair in the district which I have the honor to represent in the Congress:

HISTORY OF STATE FAIR OF WEST VIRGINIA

For a century and a half fairs have been the annual relaxation for America's farmers, a natural time for exhilaration, friendly competition, and reward for the best of the crops—and another growing season ended. Today it is a different story. Both farmer and city dweller meet at booming harvest festivals that entertain and educate an estimated 85 million visitors a year.

The giant State fair is at Dallas, Tex., which 2 years ago had an attendance rec-

ord of 2,382,712 during its exposition period.

Each year more than 2,000 county, State, and regional fairs occur across the United States. California, with 58 counties, stages more than 70 fairs; the Los Angeles County Fair at Pomona is the second largest fair in the country in attendance. In the east, industrial Ohio and and Pennsylvania both hold about 100 rural fairs.

The amazing statistic is: That half the population of the United States attend fairs. All this began with harvest celebrations and market fairs in both the new and old worlds. Their ancestry traces back to Old Testament times and the writings of the prophet Ezekiel.

West Virginia's first State fair was established at Wheeeling in Ohio County, in 1881, and after a number of years—to about 1930—the Northern Panhandle exposition ground was taken over for use as a professional race track, and since operated as Wheeling Downs.

The great Greenbrier Valley Fair, organized in the early 1920's in Greenbrier County, a phenomenal success from the beginning, grew rapidly and was an exposition of State fair stature long before it was designated by an act of the legislature in 1941 as the State Fair of West Virginia.

This year, from Monday noon, August 22 through Saturday night August 27, the once famous regional fair will run its 31st year of operation—the young, growing, reestablished State fair of West Virginia—an exposition equalled by few and surpassed by no other State fair in the east for its quality and excellence of exhibits.

The State fair is representative of the 55 counties of West Virginia. It is also the competitive ground for surrounding States—a place to assemble the best in livestock and agriculture, and permit the best to win. More than $40,000 will be distributed in prize awards and purses at West Virginia's 1955 State fair, located in Greenbrief County, midway between Lewisburg and Ronceverte.

The entertainment program of this year's fair is the biggest and finest ever assembled. A top feature is again the appearance of State high school bands, majorettes, and performers—a different community music organization each day of fair week.

Official Actions of Howard I. Young

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 30, 1955

Mr. CURTIS of Missouri. Mr. Speaker, on July 11, 1955 there was inserted in the CONGRESSIONAL RECORD, pages 8752 to 8761, what purports to be a summary of a Government Accounting Office report of the official actions of Howard I. Young while serving as Deputy Administrator of the Defense Materials Procurement Agency from September 1951 to May 1953.

This summary and statements of certain members of the other body cast a reflection upon the character and integrity of Mr. Young and have been given wide publicity in the newspapers and other public relations media. As is frequently the case, the wide publicity is being used to produce certain political ends, in this instance to effect legislation which will limit the use of businessmen in Government during periods of emergencies or otherwise. At least the political aspects of the matter have been limited to specific legislation rather than partisan politics, inasmuch as a democratic administration was involved with a Republican acting as Deputy Administrator.

This limitation, however, is hardly a comforting thought to the individual whose reputation has been affected.

Contrary to all concepts of American justice or good congressional investigatory procedure to get at the bottom of facts, the gentleman whose official actions were the subject of the alleged investigation and inquiry was never consulted or asked to throw light on the matters sought to be clarified before the publicity ensued.

I know the gentleman involved personally over a period of years. I know the excellent reputation he bears in his community for honesty and integrity. He is a person whom the term "public spirited" aptly fits, and the community and I know him as such.

The matter of Howard Young's official actions, of course, are matters for public scrutiny. He knows that and is among the first to insist that they do be scrutinized and that this principle be always followed in regard to actions of all public officials.

Because the CONGRESSIONAL RECORD has been used to present one aspect of the matters at hand, I am inserting into the RECORD a statement of John F. Lane on behalf of Howard I. Young before the Joint Committee on Defense Production July 27, 1955. I only wish the reporting fraternity would be as zealous in reporting rebuttals as they are in reporting charges. So often charges appear on page one under banner headlines and rebuttals and retractions appear in the back pages.

I don't know how much Mr. Campbell, the Comptroller General, is responsible for this deplorable matter. Certainly he is responsible for the basic errors already admitted by him to exist in his office's report, not mere "technical differences," as he is reported to have referred to them. Although from the knowledge I have of Mr. Young's integrity and ability and the brief review I have made of the charges and rebuttal, I am satisfied that Mr. Young will establish beyond a question of doubt his integrity and good judgment, I am not going to say that the investigation made by the GAO was uncalled for or was not properly conducted. I think it might have been, although it is difficult to see why at some stage it was not deemed important to question Mr. Young about the matters. I make this statement on the assumption that the publicity given to this matter was not done with either the consent or the connivance of the GAO. Possibly the actions of the congressional committee going into these matters were within the realm of proper procedures, provided again that the publicity given to the matter was not done either with the consent or connivance of the committee.

However, one thing is quite clear. Someone on the committee or on the committee staff was guilty of a gross error in "leaking" unsubstantiated charges to the press. If the committee wishes to protect its fair name, I suggest it be zealous in getting to the bottom of this matter and do something about it and properly publicize it.

When all is said and done and the facts have been sifted from rumors and hearsay I am hopeful that those who have made unfounded charges will realize the importance of admitting with the widest publicity possible that the charges were unfounded. I am referring to charges made against Mr. Campbell and the GAO just as much as I am referring to charges made against Mr. Young. Let's have an end to this hit and run smearing that has been going on for so many years.

Since writing the above, certain matters have already become apparent. In two specific and basic instances the GAO has admitted its facts were in error, and yet these specific instances bore directly upon the character and integrity of Mr. Young, if indeed they did not suggest criminality. There are only two other specific and basic matters in the summarized report of the GAO inserted in the record by a Member of the other body which specifically reflect upon the integrity of Mr. Young. Both of these specific matters have been clearly contradicted by Mr. Young in his statement which was placed in the RECORD by a Member of the other body. They are matters which are subject to outside proof and can be readily determined. One, I have checked for myself and I find Mr. Young's version accurate, the GAO version inaccurate. The other should likewise be easy to verify and undoubtedly has been verified, I suspect, in Mr. Young's favor inasmuch as I have not seen it reiterated by the GAO representatives.

Of course, once the specific charges have been disproven, all the general charges fall of their own weight. It is the general charges, however, which are the most serious and most damning. Left with unproven generalities, if he is, the Comptroller General should waste no time in clearing the air and admitting his errors.

The matter has now gone beyond the case of Mr. Young, however. The charges against the GAO set out in Mr. Lane's statement must be carefully examined into. If, indeed, the GAO selected Mr. Young to illustrate a point in order to get through specific legislation, it has gone considerably beyond its authority and the purposes for which it was created. Indeed, it loses its usefulness to the Congress if it has been guilty of selecting an individual "as a case example to provide the Congress with material upon which to decide legislative policy," as alleged by Mr. Lane in his statement and has indulged in the techniques and tactics alleged in Mr. Lane's statement.

I am sending a copy of these remarks to the Comptroller General of the United States with an accompanying letter asking him to comment upon the charges made against his organization and perforce against himself in his official capacity. I am certain that he recognizes

these charges are so serious that if proven, and done with his knowledge or knowledge attributed to him, his resignation is indicated.

STATEMENT OF JOHN F. LANE ON BEHALF OF HOWARD I. YOUNG BEFORE THE JOINT COMMITTEE ON DEFENSE PRODUCTION, JULY 27, 1955

At the adjournment of this committee's hearings on July 14, the committee requested that we meet with the representatives of the General Accounting Office for the purpose of reconciling the discrepancies between statements made in their report of investigations as to Mr. Howard I. Young and to Mr. Young's testimony before this committee.

We wish to inform the committee that we have sought in the utmost good faith to comply with the request. Our discussions began in the committee room immediately after adjournment of the last hearing and have continued up to this time. We have met with GAO on 4 occasions in the intervening period and on 2 of these occasions Mr. Young was present. I was present on all occasions. Our discussions involved approximately 18.5 hours of time and 60.5 man-hours. During this period, any and all readily available information and materials that GAO has requested of us has been made available to them and we have made it plain that any facts or information within our knowledge was at their disposal. We have also sought to demonstrate to them a number of the errors of omission and commission in their report as it relates to Mr. Young personally.

Nevertheless, in spite of these earnest efports on our part we regret to have to report to the committee that the purpose of these talks has not been accomplished. We must further report to the committee that in our considered judgment, this reconciliation effort between Mr. Young and the General Accounting Office cannot be expected to prove helpful to this committee and in our opinion is grievously unfair to Mr. Young. Our reasons for this conclusion include the following:

1. Our talks with GAO representatives have provided us with no evidence that they are interested in an impartial and unbiased determination of facts. On the contrary, since Mr. Young challenged the GAO report before this committee, it has seemed clear to us that the principal, if not the sole, effort of the GAO has been to justify its report rather than to find out all of the true facts bearing upon its erroneous and misleading allegations respecting Mr. Young's activities, which, of course, should have been fully determined by them in the first place. This, we believe, has been demonstrated in part by:

(a) Their sharp challenge and extensive investigation throughout the country of all information and data favorable to Mr. Young which tended to refute passages of their report submitted to this committee or directly to them.

(b) Their decision to neither accept nor reject for inclusion in their report new subject matter which favored Mr. Young (for example, the Hoffman letter and the facts respecting the capacity of operation of American Zinc smelters, both of which are of record before this committee).

2. We were astounded to be told that Mr. Young, because of his outstanding prominence in the mining industry, because of his presidency of the Mining Congress of 23 years, and because of his retention of presidency of the American Zinc Co. while he occupied a Government position, was selected as a case example to provide the Congress with material upon which to decide legislative policy as to businessmen in Government. We were not informed that Mr. Young was so picked as a "guinea pig" after all the facts were in, nor after their impartial ascertainment and after unbiased conclusions from all available facts were submitted to the Congress. Moreover, we derive the strong impression that the GAO people concerned with this report feel that it is wrong per se for businessmen to take Government positions on the ground that a "conflict of interests" is inevitable. Hence, these people who are fully conscious of their position as an arm of the Congress—and not of the executive department—in effect conduct their own crusade and their own powerful lobby to have businessmen legislated out of Government.

3. The clear and convincing evidence these talks provided that the report of investigation was not only ill-conceived and biased but incomplete. Thus,

(a) It was readily admitted that responsible present and former DMPA and GSA officials with accurate knowledge of the facts had not been contacted (though listed in the report). But this was thought to be justified on the basis of GAO's usual practice of having the report reviewed by the agency concerned before release. In this case we were told, as indeed was testified to before this committee, that the General Counsel, the Comptroller of GSA, and his assistant reviewed and approved this report. Thus, despite the fact that these gentlemen, however knowledgeable about the fiscal and legal procedures of the agency, would necessarily have little if any direct knowledge concerning Mr. Young's activities, the activities of the American Zinc Co., the activities of the contractors involved, and numerous other factual matters, their review and alleged approval appears to be relied upon by GAO to justify not only as to its assertion of facts but also its conclusions.

(b) When we informed the GAO that it was to the advantage of the Government and its contractors to have the concentrates involved in these contracts smeltered at East St. Louis, they immediately dispatched numerous investigators from their many regional offices to ascertain whether our allegations could be undermined. For example, they contacted smelters in Blackwell and Bartlesville, Okla., and reported to us information acquired there which initially, at least, seemed to modify our assertion. But they failed to inform us concerning similar contacts made by their investigators at other smelters which seem to corroborate our assertion.

(c) Rather than accept the corroborating statements of the alleged buyer and seller of $60,000 of equipment from American Zinc (an allegation of their report which was false) the GAO has resisted retracting their false statement which has seriously defamed Mr. Young from the 15th day of July to date. In the meantime, numerous investigators have been checking upon the sale of equipment issue. For example, the Western Machinery Co. (the secretary of which, I believe, is in the room today as he happens to be in Washington) has since July 15 been visited by no less than 3 teams of 2 investigators each. This in itself is significant but that is not all. These investigators have been interested not only in inquiring as to the facts of the alleged sale but apparently in order to retrieve something of GAO's position have been seeking to establish either a direct financial interest by American Zinc in Western Machinery or such a substantial business relationship between the two companies as no doubt to warrant an inference as to American Zinc influence. We have had similar reports of additional recent intensive investigations seemingly intended to discover information detrimental to Howard I. Young. As a further example, the American Cyanamid Co. in New York was so plagued by antagonistic investigators completely lacking in technical knowledge asking questions obviously designed to prejudice Mr. Young that the company had to object.

4. The patent unfairness to Mr. Young not only through taking extended periods out of his busy workdays but also through an effort to shift the burden of proof as to GAO's erroneous, unsupported or misleading statements to Mr. Young. This was made clear when we were informed that Mr. Young's testimony before this committee and the information that he had provided GAO after some 14 hours of discussion was not adequate to treat of various additional allegations made as to him in the GAO reports. We were informed that a list of these allegations, approximately 50 to 60 in number, would be submitted to us for comment.

5. The collective bargaining nature of GAO's ultimate proposal on Friday of last week after we had been requesting almost daily from July 15 that the GAO retract its defamatory statements respecting the alleged sale of equipment by American Zinc. At that time GAO formally proposed that as a result of a conference that morning with the Comptroller General, the Comptroller General would consider a statement to this and other committees correcting the report as to the sale of equipment and freight rates issues but on the condition that Mr. Young would retract two statements that he had made to this committee. This was explained to us to be a "2 for 2" basis, that is, 2 for you and 2 for us. One of the statements of Mr. Young to this committee requires no retraction and as to the other, the transcript was clarified by Mr. Young's letter to the chairman of July 20.

Mr. Young accordingly yesterday formally advised Mr. Ellis that the proposal was unsatisfactory and requested that the Comptroller General provide him with a prompt decision as to his willingness to fully and unmistakenly retract the admittedly erroneous GAO statements in its report respecting the alleged sale of equipment and to correct the inaccurate and misleading information provided by GAO as to the alleged disadvantageous freight rates to the Government and its contractors attributable to utilization of American Zinc smelter at East St. Louis. A copy of this statement is presented for the record of the committee.

6. Our own analysis of the GAO report, delivered to us at the request of this committee on July 14, indicates that the erroneous, misleading, and unsupported statements of the report are so numerous as to defy reconciliation with any agency operating in a climate as above prescribed. There is submitted for the record of the committee a numerical summary of these statements. We believe, that as to Mr. Young there are 21 erroneous statements, 12 misleading statements, and 34 unsupported statements in the GAO report.

7. We have also been shocked at the surprisingly militant—if not vicious—attack on Mr. Young personally by Mr. Ellis in the executive sessions of the Banking and Currency Committee and of this committee. We do not believe that the role thus assumed by Mr. Ellis is an appropriate one for an objective investigator for the Congress. And we cannot refrain from pointing out the marked differences in his attitude as revealed by the transcripts as between those committee sessions when Messrs. Young and Larson were not present and the session at which they confronted him.

It seems to us that this matter raises extremely important policy considerations for this committee, for the Congress and for GAO. These would include:

1. Does the Congress intend its own agency, the GAO, to provide it with reliable, accurate and supportable reports as a basis for its determination of important legislative policy?

2. Does the Congress intend that the appropriations it provides for the General Accounting Office shall be utilized to the extent here evidenced to hound and harass a

citizen, to defame his character, to have his name dragged in the mud by sensational newspaper publicity, to attack his character, to affect his relations with his industry and with his Government, when his only offense is that he is an honest businessman doing a nortoriously successful job for his Government?

3. To what extent does the Congress of the United States wants its administrative arm, the General Acounting Office, to be unbiased, to be impartial in its reports of findings of fact? And to what extent does it wish its instrument to be crusaders seeking to impress upon the Congress ideologies and philosophies which in the last analysis it is for the Congress to determine as a matter of legislative policy under our Constitution? And finally, does the Congress wish it to be known throughout the land that no honest businessman can come into Government to do a job for his country without running the risk of personal persecution and assassination from the General Accounting Office?

We believe these to be among all the important and vital questions raised before this committee. We conclude by making three requests of this committee:

1. That we be relieved of any further obligation to this committee to discuss the GAO report with the GAO.

2. That the committee direct the Comptroller General to withdraw all copies of his report on the grounds that its erroneous, misleading inferences, inaccuracies and lack of completeness fully warrant the conclusion that it should not have been issued in the first place.

3. That this committee suggest to the Comptroller General that an apology to Mr. Young now appears to be entirely in order.

Raw Cotton Export Program and Cotton Textiles and Apparel Imports

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. LANE. Mr. Speaker, under leave granted, I wish to include the following letter and memorandum I have received from Mr. William F. Sullivan, president, Northern Textile Association, Boston, Mass., on the matter of cotton export and textile import policy:

NORTHERN TEXTILE ASSOCIATION,
Boston, Mass., July 29, 1955.

Hon. THOMAS J. LANE,
House of Representatives,
House Office Building,
Washington, D. C.

DEAR TOM: We understand that Senator GEORGE has invited you and other Congressmen from textile States to a conference at the White House on next Monday on the matter of cotton export and textile import policy.

This matter is of importance to our New England cotton textile mills which already face severe competition from Japan and other countries. A policy which would grant cheaper cotton to our foreign competitors would greatly aggravate this problem unless coupled with a quota restriction on imports.

Enclosed is a brief memorandum of the issue involved. Your interest and assistance in connection with this problem will be greatly appreciated.

Very truly yours,

BILL SULLIVAN.

RAW COTTON EXPORT PROGRAM AND COTTON TEXTILES AND APPAREL IMPORTS

As a result of the United States cotton price support program, domestic cotton is priced above the world market and is rapidly losing its world competitive position. As stocks accumulate in this country the problem of disposing of 5 to 6 million bales to other than the domestic consumers becomes acute.

The Department of Agriculture has been attempting to work out a disposal program, and it has been consistently rumored that serious consideration was being given to selling American cotton in the world market at prices below those paid by domestic mills. If such a two price system were adopted, it would result in a further increase in imports of cotton textiles, displacing American workers and displacing cotton which American farmers would otherwise sell to domestic mills.

The present low tariffs and the new concessions granted to Japan at Geneva, effective September 10, 1955, will undoubtedly cause serious injury to the domestic cotton textile mills. Domestic mills which cannot presently compete because of the wage differentials with Japanese mills could not conceivably compete against a raw material differential as well.

United States mills are the principle market for United States cotton. Japan, on the other hand, buys two-thirds of its cotton from sources other than the United States. The substitution of Japanese textiles for American textiles in the American market hurts both worker and farmer alike.

If farmers are to have the opportunity to maintain their fair share of the world market without destroying their home market and American workers are to keep their jobs, it is essential that there be established an integrated program. Under such a program cotton could be sold in the world market at competitive prices and an import quota be established on cotton textiles and apparel under section 22 of the Agricultural Adjustment Act. This would give foreign exporters a share of the United States market on a historical basis and at the same time provide a measure of protection for United States workers and mills against unemployment caused by textile imports.

With the low duties which have already been established for Japanese cotton textiles, we believe that quotas on imports from Japan should be established regardless of cotton export policy. But if United States cotton should be sold to our foreign competitors at prices lower than we are required to pay, adequate quota proection against imports must be provided simultaneously to avoid serious unemployment and distress in the United States.

What's Behind That Smile?

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Constantine Brown which appeared in the Washington (D. C.) Evening Star, Thursday, July 28, 1955. The writer discusses the current attitude of cordiality on the part of the Russians and its possible effects upon the free world.

The article follows:

REDS' "CORDIALITY BLITZ" WORKS—FALSE SOVIET SMILES ARE WEAKENING WESTERN FIRMNESS ON ASIAN ISSUES

(By Constantine Brown)

The "cordiality blitz" of the Kremlin apparently is paying even richer dividends than the Russians hoped for. Without yielding 1 inch from their past position, without giving a single tangible proof of their alleged sincerity—as President Eisenhower had demanded earlier—the Russians have launched the free world, particularly the United States, on a good-will binge.

The fact, for instance, that Mr. Eisenhower's Monday night broadcast to the Nation was published in full in the Moscow newspapers is taken as an indication that the Kremlin wolves mean to live in friendliness with the Western sheep. The fact that a number of Soviet farmers headed by the Deputy Minister of Agriculture are behaving like human beings in their visit to Iowa farms, is taken as another sign that the Reds are ready to bury their hatchet (and not in our skulls). Some newspapers in this country have actually waxed lyric over the fact that the Soviet Embassy at Washington has dispatched one of its attachés, accompanied by a number of pounds of that costly delicacy caviar (better known in American rural areas as fish eggs) to be consumed in the homes of American hosts. The old bromide circulated during the wartime honeymoon with the Kremlin that Russians are just like Americans, only they speak a different language, has been revived. The tyrannical domination of the masses by the Kremlin elite is being as much overlooked now as it was then, when Stalin ran roughshod over allies and enemies alike.

Yet nothing has happened at Geneva, in the U. S. S. R. and in the captive Eastern European states, to justify the present orgy of optimism, which begins to worry our own leaders.

At no time, either at the conference table in Geneva or in the pleasant gatherings of the delegates before a well-laden buffet, have the men in the Kremlin given the slightest indication that they want to deal the cards above the table. President Eisenhower's dramatic inspection proposals have never been answered by the Reds, either officially or in private. According to those present in Geneva, Mr. Eisenhower was convinced that he had put the Russians in a box whence they could get out only by giving at least lip service to his sincere proposals. This they did not do.

The covering of the Kremlin men's faces with a friendly mask is now affecting our far-eastern policies. Heretofore we have maintained a policy in the Pacific which, while occasionally wavering, was by and large adequate and in keeping with our major security interests. The fundamental principle of that policy was that so long as the Peiping regime continued to flout all accepted tenets of international law and continued its gangster behavior, we would have no truck with it.

Nothing was done by the men in Peiping to offset our previous views of them. Yet, probably as a result of some private conversations at Geneva, we decided to meet the Chinese Communists first at an "ambassadorial level" and later, possibly, at a higher level to discuss not only the releasing of American captives in Communist China but also a cease-fire in the Formosa Strait, where there has been no real fighting since 1949. Chiang Kai-shek was "leashed" by President Truman in 1950, "unleashed" by President Eisenhower in 1953, "released" in 1954 and ordered to watch with his arms crossed the tremendous buildup of our enemies in Fukien Province. Whatever shooting there was in that area was done as a retaliation to the Reds. According to the best information, the price the men in Peiping will ask for the

illusory cease-fire will be the surrender of the offshore islands. We are in the mood to accept the price for the sake of relaxation of world tension.

Top officials in the administration have indicated very recently that since the Red "blitz of cordiality," the American people in their opinion will strongly oppose our supporting with air and naval power a Nationalist resistance in those islands. Hence, they say, if the surrender of Quemoy and Matsu can appease the Chinese Communists and cause them to behave in the future, why not let them have these two gateways to Formosa?

The same logic was followed 17 years ago by France and Great Britain when they forced their loyal ally, Czechoslovakia, to turn over to Hitler the Sudetenland. Prime Minister Chamberlain and Premier Daladier also were peace-minded and hopeful that by satisfying Hitler's "last" demands for a union between the Sudeten Germans with the Reich, they would achieve their "peace in our time" objectives.

Address by Hon. George H. Bender, of Ohio

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Saturday, July 30, 1955

Mr. BENDER. Mr. President, I ask unanimous consent to have printed in Appendix of the RECORD an address which was delivered by me over 33 Ohio radio stations on July 30, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This has been one of the biggest months in recent history for news, and I am glad to discuss it with the folks back home. Whether we look at the recent Geneva Conference optimistically or pessimistically, it has given the world a clear picture of its leaders. We have watched them under fire and we have seen how they act. By any standard, our President emerged from Geneva as the No. 1 figure on the international scene. What is more important, he demonstrated the basic strength of our free Republic. The Soviet delegation did not report to the people whom they represented. They did not consult with congressional leaders. They were not concerned with the opinions of the men and women back home. President Eisenhower was. He consulted Congress before Geneva. He reported to us during the Conference, and we know what was done. Whatever he did, whatever he said at Geneva was done and said with deep concern for its effect upon the people of our country.

Our President made a tremendous impression upon world opinion through his conduct. They saw a constitutional leader at work. I regard this as a great gain. There is a serious and strange defect in our country's public relations. People in other countries do not believe that life can be as good as it is here. The nations of Asia and central Europe are so accustomed to a meager existence that they cannot grasp the richness of American living standards. They have equal difficulty in realizing that the leaders of our Republic represent our people instead of controlling them. President Eisenhower has gone a long way toward convincing them that our system really works.

I do not believe that we made any historic strides toward ending the conflict between East and West over the conference table at Geneva.

Our differences are too fundamental to be resolved by the exchange of ideas. The Communist ideology is based upon a set of economic theories and political conclusions which the Western World will always reject. I oppose the Communist viewpoint from its dialectric materialism to its Cominform strategy. But we should understand one truth in this second half of the 20th century. There have always been conflicting viewpoints on Government and economics in our world. It does not necessarily follow that we must go to war because we differ. Our country did not fight the Russian Czars although we disagreed violently with their tyranny. We did not go to war with any European nation until we were attacked.

What we must do in this generation is to prevent the Communists from imposing their way of life upon those who do not want it. As of this moment, no country has ever adopted communism by a vote of its people. They never will.

Our policy is simple. This is our approach. When the Russians understand that we are determined to prevent aggression and subversion wherever we find them, they will stop the cold war.

As of this moment, I believe that this policy has proven its validity. There is one great achievement which did come out of the Geneva Conference. We ended the name-calling game started by the Soviet Union and resumed the use of civil terms in public affairs.

This in itself was a victory, because the use of every conference for propaganda purposes is the complete denial of diplomacy. Propaganda is part of the cold war. Diplomacy is at least an approach to peace. It offers no guaranties, but opens the door. We do not have any illusions on the subject of world peace.

We have established a strong line with our Western allies. There is every reason to believe that for years to come, Western Europe will work at our side. We are doing our utmost to win new friends all over the world. The Conference of Asiatic and African Nations at Bandung this spring proved that we are doing better than the Russians. President Eisenhower's work at Geneva added new stature to our efforts. We are refilling that great reservoir of good will toward Americans which was once a tremendous asset of our Republic.

What this means in terms of foreign affairs is easy to understand. At the end of World War II, the Soviet Union was riding high in the saddle. Its influence was sweeping over Asia. So-called intellectuals were spreading the rotten apple theory all over Washington. They said that Russia had everything to gain and nothing to lose in Europe—it was all going to fall into the hands of the Communists like a rotten apple dropping off a tree. We have been growing better apples. Thanks to President Eisenhower we went to Geneva in a powerful position.

For once we went to an international conference leading from strength. After the Second World War, we allowed our military forces to disintegrate. We scrapped our guns and rushed back to normal living, while the Soviet Union kept its army intact and its powder dry. As a result, we found ourselves on the defensive in Korea. The Russians took advantage of our public statements to try for a knockout in Asia. We could not save free China, but we have served notice that we are going to save everything else that is threatened from Moscow.

At Geneva, President Eisenhower was in command of the situation. Bulganin and company knew that, for once, the men across the table were just as strong—and probably lots stronger—than themselves. If we have ever learned a lesson the hard way, this should be it. From now on, we must never permit ourselves the luxury of unpreparedness. We must be ready, willing, and able to meet the challenges of history, whenever, wherever, and however they may arise.

These are important developments in our world problems. We shall be facing some others of equal importance in the weeks to come. When Congress closes its books and goes home after more than 7 months of continuous sessions, there will still be plenty of unfinished business before the Nation. Legislation often works in stages. Congress will pass a law, but no one will know exactly how it may affect our country for some time to come. We must often wait and see.

One of the bills that has disturbed many people is the military Reserve program. Some folks insist that it is an entering wedge for universal military training. I am certain that the overwhelming majority of Congress is opposed to universal military training in any shape, form, or manner. We have made it clear on a dozen occasions that such legislation could not pass. What Congress is trying to do is to establish a system which will assure our country of a trained body of young men who can be called upon in an emergency. No one wants our sons and daughters to be exposed to the risks of war. We certainly do not want them exposed to war twice in their lifetime. That is exactly what happened to thousands of young men during the Korean war. Young fathers, young businessmen, families just getting started in normal living were recalled for military duty in Korea. We do not want that to happen again. I hope that our program will make it possible to train a strong nucleus of volunteers for Regular Army service. They must be backed by others who are part of our Reserve forces. Certainly, every American must realize the need for a powerful Military Establishment in these troubled times. We must never deplete our strength again to a point where our weakness invites attack. We must never permit our people to believe that we can buy preparedness without pain, or prevent war without preparation.

This session of the 84th Congress has a mixed record of accomplishments and failures. The Democratic majority found itself in the position of adopting a Republican program for the most part. It has not balanced the Federal budget. It has not cut taxes. It has not thought through the important job of cutting down waste and extravagance in the structure of our Federal Government.

These are items on the agenda for the future. We must do our best to bring them to pass when the next session takes place. I cannot exaggerate the feeling of frustration that grips so many Americans when we seek action in Washington. Businessmen find it impossible to obtain fast, reliable information. Departments shift responsibility for the handling of contracts. Things often get done despite red tape, not because of it. Yet, at the same time, we understand the need to protect Uncle Sam from unwise spending or hasty action. There are ways and means of ending much of this confusion. The Commissions that have studied these problems have made some down-to-earth recommendations. If we act upon them, we shall go a long way toward solving some of the big money problems that face our people.

I look forward to the next few weeks. They will provide me with an opportunity to talk face to face with thousands of people who do not come to Washington, who do not write letters, but who are deeply concerned with our country. I hope to see them at county fairs, in their home communities, and to learn their views. Nothing offers a better assurance for the future well-being of

our Nation than the free expression of public opinion.

In the meantime, my standing rule is still in effect. If there is any way in which I can be of help, a letter to Senator GEORGE H. BENDER, Washington, D. C., always opens the door to my office for every public service.

Simon E. Sobeloff

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Saturday, July 30, 1955

Mr. BEALL. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a statement I have prepared relative to Hon. Simon E. Sobeloff, who has just been nominated for membership on the Fourth Circuit Court of Appeals.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BEALL

Maryland is proud of Simon E. Sobeloff. The Free State has sent many talented members of the bar to Federal service, among them William Pinkney, Roger Brooke Taney, and Reverdy Johnson.

The contribution these men made to the Government of the United States is well known and their influence on the law of this land was great. They brought distinction to themselves and to their State. Simon E. Sobeloff, who has been nominated by the President as a member of the Fourth Circuit Court of Appeals, lives in that great tradition.

His philosophy as the attorney for the Government is that the best interests of the United States is served when justice is done. Such a concept is in keeping with that of the Honorable Morris Soper, the distinguished jurist whom Mr. Sobeloff is nominated to replace.

The career of Simon Sobeloff is exceptionally well known to all Marylanders. He was born in Baltimore, educated in our public schools, and graduated from the University of Maryland Law School in 1915.

As a member of the bar he earned the respect and admiration of the best lawyers and judges in our State.

As a Baltimorean and a Marylander he earned the gratitude of our people by his devoted public service.

Long before he held any public position he was known as a civic leader whose advice and counsel was readily available for any worthy cause.

Such an enviable reputation made him a man much sought after by other men in public office. His services were called upon by mayors of Baltimore city and governors of our State.

The present Governor of Maryland has paid Simon Sobeloff a great tribute by remarking that he is "a man who goes forth to meet the situations that are fraught with danger and calmly sets them aright before they acquire the statures of crises."

Simon Sobeloff has never failed the people of Maryland. As a public official and as a private citizen he has shown himself to be a man devoted to the common good.

He has served as solicitor of Baltimore city, chairman of the Commission on Administrative Organization of Maryland's Government, as Chief Judge of the Maryland Court of Appeals.

Our State was honored and proud of his appointment as Solicitor General of the United States.

In that office he has served his Government and the people of the United States well, and brought additional distinction to his name and to his native State.

I am not a lawyer, but I have heard his work as Solicitor General praised by outstanding members of the legal profession, and I know him as a man with a great understanding of people's problems, and as a man who possesses a rare and gifted sense of judgment.

Now, as Solicitor General it was Mr. Sobeloff's duty to present the Government's argument before the Supreme Court as to how that Court's historic decision on segregation in public schools should be implemented.

There are those with strong personal feelings on this subject who appear to hold Solicitor General Sobeloff responsible for the Court's original decision. The fact is that Mr. Sobeloff was not in office when the original case was argued, and his presentation to the Court was the position of the Executive Department as to how the desegregation decree could best be implemented in the interests of all the people of the United States.

It was his duty to place before the Supreme Court the view of the Government, as it was the duty of other attorneys to advocate the recommendations of other interested friends of the Court.

Mr. Sobeloff, knowing the situation in the South and believing in the essential justice of the Supreme Court's decision, argued for a decree which would carry out the intent of the Court and yet not radically disrupt the public school system in those areas where segregation had long existed.

The brief Mr. Sobeloff presented demonstrates his wisdom, and is ample proof of his qualifications for membership on the Fourth Circuit Court of Appeals. Those who are "investigating" his qualifications would do well to read that brief and then join in confirming his nomination before this session of Congress adjourns.

I personally regret the delay on this nomination and I urge the committee to hold a prompt hearing and report the nomination to the Senate so that we may confirm Mr. Sobeloff.

Revision of Alien Property Disposal Law

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Saturday, July 30, 1955

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I have received from the Chamber of Commerce of the United States in regard to the proposed revision of existing law having to do with the disposal of alien property.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE CHAMBER OF COMMERCE,
OF THE UNITED STATES,
Washington, D. C., June 21, 1955.

The Honorable HARLEY M. KILGORE,
Chairman, Senate Judiciary Committee,
United States Senate,
Washington, D. C.

DEAR SENATOR KILGORE: The Chamber of Commerce of the United States supports the proposed revision of existing law with regard to disposal of alien property contained in S. 1405 and in section 4 of your bill, S. 2227, both of which are now before the Committee on the Judiciary.

We believe that the proposed amendment will materially aid in accomplishing what we hold to be a desirable aim, namely, the sale to American citizens at competitive bidding of alien property still held by the Office of Alien Property, with the proceeds to be paid into the United States Treasury.

We would appreciate being notified in advance of any hearings scheduled on the above bills as we would like to have the opportunity to present our views.

Cordially,

CLARENCE R. MILES.

The Lawyer's Part in Plans for Peace and Disarmament

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Saturday, July 30, 1955

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Lawyer's Part in Plans for Peace and Disarmament," delivered by Charles S. Rhyne, a member of the District of Columbia Bar and president of the Bar Association of the District of Columbia.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE LAWYER'S PART IN PLANS FOR PEACE AND DISARMAMENT

(Address by Charles S. Rhyne before the annual convention of the Minnesota State Bar Association, St. Paul, Minn.)

Mr. President, distinguished guests, ladies, and gentlemen, I appreciate the invitation to speak to your great Bar Association. For years I have heard of your outstanding work. It is good to see you in action.

My subject today is the lawyer's part in the search for peace. But before discussing that subject, I would like to say that I feel that I am among "home folks" today. For the past few weeks I have been working with very wonderful people from your twin cities on one of the great current controversies in Washington, the controversy over exemption from Federal regulatory control of sales for resale in interstate commerce by natural gas producers and whether or not consumers are entitled to protection from price gouging. Mayor Joseph E. Dillon, of St. Paul; Mayor Eric G. Hoyer, of Minneapolis; Attorney General Miles Lord, City Attorney Charles E. Sawyer, of Minneapolis; Corporation Counsel Marshall F. Hurley, of St. Paul, and Patrick L. Farnand, counsel for your local gas distribution company have all made great contributions on the side of consumers. They opposed legislation to scuttle the so-called Phillips Petroleum Co. decision of the Supreme Court last year—a case in which I participated in the argument. Lawyerlike, I mention it because I was on the winning side.

For many years Bill Gibson, Morris Mitchell, Sidney Gislason, Ivan Bowen, John Burke, Bert McKasy, Cliff Gardner, John Palmer, Mike Galvin, Ruben Thoreen, and many of your other great leaders in American Bar Association activities and I have worked together. Morris Mitchell and I also worked

together on the program for an increase in salaries of the Federal judiciary and Members of the Congress, Morris as chairman of the committee of the ABA, and I as general counsel of the commission on judicial and congressional salaries. As a member of the ABA's regional meetings committee, I put Bill Gibson and his coworkers on notice that we expect the greatest regional meeting in all American Bar Association history here next October when the northwest regional meeting takes place.

You Minnesota lawyers have made great contributions in the public relations field. I had the pleasure of personally going with some of your high-school essay contest winners to visit the Chief Justice of the United States in 1949. And how appropriate your topic for those young people of "Why Freedom Depends Upon Government Under Law" is to my thesis of today. Your distribution of 420,000 pamphlets on law and lawyers during the past year is an amazing performance. I salute you for your good work and consider this most promising ground in which to sow the seed, or sell the idea, which I am here today to present.

My subject can be considered as an idea for an affirmative public relations program for the organized bar in the world of today, when related to the responsibility of lawyers to provide leadership in formulating public opinion on the great issues which are before our people. This is a responsibility of lawyers to the public that is unique and different from that of the members of any other profession. By training and tradition, lawyers have from the creation of our Nation performed this essential duty. In recent years we have been failing somewhat in our duty and the people are looking for leadership to business and labor leaders, organized pressure groups, and elsewhere.

We are now experiencing one of the strongest urges in all world history toward peace and disarmament and away from war. The headlines out of Washington—San Francisco this week—and from all over the world, herald the dramatic recent developments in the search for an ending of current world tensions. We are told that from this day forward a peaceful world is the only hope for the survival of mankind. With the prospect of atomic war destroying all civilization, machinery to create and maintain a peaceful world by preventing war is our last surviving hope. From the early pages of history we learn that many disarmament-peace proposals to achieve such a goal have been placed before the people of the world. But never has the carrying out of such a plan been more essential to the survival of the human race. Nor have the people of the world ever been more alert to such a need. This situation offers a great challenge, a great opportunity, and many dangers.

That is why I ask you today to consider with me the lawyer's part in this search for peace.

As lawyers we should go out on the very fringes, the frontiers, of the formation of public opinion and help educate our people in what to seek, and what to expect, in current discussions and conferences on peace and disarmament. The uncertainty of the present situation can only disappear when the possible results are analyzed and realized. Hysteria and fear based upon misconceptions must not be the lot of our people. By performing the task of discussion, analysis and clarification, lawyers can do a great service. By allowing our people to think the problem is easy, by allowing them to expect too much too soon, we may place our leaders in untenable positions, and our people may easily fall into the propaganda traps which the Communists are undoubtedly preparing for us.

The emphasis in the great current international debate is upon statement and counterstatement, diplomatic maneuvers for positions of advantage propagandawise, all preparatory to the Big Four and other impending conferences. So far little has been said about the fact that if an enduring peace plus disarmament is ever to be achieved, there must be a foundation of some legal framework wherein international disputes are settled under legal principles rather than by war. The current discussions relative to inspection and alarm systems, as a prelude to gradual reduction in armament, have not made this point clear. I propose that you, as lawyers, should remind our people that disarmament discussions may be mere words, fluctuating with national leadership changes, unless such a legal foundation is created for permanent peace.

I do not for one moment pose as an expert on world peace or disarmament. My basic thesis to you today is that all of us are involved in this constantly shifting and very confusing overall picture of international relations. International developments now dwarf and control most of our domestic problems. All of us must concern ourselves with these developments, especially we lawyers who, by training and experience, have the capacity to collect and analyze facts and come to some understanding of the issues involved. We lawyers have a real duty and responsibility to aid in the solution of this great problem. It is here that lawyers have the capacity and opportunity to make a real contribution to the future of all mankind.

When you collect the facts, all of you will not come to the same conclusions. And it is good that you will not. Many of you may decide that we can keep ahead in the great arms race, that you like the old balance of power idea, and that you do not feel that disarmament under a system of international law is desirable or feasible. My point is that this a great issue in which we all have a tremendous stake. Free debate on other great public issues has made America great. What we need on this issue is debate and discusion to educate and clarify. Tomorrow's World is being shaped by today's people. Now is the time for lawyers to aid in shaping it toward an enduring peace and away from war.

No group in the United States has been less conscious than lawyers of their power and their influence in the communities in which they live. But by training and tradition they are among the leaders in creating and moulding public opinion. Lawyers come from all religious faiths, creeds, races, and poltical parties. There are always lawyers to present both sides of all issues. Their skill in mastering intricate problems and in the art of persuasion is acknowledged by all. Their knowledge of history and the evolution of government best fits them to be a deciding factor in history's making.

We as lawyers have a duty to lift up our heads from the personal, individual controversies, from which we make our bread and butter, to the great international arena and do our bit toward a solution of this problem of peace—the geratest problem mankind has ever known, a problem which has plagued mankind since the beginning of time but which has never been solved.

And it is a problem which with nuclear warfare upon us, man must solve. Is a solution impossible of achievement? I do not know, but an atomic explosion was formerly believed by some to be impossible. So here, some day, some way, some plan may be developed whereby proud nations may maintain their sovereignty, yet submit their differences to settlement under a rule of law. I personally cannot agree with some of the one worlders that a surrender of sovereignty offers a forward step here.

A solution to this problem of peace and disarmament must be found in adequate legal machinery for peaceful settlement of international disputes, or resort to war will continue as the only machinery for solving such problems. Talks among leaders of nations are essential preludes to such machinery. Yet until concrete legal machinery is created to put the agreements at such talks into permanent effect, those talks may not lead to peace plus disarmament. Leaders of nations change frequently. And we need more than their personal word as to the intentions of their nations. We can have no security or disarmament plan which depends upon the whim of the transitory dictators in the Kremlin.

Let us look at some of the physical facts of the international situation today. The airplane and communications have shrunk the world from nations to neighborhoods. We no longer think in terms of distance but in terms of time. Every spot on earth is within 24 hours of St. Paul—Moscow is only 8 hours or less. We now live in a physically indivisible world. Our interests are worldwide. All developments anywhere affect everyone everywhere. Not a single one of us can escape the consequences of certain actions the world around. This shrunken world can be a better place in which it is easier for all men to live in peace and prosperity, or a place where life is more difficult to preserve than ever before.

We are in the midst of the greatest arms race in the history of the world. More billions are now being spent for arms than for all peaceful activities of Government. We now have our largest peacetime armed force in all history. So does Russia. We hear and read conflicting reports as to who has the larger and better air force. We hear that our side leads in atomic and other nuclear weapons. We hear frightening things about intercontinental guided missiles, nerve gas, and bacteriological warfare. Nearly every week some new weapon, new airplane, or new airplane speed record is announced. Civilization has in fact produced tools whereby man can enter a fratricidal hell or the brotherhood of man. Our people are told that Russia has atomic bombs and the ability to deliver them. This means that with a word the Kremlin can set the world ablaze.

The prospect of the world divided into two mighty armed camps, ready to kill each other off at the drop of a hat, is no pleasant future to envision.

The international political facts are uncertain. Some may be clarified this week at the 10th commemorative session of the United Nations in San Francisco. There, many spokesmen for nations are giving their views on the current world situation. The Big Four meeting now scheduled for July will be the main forum for the expression of views and positions. The atoms-for-peace conference in Geneva in August may bring great developments. Some of our allies seem to want peace at any price. The neutral nations are sometimes playing up to both sides in the cold war. The creation of an office of "Secretary for Peace" of Cabinet rank headed by your own great former governor, Harold E. Stassen, was the greatest recent effective propaganda achievement of the Eisenhower administration. And one cannot help but note the fast-moving developments since that time.

Russia has almost in one breath proposed a disarmament plan; agreed to a peace treaty for Austria; agreed to the Atoms for Peace Conference; on bended knee begged Tito to return to the fold; and agreed to the Four-Power Conference of Chiefs of State. What does all this mean? Are we and our allies being led into a trap?

We know of the recent performance in Yugoslavia where buffoonery replaced diplomacy in large part. Is this a fair example of Russia's leadership as it now exists? I doubt it. The Russians knew what Krushchev was like before he went to Yugoslavia. They must have sent him to play his part for a purpose. We lawyers know how dangerous it is to underestimate an adversary. Is it

not safer to assume that this and other Communist peace moves are tricks designed to weaken us overseas in bases, allies, and other ways?

Such are some of the physical, economic, political and other facts against which the recently stepped-up peace moves must be measured. We know that every one of us has a direct personal stake in the issues to be considered at the upcoming conferences. In the world of today, such events are no longer of concern only to the diplomats. For the first time since the Indian wars, we are all in effect in the frontline trenches. Whether your son or mine leads a peaceful life or dies on some farflung battlefield depends upon a plan to keep the peace. And never forget that if war comes, the United States will be the No. 1 target. The enemy will know that his only hope for victory lies in a quick death blow for us.

We, in our Nation, never believe our leaders are all wise. We have a tradition of helping our leaders by constructive criticism and new ideas. And here with so much at stake we must all do our bit to help answer the unanswered questions. Public opinion governs many major decisions in a democracy. No issue has ever loomed as large or as important, as the issue of peace. And the time for decision on this issue—it can be phrased as the issue of civilization's survival—is drawing uncomfortably close.

The United States is the leader of the free world. We as the legal profession of that leader must do our part, make our contribution to a plan for international disarmament by providing ideas for some plan, some legal framework, which is a must if law is to replace war as the accepted procedure for settling international disputes. Until we have this legal machinery, universal peace is still a rainbow or a mirage which may disappear shortly after the diplomats or heads of state go home. Until they agree upon and leave behind them some permanent legal machinery to keep the peace, a real peace plan is still to be achieved.

Where are we now in our search for the necessary legal machinery? We start with the United Nations. It is woefully inadequate. Even its greatest friends so concede. But despite its obvious imperfections, it offers a start toward the legal machinery which is so desperately needed. We can profit from the U. N.'s errors and build upon its strong points.

Of special significance to lawyers is the fact that the International Court of Justice is the most ignored agency for peace in the world. Its record of 15 rather unimportant cases in 10 years is an amazing vote of lack of confidence in its effectiveness as an agency to settle international disputes. An increased acceptance by nations of its jurisdiction may offer a hopeful avenue on the road to peace and disarmament.

The historical predecessors of the UN, like the League of Nations and the Kellogg Peace Pact and other such dreams of great men, have crashed. But then, there were no dread facts to focus the attention of all the peoples of the World upon the dire consequences of war such as the horrors of atomic warfare.

Legal machinery is the ultimate end result of public opinion. It is up to lawyers to create the essential public opinion on a worldwide basis in order that the peoples of the world will demand and get the legal machinery which they must have to live in peace. The lawyers of our country and of the world, have so far failed miserably in providing this need. We have so far been derelict in our duty. And we must meet the challenge of our times or accept part of the blame for world catastrophe which is bound to come from continuance of the current arms race.

Lawyers live in a world of controversy. They constantly work out conflicts into compromises so as to avoid catastrophe to individuals. Their experience can aid in the international arena, where the conflicts and compromises are between nations.

Never before in all world history has such an opportunity and challenge come to any profession. Are we as lawyers equal to this challenge? Can we who have devised legal machinery to meet thousands of situations locally, nationally, and on a small scale internationally, measure up to this greatest of all challenges? I believe we can. But we cannot and will not if we continue to ignore our duty and never face up to our responsibilities in the world of today.

International law is still a mysterious subject to nearly all members of our profession. We simply must take the mystery out of the subject. In the early days of our Nation, lawyers were concerned chiefly with local problems. Now lawyers are concerned to a larger extent with national problems. Soon they will be more and more concerned with international problems as trade and travel continue to grow between nations. Few State and local bar associations concern themselves with international law. In the American Bar Association, international law subjects make headlines at conventions because of the work of a few on controversial issues. But they receive inadequate attention by lawyers in general. In fact, ignorance of the subject is looked upon as a virtue by some lawyers. They are proud of their lack of acquaintance with it. They feel the subject is not worth their time and effort. If war comes now, all concede that death and destruction on an undreamed of scale is a certainty. And without an effective system of international law, war remains the ultimate resort for settlement of international disputes. Under these circumstances should lawyers continue to ignore this subject?

Above all, in connection with the forthcoming conferences and discussions, we must be critical and cautious in considering Communist peace proposals. Peace and disarmament moves should not be allowed to develop into a Trojan horse designed to lure the free world to its own destruction.

In the disarmament discussions another job which we lawyers can do is to warn our people that until that dreamed for day when a peace plan with proper legal machinery arrives, our Nation must not give up or lessen its armed might. The only way adequate machinery to settle international disputes can be secured is to move from a position of strength rather than a position of weakness. We must all realize that the bargaining at these international meetings will not all be one-sided. There can be either appeasement, continuance of the arms race and eventual war, or honest, informed and vigilant bargaining looking toward an easement of world tensions and a plan for peace. But until a peace plan is formulated and agreed to, our people should know that they must insist upon a defense establishment which will in and of itself make peace as secure as possible. The quick disarmament which encouraged widespread advances by the Communists must never occur again.

Law or force will rule the world. If our civilization is to survive, the rule of law must eventually prevail. We lawyers must convince all people of this fact. They must march forward demanding a formula for a lasting peace—a peace through law. Then and then only will we lawyers have made our contribution to a real solution of the greatest problem of mankind. Then and then only will the hopes of the peoples of the world be realized in the achievement of a lasting universal peace. Only then can peace endure forever.

Juvenile Delinquency

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Saturday, July 30, 1955

Mr. NEUBERGER. Mr. President, the recent parade of sports champions to the White House to lend their energies in the crusade against juvenile delinquency resulted in some editorial comment, in addition to the stories which filled the sports pages and spilled over into the political columns. The news that a committee was then and there being formed to consider ways to make every youngster a competitive participant in some sport, and thereby thin out the ranks of juvenile delinquents, has made many physical-education authorities wonder if the President has had the privilege over the years to keep abreast of their thinking. In the next few weeks, it is to be expected, many devoted leaders in this field will take time to inform the White House more fully on these matters.

A letter which in a completely cooperative and friendly spirit does this was recently addressed to the President by H. Harrison Clarke, research professor in physical education at the University of Oregon, in Eugene. For the benefit of everyone concerned with the grave subject of how to reduce juvenile delinquency, Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the able letter of Professor Clarke.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNIVERSITY OF OREGON,
SCHOOL OF HEALTH AND
PHYSICAL EDUCATION,
Eugene, Oreg., July 20, 1955.

The PRESIDENT,
Washington, D. C.

DEAR MR. PRESIDENT: As a professional physical educator in schools and colleges for over a quarter century, I was greatly pleased to learn of the White House luncheon to consider the use of sports in combating juvenile delinquency and in raising the physical standards of United States youth. Certainly, the Nation will applaud both these efforts.

The roster of those at the luncheon well represents leading personalities of the sports world, both as performers and coaches. Their support of and active participation in an athletic program designed to reduce juvenile delinquency should be tremendously effective. The contributions these men have and will continue to make to American life are very great indeed.

May I have the temerity to say, however, that the major problem in raising the physical standards of United States youth is to improve the fitness of those boys and girls who are subpar in basic strength and stamina. Effective treatment of those below standard should be fundamentally quite different from those who are athletically inclined, as I am sure Dr. Hans Kraus, who reported at the luncheon on the relative fitness of American and European children, will agree. Furthermore, this sub-par group will not respond to a voluntary sports program as they lack the strength, endurance, and skill for successful and enjoyable participation in it.

The sports program proposed is similar to those conducted for years in most schools and colleges and was promoted vigorously for the civilian population during World War II. In every instance, this type of program failed utterly to solve the problem of the low-fitness individual. To continue again with this failure on a national scale seems to this observer to be the perpetuation of a great wrong. This action is especially serious when it is known that effective processes for improving subpar boys and girls have been developed and successfully tested through use.

May I urge you and your advisers, therefore, to investigate these proven practices before proceeding with plans for a nationwide program to improve the physical standards of United States youth.

I have the honor to remain,

Most respectfully yours,

H. HARRISON CLARKE,
Research Professor,
Physical Education.

The Catholic Gift to the Public Schools

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 30, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following very interesting editorial published in the Catholic Standard and Times, Philadelphia, Pa., July 29, 1955, by the Most Reverend John F. O'Hara, C. S. C., archbishop of Philadelphia:

THE CATHOLIC GIFT TO THE PUBLIC SCHOOLS

The question of Federal aid for public schools has been discussed editorially in the Catholic Standard and Times on two previous occasions this year.

On February 11, we called attention to wide discrepancies in estimates of the need of Federal aid revealed in the testimony of State school officers who appeared at hearings on legislation proposed for passage by the 83d Congress.

On March 18, we discussed a proposal of the National Citizens Commission for the Public Schools that $19 billion be spent on public education in 1965, and we showed that the fantastic proposal was based on an error of possible 10 million children in the projection of the average daily attendance in the public schools in 1965.

Various proposals for Federal aid for school construction have been studied by the respective committees of the Senate and the House during the current session of the 84th Congress. The House Education and Labor Committee has now reported a bill for debate, provided it passes the Rules Committee. We believe that we can add interest to our study of its provisions by interweaving a few facts on the Catholic financial contribution to the construction and operating costs of the public schools.

The bill approved by the House committee would set up a 4-year program of Federal-State participation, with Federal grants of $400 million a year on a matching basis for the construction of new schools.

It would provide also for the Federal purchase of $750 million in school bonds in districts which cannot sell bonds at a reasonable rate of interest.

A third provision would pledge United States credit on a matching basis for bond issues for existing or newly created State school building authorities. The Federal Government, of course, expects repayment on the bonds and due release from credit obligations assumed under the third provision.

This is the substance of the bill. To add interest to the study of its provisions we submit the fact that the Catholics of this country, by the construction and operation of their own schools, are doing considerably more for the public schools than the Federal Government proposes to do.

Take the item of construction alone. The Government has reported that private school construction in the United States in 1954 totaled $550 million. What portion of this was Catholic we are not told, but we are assured that more than 90 percent of the private elementary and secondary schools in the country are Catholic.

It seems clear, then, that the Catholic contribution to school construction in the United States last year was $100,000,000 more than the Federal Government proposes to grant to the States for public school construction in each of the next 4 years.

That this Catholic contribution is not a 1-year phenomenon is clear from the comment by the Bureau of the Census (Current Population Reports, series P-20, No. 54):

"Growth in private elementary and high school enrollment has taken place twice as past, percentagewise, as it has in similar levels of public schools since 1948, the first year for which census data are available on school enrollment by type of control of the school. During these 6 years, the number of public school pupils has increased by 4.8 million, or 20 percent, whereas the number of private school pupils has increased by 1.2 millions, or 49 percent." (Should we correct the census comment to read, 2½ times as fast?)

Even more striking is the Catholic contribution to the current expenditures for the operation and maintenance of the public schools. There are various ways of looking at this, but we select one based on geographical considerations, for we believe that it points up the whole issue of Federal aid to schools.

The statistical abstract of the United States for 1954 provides a table (No. 141, p. 126) showing the 1951 enrollment in the public schools and the current expenditures, in the four great sections of the country: northeast (Maine to Pennsylvania), north central (Ohio to Kansas), south (Delaware to Oklahoma), and west (Rocky Mountains to the Pacific).

From this data we can derive the following table:

Section	Enrollment (thousands)		Cost per pupil in average daily attendance, public schools	Cost per pupil enrolled in public schools	Cost per pupil enrolled in public and Catholic schools
	Public school	Catholic school			
Northeast	5,560	1,494	$281	$247	$195
North Central	7,189	1,116	239	215	186
South	9,411	486	165	144	138
West	3,545	272	263	231	214

It is perfectly clear from this table that in the Northeast, where Catholics are very numerous, their gift to the public schools amounts to the difference between $247, the cost per pupil enrolled in the public schools, and $195, the expenditure per pupil which the same budget would allow if Catholics closed their schools and sent their children to the public schools. This amount is $52 per pupil. Extend it to the 5,560,000 pupils enrolled in the public schools, and the total contribution in that section of the country is $289,120,000. For the four sections of the country it is as follows:

	Catholic gift per pupil	Number of pupils	Total contribution
Northeast	$52	5,560,000	$289,120,000
North Central	29	7,189,000	214,841,000
South	6	9,411,000	56,466,000
West	17	3,545,000	60,265,000
Grand total			620,692,000

In legal terminology, this is a grant-in-aid. Nothing is expected back. There are no bonds, there is no interest to pay. This grant for operating expenses, frees other moneys for school construction. The total present grant to the public schools, then, is the annual expenditure of $500 million for Catholic school construction, plus the $620,692,000 for operating expenses, or a grand total of $1,120,692,000.

This is contribution No. 1 of the Catholics to the public schools of the United States.

Contribution No. 2 is the local tax paid by Catholics along with their fellow citizens. A conservative estimate of the proportion of Catholic children of the United States enrolled in the public schools is 38 percent for the elementary schools and 60 percent for the high schools.

Contribution No. 3 is the State tax, which, like the local tax, is paid alike by Catholics and non-Catholics. It is the unused portion of these two taxes, representing the education expense of 62 percent of our elementary school pupils and 40 percent of our high-school students, that makes up the gift of $1,120,692,000 to the public schools.

Contribution No. 4 exists in California, where in spite of a law to the contrary, real estate taxes are imposed on parochial schools.

Contribution No. 4 for the rest of the country (No. 5 for California) is proposed in the current bill for Federal aid to public schools.

Turning back to the table which shows the cost per pupil for current operations, we find that the South presents the acute problem. The small Catholic population in that section makes a magnificent gift—$56,466,000—to the public schools, and this is more than the total expenditure for operating public schools in 19 of the States of the Union. But it spreads thin over the almost 10 million pupils in that section.

If the Catholic school population of the South were sufficient to provide for that section the bonus the Northeast enjoys ($52 per pupil), the expenditure in the South, with no additional taxation, could be $190 per pupil, or only $5 less than the expenditure in the Northeast, and $4 more than the expenditure in the North Central States.

Is there some way to solve this problem fairly and decently, without taxing the whole country, and thus asking Catholics for a fourth (in California, a fifth) contribution?

Catholics would be delighted, of course, if the well-known religious zeal in the South would manifest itself in the establishment of an abundance of private schools in which religion could be taught without the violation of conscience.

Put the matter this way: In the Northeast, the States collect 100 percent of the taxes and spend them on 80 percent of the students. If through the zeal of existing religious groups in the South only 80 percent of the pupils would depend on tax money for their education, the situation would be relieved.

We believe that the good will and the zeal for this exist. Can it be channeled by enlightened leadership? If this estimate is correct, then the problem can be solved without the danger of Federal interference in the local schools of our Nation.

Federal interference? It is inevitable if the Federal Government finances the schools. A minority opinion published in October

1931, with the report of President Hoover's National Advisory Committee on Education, stated correctly: "It is not easy to conceive the practical possibility of any Federal grants ever being made for education in general without some specific legal supervision of the manner in which the moneys shall be used. The function of supervising the use of Federal grants for education would naturally devolve on the Department of Education, thus making it a potent instrument for Federal control.

Let us suppose the administration of such funds were in the hands of a citizen of Massachusetts, a State which spends $14.80 for elementary and secondary education for every dollar it spends on higher education. What would be his reaction toward a request for funds for elementary education from a State which spends only $3.20 for the grade schools for every dollar it spends on higher education.

There are six States among the "needy" which spend less than $4 for grammar and high school for every dollar spent on higher education. That is their privilege, and they should cherish and protect it. Their best protection is the rejection of Federal control, and their position is strong if they reject Federal aid.

Faith in the Atomic Future and Atoms for Peace

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, July 30, 1955

Mr. WILEY. Mr. President, I was pleased to note, as the leading article in this month's Reader's Digest, a splendid article entitled "My Faith in the Atomic Future," by Lewis L. Strauss, Chairman of the United States Atomic Energy Commission.

I believe that Admiral Strauss' message, as told to James Monahan, will be of deep interest to all thinking Americans.

Just a week and a half from now, the International Conference on Peaceful Uses of Atomic Energy will open in Geneva, ushering in, we trust, a new era in civilian application of this miraculous scientific development.

There is now on the press in the Government Printing Office a new Senate document, prepared at my request, and authorized by the Senate on June 21. It is entitled "Atoms for Peace Manual." The manual, Senate Document No. 55, will be ready in time for the conference and, to the extent of a somewhat limited supply, for general distribution to Americans who will be following the conference's work.

I ask unanimous consent that the text of Admiral Strauss' article, preceded by a biographical note, as published in the Reader's Digest, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MY FAITH IN THE ATOMIC FUTURE

(By Lewis L. Strauss, Chairman, U. S. Atomic Energy Commission)

(As told to James Monahan)

(Rear Admiral Strauss brings to the position of Chairman of the AEC a deep personal interest in the promise of atomic energy. In 1935–37 his mother and father both died of incurable cancer. As a memorial, he started a project at the California Institute of Technology to pioneer in the production of cheap radioactive substitutes for radium in cancer treatment. Early in 1939 Dr. Nils Bohr, the Danish scientist, arrived in the United States with evidence that the Hahn-Strassmann-Meitner experiments in Germany had definitely fissioned the uranium nucleus, making a chain reaction theoretically possible. To Strauss this was portentous news: it could mean the mass production of radioisotopes, cheap enough to be available to every hospital. But it also meant much more. One physicist working on the Caltech project wired Strauss: "I see enormous possibilities * * * leading, unfortunately, perhaps to atomic bombs." Seven months later Dr. Albert Einstein wrote the historic letter to President Roosevelt stating that the atomic bomb could be made. During the war years Lewis Strauss was on active duty in the Navy, but the atomic future was much in his mind. In 1945 he became the Navy member of the Interdepartmental Committee on Atomic Energy. In 1946 he was appointed by President Truman to the newly authorized Atomic Energy Commission. He resigned from the AEC in 1950 to reenter private business but was recalled in 1953 by President Eihenhower and appointed Chairman. On August 8, when the United Nations' World Conference on the Peaceful Uses of Atomic Energy meets in Geneva, Switzerland, Admiral Strauss will lead the American delegation.)

Many people regard the atomic discoveries of recent years as part of a nightmare that disrupts the peaceful dreams of civilized man. I do not believe history will see them in that light. We have gained control over natural forces that can advance civilization, even within a single generation, to a point which man has never attained before. I believe firmly that our knowledge of the atom is intended by the Creator for the service and not the destruction of mankind.

The Atomic Energy Act of 1946 was a far-sighted law. But I had certain specific reservations about it. Nuclear energy, which I believed could change the world, was straitjacketed in Government regulations. Research, development, patents, manufacturing, and possession of fissionable materials were denied to private enterprise. Atomic energy was an absolute Government monopoly.

Atomic weapons development is necessarily a Government responsibility. But I was convinced that developments in agriculture, industry, and power production would not be realized fully until the field was opened to the genius and enterprise of American industry.

Actually, the restrictions might have been relaxed sooner but for the attitude of Soviet Russia. Beginning in 1946, when the United States held a virtual world monopoly on nuclear weapons, we proposed international control, subject to rigid inspections and enforcement, which would have limited the use of atomic energy to peaceful purposes. At that time we even offered to share our knowledge and resources with all nations.

The Soviets did everything possible to delay, confuse, and destroy that plan. Actually, they were launching their own secret atomic program. We detected their clandestine weapon test in 1949, and were at once engaged in the costly and perilous contest for supremacy in nuclear weapons. Every thinking person knows now that our present great and versatile stockpile is the major safeguard of the free world.

Meanwhile, atomic energy became associated in popular thinking with death and destruction. Yet the custodians of atomic energy under President Truman and President Eisenhower never lost sight of its benign potentialities. Progress was phenomenal in the production of radioisotopes.[1] They were produced by AEC reactors as early as 1947. They were distributed freely to institutions here and abroad, and within a few years revolutionized some areas of medical research and the diagnosis and treatment of certain diseases. Scarce, high-priced radium for the treatment of cancer was rendered virtually obsolete by radioactive cobalt and other elements which are equally effective sources of gamma rays and yet are now available to institutions at a small fraction of radium's cost.

Several different types of nuclear reactors for the generation of electrical power were designed by the AEC. But most authorities put the date of their construction in the remote future.

When I returned to the AEC as Chairman in 1953 I was deeply impressed by the growing conviction in the White House and the Congress that the time had come for full-scale development of atomic energy outside the military area.

President Eisenhower, in his address to the General Assembly of the United Nations on December 8, 1953, stated: "The United States pledges before the world its determination to help solve the fearful atomic dilemma, to devote its entire heart and mind to find the way by which the miraculous inventiveness of man shall not be dedicated to his death, but consecrated to his life."

Two months later the President sent to Congress the message which resulted in the Atomic Energy Act of 1954. The new law had two great aims—to make international cooperation possible, and to enable private enterprise to develop the atom for peaceful purposes.

The progress of the past 18 months—only a moment in history—has been extraordinary. For example, the AEC announced its program to develop power-producing reactors, and invited private companies to participate. The quick response was totally unexpected. The Duquesne Light Co. is building our first full-scale nuclear-power plant at Shippingport, Pa. At least 4 or 5 others will be constructed in the near future in Massachusetts, Michigan, Nebraska, Illinois, and New York.

These pioneer nuclear-power plants cannot be economically competitive with conventional plants at present. Yet the participating companies are paying about 90 percent of the total costs. This, I maintain, could only happen under free enterprise in an expanding economy.

Indeed, 2 or 3 proposed plants will be constructed entirely without financial help from the Government. Mr. Hudson R. Searing, president of one of these companies, Consolidated Edison of New York, recently told stockholders that nuclear power "is the only

[1] An isotope is the twin of an element. It is chemically identical, but differs slightly in atomic weight. Radioisotopes also differ from their stable twins by giving off radiation. Some radio isotopes (radium and uranium, for example) occur in nature. Today it is possible to produce radioactive twins of any stable element (carbon, sodium, phosphorus, etc.) in the atomic pile or reactor.

way we can see of bringing about lower electricity costs over the long pull."

It is pointless to speculate on how soon nuclear power will be cheaper than power produced by falling water or the burning of coal or oil. We do know that our resources of fossil fuels are limited, and that coal and oil will be needed for functions which atomic energy cannot perform. We know that there is a great disparity in electricity costs between those areas where waterpower, coal, and oil are plentiful and regions like New England where such resources are scarce or nonexistent. We also must remember that there are many countries which are not blessed with such abundant resources as our own. So to me the present question of "economic" nuclear power is academic. I believe that it will be available before long, and that it logically will be used first where it is needed most.

Nuclear power for the propulsion of ships and aircraft will also come sooner than is generally realized. Few people have grasped the significance of the *Nautilus* and her sister submarie, the *Seawolf*. With the feasibility and safety of the marine propulsion reactor established beyond doubt, the job now is up to the designers and builders of surface vessels. The time to begin is now. That was the thought behind the President's recent recommendation of a nuclear-powered merchant ship.

I am convinced that the radioactive isotopes will continue to be the wonders of the atomic age. Today, they are being used by many industries to control processes, detect flaws and test the durability or wearing quality of all sorts of materials. New uses for them are found every day.

Used as tracers or as radiation sources, these atomic particles can search out the innermost secrets of nature and give man greater control over his environment. For example, plant geneticists have already used radiation from isotopes to produce a new strain of rust-resistant oats, wilt-resistant tomato seedlings, and a peanut plant with 30 percent greater yield. These and similar developments will means millions—perhaps billions—of dollars to farmers.

By incorporating small amounts of radiophosphorus in fertilizers, and then using instruments to trace the uptake from the soil through roots, stem, leaves and blossom, agricultural experts can now determine the right amount of fertilizer to use in the most economical manner, and at the proper time in the growing cycle.

For nearly a century science has tried in vain to solve the fundamental secret of photo synthesis, the process whereby nature traps solor energy in the green leaf and converts water and carbon dioxide into the sugars and starches on which all higher life subsists. Using radioactive carbon as the tracer, researchers today seem to be on the point of solving (and perhaps duplicating) this mysterious process. If successful, that achievement might lead to the synthetic production of basic foodstuffs from simple and abundant chemicals—the solution to the world's pressing food problems.

Since 1946 the American people have spent more than $12 billion on atomic energy. We will probably continue spending about $2 billion a year. Most of this money is invested in our stockpile of nuclear weapons, which represents the security of the free world. We have no choice but to maintain that security—until the whole world joins us in arriving at a safe solution to the atomic dilemma. I firmly believe that can be accomplished.

But our nuclear stockpile also represents a national resource of incalculable value. With nuclear weapons you can "beat swords into plowshares and spears into pruning hooks" even more realistically than the Scriptures envisioned. The material is immediately convertible to peaceful uses. That is what President Eisenhower had in mind when he told the United Nations that the weapon "must be put in the hands of those who know how to strip its military casing and adapt it to the arts of peace."

Young people have asked me if I sincerely think that we shall enjoy the benefits of the atom before the world is overtaken by the destructive power that is within man's grasp. With all my heart I can answer: Yes!

We are living in an era that seems designed to test the courage and faith of freemen. Yet I do not believe that any great discovery of the atom's magnitude came from man's intelligence alone. A higher intelligence decided that man was ready to receive it. My faith tells me that the Creator did not intend man to evolve through the ages to this stage of civilization only now to devise something that would destroy life on this earth.

My old chief, former President Herbert Hoover, to whose Quaker convictions all warfare is revolting, listened to President Eisenhower's U. N. speech and said: "I pray it may be accepted by all the world." We pray that divine providence will guide men of all nations to grasp this opportunity to "shake off the inertia imposed by fear and make positive progress toward peace."

Will America Stand?

EXTENSION OF REMARKS

OF

HON. JOHN JARMAN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 30, 1955

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks, I should like to insert in the CONGRESSIONAL RECORD the following oration written and delivered by a student in my district, Mr. William Randolph Robbins III:

WILL AMERICA STAND?

The chief threat of America comes from within America.

It does not come from a greedy dictator with hungry eyes and grasping hands who waits to tear down our flag and trample on it.

Have you heard of the fifth columnists in France and other countries? They bore from within, like termites, weakening the fiber of a nation gradually and unsuspectedly.

But danger does not come from jealous nations growing fat on American foreign aid, biding their time until perhaps they are strong enough to invade American soil.

The chief threat to America comes from me, and it comes from you.

Our complacency, our apathy in local, State, and National affairs; our disregard for the privilege of voting, which can be forfeited unless we choose to exercise it—these are the ugly, rasping rattles that can sound America's death knell.

Not the sharp staccato of gunfire in the streets; not the explosions of bombs shattering the morning calm; not a single piercing yell when an empire folds its wings. The death rattle of freedom is more than that.

It is the citizens rejecting their government through neglect. A government under the lash of its people is far stronger than one ignored. When people laugh, freedom is gasping for breath.

When our flag ceases to be a cherished symbol of American integrity and consecrated with devotion to an inspiring heritage, where shall the cause be found? Must we ready ourselves for the acceptance of slavery under a despotic, ruthless master who despises freedom and hates justice?

What is it that you are doing, and that I am doing, that makes us the chief threat to America? How do we reveal our disloyalty?

A secretary in a city crying for secretaries spends the summer at home collecting unemployment compensation. Two unnaturalized aliens in Chicago accepted unemployment checks totaling $10,000 over a period of 8 years, while working all the time. Any unemployed person may arbitrarily reject a job, and still collect unemployment compensation.

These examples show how twisted our thinking has become. Today there are Americans willing to trade free enterprise for social-security benefits. Has liberty, so loved that thousands of Americans willingly die to preserve it, degenerated itself for a price tag called social adjustment? Is a social welfare state an American design?

This country wasn't carved out of the wilderness, as some say. It was plowed, tamed, clawed, and hammered out—by men who just wanted a chance.

When their oxen died on the prairie en route to a wild new territory, they pulled and pushed their wagons by manpower. If their wagon broke down they didn't wait for Government aid, they didn't demand Government subsidies—when their crops failed, maximum pay for minimum work, or pay for no work at all.

They didn't demand anything except freedom.

There was hope, there was future, there was a chance for security. Security achieved by their own will power and self-confidence. Future because they were free to climb as high as they could carry their own weight. Hope because progress depended upon the individual not the State.

Those pioneers—Carson, Boone, Crockett—wrestled the wilderness for the highest stake in history—freedom for you and me.

We can abuse this freedom—corrupt it—laugh at it—and it will die. We can guard it, tend it, cherish it, and it will become again the hope of tomorrow. It is as we will.

It is not easy for us to be good citizens in a free country. Of course not. Nothing worth while ever is easy. The easy way out is to surrender the pick and the shovel for the soup line and chains. But freedom is like bread, you go on earning it every day. Otherwise it molds, drys out, and soon crumbles into dust.

Because freedom is hard, and slavery is easy; because it is easier to be a slave than a hired man; because it's easier to be told what to do than to think independently.

You and I need not be the chief threat to America. Can we not be the bulwark of the future, the hope of millions yet unborn, leaders of a world crying for leadership? Yes, but we must do it ourselves. We must be pioneers.

Let us halt the march of government power. Let us defy those who would degrade our flag; let us strengthen ourselves morally, economically and socially, lest we become like an angry scorpion that turns upon itself and dies of its own bite.

In this hectic 20th century, let us be pioneers. Let us be Americans.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

The Illness of Senator Johnson of Texas

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Saturday, July 30, 1955

Mr. MONRONEY. Mr. President, the press throughout the United States has recognized the great service which has been rendered by our colleague, the majority leader, the distinguished Senator from Texas [Mr. JOHNSON]. Because of the nationwide interest in his present illness, and the hopes of all that he will soon recover, I ask unanimous consent to have printed in the Appendix of the RECORD editorials from the following newspapers paying tribute to the service of our distinguished majority leader:

The Daily Oklahoman of July 12, 1955; the Portland, Maine, Express, of July 19, 1955; the Salem, Ohio, News; the Lockport, N. Y., Union-Sun & Journal of July 9, 1955; the Mobile, Ala., Press of July 6, 1955; the Stamford, Conn., Advocate of July 6, 1955; the Hickory, N. C., Record of July 7, 1955; the Arizona Republic of July 7, 1955; the Kalamazoo, Mich., Gazette of July 9, 1955; the Lewiston, Maine, Sun of July 6, 1955; the New Britain, Conn., Herald of July 6, 1955.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Daily Oklahoman of July 12, 1955]

A REWARD OF MERIT

Following the recent hospitalization of LYNDON JOHNSON virtually all of his colleagues have spoken most kindly of him. Apparently he enjoys the complete respect of all his associates. Many of them seem to have a real affection for the Texas Senator. His place in their estimation was revealed clearly when all of them stood as a body and breathed a silent prayer for his early recovery.

It is not very pleasant but it might be a bit helpful to turn from Senator JOHNSON who is esteemed by all his associates and consider momentarily some Senator who is esteemed by nobody at all. There are a few Senators who are not at all popular among their colleagues. If one of them were stricken, few words of praise would be evoked by their misfortune. Their associates might stand in prayer for them, but it is doubtful if the prayers would be marked by any degree of fervency. And if the pallid messenger with the inverted torch should call one of these to the final reckoning, no one would think of saying that his passing constituted a national calamity.

LYNDON JOHNSON is respected because he serves his country sincerely and serves his party in a gentlemanly way. He is not crazy about headlines. He does not bid for publicity with vituperation. He does not consider an opponent a skunk just because opinions differ. He is universally esteemed because he deserves universal respect. Of course there are other Senators like him, but unfortunately there are a few who are completely unlike him.

[From the Portland (Maine) Express of July 19, 1955]

OBSERVATIONS FROM THE NATION'S CAPITAL

Republicans, now absolutely convinced that President Eisenhower will run in 1956, are far more hopeful than they once were over their chances of regaining control of Congress next year.

In their optimism, they shrug off two well-known facts: First, that the GOP has far more Senate seats in danger than do the Democrats; and, second, that the Democrats have been winning elections and picking up votes at the local and State levels since 1952.

The Republicans reply to this by pointing out that no winning presidential candidate in many years has failed to carry his own party to victory in the congressional elections. And, they say, Mr. Eisenhower will definitely be an all-conquering candidate in 1956.

Democrats, who were confident to the point of cockiness about their 1956 congressional chances until recently, are no longer quite so sure.

They concede the President's personal popularity, realize he will campaign hard for a Republican Congress if he runs next year, and they admit they still have not come up with any really good issues for the 1956 campaigns.

The situation has been complicated by the heart attack which removed Senate Democrat Leader LYNDON JOHNSON from the political scene—temporarily, both his friends and his political foes hope.

The Texan, since taking over as majority leader last January, had demonstrated unusual political skill. He rates ace high with liberals and conservatives alike in the Democratic fold.

Without JOHNSON'S shrewd touch and his constant practice of what amounted to a political healing act, old enmities are likely to recur.

However, if he can return to the Senate floor in January the Democrats will be in a much better position to go into the 1956 race with ranks closed.

United States officials were hopeful that some progress could be made at the Big Four conference on a world disarmament plan, but they were well aware that a long, long road lay ahead before any concrete program could be worked out.

President Eisenhower, before he went to Geneva, said he hoped some agreement could be reached between the major powers on setting up a special group to consider disarmament and make recommendations.

Regardless of the developments at Geneva, it is obvious that several years may be required before the differences between the big powers can be resolved and a definite, workable plan formulated.

The big problem, of course, is the search for a method of inspection of armaments that would be both workable and acceptable to the various nations.

In the long run, this must boil down, as Mr. Eisenhower has pointed out, to how much the nations trust each other—and right now, despite the parley at the summit, there's still plenty of mutual distrust.

If you like meat, there's good news ahead. Millions of hogs in pens, cattle in pastures, and chickens in barnyards promise lower prices.

Agriculture Department experts say:

Pork prices, which have climbed slightly in the past few months, are leveling off and will start dropping soon.

Though top-grade beef may go up slightly, less expensive meat products will go down, and sharp declines are expected in veal and lamb prices.

There are so many chickens in the United States at the moment that poultry prices are due for a really sharp fall.

In general, the Agriculture Department men expect livestock prices for the rest of this year to be lower than they were in the last half of 1954.

The 1955 production of red meat is expected to reach a record 26.3 billion pounds, exceeding the 1954 figure of 25.4 billion pounds.

During the next 12 months, the Interior Department is going to undertake its largest program in history—to investigate the availability of surface-water and ground-water supplies.

The Federal Government is prepared to spend $4,350,000 on the project while other funds will be made available by State and local governments. The study will be made by the Geological Survey.

The survey says there is a growing water problem in this country. To back up its statement, it offers these comparisons: In 1920, water used for irrigation in the United States amounted to 65 million acre-feet; in 1940, 72 million; in 1950, 88 million, and in 1953, 92 million.

[From the Salem (Ohio) News, the East Liverpool (Ohio) Review, and the Canton (Ohio) Repository]

LEADERS ARE BORN

The secret of representative government is the leadership of its representatives. Through the years, the United States usually has found enough born leaders among the hundreds sent to Congress to keep it from coming apart at the political seams. Only once—in the post-Civil War period—did it draw a blank.

LYNDON B. JOHNSON, of Texas, majority leader in the Senate, has proved to be one of the born leaders. His dangerous illness at the peak of his responsibility is a blow to the entire Federal Government.

The impact on Government is being compared to that when the late Senator Taft was forced to leave his post as majority leader in 1953. Taft had become a national leader by virtue of his ability to master the intricacies of Senate procedure and to command the respect of his fellow Senators of both parties.

Senator JOHNSON is still young—only 46. Yet no one since Taft's death has emerged as a stronger legislative personality. His recovery will be prayed for by Senators of both parties and by everybody who comprehends how heavily this Republic relies on the democratic process to give it the natural leaders it must have to avert chaos in popular Government.

[From the Lockport (N. Y.) Union-Sun and Journal of July 9, 1955]

SENATOR JOHNSON STRICKEN

Senator LYNDON B. JOHNSON'S tireless work as the Democrats' Senate leader made him

the most influential man in Congress, and many have considered him the ablest. His heart attack may have far-reaching effects on both national politics and the affairs of Government. He has been talked of as a Presidential possibility in 1956 or 1960, but this would seem to be out of the question, as a man who has had a heart attack is not likely to stand the strain of a campaign or the duties of the White House. Nor would the voters choose a man whose health might fail him in an emergency.

Senator JOHNSON has been an extremely shrewd, capable majority leader of the Senate. As one commentator remarked, he has been "almost matchless in terms of political skill and in giving the Democrats a new and almost monolithic unity on every high occasion."

The Democrats are especially worried lest Mr. JOHNSON may not be able to return for the second session of Congress, in the election year of 1956. As much the most influential southerner in Congress he might well be the deciding factor as to whether such States as Texas, Virginia, and South Carolina will support the Democratic nominee for President.

It respect to affairs of state Mr. JOHNSON was entitled to observe last week that President Eisenhower had been mistaken, during last year's campaign, in predicting a cold war between the White House and the Capitol, should the Democrats win control of Congress. Under JOHNSON'S leadership such controversial administration bills as minimum wage, reciprocal trade, and foreign aid have been passed with hardly a ripple.

As the President retorted, a great deal of necessary legislation remains to be passed. However, Mr. JOHNSON established a program; probably the Democratic whip or assistant leader, Senator CLEMENTS, of Kentucky, will be able to carry out the details.

Yet to a substantial extent for this session, and to a much greater degree for the next, the country has cause beyond the personal consideration to hope for a speedier recovery than now seems probable for an opposition leader who is as much a middle-of-the-roader as the President himself.

[From the Mobile (Ala.) Press of July 6, 1955]

JOHNSON'S ILLNESS BLOW TO GOVERNMENT

The United States Government suffered a severe blow when Senate Democratic Leader LYNDON B. JOHNSON, of Texas, was stricken with a heart attack.

Perhaps no one realizes this fact more than President Eisenhower, who, despite occasional flareups, has gotten along splendidly with the able Texan.

While it is not indicated that the Senator is clearly out of the national picture, it is certain that Congress will miss his guiding hand during the remainder of its present session.

The esteem in which Senator JOHNSON is held is illustrated by this appraisal by William S. White, in the New York Times:

"Almost no one here, in either party, questions that Mr. Johnson's skill as a leader is unmatched in recent memory, as is his influence on a heretofore temperamental group of Senators running all the way from the profoundly standpat HARRY F. BYRD, of Virginia, to the volatile New-Fair Deal HUBERT H. HUMPHREY, of Minnesota.

"There is no legitimate question that Senator JOHNSON has repeatedly performed seemingly impossible feats and that the Senate has been far more efficient and far quieter in his regime than it has been in many years."

The leadership which Senator JOHNSON and other Democrats have given Congress, together with that of President Eisenhower, have provided America sound, conservative government at a critical stage in its history.

Much of the credit for this situation should go to the "responsible opposition" fostered by Senator JOHNSON.

The opposition which he has spearheaded was quite cooperative with the Republican administration at a time when President Eisenhower was "growing up" as a politician. This situation is due in part to the fact that the current Democratic leadership in Congress, and Mr. Eisenhower, are for the most part "middle-of-the-roaders" in politics.

As a result of this teamwork, the President has obtained practically everything he wanted in the field of foreign affairs. There still, however, is a considerable list of domestic legislation he would like to see enacted.

The question arises today as to whether there is anyone in Democratic congressional ranks to fill Senator JOHNSON'S shoes during his illness.

It would be most unfortunate for the country as a whole if some New-Fair Dealer should step into the role and lead the Democratic majority on an all-out drive to handcuff President Eisenhower's legislative program.

[From the Stamford (Conn.) Advocate of July 6, 1955]

SENATE LEADERSHIP

The serious illness of Senator LYNDON B. JOHNSON is cause for regret by all Americans. A leader of the Democratic Party in Congress. Senator JOHNSON pushed through needed legislation in the interest of the Nation rather than of any one party. If he could twist the issue to benefit his party so much the better, but like the other great Senate leader Robert A. Taft he was never an obstructionist merely for the sake of obstruction.

His greatest service to the Nation in this session has been to keep the left-wing branch of his own party from flying off in all directions and so making no advance in needed legislation. Despite little political maneuvers, Senator JOHNSON has been a supporter of much o fthe President's far sighted and truly liberal program. True, it would be political suicide to oppose this program, but there are some in the Senate who in a search for issues would throw caution to the winds.

Senator JOHNSON has not been tempted. He has worked for the good of the Nation with a maximum of good will. One finds it hard to believe that there is any real deep difference in policy between that sponsored by the Republican Party as expressed by the President and that of the Senator from Texas.

We hope that the Senator makes a quick recovery. This session of Congress will be able to carry along without him. The next session would miss his strong hand. His hand will be needed for guiding and restraining.

[From the Hickory (N. C.) Record of July 7, 1955]

VALUABLE LEADER

It is to be hoped that the complete recovery of Democratic Senate leader, LYNDON JOHNSON, of Texas, is only a matter of time. He is recognized as one of the ablest leaders in the Congress.

As was pointed out following the recent humiliating defeat of Senator JOE MCCARTHY in his efforts to embarrass President Eisenhower in his foreign policy, the victory for the Democrats was far-reaching, due to the resourcefulness of their Senate leader.

JOHNSON maneuvered the situation so that leading Republicans in the Senate were forced to repudiate their own 1952 platform, and give up their campaign tactics of calling the Democrats Communists.

The columnist, Drew Pearson, noted at the time how adroitly JOHNSON worked it so that Herbert Hoover, Jr., Acting Secretary of State, had to testify against the McCarthy resolution which sought to require Eisenhower to demand the liberation of satellite countries. MCCARTHY had read into the record excerpts from the Republican platform which called for liberation of satellite peoples behind the Iron Curtain. The GOP pledge which the Wisconsin Senator quoted, was as follows:

"We shall again make liberty into a beacon light of hope that will penetrate the dark places. It will mark the end of the negative, futile and immoral policy of confinement which abandons countless human beings to a despotism and godless terrorism."

In the ensuing discussions Senator BOURKE HICKENLOOPER, of Iowa, was jockeyed into a corner, where he stated publicly: "I wish to say that I have the greatest confidence in and respect for my Democratic colleagues, and I would be the last to say that any is an appeaser as far as communism is concerned."

In the course of the debate, when Senator CAPEHART of Indiana pressed MCCARTHY to say, "Wherein have President Eisenhower, the Secretary of State, or the Republican Congress at any time failed to live up to their obligations—or done something that would give comfort to the Communists?" the Wisconsin Senator seems to have let the Hoosier solon have both barrels:

"The Korean armistice was appeasement," he asserted. "Giving up the Tachen Islands was appeasement. Giving up Northern Indochina was appeasement. But a further example of appeasement is what the Senate is encouraging today."

Senator JOHNSON evidently decided it was time to call a halt and get on with the voting, which he did—the result being a 77-to-4 chastisement for MCCARTHY.

[From the Arizona Republic of July 7, 1955]

A REAL LOSS

Senator LYNDON JOHNSON, suffering from a heart attack brought on by his mankilling job as majority leader of the United States Senate, won't be able to return to Congress during this session. His loss will be felt by the Democratic Party and by the Senate as a whole.

Senator JOHNSON represents the conservative, or southern, wing of the Democratic Party. It was men of his stripe who kept the New Deal from going completely overboard and who are now cooperating with Republicans in pushing through much of President Eisenhower's program. We join the President and the Senate in wishing Senator JOHNSON a prompt and complete recovery.

[From the Kalamazoo (Mich.) Gazette of July 9, 1955]

TAKE IT EASY

Just before Senator LYNDON JOHNSON'S heart attack, one of his colleagues printed in the CONGRESSIONAL RECORD an editorial that had appeared in a Washington newspaper. The editorial writer, with no inkling of the impending breakdown, sought, with good reason, to eulogize the much-admired Texas Democrat and able leader of the Senate majority. Here are some excerpts from the editorial:

"These days JOHNSON throws everything he has into the leadership job—the stamina of the 200-pound, 6-foot, 3-inch physique, his political experience, and his persuasive gifts. He ordinarily works through the evening with a staff. * * * He accepts no social engagements. * * * The Johnson formula for legislative success is rigorous. * * * Sleep is forgotten, meals are ignored. * * * The system has paid off in the Senate with a long list of triumphs. * * * "

Senator JOHNSON deserves praise; and the American people, regardless of place or party, hope for his quick recovery. But let's hope, too, that when he returns to the Senate he'll adopt a less rigorous formula.

His doctor will probably say to him, "Take it easy."

That is what doctors say to many of their patients.

[From the Lewiston (Maine) Sun of July 6, 1955]

SENATOR JOHNSON'S ILLNESS

The critical illness of Senator LYNDON JOHNSON of Texas, the Democratic majority leader, is a serious blow to the party in Congress.

Only 46, the youthful Texan was struck down a few days ago by a heart attack, and he will not be back in the Senate before adjournment. That is not so serious, however, as the prospect that he may be unable to exercise his duties during the 1956 pre-election session.

JOHNSON has performed prodigious feats as Senate leader this year. His role has been, in a way, paradoxical. The Senator has rallied strong party support for many Eisenhower measures—measures frequently opposed by a heavy percentage of the President's own party. And when the cause of partisan politics seemed to call for it, Senator JOHNSON has gathered powerful Democratic backing, at the strategic time, on other bills. Washington is still talking about the housing measure, which came into the Senate as an administration bill and with the support of the Democratic-controlled Senate Banking Committee. Here was one of those issues where the Democratic liberals could see more votes in a liberalization of the housing provisions. But they lacked votes for a substitute bill that would permit 200,000 housing "starts" over a 4-year period instead of the 70,000 called for biennially in the Eisenhower bill.

Senator JOHNSON, however, went to work lining up Democratic support and collecting on "debts" due him by a number of Republicans. The result was a victory for the Democrats against what first seemed to be insurmountable odds.

The Texan's role has been made all the more difficult by the fact that an especially popular Republican President sat in the White House, while the Democrats held only a two-seat margin in the Senate. But by hard work, adroitness and the exercise of an attractive personality he has won the admiration and respect of many Senate veterans. At this time there is no one of equal stature to replace him.

We join with his friends in wishing this capable leader a speedy and permanent recovery.

[From the New Britain (Conn.) Herald of July 6, 1955]

SENATOR JOHNSON'S ILLNESS

The Democratic party in particular and the Nation as a whole will lose greatly by the absence from his post of Senate Majority Leader LYNDON B. JOHNSON, who suffered a heart attack last week.

As recently as 10 days ago, the active, aggressive, 47-year-old Texan was busy stirring Presidential wrath with his (JOHNSON's) statement that the Democratic Senators were not going to be a bunch of second lieutenants to Ike.

JOHNSON is more than a militant politician. He is prominently mentioned as being of presidential timbre, and his attitude toward the welfare of the Nation, especially in such a major area of legislation as foreign affairs, is of statesmanship caliber.

Death and illness often strike when least expected, and certainly that is the case in Senator JOHNSON's attack. It serves to emphasize the frailty of man in comparison with the events around him.

Problems of the GOP in 1956

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Saturday, July 30, 1955

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Electoral Vote Analysis Shows GOP Faces New Problems in 1956," published in the Democratic Digest for June 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ELECTORAL VOTE ANALYSIS SHOWS GOP FACES NEW PROBLEMS IN 1956

Two and one-half years after the Eisenhower landslide in 1952, there are no outbursts of optimism coming from Republican Party spokesmen predicting a comparable performance in 1956. This recalls a somewhat similar situation when another Republican occupied the White House.

Herbert Hoover, like Eisenhower, won a landslide victory in his first bid for the Presidency, with 58 percent of the popular vote and 440 electoral votes. Eisenhower won 55 percent and 442 electoral votes. Hoover, like Eisenhower, needed some Democratic votes to win, and in Congress his party squeaked through with a bare majority.

Half-way through Hoover's term, Democrats took control of the House of Representatives, whereas Eisenhower lost both the House and Senate in 1954. By the end of Hoover's first term, his political fortunes were sharply reversed and he was soundly defeated in his second-term bid by Franklin Delano Roosevelt.

Perhaps the summer of 1955 may seem a little early to start counting electoral votes in 1956, but certainly there are enough political indicators to speculate on the outcome. The Democratic trend since 1952, as seen in the local, State and national elections, raises a question as to whether the Republican candidate for the Presidency can carry enough States to give him the 266 majority of the 531 electoral votes needed to return him to the White House.

National Chairman Paul M. Butler, in noting the trend, recently stated: "There is no question of a great Democratic resurgence."

Republican National Chairman Hall, viewing the same results, said that his party is "in trouble," a feeling shared by some of his colleagues.

In March of this year, Republican Senator Goldwater told a meeting of the National Federation of Republican Women that the party is "suffering a downward trend nationally." Two weeks later, Vice President NIXON warned party workers in Los Angeles that "the Republican Party is not strong enough to elect a President. We have to have a Presidential candidate strong enough to get the Republican Party elected."

What he was saying, of course, is that there are more Democrats than Republicans in the country, a fact revealed in the 20 years of Democratic administrations and upheld by recent polls. Democrats outnumber GOP voters by 20 million, according to a 1955 Gallup poll. If all civilians were to register anew, says Gallup, the party lineups would list 54,300,000 Democrats, 34,000,000 Republicans, and 9,400,000 undecided.

Some of these Democrats voted for Eisenhower in 1952, but that was before he was clearly tagged as a Republican. His victory in that election was a personal one, with his basic appeal essentially along nonpolitical lines.

By 1954 the President had made it clear that he is a Republican and that he believes in the Republican philosophy of government. By last November, when the Eisenhower administration faced its first large-scale test at the polls, it lost.

It was then that Chairman Hall expressed his concern in terms of 1956, when he singled out the GOP loss of governorships as one of the most serious aspects of that election.

Democrats now hold governorships in 27 States with 347 electoral votes. The Republicans hold 21, with 184 electoral votes. Those figures clearly reveal the Democratic majorities in the States, which enabled them to sweep new Democratic Governors into office last year and reelect all the incumbents running. In terms of the electoral votes in 1956, this is an advantage, but not necessarily a guaranty of the State's electoral votes.

Few political analysts would question Democratic claims to the 89 electoral votes in the 9 Southern States that voted for Adlai Stevenson in 1952. They are Alabama (11), Arkansas (8), Georgia (12), Kentucky (10), Louisiana (10), Mississippi (8), North Carolina (14), South Carolina (8), and West Virginia (8).

An additional 57 electoral votes are in traditionally Democratic States which Eisenhower won in 1952. They are: Texas (24), Tennessee (11), Florida (10), and Virginia (12).

Democrats are counting on a return of the solid South based on the unity that has developed between North and South since the Democratic defeat in 1952. While Republicans went out of their way to woo the normally Democratic South in the last presidential election, they have been almost equally as aggressive in alienating southern voters since that time. There is a striking example in the GOP farm policies, contrary to the best interests of a region so dependent upon agriculture.

Also, such phrases as "creeping socialism," used by President Eisenhower to describe TVA, and his open support of the Dixon-Yates contract, are not the same language southerners heard from Eisenhower as a candidate. It will win few votes from public-power-conscious areas of the South.

Added to this is the Republican attempt to pin the label "party of treason" on all Democrats, which was answered with a stinging rebuke from one of the South's most loved and respected statesmen, SAM RAYBURN. Another southern statesman, Majority Leader LYNDON JOHNSON, of Texas, has won wide respect for his party in closing the gap between North and South on party differences. Bearing these facts in mind, Democrats are looking to a solid South, with a total of 146 electoral votes.

Two border States—Oklahoma, with 8 electoral votes, and Missouri, with 13—may be safely added to this group. Both have Democratic Governors and in each State there is only one Republican in the entire congressional delegation. This would give the

Democratic candidate a running start of 167 electoral votes.

Republicans are saying their sure States will include Indiana, 13; Iowa, 10; Kansas, 8; Maine, 5; Nebraska, 6; New Hampshire, 4; North Dakota, 4; South Dakota, 4; Utah, 4; and Vermont, 3—which would give the GOP a start of 61 electoral votes. But few Democrats would concede the loss of all these States.

Where the GOP has new cause to worry over Democratic gains is in a group of States with 56 electoral votes and which Democrats expect to carry by 1956. They include Michigan, 20; New Jersey, 16; Maryland, 9; Delaware, 3; and Connecticut, 8. Republicans also are concerned over Ohio, 25.

Michigan Republicans have been losing ground steadily in recent years while Democrats have been making sharp gains. This was shown in the victory of dark-horse candidate Senator McNamara in 1954, and early this year Democrats captured a majority of the offices in the spring election for the first time in 20 years. Moreover, they have a powerful vote getter in Gov. G. Mennen Williams, elected to his fourth term last November.

New Jersey voters were exposed to large-scale Republican corruption and turned the State administration over to Democratic Gov. Robert Meyner early in 1953, to mark the beginning of the Democratic trend nationally. In Maryland and Delaware, Democrats swept everything in 1954, with the exception of the governorship in Maryland.

In Connecticut last year there were enough Democrats to unseat Republican Gov. John Lodge and elect Democratic Gov. Abraham Ribicoff in what was considered a stunning upset for the GOP. Add to this neighboring Rhode Island, traditionally Democratic, with 4 electoral votes, and the Democrats have a comfortable 227 votes.

Political analysts point to the Pacific Northwest as a new source of Democratic strength since the Eisenhower administration's policies on power, agriculture, and reclamation have alienated many of the people of these States. They are predicting Oregon, with 6 electoral votes, Washington with 9, and Idaho with 4, will be in the Democratic column in 1956.

Without going too far out on the limb, the Democratic picture at this point adds up to 246 electoral votes, only 20 shy of the required majority. Thus, victory in any 1 of the 4 biggest States—New York, with 45 electoral votes, Pennsylvania (32), California (32), and Illinois (27)—would put a Democrat in the White House.

In New York, Democrats scored a sharp upset last year with the election of Governor Harriman, and in 1953 with the election of Mayor Wagner. The Democratic trend has been given an additional boost by the Eisenhower administration's decision to fire Edward J. Corsi, a New York Republican. Political writers are predicting this will cost the GOP many votes in New York and several other States.

President Eisenhower's popularity carried Illinois in 1952, but last year his personal intervention on behalf of the Republican candidate for Senator did not save him from a crushing defeat.

In the once-Republican stronghold of Pennsylvania, Democrats elected a new and comparatively unknown Governor, George W. Leader, in 1954, and this year's sharp upswing in Democratic registrations encourages even brighter hopes for 1956.

Increased Democratic strength in California is not reflected in Democratic gains in the Congress due to successful gerrymandering by the GOP State legislature (see April Digest). But the Democratic popular vote of 51.5 percent for Congress last year, representing a gain of 11 percent since 1948, would have been enough to carry the State for the Democrats in a Presidential year.

Then there are a group of States, such as Montana and Wyoming, where falling cattle prices under the GOP have been seriously felt; Colorado, New Mexico, Arizona and Minnesota, with new Democratic governors and a combined total of 32 electoral votes, all showing strong Democratic leanings. And there are Massachusetts with 16 electoral votes and Nevada with 3, both with a consistent Democratic tradition in Presidential elections. Even Wisconsin, with 12 votes, now reacting strongly against McCarthyism, is a Democratic hopeful for 1956. Democratic Representative Lester R. Johnson's upset victory 2 years ago in the Ninth Congressional District was an early portent of the changing trend.

Summing up, the anaylsis seems to shake down to the following 2 points: First, whether President Eisenhower runs or not in 1956, the required majority of 266 electoral votes is well within reach of the Democrats. And second, if the Democratic gains of the last two and one-half years indicate the real trend of public opinion, the Democrats will not only win, but score a substantial victory.

Ethical Conduct in Government

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Saturday, July 30, 1955

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled " 'The Team' Needs Scrubbing," published in the Memphis (Tenn.) Commercial Appeal of July 27, 1955. It deals with ethical conduct in Government.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

[From the Memphis Commercial Appeal of July 27, 1955]

THE TEAM NEEDS SCRUBBING

President Eisenhower has a scrupulous, frank openness that has captured the imagination of the world and contributed to his great success at the recent Geneva Conference. We wish this frank openness was personified in all the members of "Ike's team."

While perfection is too much to hope for, the administration that came in on the basis of restoring ethical conduct to Government could be expected to be careful in selecting members of "the team."

Perhaps there was nothing technically wrong with what Harold Talbott, Secretary of the Air Force, did, but testimony before Senate investigators leaves the impression that his engineering firm benefited from his public office.

Edmund F. Mansure, Administrator of the General Services Administration, is the object of an attack by the conservative Fortune magazine for his messy appointments and favoritism. The magazine calls GSA "the most durable mess in Washington."

Senate examination of the Dixon-Yates deal has dragged out of deep shadows Adolphe H. Wenzell. Mr. Wenzell was with his left hand an expert adviser in the Budget Bureau on what to do about the Tennessee Valley Authority needs for more electricity, while with his right hand he was a vice president of the First Boston Corp., which was arranging to borrow the money for the Dixon-Yates answer to the TVA need.

Stocks and bonds for the Dixon-Yates financing had to obtain approval of the Securities and Exchange Commission, of which the Chairman is J. Sinclair Armstrong. The public is just now learning that the Chicago law firm of Lincoln, Isham & Beale, from which Mr. Armstrong came to the SEC, is attorney for the Commonwealth Edison Corp., once the capstone of the discredited Insull structure.

After months of determined digging, the investigators have only recently revealed that the Atomic Energy Commission advice on how the Dixon-Yates contract could be accepted under the Public Utility Holding Company Act came from Ralph Demmler, a partner in a law firm which represents First Boston, and from Robert McDowell, who became a SEC official on recommendation of the senior member of First Boston's New York law firm.

And then we have the long awaited explanation of why SEC hearings on Dixon-Yates were suspended while Congress voted on a Dixon-Yates question. It turns out that Mr. Wenzell was about to be put under the spotlight and the "assistant President," Sherman Adams, asked the SEC to pause.

Each of these men fits into a distasteful picture of the private power lobby being allowed to get so close to the center of governmental strength as to bring discredit on the Eisenhower administration.

It is time for Ike to direct his attention to "the team" and to getting it scrubbed up.

The Cotton Industry

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Saturday, July 30, 1955

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Trade Policy May Disrupt Cotton Marts," which appeared in the Greenville (S. C.) Observer on July 22, 1955.

There being no objection, the article was ordered to be printed in the Record, as follows:

TRADE POLICY MAY DISRUPT COTTON MARTS

MEMPHIS, TENN.—A number of top people in the raw-cotton-producing business are beginning to express concern about what will happen to American farmers when two different Government policies collide.

For many years, as a result of established law, United States cotton farmers have been helped by Government price supports.

Along with the price supports, the law also bars foreign-grown cotton from being brought into the country, except for a very small amount of specialty growths. This means the farmers have a protected market and a protected price in the United States for their cotton.

Under this program, more than 98 percent of all cotton goods manufactured and used in the United States is made from American cotton.

What bothers the farm leaders is that another big Government program is moving in an opposite direction and threatens to wreck the price-support system.

They refer to the State Department's trade program, particularly the severe tariff cuts made recently at Geneva on cotton textile goods for the special benefit of Japan.

The slashes, due to go into effect in September, are so drastic that in cents per

yard of goods they run considerably more, on the average, than mill profits now being earned in the manufacture of the goods.

In effect, these tariff cuts amount to an import subsidy on foreign cotton. In the case of common, unbleached print cloth, for example, the tariff cut is said to be comparable to an import subsidy of 3.3 cents a pound of cotton.

Increasing fears are being expressed that when these 2 policies run head on after September 10, many textile mills and countless farmers will be hurt. Already there are ominous headlines in the press, such as:

"Field's (Marshall Field & Co.) sees Japan becoming major supplier in 3 years." "Jap fabrics may be sold by Bur-Mil (Burlington Industries, Inc.)." "Hear Macy's to use whole floor to promote Jap goods," and many others.

It is obvious to the farmers that just as foreign manufactured goods are the product of foreign labor, so likewise are foreign fabrics mostly the products of foreign cotton. Taking foreign textile manufacture as a whole, seventy-five percent of its raw fiber material is foreign cotton and only 25 percent is American-grown cotton.

Farmers therefore fear the eventual loss of their biggest market—the consumption of American cotton by American mills—either because it will be taken over by Japan or because United States mills may be forced to shift to rayon and other synthetics, which were not touched by the Geneva tariff cuts.

Right now, it has been learned, there is a lot of high-level discussion going on in cotton trade circles and State farm organizations of the Cotton Belt as to how to remedy the situation before the policy conflict causes heavy damage.

One idea which is gathering momentum, and is reported being favorably considered in Congress, is a plan for establishing a system of cotton goods import quotas. Such a system, as one official described it, would set sensible, reasonable, and specific limitations on the amounts of foreign made cotton textiles permitted to enter the United States.

World trade thinking in cotton farm regions up to now has centered mostly on the problem of exporting and selling more raw cotton overseas. But farmers see there's danger in pushing all their efforts in that direction if some State Department monkey wrench ruins the 9 million bales a year home market for American cotton.

Considerations of this sort are understood to have prompted Senator OLIN JOHNSTON, Democrat, of South Carolina, to urge President Eisenhower to impose textile import quotas immediately. In a wire to the White House, the Senator pointed out that under present law the Chief Executive already has power to do so.

Recognition of Service Performed by Senator Byrd

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Saturday, July 30, 1955

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Time American People Recognize Service Performed by Senator BYRD," published in one of the great and enlightened newspapers of Florida, the Miami Daily News.

The editorial is written about the admired, respected, and very able senior Senator from Virginia [Mr. BYRD].

The headline is one with which I agree. However, I think the American people are beginning more and more to appreciate the valuable, selfless service rendered by Senator HARRY F. BYRD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TIME AMERICAN PEOPLE RECOGNIZE SERVICE PERFORMED BY SENATOR BYRD

The Federal Government reported last week that it had gone almost $4,200,000,000 into the red in the year ended June 30. This was a deficit of approximately $1,000,000,000 more than the year before.

This isolated news item is not exciting by itself. This Nation has piled up deficits in 21 of the last 24 years.

In retrospect, it is interesting to recall that there was a clear voice of warning about this fiscal year—now history but still more than a memory since it will burden us and our posterity.

That was the voice of Virginia's Senator BYRD who said of the 1954–55 fiscal year, "The longer the administration goes without making good on the President's cardinal campaign promise to balance the budget, the more difficult it will be." This was a statement on March 6, 1954.

Of course it is also history that nothing was done about Senator BYRD's warning. Perhaps it is time to pay a little more attention to his wisdom.

This senator is probably the best known advocate of economy in the history of this country. Yet today he is still pretty much stigmatized by the more ardent New Deal and Fair Deal, as well as Eisenhower administration advocates of spending programs who have come up against him in the Senate Finance Committee. Senator BYRD is now chairman of that committee, as well as chairman of the Joint Committee on Reduction of Nonessential Federal Expenditures.

Here is what Senator BYRD would do to bring a ballooning national debt down to earth and our spending to something approaching sanity:

First, require a "single package" appropriation bill.

Second, improve staff facilities of Congress for reviewing budgetary proposals.

Third, use Hoover Commission data more effectively in deliberation on basic legislation and on appropriation bills.

Fourth, open more committees to the public and invite them to participate—an objective also of the American press.

Fifth, tie authorizations to spend and appropriations more closely to funds actually available.

Sixth, eliminate use of carryover funds.

Seventh, give the President the right to veto individual items in appropriation bills.

Eighth, improve the accounting and budgeting systems of the Federal Government.

Ninth, decide there will be a moratorium on all new spending programs until the Federal budget is showing an actual surplus.

This last proposal is probably the most important of them all. Senator BYRD last week indicated how important he thought the authorization of new Federal-aid highway spending was by claiming for his Senate Finance Committee the bill now pending in the House. The consensus is that if he gets it, the bill will not get out of Congress this session.

What progress is being made, if any?

The Treasury Department and the Bureau of the Budget said in their tentative fiscal year-end report last week that "greater prosperity reflected in rising income-tax payments, sent Federal revenues about $1.3 billion higher than President Eisenhower's January forecast."

This has heightened hopes for a sharp reduction—or even possibly elimination—of the estimated $2.4 billion deficit for the present fiscal year, which began 24 days ago.

However, it is feared that mounting farm surpluses may offset this increasing Federal revenue traceable to good times. The crop price supports revealed in the year-end statement exceeded by more than $1 billion the estimate which Eisenhower sent to Congress 6 months ago.

So Senator BYRD and his advice are still needed—perhaps more than ever.

Come war, come peace, we need to lay bare waste and extravagance in government.

Come Democrats, come Republicans, one man has done just that—outstandingly.

It's time for the American people to recognize Senator BYRD.

Imposition of Censorship on Washington News Corps

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Saturday, July 30, 1955

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "New Censorship Curbs Washington News Corps," published in the Democratic Digest for July 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW CENSORSHIP CURBS WASHINGTON NEWS CORPS

Defense Secretary Wilson seems to have changed his slogan to "What is good for the Republican Party is good for the country," said the Madison (Wis.) Capital Times.

This is not, of course, an attitude peculiar to Mr. Wilson in the Eisenhower administration, but it is generally conceded by the Nation's press that the former boss of General Motors has now applied the Republican partisan doctrine in singularly extreme form. He accomplished that with his new censorship system in the Department of Defense.

His rule for news control, the Capital Times observed, "is just about the same kind of yardstick employed by the Kremlin to determine what information should be made public."

With that estimate, there appears to be no quarrel among the publishers, editors, and writers of America.

"If any censorship order of this extreme had been promulgated by former President Truman, the press of this country would have exploded in revolt," the Capital Times added.

It is true that there has been no general explosion in the press, but it doesn't follow that the journalistic profession is not vastly disturbed over the rise of secrecy and censorship in the Eisenhower administration. In fact, the press has been showing mounting concern over this phenomenon for some time. Secretary Wilson's news clamp has drawn criticism from both the American Newspaper Publishers' Association and the American Society of Newspaper Editors. There's a large and steadily growing file of newspaper and magazine articles and editorials, warning of the increasing trend toward locked door government and handout administration.

Publishers and editors can see no justification whatever for the new Wilson test, requiring that all Department releases must be found not only free of any classified material, but must "constitute a constructive contribution to the mission of the Department of Defense."

This sets up a rule which can easily be construed by overzealous officials to mean that anything which might put the administration in an unfavorable light should be suppressed. Such an outcome seems as inevitable as that an old General Motors partisan should think that what is good for General Motors is good for the country. The tendency is shown by Secretary Wilson himself with his quick defense of a political brochure issued by the GOP Senate Policy Committee, which made a dozen security violations in the use of classified material. Political discrimination in favor of Republican leaks of classified material is a serious matter indeed, but, as the editors observe, the greatest peril lies in the suppression of vital information which does not fall within the proper realm of secret or classified material.

It is true that President Eisenhower subsequently termed publication of the GOP political brochure a blunder, but more significant is the fact that the President allowed the Wilson gag to stand. This left censorship and propaganda as the rule for the largest and most sensitive Executive Department of the National Government—a Department that controls the activities of millions of our citizens, spends over 70 percent of the money provided by the taxpayers, and bears most directly on the security of the whole Nation.

The threat which this news control system raises to the Nation's security interests is underscored by the furor over the administration's politically timed release of military intelligence information on sensational advances in Soviet offensive-type aircraft. The intention of the release, "as far as could be judged from inquiries at the Pentagon, was to head off and forestall criticism of the administration's defense program by members of the United States Senate," writes Hanson W. Baldwin, military analyst of the New York Times.

Mr. Baldwin adds that this release "is the best possible illustration of what is wrong with Secretary of Defense Charles E. Wilson's formula for the release of military news that is 'constructive.' The word 'constructive,' in this instance, was translated to mean the political advantage and service effect."

The release did not have its intended effect of showing that the administration was alert in letting the public know of Soviet steps which threaten our aerial superiority, if they don't actually tip the balance against us. Instead, the information belatedly released to the public has now brought new demands for a Senate inquiry into the strength of our Armed Forces. Senator STUART SYMINGTON, Democrat, of Missouri, asserts that the release proves that Secretary Wilson was "dead wrong" a year ago when he reported the Russians were concentrating on the buildup of defensive rather than offensive airpower.

For a year and a half, the Defense Department discontinued publication of the semiannual list of the 100 largest companies getting defense contracts—after one report revealed that in 6 months the total of General Motors defense contracts had increased by over $1.7 billion, while contracts going to all other companies decreased by $395 million.

Smarting under public criticism on this coverup, the Department revived the report in May of this year but used a different basis for the compilation, so that the new contracts going to General Motors were not listed at all. The Department withheld this information on General Motors and 44 other companies, on the curious ground that contract cancellations and cutback "offset" or exceeded new procurement since July 1, 1953. Under this fantastic reporting system, it was announced that contract cancellations exceeded new procurement by nearly $60 million in the General Motors account, although it was admitted that the company "undoubtedly is still one of the largest suppliers of military equipment."

The TV show which was made of Secretary Dulles' May 17 report to Mr. Eisenhower on his latest European trip gave an incomplete picture of the situation developing for the coming Big Four meeting. "Fiction and theater," columnist Walter Lippmann described the production. What Mr. Dulles talked about "was at best only half the truth," Mr. Lippmann added.

"* * * if, in the coming encounter with Moscow and Peiping, our own public opinion is crystallized on the half-truth which was Mr. Dulles' theme," the columnist warned, "the administration will not have the kind of informed support in Congress and among the people which it will need to have."

The full magnitude of this challenge to American traditions of the free press and fair play may be seen only against the backdrop of the long series of protests which have been registered in the press against the administration's thickening Paper Curtain between itself and the public. Incidents multiply which show that the fear psychosis—which Republican orators themselves have done so much to generate—is constantly erecting new barriers to communication. At the same time, security reasons are used increasingly as a pretext to shield normal Government operations from the public gaze, serving merely partisan purposes.

Newsmen complained of the silken curtain with which Secretary Hobby enveloped her Department of Health, Education, and Welfare in connection with the muddled management of the Salk antipolio vaccine program.

In the Atomic Energy Commission secrecy has been carried to the dangerous point where not only the general public but other agencies of the Government have been kept in the dark on vital information needed for early and expeditious civil-defense planning. After the radioactive fallout at Bikini last year AEC Chairman Strauss gave an inaccurate account of the blast's range and effects, and that false reassurance to the public was never corrected by the administration. The public had to depend on an independent nuclear scientist for our first accurate analysis of the radioactive peril.

The double standard used by Secretary Wilson for military information circulated to the public in a GOP propaganda piece has the same political motivation as the Dulles leak of the Yalta papers and Attorney General Brownell's leak on the appointment of Chief Justice Earl Warren. In each case there is Government control and manipulation of news sources for partisan advantage.

Another manifestation of the administration's "papa knows best" attitude has been given in the Dixon-Yates deal. "A feature of the Dixon-Yates matter which has made the administration vulnerable from the beginning has been secrecy," said the pro-administration Indianapolis Star.

The administration has drawn a heavy curtain of secrecy around its management of the Federal employees' security program, under which thousands of patriotic Americans in Government service have been misbranded "security risks." An important segment of the press has met that challenge head-on, and largely as a result of good journalistic enterprise, the political hoax in the administration's security risk numbers game was exposed. However, the numbers game still goes on and the President rejects all recommendations for a bipartisan review of a system that has worked badly indeed.

The light shed by the press forced the administration to make partial redress to falsely accused Wolf Ladejinsky, but the system which produced the miscarriage of justice still stands, and Mr. Eisenhower has washed his hands of responsibility in the matter.

Tampering with the fifth amendment, wiretapping, and press registration measures are other aspects of the tightening grip of Government which have brought expressions of dismay from responsible editors.

"One of the biggest threats of the Communist Party to our way of life in this country is that we will be frightened into curtailing our basic freedoms in the mistaken belief that we are curbing Communist activities," warned editor Robert U. Brown of Editor & Publisher in an issue of his magazine last winter.

"Registration of equipment with the Government is a philosophy foreign to our democratic principles," he added. "Registration of printing presses was one of the things the framers of the Constitution tried to guard against. It is too close to licensing of the press."

Expressing its concern over the darkening climate of secrecy and repression on many sides, the Philadelphia Inquirer said:

"It is ironic that at a time when Americans are increasingly shocked by suppression of truth behind the Iron Curtain, there should be a swelling tide of attempts to gag newspapers in the United States of America."

Columnist Marquis Childs recently reported that among working reporters in Washington "there is growing concern over what appears to be a concerted effort to suppress legitimate news, and with a system of rewards and punishments to see to it that only news which is favorable or reported in a favorable light is given to the public."

The Alsop brothers, in an article published only last February in the Saturday Evening Post, declared they have actually been investigated by Federal agents for seeking to alert the public about atomic weapons and guided missiles.

"Their object was not to tell Soviet officials anything they didn't already know, but to alert the American people," said William H. Stringer, chief of the Christian Science Monitor's Washington bureau.

"Some officials," Mr. Stringer added, "apparently felt that the facts would frighten the American people. To this, the reply might simply restate the words of a former President, 'What kind of people do they think we are?' Can wise policy be developed in this country when only a few 'Q-cleared' individuals know the true facts?"

But the air of hush-hush and suspicion steadily thickens.

"'Secrecy' has become the keynote of governmental operations in the national Capital," writes Walter Trohan in the Chicago Tribune under a May 1 dateline.

"In the executive branch of the Government the press conference has become a neglected institution," he adds. "White House and State Department conferences have fallen off to a fraction of what they were 20 years ago. Most officials use the press conference to promote some plan they want to publicize rather than as a means of letting the press question the operations and programs of various departments or agencies."

Mr. Trohan finds that hostility toward the press among Government officials in Washington is now greater than at any time in the last 70 years.

This retreat to closed door Government evidenced itself at the outset of the Eisenhower term, even while the administration was making glowing promises to keep the news channels open.

At his press conference April 2, 1953, President Eisenhower told the Nation's press "to report to him any official who strangled or closed off any legitimate news and he would act."

In subsequent weeks and months there were increasing complaints in the press over the administration's attitude toward news freedom. One of the incidents of that period was an exchange of differences which moved the Washington Post to say:

"The Eisenhower administration would do well to heed the criticism made by correspondents the other evening in their television interview with James C. Hagerty, the White House Press Secretary. Raymond P. Brandt, correspondent of the St. Louis Post-Dispatch, said bluntly that the administration 'is afraid of newspapermen and doesn't understand the place of newspapers in American life.'

"More experienced political leaders than some of those now in office do understand the role of the press and are not afraid of it, however much they may quarrel with it * * *.

"There is no better way to illuminate the problems of Government in these troubled times than for the President and his Cabinet officers to open their doors to the press. A new administration has an even greater obligation than one which already is well-known to make itself understood to the people."

The record, regrettably, shows the Administration has continued in an exactly opposite course. The President and his Cabinet appeared on one TV show, which proved to be a propaganda fiasco, and since then the Eisenhower Government has withdrawn increasingly behind tightly, sealed doors.

Newsmen find nothing reassuring in the picture despite Mr. Eisenhower's "generalization" in his May 10 address, when he said:

"There is one generalization to make as we proceed in our thinking about the Republican Party as an agency for serving this great country, and that is that the public must be an informed public, if a republic or a democracy is to be a success."

With the administration itself presenting the worst example, the atmosphere of fear, suspicion, and rigid conformity has spread a pall over extensive areas of our national life. Nowhere is the harmful effect of that hysteria more pronounced than in the field of scientific research, for never before was the Nation's security more dependent on unfettered scientific inquiry.

The triple dilemma which American scientists face today, as described in a Washington Post report of a speech last April by M. Stanley Livingston, chairman of the Federation of American Scientists, is this:

Government security regulations are plugging the ears of the scientific community.

Scientists don't dare speak out even when they do have the facts.

Yet, if science is to progress, speak they must, particularly in regard to the current problem of atomic radioactivity.

The incalculable cost to the community of that kind of security is suggested further by Roland Sawyer, who writes in the Christian Science Monitor:

"I talked with two scientists who made no breaches of security, but who asserted to me—and they are men who can be trusted—that because of security many millions are wasted because mistakes are made from insufficient public discussion. Worse, according to these men, the country doesn't get the weapons for defense it could have, because the public isn't informed. If it were, those men claim, public opinion would insist upon things being done that have not been done. And air defense would be 2 to 3 years further along."

Here, in the reports of responsible and thoughtful representatives of the press, the dilemma of the press and the public is vividly set forth as the country faces the future under a fearful, rattled and overly partisan administration.

The Bicycle Industry Is Important to Many People

EXTENSION OF REMARKS
OF
HON. PAUL F. SCHENCK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. SCHENCK. Mr. Speaker, the Huffman Manufacturing Co., of Dayton, Ohio, has been an important manufacturer of bicycles in our section of Ohio. Some years ago I was made aware of the disturbing effect of the lower tariffs on bicycles, the loss of business, and the consequent resulting loss of employment. This affected the employees of this company in a very personal way and caused many of them to seek other employment. Thus the company not only lost business but it also was unable to retain the service of many of its valued, skilled, and experienced employees.

Not only has the Huffman Manufacturing Co., of Dayton, and its skilled employees been seriously affected, but the entire bicycle industry throughout the Nation has suffered by the importation into the United States of bicycles from other nations of the world.

The Tariff Commission has made exhaustive studies and has made its report to the President.

It is my sincere hope, Mr. Speaker, that the President will give this matter his earnest consideration at the earliest possible date.

Many people, Mr. Speaker, are deeply interested. Bicycle manufacturers use a considerable amount of steel, rubber, bearings, other manufactured parts, paint, etc., in their products. There are a considerable number of people employed not only in the industry directly but also in the allied industries in producing the materials and parts used by this industry. Therefore, Mr. Speaker, this industry is important to many parts of our Nation.

It is also understandable, Mr. Speaker, that Mr. George Meany, president of the American Federation of Labor, should be concerned because of the employment of people. A copy of Mr. Meany's letter dated July 15, 1955, and addressed to the President, has been supplied to me. Under unanimous consent, I include it in these remarks as an expression of the point of view of Mr. Meany in this important matter:

JULY 15, 1955.

The PRESIDENT,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: This letter is in further reference to the application of the bicycle industry for relief from injurious import competition under the escape clause of the Trade Agreements Act, about which I wrote to you on March 11, 1955.

It is understood that this case was returned to the Tariff Commission for more up-to-date information and further observation of the trend of imports. I have accordingly myself had further inquiry made into this matter and as a result am doubly convinced of the urgency of remedial action.

The bicycle industry has lost ground rapidly to imports and continues to do so solely because of the lower wages paid in foreign plants, the tariff reductions made in the past and the currency devaluation of 1939.

During the 4 years preceding 1950, domestic lightweight models outsold the imported ones by 10 percent to 15 percent. From 1950, after currency devaluation, on top of sharp duty reductions, the imported product ran away with the market.

Today there is a retail price differential of about $20 in favor of the imported bicycle. This represents a formidable handicap in view of the quality of the imported product.

The American Federation of Labor, as stated in my previous letter, has supported the trade agreements program, but has always made it clear that we cannot condone import competition that drives our own workers out of employment when such competition derives its advantages from lower prevailing wages abroad than those enjoyed by American workers. Should this be permitted the American wage standard would soon be dissipated.

The bicycle case impresses me as clearly indicative of excessive tariff reduction in view of the exchange devaluations that took place. This brought the rates definitely below the peril point and the rapidly rising imports are the result. The workers in the bicycle industry have my full support in seeking a restoration of the duty and I would therefore strongly urge that you promulgate the Tariff Commission's recommendation.

Sincerely yours,

GEORGE MEANY,
President, American Federation of Labor.

The President at Geneva: Moral Leadership Regained

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. SCHWENGEL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to pay tribute to the President of the United States for the magnificent leadership he provided at the Big Four meeting.

The meeting at the summit has come and gone. The issues that divide the East from the West have not been settled. No realistic person expected them to be settled in so short a time.

Yet we know that it was eminently worthwhile, for in a few short days the work of years of Soviet propaganda against the United States was undone. The picture the Soviet Union has been trying to sell to the world of a trigger-happy, materialistic America was largely dissipated. It was dissipated because President Eisenhower, with the sincerity and moral fervor which are so characteristic of him, reached out and touched the heart of the world.

It was not only the President's dramatic proposal for an exchange of military blueprints with the Soviet Union and mutual aerial reconnaissance that was responsible, it was his evident truthfulness as a soldier, his directness, his refusal to be drawn into long discussions

of controversial details, that evoked widespread admiration.

The President said he had searched his mind and heart for something that would convince everyone of the sincerity of America's desire for peace. He found it, and in so doing he dispelled any lingering doubt that America stands for good will to all men. At Geneva President Eisenhower was the champion of all that is best in our country, what has always been the true source of its strength in the world, namely, its adherence to principles of international morality, and its sympathy with the common desires of all humanity.

Statement in Regard to S. 2253 Which Amends the Agricultural Trade Development and Assistance Act of 1954 (Public Law 480)

EXTENSION OF REMARKS

OF

HON. ROBERT D. HARRISON

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 30, 1955

Mr. HARRISON of Nebraska. Mr. Speaker, title I of Public Law 480, the Agricultural Trade Development and Assistance Act, authorizes the President to sell our farm surpluses to friendly nations for foreign currency. This law implements what I believe to be a sound principle, namely changing our farm surpluses into working capital and using that capital to develop and expand permanent markets in foreign countries for our farm products.

On July 12, 1955, the President issued the second semiannual report of the activities carried on under Public Law 480. In my opinion, this report demonstrates that this is an effective farm program which can be of material assistance to the present dilemma of American agriculture.

However, it became apparent to me that Public Law 480 needed minor changes which should be designed to assist in the administration of the program. I, therefore, introduced H. R. 7149 to amend title I of Public Law 480. A companion measure, S. 2253 was also introduced in the Senate. The Senate passed their bill on July 20, 1955. It was this bill as amended by the Senate that the House Committee on Agriculture reported out and that the House has passed.

While it is a matter of regret to me that the Senate amendments were felt to be necessary at this time, I feel that the Public Law 480 program will benefit substantially from the changes now in this bill.

It is hoped that by these few changes, sales under title I of Public Law 480 can be most efficiently made and the currency most effectively utilized. By these amendments, we hope to emphasize that the purpose of title I is trade development. We must find foreign markets for our surplus agricultural production. We do not feel that this program is designed to be used primarily to facilitate our foreign relations. This is not to say that any sale or other action under title I would be or should be contrary to the foreign policy of the United States. This program will continue to be limited to friendly nations and operate under basic foreign policies as determined by the State Department.

S. 2253 increases the authorization for the farm product sales program from $700 million to $1.5 billion. This will permit about $1 billion of our farm surpluses to be converted into currency and to be put to work developing foreign markets for farm products. We have now approximately $8 billion worth of surplus farm products. It seems only realistic to me that at least 12 percent of those surpluses should be taken out of storage and put to work for agriculture.

Let us examine the program as it has progressed to date. Public Law 480 was enacted in July of 1954. The President delegated the authority to administer title I to the Secretary of Agriculture in September of that year. By November the first sales agreement was signed under this authority. Turkey was the purchaser under this agreement. By January of 1955, agreements had been signed with two countries. During the next 6 months, the program became established and began to gain some momentum. Nineteen additional agreements were signed. Seventeen foreign nations agreed to purchase our farm products. As of June 30, 1954, we had sold 53 million bushels of wheat, 647,000 bales of cotton, 141 million pounds of cottonseed oil, and 62 million pounds of tobacco. To date $468.8 million of the $700 million authorization has been obligated. It should be borne in mind that this amount is the total Commodity Credit Corporation cost including transportation, handling, and so forth. The value of the farm products sold is actually $328.5 million. This points up the reasons why the $700 million authorization is inadequate. First, if it is not increased it could force the termination of this program by the end of 1955 since there remains only $231.2 million unobligated. Public Law 480 was designed as a 3-year program and should not be cut in half. Second, because of the other expenses charged against the authorization, the $700 million authorization will actually permit the sale of approximately $500 million worth of farm products. An increase to $1.5 billion could move about $1 billion worth of farm products.

S. 2253 also provides another means to insure that title I of Public Law 480 is used as a real trade program. By Executive Order 10560, the President gave the Secretary of Agriculture responsibility for the operation of title I. I feel it is essential that the Secretary also be given the authority commensurate with this responsibility.

Since we are attempting to sell farm products, it is logical that the Secretary of Agriculture should determine what surplus products should be sold and what quantity they should be sold in. If the purpose of this program is to create and expand permanent foreign markets for farm products, it is requisite that the Secretary determine what countries are our best potential markets.

Of course, I realize fully that Public Law 480 involves foreign interests of other departments of the Government. All of these interests should be coordinated. It is also necessary that the Secretary of Agriculture operate under the general policies laid down by these other departments. This amendment would not remove these requirements in any manner. What we are trying to do here is give the Secretary of Agriculture authority to operate the actual mechanics of selling farm products.

I believe that it is especially unfortunate that the present bill does not relieve surplus sales of farm products from the cargo-preference provision which now requires that 50 percent of these cargoes be shipped in American vessels. Sales made under Public Law 480 must eventually be exempted from cargo preference if we are to obtain maximum results from the program. These farm product sales are not just a means of disposing of surpluses. Another purpose is to use the foreign currency to develop permanent foreign markets. It is essential, therefore, that sales be made to countries where a demand can be generated for our farm products.

The plain fact is that the best potential markets for our farm products are maritime nations.

For example, the United Kingdom, Netherlands, Norway, and Denmark bought $654 million worth of farm products in 1954. This constituted over 20 percent of our entire agricultural export sales. These markets could be substantially increased if our surplus products could be put to work there.

The Cargo Preference Act, Public Law 664, was enacted last August despite the present administration's opposition. The principle had grown out of our foreign-aid programs, namely, when we give products away, 50 percent of them have to be shipped in American vessels. We do not here argue with this principle. What we contend is simply this: When bona fide sales are made under title I of Public Law 480, our customers should be allowed to transport the goods however they see fit. If we want to sell farm products, we must offer quality products, competitively priced and we cannot tell our customers they cannot transport the products in their own ships if they want to.

I can offer you specific examples from the experienced gained with this program to date.

On April 4, 1955, Denmark refused to purchase $7 million worth of farm products because of our demand that 50 percent of them must be transported in American ships. In March of 1955, England refused $30 million worth of farm products because of cargo preference. Norway, as well as other Scandinavian countries, refused to purchase under Public Law 480 as long as cargo preference applies. These are countries where our sales program could reap the maximum benefits, yet the program often

cannot operate there because of cargo preference.

In reviewing the agreements signed to date with 17 foreign nations, it is discouraging to note that 13 of those countries could have provided their own transportation. Thirteen million dollars has been spent by Commodity Credit Corporation for transportation that the customer country would have preferred to furnish itself. An additional $13 million worth of farm products could have been sold, had it not been for cargo preference. This is another unfortunate result of trying to make this type of requirement apply to a sales program.

Title I of Public Law 480 is a positive approach to our agricultural surplus problem and our urgent need to expand permanently export sales of farm products. As long as it remains a sales program devoted to trade, it can make a substantial contribution to the national economy.

S. 2253, when signed by the President, will increase the effectiveness of Public Law 480, and will assure the continuance of this vital farm program for at least 2 more years.

Maybe the President Needs To "Unleash" Secretary Benson

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. JONES of Missouri. Mr. Speaker, the cotton producers of my area are quite properly becoming alarmed over the situation which exists with respect to the exporting of our cotton surpluses. It would appear that this situation results because of the indecision which exists in the Department of Agriculture which may or may not be influenced by pressure from the Department of State.

Many people believe that cotton is not moving to foreign markets because of a feeling that the Department is contemplating a program of entering the export market on a competitive basis, in which event cotton owned by the Commodity Credit Corporation would be made available at a price lower than that at which the cotton can be purchased at the present time.

Many of my producers would support such a program even if it meant a break in the cotton market which many believe would happen. I am inclined to believe this would happen. However, unless and until the United States begins to move more of its cotton into the export market, we will continue to see a greater increase in the production of cotton in other lands, in some of the nations where our mutual aid funds have been used to place their producers in a position to compete with us. I realize that there has been much opposition from our domestic textile mills if such a program is put into effect without the assurance that they would not be protected from the importation of textiles made from the cotton which we had sold at a lower price than that which prevails in our domestic market.

As long as our foreign buyers wait for the "fire sale" they will not buy cotton and the situation becomes more alarming each day with the approach of the harvest season in the United States.

The Secretary of Agriculture, in the opinion of most people, including some of the officials in his own Department, has the authority to sell surplus cotton for export at reduced prices, and there seems to be a prevalent rumor, current both at home and abroad that such action is contemplated, and the movement of cotton has come to a standstill.

There is need now for a positive statement from the Secretary of Agriculture, with the full support of President Eisenhower, as to what action, if any, may be expected during the next few months during which the 1955 crop will be harvested. A statement to the effect that there will be no reduced prices during the current season would at least have the effect of letting other cotton move. It is the inaction, the indecision, and the apparent inability of the Department of State and the Department of Agriculture to integrate their programs that has brought about the confusion which has prevented the disposal of surpluses now held by the Commodity Credit Corporation, and has discouraged the sale of private cotton in foreign markets.

While I have been anxious to cooperate in the passage of any legislation which is needed or which would relieve the situation, I would respectfully call attention to the fact that Secretary Benson has every authority which he needs to act, and if he needs to be "unleashed," I hope the President will take the appropriate steps to see that this is done.

During the past few days I have received numerous communications in the form of telegrams, letters, telephone calls, and personal visits expressing the interest of the cotton producers of southeast Missouri in obtaining some action. In additional I have met with numerous groups and had conferences with officials in the Department of Agriculture, in which I urged that some action—almost any action—be taken. Under leave to extend my remarks, I am reproducing herewith the text of a number of those telegrams indicating the interest in southeast Missouri in this problem:

PORTAGEVILLE, MO., *July 27, 1955.*
PAUL C. JONES,
House Office Building,
Washington, D. C.:

Please use your influence to save the cotton producers and industry. Administration do-nothing is ruinous. Get something done PAUL.

O. H. ACOM.

SENATH, MO., *July 27, 1955.*
PAUL C. JONES,
House of Representatives,
Washington, D. C.:

Believe it is urgent to obtain reasonable cotton-export program at once. Urge your every effort to obtain prompt positive action on a practical and continuous export program.

R. K. SWINDLE.

EAST PRAIRIE, MO., *July 27, 1955.*
Hon. PAUL JONES,
House Office Building,
Washington, D. C.:

Please be reminded that the future of the agriculture economy in southeast Missouri depends upon disposal of surplus cotton via immediate export program. Missouri farmers depend upon production schedules and not upon the futures market.

A. L. STORY.

KENNETT, MO., *July 27, 1955.*
Hon. PAUL C. JONES,
New House Office Building,
Washington, D. C.:

Respectfully solicit your immediate assistance in securing prompt positive action to export 5½ million bales of cotton during next fiscal year.

DON THOMASON.
CECIL CAMPBELL.
AMIEL CAMPBELL.

CARUTHERSVILLE, MO., *July 27, 1955.*
Congressman PAUL C. JONES,
Washington, D. C.:

Hope you can get something done on the cotton-export program as we are losing our foreign market.

S. CREWS REYNOLDS.

EAST PRAIRIE, MO., *July 27, 1955.*
Hon. PAUL JONES,
House Office Building,
Washington, D. C.:

I sincerely hope that you will lend full cooperation to some means of expediting cotton exports before session ends. Missouri cotton farmers need this export program to sustain cotton production in our State.

W. C. BRYANT.

CHARLESTON, MO., *July 27, 1955.*
Congressman PAUL JONES,
Tenth Missouri District,
Washington, D. C.:

Cotton producers this area urge quick action on export program.

JIM WALLACE.

KENNETT, MO., *July 27, 1955.*
Hon. PAUL C. JONES,
House of Representatives,
Washington, D. C.:

Urge you to do something about export program on cotton. We grow cotton to sell. Not to store. Had rather have reduced price and more acreage. Do something; we are in trouble.

VICTOR E. DOWNING.
VERNE W. JOHNSON.
F. W. JOHNSON.
A. E. BOLTON.

BRAGG CITY, MO.

SIKESTON, MO., *July 27, 1955.*
Hon. PAUL JONES,
House Office Building,
Washington, D. C.:

Cotton growers need an increase in acreage. Certainly not a decrease which must follow if exports are not greatly stimulated. We urge that all things possible be done to keep us in the cotton business abroad. Don't let us be frozen out of our foreign markets.

WILLIAM L. OLIVER.

EAST PRAIRIE, MO., *July 27, 1955.*
Hon. PAUL JONES,
House Office Building,
Washington, D. C.:

Earnestly request that you give every effort to matter of cotton exportation before Congress adjourns. Some means foreign disposal of cotton surplus absolutely necessary to agriculture in our area.

GEORGE U. SHELBY.

MATTHEWS, MO., *July 27, 1955.*
Congressman PAUL C. JONES,
House Office Building,
Washington, D. C.:
Would like something done on cotton-export situation.

ALLEN DAVIS.

Public Rebuffed

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. MINSHALL. Mr. Speaker, the majority on my left inherited responsibility as well as the spoils when they assumed control of the House of Representatives last January.

I should therefore like to call their attention to an editorial which recently appeared in the Cleveland Plain Dealer of July 29, 1955.

The editorial follows:

PUBLIC REBUFFED

Few Congresses in our history had such momentous opportunity to boost public welfare as did this 84th in connection with highway construction. Still the job was muffed.

The program fell, according to Speaker SAM RAYBURN, to pressure of the truck lobby. By that token, those who need good roads most balked at helping pay the tab. But as much to blame was politics. The majority of Congressmen put fear of their jobs ahead of serving the people.

Largely because a timid Congress failed, we can look forward to more instead of fewer traffic fatalities and traffic jams on the highways. It is hard to reconcile them against political bargaining, pressure groups and selfish interests.

Yet outrage and disappointment must be overlooked in the face of practicalities. President Eisenhower has begged Congress to reconsider and come up with a compromise road-financing program. It would contain some tax increases and some bond issues, the President's original scheme.

The fact is, time has run out. Another highway bill would have to start from scratch, and hearings on the defeated measures ran 18 weeks. We do not anticipate a legislative miracle, for that is what it would require.

Moreover, recriminations really are useless. Ohioans lost over a billion dollars toward new roads in the coming decade because Congress bumbled. So? So we must find a way of helping ourselves to do the job.

The obvious kickoff line is the second turnpike, from Conneaut to Cincinnati. New York State is expediting the leg of its throughway from Buffalo southwest. Pennsylvania has announced the precise route of its connecting Erie bypass.

Thus Governor Lausche must come to grips with setting the route of Turnpike 2. Work on many other vital road projects is stalled until the decision is made.

Cleveland, too, must face the issue as far as its freeway plans are concerned. While the State's $500 million bond program is of considerable help to us—or will be—it's not enough.

Therefore will we, like New York City, finance our own freeways by special license or toll gates?

Or will we, like Congress, fold our tents and steal away?

For one thing, we can't. This thing hits us smack in the pocketbooks. Cleveland bobs up or down on the fortunes of the automobile industry. Soon, and much sooner than we think, this lack of adequate highways is actually going to curtail car production. To borrow from Willie Keeler, you can't put 'em where they ain't. That would be a unique recession, wouldn't it, based on our own cupidity?

Yes, we Americans are funny people. Here is our Congress in the process of approving several billions in foreign aid, with no substantial opposition. Yet we boggle over a sure way of saving our own lives, money, and happiness. Somehow the humor of it eludes us.

Fiftieth Anniversary of the Kent County Tuberculosis Society

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. FORD. Mr. Speaker, it is my privilege to represent the Fifth Congressional District of Michigan which is composed of Kent and Ottawa Counties. This year, 1955, marks the 50th anniversary of the Kent County Tuberculosis Society which was organized 3, 1905, as the Grand Rapids Anti-Tuberculosis Society.

Therefore, Mr. Speaker, I would like to state publicly and proudly a few of the outstanding accomplishments of the the Kent County Tuberculosis Society. This, I earnestly hope, will serve partly as a tribute to this organization's fine work and partly as an inspiration to other communities which are carrying on their own work in this crucial area of medical education and detection of disease.

During the 45-month period from January 1925 to September 1928 there were 377 deaths in Kent County attributable to tuberculosis. Now compare this to the 45-month period from January 1951 through September 1954 when, notwithstanding an approximate 20-percent population increase, only 91 tubercular deaths were recorded in Kent County.

The Kent County Tuberculosis Society has played an important role in achieving this record. It has through the years adopted the latest techniques as they have become available. The leaders in this society are convinced that any such program is best if handled on a local level wherever possible. Supported by the Christmas Seal series, their program is based largely on the Mantoux tuberculin test, the chest X-ray, and the fine opportunity for education it provides.

They fully realize that modern drugs and surgery are saving lives but cases must be found before they can be treated. A total of 37,512 persons were given Mantoux tuberculin skin tests between April 1, 1954, and March 31, 1955. Over 24,000 were X-rayed. Out of this number 21 active tuberculosis cases were discovered which may have gone for weeks without discovery had not these tests been promoted.

The society carries on a cooperative program with the public health department and the local sanatorium. It does the educational and stimulating job. Most of its work is carried on among apparently well people as it continues to educate for healthful living.

The citizens of Kent County,, Mich., owe a large debt to these people who are active crusaders against tuberculosis.

Multiple Use of the Surface Resources of Our Public Lands

EXTENSION OF REMARKS
OF
HON. CLIFTON (CLIFF) YOUNG
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. YOUNG. Mr. Speaker, legislation has been enacted by the Congress which provides for the multiple use of the surface resources of our public lands, to provide for their more efficient administration, and to amend the mining laws to curtail abuses of those laws by a few individuals who usually are not miners.

In our efforts to arrive at a fair and reasonable answer to the problem of multiple use of the surface of our public lands and at the same time to protect the prospector and small-mine operator, I, and other members of the House Interior Committee, have had the finest cooperation and able assistance of the Department of the Interior, the Department of Agriculture, the American Mining Congress, the Nevada Mining Association, and other State mining associations, the American Forestry Association, the National Wildlife Federation, the National Lumbermen's Manufacturers Association, and many other conservationist groups.

Because of the interest that the miners and prospectors of Nevada and other Western States have in this legislation and because they wish to learn how they may be affected by the new law, I have prepared an explanation of H. R. 5891—Public Law 167, 84th Congress—which should answer many questions raised by those concerned.

Over the past 20 years there have been increasing demands from some conservation organizations, Federal agencies, recreational organizations, and sports writers that the mining laws be revised. It had been charged that the mining law of 1872 interfered with other uses of Government lands, and had resulted in unauthorized use of such lands in the guise of mining locations. The mining industry had in no way condoned the abuses by the few whose action has produced many of these demands.

There must be continued opportunity to go on the public domain to search for minerals, to locate mining claims as provided under existing law, to mine any minerals found, and to make a profit if fortunate enough to discover and develop commercial deposits. This is the

way in which our mining industry has grown from the early days. Our Government must encourage development of minerals on the public lands—particularly so when our national security is so vitally dependent upon these basic raw materials. The miner must have security in his investment, which requires that full title be given to him when he shall have fulfilled all the requirements for a mineral patent.

The new law closes the door to abuses of the mining laws, and provides for multiple use of the surface of mining claims prior to patent. At the same time, this new law guarantees the miner his full rights for prospecting and development, and the same rights upon patenting the claim as if the new law had not been enacted. The passage of H. R. 5891 has solved a problem that had been before Congress over the past two decades.

WHAT DOES THE NEW LAW DO?

It precludes from location under the mining laws of common varieties of sand, stone, gravel, pumice, pumicite, and cinders and provides for the disposition of these minerals under the Materials Disposal Act of 1947. It does not affect the validity of any mining location based upon the discovery of some other mineral occurring in or in association with such a deposit—for example, gold occurring in gravel. A deposit of such materials which is valuable because it has some property giving it distinct and special value continues to be locatable under the mining laws as does also block pumice which occurs in nature in pieces having 1 dimension of 2 inches or more.

As to mining claims hereafter located, the law, prior to patent: First, bars the use of a mining claim for any purpose other than prospecting, mining or processing operations and uses reasonably incident thereto; second, permits the United States to manage and dispose of the timber and forage, to manage other surface resources—except mineral deposits subject to location under the mining laws—and to use so much of the surface of the mining claim as may be necessary for such purposes or for access to adjacent land, so long as these activities do not endanger or materially interfere with mining operations or related activities; third, precludes a mining claimant from removing or using the timber or other surface resources subject to management or disposition by the United States, except to the extent required in his mining operations or related activities—permitted timber cutting, other than to provide clearance, must be done in accordance with sound principles of forest management; and, fourth, provides that if at any time the locator requires more timber for his mining operations than is available to him from the claim after disposition of timber therefrom by the United States subsequent to the making of his location, he shall be entitled, free of charge, to be supplied with timber for such requirements from the nearest timber administered by the disposing agency which is substantially equivalent in kind and quantity to the timber estimated by the disposing agency to have been disposed of from the claim.

None of these limitations apply after patent, and the patentee will acquire the same title to the mining claim as if this law had not been enacted.

The new law provides an in rem procedure similar to that contained in Public Law 585, 83d Congress, which resolved the conflict between the mining laws and the Mineral Leasing Act. This procedure enables the Government to resolve title uncertainties resulting from the existence of abandoned, invalid, dormant, or unidentifiable mining claims, located prior to enactment, in the national forests or on other public lands, and thus to eliminate problems incident to timber sales, and so forth. It is in the nature of a quiet-title action, and follows generally the procedure applicable to securing mineral patents, whereby those who claim rights adverse to those of the applicant for patent are required to come forward and assert them.

This procedure may be initiated by the head of the Federal agency responsible for administration of the surface resources of the lands involved, but will be conducted through and in the Department of the Interior.

Careful provision is made for notice to mining claimants of the pendency of such a procedure. A notice must be published in a newspaper having general circulation in the county in which the lands involved are situated. If published in a daily newspaper, the law requires publication in the Wednesday issue for 9 consecutive weeks; if in a weekly paper, in 9 consecutive issues; if in a semiweekly or triweekly paper, in the issue of the same day of each week for 9 consecutive weeks.

A copy of the notice must be personally delivered to or be mailed by registered mail within 15 days after the date of first publication (a) to each person found from a required examination of the lands to be in possession or engaged in working the lands involved in the procedure, (b) to each person who has filed in the county office of record a proper request for such notice, and (c) a copy of the notice must be mailed by registered mail to any person who is shown by a title search to have an interest in the lands. Following such notice, if a mining claimant files a statement asserting rights to the surface resources of a mining claim located on the lands involved in the procedure, a local hearing will be held to determine the validity of such asserted rights. If the decision upholds his asserted rights, no subsequent similar proceeding will in any way affect those rights. If a claimant fails within 150 days from the first publication to assert his rights in the prescribed manner, the claim thereafter has the same status as claims hereafter located, with the Government having the right, prior to patent, to manage and dispose of surface resources as set forth above.

Any mining claimant can assure himself of notice of an in rem proceeding affecting his claim by recording an acknowledged request in the county office of record for a copy of such notice, giving his name, address, and the specified descriptive data as to each unpatented mining claim under which he asserts rights.

To limit, as to any in rem proceeding, the length of the hearing and the cost of transcripts, the law restricts any single hearing to a maximum of 20 mining claims, unless the parties otherwise stipulate.

The new law permits the owner of any unpatented claim heretofore located, if he so desires, to waive and relinquish rights to the surface resources of his claim not required in his mining operations or related activities; and thereafter his claim will have the same surface rights status as claims hereafter located, with no disturbance of his priority rights in other respects. No such waiver would constitute any concession as to invalidity of the mining claim.

The new law prohibits inclusion in any mineral patent for any mining claim of any limitation or restriction not otherwise authorized by law. However, it does not limit or repeal any existing authority to include any reservation, limitation, or restriction in any such patent, and does not limit or restrict any use of the lands covered by any patented or unpatented mining claim by the United States, its lessees, permittees, and licensees which is otherwise now authorized by law.

The law also specifies that surface rights to waters reserved to the United States, as well as those assured to mining claimants, will be continued to be regulated and controlled by the provisions of State law to the same extent and degree as they were prior to enactment.

WILL THE NEW LAW AFFECT THE OWNER OF AN UNPATENTED MINING CLAIM HERETOFORE LOCATED?

Mining claim holders could be affected by the new law in that all unpatented claims heretofore located will be subject to a section 5 in rem proceeding if one is filed which includes the lands covered by the mining claim. In this event, the mining claimants would be required to come forward and establish the validity of his mining claim if he desires to assert full possessory rights to the surface of the land. Determination of the validity of so asserted surface rights would be made by the Secretary of the Interior or his designated agent.

The new law should contribute to greater utilization of the surface resources of our public lands without restricting the opportunities for prospecting and mineral development or reducing the rewards of success.

ANSWERS TO QUESTIONS THAT MAY BE RAISED BY MINERS

Question: Does the new law affect the rights of an individual to go on the national forests and other public domain to prospect for minerals and to locate mining claims?

Answer: No.

Question: May a mining claim be hereafter located on a deposit of a common variety of sand, stone, gravel, pumice, pumicite, or cinders?

Answer: No. However the term "common varieties" does not include deposits of such materials which are valuable because of some distinct or special value and does not include "block pumice"

which occurs in nature in pieces having one dimension of 2 inches or more. The report of the Senate Interior Committee pointed out that materials such as limestone suitable for use in production of cement, metallurgical or chemical grade limestone, gypsum, and the like, will still be locatable under the mining laws. The law is also specific in providing that a mining location may be based upon the discovery of a locatable mineral occurring in or in association with the common variety materials.

Question: What rights to the surface of a mining claim hereafter located will be controlled by the Federal Government?

Answer: The United States is authorized to manage and dispose of surface resources on claims hereafter located and to use the surface for access to adjacent lands, so long as and to the extent that these activities do not endanger or materially interfere with mining, or related operations or activities on the mining claim. In other words, the new law will in no way deprive a miner of any surface right which is reasonably related to prospecting, mining, processing operations. The House Interior Committee report on the bill was very specific in pointing out that this legislation would not have the effect of modifying long standing essential rights springing from location of a mining claim by stating that the dominant and primary use of lands hereafter located, would, as in the past, be vested in the mining locator of such claim.

Question: Do these reservations of surface rights to the United States continue after mineral patent has been granted?

Answer: No. The new law provides that no reservation, limitation, or restriction will be included in any mineral patent hereafter issued unless such reservation was otherwise authorized by law. In other words, the new law in no way affects the character and scope of title to a mining claim, including its surface resources, after patent is issued.

Question: Does the law impose any new restriction upon surface use of a mining claim validity located before the passage of the new law?

Answer: No.

Question: It has been charged that the new law gives a Government official the power to determine the validity of a mining claim. Is that true?

Answer: This has always been true under the general mining laws and this authority is not affected by the new law. The Secretary of Interior has always had authority to determine the validity of a mining claim. Under the in rem proceeding provided by the new law, the mining claimant without the filing of a specific contest against his location may be called upon to come forward and assert his claim and its validity. If he fails to do so, it does not invalidate his location, but simply gives it a surface-rights status like that of claims located after passage of the new law. He does not in such an in rem proceeding have to put the validity of his claim on the line. Of course, if he appears and asserts a validity of his claim predating passage of the new law, that question would be in issue. Determination might or might not completely condemn the location. For example, if it were found that the supporting discovery was not made until after passage of the new law, the effect of the decision would be to make the claim subject to the new law. But if it were found that the claim had no discovery, the effect would be a holding of complete invalidity.

Question: It has been charged that the new law discriminates against the small miner. Is this true?

Answer: The rights of every miner, small or large, are equally and fully protected under the new law. He is free to go on the public domain, including the national forests, and to prospect for minerals, to locate mining claims and to patent mining claims, just as he has been able to do so since 1872.

Question: Why did the mining industry support this new law?

Answer: The mining industry recognized that there were occasional instances in which attempts were made to misuse the mining laws to obtain valuable timber, a desirable homesite, or property for commercial purposes. It recognized that although such attempted mining locations usually lacked good faith or other elements requisite to validity, they nonetheless presented problems to those administering public lands and cast an unfavorable aura of suspicion upon the mining law system. The mining industry in no way condoned such abuses. Bills have been introduced for the purpose of preventing abuses which would have changed the basic concept of the location—patent system, or which would have imposed burdensome requirements on the locator. The industry felt that it was of vital importance to maintain the location and patent concept of established mining law, that the real purpose of the mining laws was to permit mineral exploration and mining use and that a prepatent preclusion of use of surface resources for other than legitimate mining purposes would not injure the good faith miner or retard mining activity.

Question: Does the new law require recordation of mining claim location notices of heretofore or hereafter located mining claims with any Federal agency?

Answer: No.

Question: How will common varieties of sand, stone, gravel, pumice, pumicite, or cinders now be obtained from public lands?

Answer: Such materials may be obtained under the Materials Disposal Act from the Federal agency administering the lands involved—that is from the Department of Agriculture or Department of the Interior. The charge for such materials will be determined by the administering agency. In the case of a Federal, State, or municipal agency, or nonprofit association or corporation, the Secretary of Agriculture or Secretary of Interior as to lands administered under their respective Departments may permit the removal of such materials without charge. In the case of an individual or private company, such materials may be obtained from the Federal agency administering the lands involved—from the United States Forest Service or from the Bureau of Land Management. Payment for such materials will be determined by the administering agency. In the case of a Federal, State, or municipal agency or nonprofit association or corporation, the United States Forest Service or Bureau of Land Management may permit the removal of such materials without charge.

Question: Does the new law affect the validity of a previously-located mining claim, based upon a discovery of common varieties of sand, stone, gravel, pumice, pumicite, or cinders?

Answer: No.

EXAMPLE

Jones is the owner of a mining claim located prior to enactment of the new law. He is satisfied that he has a valid mining claim, properly posted and recorded, and has a valid discovery of tungsten on the property. He has performed the annual assessment work requirements.

Question: What courses of action are available to Jones in the event the Secretary of Interior initiates action to determine the surface rights on lands embracing his claim?

Answer: First, if Jones desires to retain the full rights to the surface use of his mining claim which he presently enjoys, he must file—in the office specified by the Secretary of Interior in the published notice of the proceding—within 150 days from the date of the first publication of such notice, a verified statement setting forth as to his unpatented mining claim (a) the date of location; (b) the book and page of recordation of the notice or the certificate of location; (c) the section or sections of the public land surveys which embrace such mining claim; or if such lands are unsurveyed, either the section or sections which would probably embrace such mining claim when the public land surveys are extended to such lands or a tie by courses and distances to an approved United States mineral monument; (d) whether such claimant is a locator or purchaser under such location; and (e) the name and address of such claimant and names and addresses so far as known to the claimant of any other person or persons claiming any interest or interests in or under such unpatented mining claim. The Secretary of Interior will then fix a time and place for a hearing to determine the validity and effectiveness of any right or title to, or interest in or under such mining claim. The hearing must be in the county where the lands in question are located, unless the mining claimant agrees otherwise. Conduct of the hearing will follow the then established general procedures and rules of practice of the Department of Interior in respect to contest or protests affecting public lands in the United States. If the final decisions rendered affirms the validity and effectiveness of the rights asserted by Jones under his mining claim, then no subsequent similar proceedings can affect his right or interest under such mining claim.

Second, if Jones does not desire to assert full rights to the surface use of his

mining claim, proir to issuance of patent therefore, and is satisfied to have his rights of surface use limited to the surface use required in his mining operations or related activities, he could either (a) refrain from filing any statement, in which event his failure to file would be deemed to constitue a waiver and relinquishment of full surface rights and would thereafter subject the claim to the limitations and restrictions which permit the Government to manage and dispose of surface resources; or (b) file a waiver and relinquishment of such exclusive surface rights in the office where the notice or the certificate of location of such mining claim is of record which would thereafter subject the claim to the rights of the United States to manage and dispose of surface resources.

Discredited Public Housing, Killed Last Year, Must Not Be Revived

EXTENSION OF REMARKS
OF

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 30, 1955

Mr. FISHER. Mr. Speaker, the overwhelming vote by which the Wolcott substitute to S. 2126 was approved on yesterday, marked another milestone in the long struggle this House has made against the abuses and evils of public housing. Public housing was killed last year. As of today there is no such thing—except for the remnants of contracting remaining in the authorization for 35,000 units in the bill last year. And that authorization expires at the end of August.

On yesterday I addressed the House in support of the Wolcott substitute. Because of time limitation I did not cover many phases of the public-housing program which I believe should be reviewed. Therefore, I shall pursue the subject a little further at this time.

COMMITTEE BILL AGAINST ADMINISTRATION VIEWS ON PUBLIC HOUSING

In the debate on the Wolcott substitute, many proponents of the committee bill, which carried an overall total authorization for 124,000 housing units, contended the measure was in accord with the administration's request. That claim was challenged, and properly so. In a press release on July 13, Housing Administrator Albert M. Cole stated that the administration wanted the housing to require that—

First. Cities develop approved programs of urban renewal prior to participation in Federal public housing aid.

Second. Public housing be made available only to families displaced by slum-clearance projects.

That, Mr. Speaker, is the latest authoritative statement of the administration's position on the subject, coming from an official spokesman.

Both of those requirements are in the law now. But the committee bill instead of retaining them and complying with the administration's request, repeals both of them from the law, along with the repeal of several other very desirable restrictions to protect the public interest against evils and abuses that have cropped up in the administration of the program.

Moreover, while the President requested 35,000 units for each of the next 2 years, the committee bill went further and reauthorized the 35,000 included last year and went even further to initiate a brand new program calling for 20,000 units for old folks. This provision, not included in the President's request, is known as the Townsend plan.

So it is obvious that while the spokesmen for the committee which reported S. 2126 contended on yesterday that they were merely complying with the administration's request, the bill as reported was in many respects completely contrary to the administration's program.

SLIGHT RELATIONSHIP BETWEEN SLUM CLEARANCE AND PUBLIC HOUSING

For years, Mr. Speaker, the public housers have based their principal justification for socialized housing upon the claim that housing must be available for people who are made homeless by slum clearance.

But surveys have revealed that only a minor portion of public housing projects have been built upon land from which slums had been cleared, and that a very limited number of public housing tenants ever lived in knocked down slums. Some say the percentage is as high as 30 percent; others insist the figure is from 10 to 20 percent. Actually, therefore, there is but little relationship between public housing and slum clearance.

This well-known fact is proven not only by surveys but also by tacit admission of the Public Housing Administration. A few days ago Mr. Charles E. Slusser, PHA Commissioner, reported that a total of 29,509 units have been contracted out of the 35,000 authorized under what he called the crippling amendments which tied the program to cumbersome procedures. He added:

> The restrictive provisions in the Housing Act of 1954, tying the low-rent housing to slum clearance and urban renewal, stopped many housing authorities from further participation in the low-rent housing program.

He went on to say that out of more than 700 local housing authorities with active low-rent housing programs, a bare 34 have been able to enter contracts during the year.

In other words, here we have the Public Housing Commissioner himself virtually admitting that there is very limited relationship between slum clearance and the need for public housing. Yet public housers have demanded for years that we spend billions for socialized housing just so the people forced out in the street by slum clearance will have a place to live.

PUBLIC HOUSING BREEDS JUVENILE DELINQUENCY

Mr. Speaker, during the debate on yesterday it was said that public housing is a weapon against crime. I wonder about that. Actually, many people are asking: Why is there so much juvenile delinquency in public-housing projects? That is difficult to answer unless we assume that among tenants attracted to such projects there are a considerable number of juvenile delinquents, and by concentrating them the problem is aggravated. That fact is illustrated by a story which appeared not long ago in the New York Times, to this effect:

> Dozens of families are being evicted from city housing projects because their delinquent children are regarded as a menace to the safety and comfort of other tenants.
>
> City housing authority officials said yesterday that chronic or dangerous juvenile delinquency was among the reasons for which about 250 families are evicted each year as undesirable tenants.

A couple of years ago District Judge Campbell in Houston refused the custody of a child to a litigant who proposed to keep it in the San Felipe courts, a public housing project, because he said it was not a proper place to rear a child. And he cataloged from police records a long and unsavory record of crime, immorality, and delinquency in public housing projects in the city of Houston. While I am sure such conditions do not obtain in many well-administered projects, yet scores of instances have occurred in other cities that could be cited.

S. 2126 WOULD COST TAXPAYERS $2½ BILLION

Let us look for a moment at the fantastic cost of this program. If the committee bill had prevailed, and if the public housing units covered in it were constructed, the cost would exceed $2½ billion.

It would be cheaper, much cheaper, for the Government to build the projects and then deed them to occupants, rather than carry the load of subsidy, upkeep, financing, interest, overhead, and so forth, that are involved. But the tenant would be foolish to accept title, if offered, because it is much cheaper for him to become a ward of the state, enjoy rent at low or nominal levels, no taxes on the property and no assessments for streets, schools, sewer lines, garbage disposal, or even lawn mowing.

Here are the facts about the cost. Each apartment with a development cost of $10,000 (which is below the present average cost) eventually costs the taxpayers $18,600. The law (sec. 10 (b) and (c) of the United States Housing Act of 1937, as amended) provides that the fixed annual contribution shall in no case exceed a sum equal to the applicable Federal interest rate plus 2 percent, times the development or acquisition cost.

Public Housing Administration has announced that the going rate for the period ending June 30, 1955 is 2⅝ percent. Therefore we can make this computation:

	Percent
Federal going rate of 2⅝ percent equals	2.65
Plus 2 percent	2.00
Total	4.65

Four and sixty-five hundredths percent times 40 years equals 186 percent.

One hundred and eighty-six percent times development cost of $10,000 equals $18,600.

Then by multiplying the 124,000 units authorized in S. 2126 times the $18,600,

the total possible subsidy cost is $2,306,400,000.

The cost which I have just described does not include the $4.90 per month per unit, which represents the Federal tax loss on tax-exempt public housing bonds. The confirmation of that loss is found at page 314 of the President's Housing Advisory Committee Report.

The total additional cost per unit is thus increased by $2,352.00, when computed over the 40-year period.

Nor does this computation include the tax loss to local communities which are required to exempt a public housing project from any form of local tax for a period of up to 40 years. This alone amounted to $25 million in 1953, according to the President's Housing Advisory Committee Report. In fact, the Federal Housing Agency's handbook of 1949 states:

> It is expected that the value of the contribution which localities make by foregoing full ad valorem taxes on projects occupied by low-income families, less in lieu payments which are received, will approximate 50 percent of the Federal contributions over the life of the projects.

Nor do the cost figures I have given include the administrative costs that will go on indefinitely. That alone runs into millions.

In other words, when we add the net loss suffered in taxes by local communities to the mounting administrative costs of public housing, and add the loss in revenue from tax-free public housing bonds, to the costs I have previously computed, the total outlay, direct and indirect, to support this venture in state socialism is truly fantastic.

PUBLIC HOUSING BONDS A BONANZA FOR INVESTMENT BANKERS

Mr. Speaker, much has been said here about Government bonds providing a big advantage for investment bankers. The gentleman from Texas [Mr. PATMAN] has had a lot to say about that. He has expressed fear that such investors will garner an unfair advantage. That point is particularly applicable to the investors who reap such a windfall from the purchase of public housing bonds.

It must be remembered that the only Federal bonds being issued that are exempt from income taxes are public housing bonds. The Public Housing Administration has been selling around a billion dollars' worth of those bonds annually. They are much sought after by the investment bankers, and for good reason. You cannot blame them. It is legal, thanks to the 1949 Housing Act which exempts those bonds from income taxes. Now what does that mean to the investors?

It means this: Even at 2 percent yield, the tax-exempt bond is the equivalent of a yield of 13.33 percent on a taxable bond held by an individual in the $80,000 to $90,000 individual income tax bracket.

And the President's Advisory Committee on Housing states:

> It is estimated that for units completed under the Housing Act of 1949 the average tax loss (on tax-exempt bonds) will be about $4.90 per unit per month.

So the investment banker gets the big windfall at the expense of other taxpayers. As I see it, such an advantage is both unsound and indefensible. It should be repealed.

PUBLIC HOUSERS OPPOSE RESTRICTING OCCUPANCY TO LOW-INCOME TENANTS

Mr. Speaker, another deception that has been practiced by public housers has been the phony claim that it is to help only low-income people. Just you try to limit occupancy of public housing apartments to tenants who make $2,000 a year, or $3,000 a year, and witness the public housers blow their tops.

Let us take a few readings on this and see what the facts are. Take the city of Detroit where the local housing commission director reports that tenants are admitted to public housing apartments who earn $3,800 annually, and are permitted to remain indefinitely even if their income goes up to as much as $4,500.

In Wilmington, Del., it is reported to be $4,800.

In Dayton, Ohio the annual income limit for public housing occupancy is reported to $5,800.

Other comparable examples over the country could be listed here. But these serve to completely refute the phony contention that public housing is intended only for low-income people who have been displaced by slum clearance.

LATE SENATOR TAFT FAVORED PUBLIC HOUSING FOR WELFARE PURPOSES ONLY

Mr. Speaker, a number of speakers on yesterday cited the support of the late and lamented Senator Taft as justification for their present support of public housing as a policy. But they should go back and read the late Senator's speeches on the subject. They will find that his support of the program was confined to considerations of public welfare. He was too much of an advocate of free enterprise to favor public housing for tenants making incomes of, say, $4,000 a year.

Let me cite an illustration which delineates the difference between public housing as welfare and as socialism.

Two years ago, according to the Wilmington Morning News, Rev. F. Raymond Baker, a member of the Wilmington Housing Authority, appeared before the city council there and protested an increase of up to $4,800 which a public-housing tenant could make and remain in the project. He is quoted as saying: "Through the years, I have been a member of the Wilmington Housing Authority and during that time I have been interested in, first, housing for low-income families, and, second, keeping the professionals from going too far with public housing. I think I have been fighting against what happened in the Wilmington Housing Authority," where, he said, the action in increasing the income levels marked the end of public housing as welfare and the beginning of housing as socialism.

Those of you who get comfort from following the example of the late Senator Taft can be assured that he never advocated public housing as socialism. The record should be kept straight in that respect.

SHOULD TAXPAYERS HELP PAY GROCERY BILLS?

Mr. Speaker, the public housers demand that "every American have decent housing at prices he can afford." That is fine and good in theory. But it means having Uncle Sam help pay the rent bills each month. Under that theory, would it not be equally as logical to demand "a well-balanced diet of decent foods for every American at prices they can afford?" Or "decent medical and hospital care for every American at prices he can afford?" Or "decent transportation at prices he can afford?" Just where would those who adhere to that philosophy draw the line?

SHALL WE MARCH BACK DOWN THE HILL?

You and I know that socialized housing, as a philosophy, is simply contrary to our concept in this country of private ownership, of free enterprise. It is easy to say a little is all right. But that is just as logical as it is to say that a little pregnancy is all right. We have passed the so-called tapering-off stage. Public housing has passed beyond the welfare stage and is now in the socialistic stage. If that were not true there would be no such clamor by professional public-housing advocates for the repeal of the so-called restrictive provisions now in the law—provisions designed to confine public housing to welfare purposes.

We have been tapering off since 1951, when by a vote of 181 to 113 the House adopted the Gossett amendment to limit new public-housing starts the following year to 5,000. And we have insisted on ending the program each year, only to be overridden by the Senate. Then, last year, both the House and the Senate spelled out the total, final, complete end of public housing. Let us not march back down the hill and wipe out the progress that has been made. Let us think of America and its future, of the preservation of free enterprise against the inroads of this form of creeping socialism. After all, we have done right well under the free-enterprise system. Why pursue this foreign system of public housing, copied lock, stock, and barrel from England, where it was initiated by the Labor-Socialist Party?

Mr. Speaker, an English poet once wrote that—

> Vice is a monster of such frightful mien
> As, to be hated, needs but to be seen;
> But seen too oft, familiar with its face,
> We first endure, then pity, then embrace.

A Tribute to Congress

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 30, 1955

Mr. SCHWENGEL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to make an observation which has come to me as a freshman Congressman.

As we come to the end of the 1st session of the 84th Congress, I cannot help but express myself as being grateful for the privilege of representing a segment of the people of this mighty land of ours in the halls of Congress. I know now why it is often referred to as the greatest legislative body in the world. I have seen it operate. I know firsthand of its deliberation, of its innate sense of fairness, and of its constant striving to implement the voice of the people. I want to echo all of the fine things that have been said in tribute to Congress. I take exception to those who would deride and belittle it. It is not perfect in every sense of the word, but it is a true reflection of the hopes, ideals, and aspirations of free men as they strive for perfection. I am proud of Congress, and prouder still that I am a Member.

In this tribute, it behooves me to pay due respect to all Members of Congress for their help and guidance. I had lots to learn as a new Member. I still have a long way to go before I can feel that I am a good Representative. I am certain, however, that I will attain that status sooner through the helpful cooperation of my colleagues who have been kind and tolerant of another freshman.

I have a special tribute to pay to my fellow Members of the Iowa delegation. They have not had a freshman to break in for a long time. But they took me under their wing, and through the generous help they have given my office staff and me, I have done a better job representing my district than had I been left to "learn the ropes" by trial and error. I will always be grateful that they helped me get off on the right foot and that they lived with me, and worked with me, through this first session.

Already the pundits are starting to appraise the record of the 84th Congress. It will probably be some time before our efforts are fully evaluated and assigned a place in history. I am optimistic about that evaluation, and with a deep sense of humility, truly proud to have played a part in the record.

Banquo's Ghost—The Summit

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 30, 1955

Mr. BYRD. Mr. Speaker, the recent Geneva Conference is now over and, although the meeting at the summit will be placed in its proper perspective by the cold and scrutinizing light of history, some of the newspaper columnists have already been able to whisk us out of the atomic and cobalt age into the glorious age of rose-colored glasses. All is suddenly sweetness and light, there has been a recognition of the status quo, the bear is not really a bad bear after all, everybody is buddy buddy, and "there ain't gonna be no war."

A magic has been exuded from the conference which far excells anything that can be found in the Arabian Nights and, borne upon the wings of soft breezes drifting down the slopes from the sun-swept summit, occult powers have completely overcome some of the crystal gazers, to say nothing of certain administration spokesmen of the Democratic Party who have been felled at a single stroke of the wand.

However, Mr. Speaker, like a breath of fresh air, it is satisfying to find that many writers are refusing to follow the white rabbit into the land of imagery and that, on the other hand, they are showing a determination to study the facts realistically and relate the real results of the conference to the American people. In so doing they are contributing a service to the cause of justice and freedom.

To those who do suffer the illusion that the real nature of international communism has been changed by the new show of amiability and affability put on by the Russian delegation at Geneva, one might point to the announcement, on the heels of the Geneva adjournment, that the Soviets are increasing their military forces in East Germany.

Then, too, the Israeli plane disaster, in which more than fifty persons were shot down by Bulgarian Communists, only conforms to the Russian pattern of committing overt, violent acts in order to demean the United States before the eyes of the world. "So sorry," says the Bulgarian Communists, and they feel that they have atoned for their trigger-happy brutality.

After all, it was virtually on the eve of the Geneva conference that the Russians shot down one of our American planes over international waters, inflicting severe burns upon a number of American boys, scars which some of the victims will carry to their graves.

In that instance, the Soviets quickly assumed partial responsibility, a development, based upon past experience, that warranted the sound conclusion that they knew it was their full responsibility. Presented with this flagrant case which ought to have been pressed vigorously and for the assessment of full blame and total damages, our State Department made a hasty agreement, accepting the Soviet offer to pay for half the damages.

I repeat this case at this juncture, Mr. Speaker, to point up the sorry standards of measurement we are using in our official dealings with the Russians and to stress the fact that our sincere desire for peaceful relations with the Communists will carry us into serious danger unless we base our reckonings and policies on realism.

Mr. Speaker, the American people, without regard to party, would literally throw their hats in the air with joy, if Geneva had produced any real, sound basis for peace in our day. But all of the smiling and hale-fellow-well-met show at the summit failed miserably to alter the totalitarian Soviet structure. The satellite peoples are just as captive after Geneva as they were before. We have not read of a single prisoner having been freed. The world still looks in vain for the Soviet lifting of the ban against freedom of worship. The loved ones of the thousands upon thousands of politically imprisoned foreign nationals have less hope now for the release of their relatives than they had before the meetings began. No edict has been issued by the Kremlin for its subversive agents throughout the world to cease and desist in their foul efforts to undermine national governments throughout the free world.

What has come from the Geneva meetings, Mr. Speaker, is a vast flood of propaganda all aimed at showing that the prospects of peace are soaring because Bulganin exhibited party manners, that good fellowship was generated with the aid of cocktails and caviar, that a "new climate" has been produced, and that from here on everything is going to be just ducky.

If we ever get out from under this terrific barrage of propaganda bilge, we shall discover that the all vital, all important problem of German unification remains unsolved, and, as a matter of fact, the Western position vis-a-vis Germany has been damaged and the Adenauer government has been weakened. Why do I say this, Mr. Speaker? For the simple reason that the Western position on the German unification problem has been predicated upon a united-front posture by Britain, France, and the United States to the effect that German unification must be disposed of constructively before any discussion would be engaged in relative to the Soviet proposal of a general European security pact. As a matter of fact, published reports from recognized and established correspondents have related that, in a moment of exuberancy, during face to face conversations with the Russians, President Eisenhower said that the German unification matter was not necessarily a condition precedent for the discussion of European security. This statement, which the press reported, caused the British representatives to have a slight case of tremors, caused the French to go pale, and required a late hour press conference by Secretary of State Dulles to shore up the Western Alliance and give reassurance to the Bonn government.

As we get more of the picture of what really went on at Geneva, there are other disturbing angles coming to the fore. Let us consider for a moment the disclosure by French Premier Edgar Faure that it was a last minute proposal by President Eisenhower which broke the deadlock at the conference and made it the success it is being heralded.

The United Press is authority for the story on Premier Faure, and it carries the very significant editor's note to this effect:

> The secrecy of the final conference prevented Mr. Faure from explaining just what the items were that deadlocked the conference or what Mr. Eisenhower proposed to break the deadlock.

There is every indication that the concession Mr. Eisenhower made was in reference to the vital question of German unification coming before consideration, by the October Foreign Minister's meeting, of the Russian overall European se-

curity pact. If this is the price we paid for harmony, if this is the concession our President made in order that the summit meetings could be proclaimed a success, then, in reality, we have experienced a major defeat. It is hardly to be wondered at that the British would be greatly disturbed and that the French would be gravely upset, or that the Germans would have the feeling that its allies were cutting the ground from beneath the Bonn government.

And so, it is most disturbing to look back upon the fruitless Geneva Conference, and to wade one's way through the sea of phony claims being made for the summit meetings and then look out across the months to the forthcoming Foreign Ministers meeting in October. You, Mr. Speaker, and the Members of this House know my feelings on the subject of trade with Russia, of my insistence that all goods are strategic and that when we supply and alleviate the deficiencies in the Russian economy we are in fact strengthening and perpetuating the Communist regime. Well, there are significant indications that at the October meeting steps will be proposed to drop the trade barriers and open the floodgates. Of what other import are the following words by President Eisenhower, contained in his last speech at the Geneva Conference:

The work of our foreign ministers as they strive to implement our directives will be of great importance, perhaps of even more than what we have done here. Theirs is the task, reflecting the substantive polices of their governments, to reach agreement on courses of action which we here could discuss only in broad terms. I know we all wish them well.

I trust we will all support the necessary adjustments which they may find our governments must make if we are to resolve our differences in these matters.

These words, too, could apply to the German unification question and to many others, and if they do they are cause for serious concern, not for cheers.

The Army's Top Cops: A Well-Deserved Salute to Maj. Gen. William Maglin and His Corps of Military Police

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. SIEMINSKI. Mr. Speaker, in the August 1955 issue of Coronet magazine, a most unusual and outstanding bit of reporting is done in an article entitled "The Army's Top Cops." It should lighten the hearts of the families whose kin serve in the Army.

Would that the Department of Defense had a unified corps of cops for all branches of the service skippered by a general like Maglin who says, "Our work is really protection; we protect soldiers from rackets, from people who prey on them. It's our job to look out for trouble, not look for trouble."

The article follows:

THE ARMY'S TOP COPS
(By Tom Davis)

About an hour before reveille at a large eastern Army post, a military police car drew up before the post exchange and a young MP climbed out to make a routine security check of the darkened premises.

Leaving his partner behind the wheel, he disappeared around a corner of the building. A few moments later, he came rushing back to report: "One of the back windows is smashed. The screen's been cut. Radio the desk right away."

His partner grabbed the radio telephone on the car's dashboard, called the military police sergeant's desk, and within seconds the office of Maj. Max C. Vogt, Jr., veteran provost mashal, had put into action one of the Army's crack military police criminal investigation units. These men—soldiers first, military policemen second, and investigators by specialization—are among the finest detectives in the world.

The post exchange officer, among the first to be called, promptly arrived and it was discovered his office safe had been cracked and looted of $50,000 in cash receipts covering a 3-day holiday period. With this, the MPCI men went to work.

Checking revealed that entry had been made by cutting the heavy wire screen, then jimmying and pushing up the window. Two clues were uncovered a this stage: marks which the tool used to cut the screening had left on the prongs of wire, and cloth fibers which clung to the screening where the burglar's clothing had snagged on the sharp edges.

Screening and cloth fibers immediately were sent to the FBI laboratory for analysis. In this instance, an FBI laboratory was used because it was the closest to the post; normally, it would have been an MPCI lab.

Here it was determined that the fibers had come from a type of clothing issued to soldiers. A photographic blowup showed in clear details the markings left on the screen by the cutting tool. With continued use, tools such as wire snippers leave their own distinctive markings, much like a pistol barrel rifling leaves on a bullet.

Despite around-the-clock work, the investigation dragged on until a soldier found some costume jewelry secreted in a ventilator in a supply depot. The stuff, dust-covered but still bearing the stock tags, was brought to the provost marshal's office where it was examined.

The PX had been broken into several times in the past and in one of the burglaries a quantity of rings and necklaces had been taken. A check of inventory records disclosed that this was some of the loot. Now the MPCI people thought there might be a tie-in between the old and the new cases, and the search shifted to the new area.

It was discovered that workers in this building used tools of a type that could also be employed to cut heavy screening. Shortly such a tool was found hidden in a desk drawer and subsequent lab tests showed it was the one which had cut the screening on the PX.

Now 15 men who might have had occasion to use this particular tool came under interrogation. One of them—a married man long in the service—became a strong suspect. He denied any connection with the case, however, nor could investigators find evidence linking him with the burglary and safe-cracking.

A check of the suspect's service record showed that he had been in trouble in the past. It was learned also that he had purchased a new car, made a down payment on a home, and had been spending money freely since the burglary. The MPCI men knew that these things could not have come out of the suspect's military pay.

Brought to the Provost Marshal's office, he willingly answered questions and agreed to take a lie-detector test. But when the time came he refused flatly to cooperate and clammed up tight on all further attempts to question him.

The MPCI men knew that while there was overwhelming evidence that they had the right man—all of it was circumstantial. The suspect still continued to deny he knew anything about the case. At this point, they got their big break.

The Military Police, it should be explained, work closely with local police authorities in every area in which they operate. In this case, local police had been brought up to date on the latest development in the PX burglary. As the MPCI men were about to take the suspect and their evidence to the United States Federal Commissioner's office, a local policeman telephoned that a container holding three pistols and a large sum of money had been recovered from a city dump.

On a hunch, the Provost Marshal told the prisoner that they would make a brief stop on the way to the Commissioner's office. Shrewdly, he did not say where.

When they arrived at police headquarters, the prisoner took one look at the container and, believing he'd finally been trapped, made a complete confession.

He had surmised, he said, that the PX safe would contain a large amount of money taken in over the 3-day post holiday and had broken in during the night. The three pistols all belonged to him, although they had no connection with any case. He later was convicted and is now serving a 20-year term in a Federal prison.

Contrary to the general belief, the Army has no Criminal Investigation Division, and never has had one. The AEF, in World War I, had a Division of Criminal Investigation in Europe. In World War II, the Office of the Provost Marshal General had a Staff Division for Criminal Investigation. This Division did not exercise command over the investigators in the field. Investigators were assigned to major commands. Because of the wording on their badges and credentials, they became known as "CID agents," and frequently were organized for operations independent of the Army command structure.

The old setup now has been replaced by the hard-hitting, streamlined MPCI groups.

In the words of Maj. Gen. William H. Maglin, Provost Marshal General of the Army, Chief of the Military Police Corps, "the investigator has moved into his rightful place in the Army Establishment. He works for his local provost marshal in the same manner as the detective works for the chief of police in his home town, and the provost marshal of any command is the chief of police."

A soldier expressing a desire to become an MP may be assigned to the Provost Marshal General Center at Camp Gordon, near Augusta, Ga., where he may stay from 16 weeks to 8 months, depending on the extensiveness of his training. MPCI detachments are assigned to areas with potentially high crime rates, or where the need for strict crime prevention is necessary.

Today's MPCI man is a highly trained specialist in criminal investigation who may or may not wear a uniform. If the investigator is working in a military area where the uniform is commonplace, he will wear it. If he is assigned to a case involving civilians or foreign nationals, he wears civilian clothes. He averages 33 years of age and is married.

He is not charged with matters concerning spies or enemy agents. He's a career or professional soldier dedicated to fighting crime where it concerns the Army, and his identity is carefully concealed so as to preserve his usefulness to the service.

He works with this admonition constantly before him: "We want no 'Sam Spades' in the organization." This simply bears out

the military police slogan: "Of the troops and for the troops." Though it also serves to discourage any ideas a man might get about using the organization as a stepping stone to personal publicity.

Men taken into custody are, for the most part, enlisted men; and it is usually the soldier who is a. w. o. l. or who is a deserter who commits the major crimes—murder, rape, criminal or aggravated assault, or some other felony.

Larceny is the big crime, at the moment, in the life of an MPCI man. That is the felony that keeps him busiest. Commanders at large posts where there are supply depots will begin receiving reports of missing items. These are forwarded through channels to the provost marshal and MPCI men will be ordered to make an investigation.

One of the most bizarre cases in MPCI annals came up near the close of the Korean fighting. This was the Queen of Pusan case, so called from a 23-year-old former Korean nurse, Lee Yung Ja, known in the Korean underworld as the queen of Pusan. Lee was a striking brunette who attracted considerable male attention whenever she appeared in the better cafes.

With most of the off-duty soldiers frequenting these places, it was no job for her to meet a young corporal who worked in one of the big American depots storing clothing highly salable in clothing-shy Korea. It didn't take the beautiful, brainy, and completely unscrupulous Lee long to see possibilities in the friendship of this corporal.

The friendship grew in no time at all and soon she had managed to get him on dope. She herself, MPCI men say, never had the habit.

Floating between Seoul and Pusan, with a gang she had rounded up in the two war-torn cities, Lee began to move into the big-time of Korean vice. With the corporal nicely on the hook, she organized a systematic looting of the clothing depot where the corporal was working as a night checker.

He was in a position to pass loaded trucks through the security guards at the gates without arousing their suspicions, and he saw to it that these trucks contained clothing originally destined for U. N. troops. On one occasion, a Korean ambulance went through the gates carrying a load of the contraband apparel, and, like the trucks, headed straight for one of the "Queen's" hideouts.

This went on for 3 months, when military authorities suddenly launched a drive against the "Queen's" flourishing dope racket in Pusan. In one of the MP raids, the corporal was picked up for questioning in an off-limits cafe where he'd been spending money in reckless fashion.

With more than $86,000 in American money stashed away—a tremendous fortune when converted into Korean cash—the "Queen" decided this would be a good time to clear out of Pusan. None of the money so far had been split up among the gang and when a Korean member got wind of her intentions, he tipped off Korean Army officials. They, in turn, notified the American authorities. The corporal soon got the word and, realizing he'd been duped along with the others, exposed the ring's operations.

MPCI men rounded up the remaining American members of the gang who were later tried, convicted, and sentenced to long terms on charges of larceny and conspiracy to defraud the Government.

Lee Yung Ja—described as one of the most beautiful women in Korea—escaped. MPCI men who worked on the case think she bribed a seaman to smuggle her aboard a ship and get her out of the country. She is believed to be somewhere in Japan—studying to be a doctor.

The military police corps of today was established in September 1941. Its insignia is a pair of crossed flintlock pistols.

The actual strength of the corps is classified information, but it generally runs about 2 percent of the total population of the Army. Out of this relatively small number comes the even smaller elite group known as the criminal investigators.

The Military Police Laboratory, staffed with technicians—most of whom are warrant officers with scientific educational backgrounds—backs up the criminal investigators in the field with test tubes, cameras, microscopes, X-rays, and the latest of scientific equipment.

These crack Army detectives—many of whom were commissioned officers during World War II and, after being separated, returned to the service and went into MPCI work—have solved crimes dealing with larceny, assault, murder, rape, counterfeiting, car thefts, black-market operations, and even obscene letters. "Our work is really protection," General Maglin says. "We protect soldiers from rackets, from people who prey on them. It's our job to look out for trouble, not look for trouble."

Funds for Recreational Facilities in National Forests

EXTENSION OF REMARKS
OF
HON. D. R. (BILLY) MATTHEWS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. MATTHEWS. Mr. Speaker, I have recently introduced a bill (H. R. 7537) which I believe will be of interest to many Members of Congress and to which I earnestly invite their attention. It is a bill which makes a further effort to solve the knotty problem of providing adequate funds for recreation facilities in our national forests.

As the Members know, Mr. Speaker, this is a problem which has been before the Congress for many years and for which, as yet, no satisfactory solution has been found. The phenomenon of mass use of our national forests by the people of this country for recreational purposes is one which has developed largely since the end of World War II. It is to my way of thinking one of the healthier and finer aspects of our American way of life. It is good for a man's body, mind, and spirit to get into the forests away from the necessary but unnatural jangle, stress, and routine of every day life.

There have always been a few hearty souls who have felt it necessary, from time to time, to shake the impediments of civilization from their shoulders and get off into the woods. Prior to World War II, however, their numbers were relatively few. Following the end of the war we found ourselves at a new high level of personal prosperity, with good roads, improved automobiles, a short workweek and paid vacations for many wage earners, plus what was apparently a new and wider desire among the American people to find relaxation and refreshment out of doors.

This was, as I have remarked, a most healthful development in our national way of living. But this development has brought with it serious problems. In 1954 an estimated 40 million people used the national forest areas for recreational purposes. They found there, in the main, facilities which had been constructed during the late 1930's—largely by CCC workers—designed to care for only a fraction of the number of people who are now using the national forests.

The problem involved is not merely that of the convenience or health of the persons using the national forests for recreation. The larger aspect of the problem is the protection of the forests, the wildlife, and essential water supplies from damage, dissipation, or pollution by those who are rightfully and lawfully using the forests for recreational purposes. One of the greatest problems—let us be frank about it—is sanitation. The national forests are one of our greatest and most important sources of water. With millions of vacationists going into these national forests the problem of sanitation becomes very great and, if not provided for, threatens the pollution of streams and water sources endangering not only those who are visiting the national forests and must use streams and springs for their water supply but also the residents of other areas who depend upon the national forests for their water.

Another danger is that of fire. There is relatively little fire danger from widespread use of a national forest for recreational purposes if those who are in the forest find prepared camp grounds at which they may camp with convenience and safety. If they do not find such camp grounds, they will camp where they can, and, scattered about the forests they present a very real fire hazard and are virtually out of the reach of any kind of supervision or of immediate assistance, in case a fire should start.

Another problem is the maintenance of wildlife population. Those who go into the forests for recreation hope to find there an adequate population of fish and game. Our wildlife resources have been maintained at their present level only by the intelligent and conscientious effort of State, Federal, and private conservation agencies. Wildlife will not maintain itself in the abundance desired against the inroads of mounting millions of forest users without additional intensive effort on the part of those engaged in the restocking, development, and conservation programs.

To sum it up, the problem involved is not so much that of providing conveniences and facilities for those who want to use the national forests—it is that of protecting the water sources, the wildlife, and the forests themselves from the adverse effects of use by millions of Americans who are going into the forests whether facilities are provided for them or not.

Many Members of Congress have clearly recognized this problem and over the past 7 or 8 years there has been a constant effort to work out a solution as to how funds might be adequately provided to meet the needs. Let me state at the very first that the appropriations committees and the Congress have not been ungenerous in this respect. But

with so many demands upon the financial resources of the Nation, with so many items vital to the security and welfare of the Nation requiring tremendous appropriations, it is only natural that the appropriations for the purpose of providing adequate facilities for recreational users of the national forests have never been sufficient to do the job.

Beginning several Congresses ago, bills designed to provide these funds and solve this perplexing problem were introduced in Congress. At first, these bills took the simple form of providing that a certain percentage of all the receipts of the national forests should be set aside into a special fund to be used for the development, maintenance, and operation of recreational facilities within the national forests. This was a simple and effective plan, and there was precedent for it in laws providing for the setting aside of part of the Forest Service receipts for other special purposes. Many persons objected to this approach in principle, however, believing that the policy of establishing special funds which can be spent without further approval of Congress and of establishing permanent appropriations is not the best governmental procedure. Most of the major conservation groups and organizations in the country alined themselves solidly behind this approach and for several years there was a virtual stalemate as efforts were made time and again to secure favorable action on this type of legislation and Congress as frequently declined to approve it.

As an alternative, there were introduced in the 82d Congress bills which would have established some kind of fee system whereby the users of the national forests for recreational purposes would have paid a small fee and by their aggregate contributions have provided the funds for maintaining additional facilities.

These bills, too, encountered the valid objection that they gave the Forest Service what amounted to a taxing power and turned over to it funds for expenditure without the necessity of presenting a budget to the Congress and receiving approval of their plans. These bills were also objected to by certain groups, mostly sportsmen groups, who said that they were opposed to having to pay anything, no matter how small, for the use of facilities in the national forest.

Since then, intermittent conferences have gone on almost constantly between the staff of the Committee on Agriculture and the various groups and agencies and individuals interested in this problem. A number of compromise bills were developed, seeking to resolve the differences in viewpoint which heretofore have prevented effective legislative action. Limitations have been put on the amount of money which could be accumulated in this special fund; requirements have been included that the Forest Service should have to seek an appropriation each year, even though the money were coming from a special fund; and other licensing provisions and campfire permit provisions have been advanced. I myself introduced one of these bills at this session of Congress (H. R. 4994) and there are pending at the present time before the Committee on Agriculture no less than 10 bills dealing with this subject.

The bill which I have now introduced today (H. R. 7537) is not by any means an entirely new approach to the subject but is, rather, a refinement and development of the many proposals which have heretofore been made. The bill will authorize and direct the Secretary of Agriculture to establish a fee for the use of recreational facilities in the national forests.

It requires the Secretary to set the fee annually at a level which he estimates will reimburse the Treasury for appropriations made for the development, maintenance, and operation of these recreational facilities. The money will not go into a special fund—it will be covered into the Treasury as miscellaneous receipts along with other Government income. The Forest Service will not have any fund available for expenditure without accounting to Congress. On the contrary, the Forest Service will seek and obtain its appropriations for recreational facilities in the usual budgetary manner but the Committee on Appropriations and the Congress will have the assurance when the appropriation is made that there will be no actual cost to the taxpayer—that every dollar appropriated for this purpose will be reimbursed to the Treasury by the special license fee established and collected by the Forest Service.

I know that there will be those who will protest against the imposition of any fee or license for the use of what is regarded as general public property. I will not be impressed by these objections, however. It is not intended that there should be a fee imposed for access to the national forest but only for the use of facilities which are provided therein for campers and others using the forests for recreational purposes. To my way of thinking, there is no more democratic way of doing business than to provide that those who use and enjoy special benefits and facilities should pay the major part of the cost of those facilities. I can see no reason why the taxpayer in Maine or New York City or Miami who may never have any desire of going into a national forest should bear any part of the cost of providing facilities for me and others like me who do want to go into the forest and engage in fishing, hunting, or other recreational activities. On the contrary, it seems quite plain to me that those of us who want to use these facilities should be willing to bear the cost of their development and maintenance. I think that every American who enjoys and loves the forest enough to want to get out into them will be proud and happy to have an opportunity to pay the small fee which will be assessed and know that he is doing his part to provide the facilities he uses and to protect the forests and the watersheds against unnecessary damage.

Nor am I impressed by the protest that I assume will come from some sportsmen that here is another fee being added to the backs of the fisherman or hunter. I have bought enough trout flies and bass plugs and shotgun shells in life to know that the 50-cent or $1 fee per year that a sportsmen may be asked to pay to maintain national forest recreational facilities is going to comprise such a small portion of his recreational budget that he will have forgotten about it by the time he makes the next trip to the sporting-goods store.

I have not discussed my bill in detail with the Forest Service so I certainly do not pretend to commit that fine organization as to how it will administer the bill, in case it should become law. As I see it, however, the licenses required by the bill would, in most cases, be a windshield sticker that could be affxed to the automobiles of those using the forest facilities. The price of the license would depend, of course, upon the amount of the appropriation and the estimated number of persons using the facilities. My best rough estimate at the present time is that when the program got into full operation the fee would be somewhere between 50 cents and $1 per auto.

It is not intended that any fee should be charged those people who, en route from one place to another, merely pass through the national forest, even though they should stop along the road for a picnic or for other casual use of the forest. It is intended that the license and the fee should apply to those who camp overnight in the forest, who fish there, or go there for skiing or hunting or other similar recreational activities. I think it quite likely that the criterion as to when a license is required might be determined on the basis of whether or not the person was staying overnight within the forest.

As I visualize it, the license stickers would be on sale very generally in sporting-goods stores, general stores, courthouses, and other public agencies, and similar convenient locations within reach of all the national forest areas. Special provision should be made in the Secretary's rules and regulations for parties which travel by bus or in some manner other than by private automobile.

There is no intention in this bill to turn forest rangers into policemen and in my opinion the policing job would be very slight. I cannot conceive of any red-blooded American who likes to use and enjoy our national forests objecting to paying an almost nominal fee each year for the purpose of developing and maintaining the facilities he enjoys. Personally, I would be glad to have the privilege of buying such a license each year even if I were not fortunate enough to get to make use of it.

I invite the cooperation of my colleagues who are interested in better recreational facilities in our national forests to joint with me during the second session of the 84th Congress in my efforts to obtain passage of H. R. 7537.

Good Roads Lobbied Away

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. MACHROWICZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the New York Times of July 29, 1955, entitled "Good Roads Lobbied Away" and from the Detroit Free Press of July 28, 1955, entitled "Road Needs Disregarded" which I think merit the attention and thoughtful consideration of every Member of the Congress:

[From the New York Times of July 29, 1955]

GOOD ROADS LOBBIED AWAY

The House, in a depressingly irresponsible action, has defeated all legislation to accelerate highway construction. It repudiated the good sense and sound financing of its Public Works Committee by rejecting the Democratic highway bill by a vote of 292 to 123. The committee, with great political courage, had agreed by an impressive majority to match spending with taxation in a single package. The House spurned such fiscal responsibility. It also defeated the Republican bill for long-term bond issues for roadbuilding by 221 to 193. So the public gets nothing except a stunning disappointment.

How did this come about? Speaker RAYBURN said: "The people who were going to have to pay for these roads put on a propaganda campaign that killed the bill." The Democratic floor leader, Representative MCCORMACK, of Massachusetts, said: "Everybody wants a road bill but nobody wants to pay for it." He had a "sneaky idea that the truckers of the country played an important part" in defeating the bill. Yet only the other day the American Trucking Association denied that it was trying to kill the pay-as-you-build program, its president saying that truckers had been the first to state their "willingness to pay tax increases to support the program."

Nevertheless, from the time House Members began to talk about specific user taxes, such as on gasoline, diesel fuel, and tires, instead of just the abstract virtue of spending $50 billion of Federal and State money in about a decade to build and improve highways, it has been obvious that the lobbyists were hard at work.

The recognition of need for greatly increased Federal investment in highways has been general and bipartisan. The Presidential Clay Committee charted a $101 billion Federal-State program for the decade ahead, on which Mr. Eisenhower relied in urging congressional action. The Senate, while rejecting the President's financial plan on May 24 by 60 to 31, was insistent on some highway action at once and of substantial outlay. It rejected recommittal of the Eisenhower bill, and passed the Gore bill by a voice vote.

The House Public Works Committee, with several Ways and Means members sitting in, spent many weeks developing a revenue base that would avoid adding to the public debt, or the evasion of this by setting up an independent highway corporation to issue bonds, and also escape the costliness of high interest charges.

It is interesting to note that this committee, which spent so much time on the problem, stood 22 to 6 for imposing taxes to pay the bill. But when the House showdown came, 128 Democrats opposed the Democratic bill and only 94 Democrats supported it. The Democrats were overwhelmingly against what they viewed as fiscal unsoundness in the Republican bill; only 7 voted for it, while 214 of them voted against it, in a fine show of righteous indignation against heavy borrowing. But when it came to the final test of responsibility—the voting of taxes to accompany spending—128 Democrats couldn't rise to the occasion, and neither could 164 Republicans.

President Eisenhower, expressing his deep disappointment and rightly arguing that contention over methods of financing should not be permitted to deny our people these critically needed roads, has called for reconsideration before Congress adjourns. The House Republican leader, Representative MARTIN, believes a compromise could be worked out at the session if we really want to do it. But the Democratic leader, MCCORMACK, says the House Members are anxious to adjourn, and in his opinion there's no chance of getting the bill up again. We wouldn't want to interfere with an early homecoming for these House Members, but they shouldn't count on too cordial a welcome if they give up this easily on a highway bill. There are a great many people, including voters, who are willing to pay for good highways—even if the lobbyists aren't.

[From the Detroit Free Press of July 28, 1955]

ROAD NEEDS DISREGARDED

Democrats and Republicans in the House of Representatives joined forces Wednesday to doom the American people to driving on an interstate highway network which is obsolete, inadequate and, in many cases, unsafe.

Under pressure of lobbying groups, the House killed two proposed measures, either of which would have provided the largest Federal highway aid program ever undertaken in this country.

By its failure to act, Congress ignored a moral obligation. That obligation is not only to help provide a highway network that will meet the requirements of the modern motor age, but also to establish a road system that is vital to our national defense.

The request for road aid legislation came originally from the White House. It was put high on the list of measures included in the administration's program. The bill, advocated by President Eisenhower, would have authorized issuance of bonds pledged by anticipated highway revenues. This was the first measure rejected by the House.

The second was a Democratic bill—a pay-as-you-go measure, with revenues derived from increased taxes on motor fuels, tires, etc. Trucker lobbyists are credited with swaying Congressmen to kill this legislation.

Where do we stand now in relation to modernizing our road system?

President Eisenhower has already appealed to Congress to make another try at passing highway legislation. But the measure is buried under an avalanche of other bills.

It is agreed that no Federal-aid measure is possible during the current session which is drawing to a close. Speaker RAYBURN and other Congressional leaders predict that no agreement is likely during 1956.

Michigan, relying in part on anticipated augmented road funds from Washington, approved higher State taxes to raise a very substantial amount of highway money, part of which was to be used for matching Federal funds.

Congress has left Michigan, along with other States, holding the bag. We must go ahead on our own, meanwhile paying hundreds of millions of dollars in gasoline and other motor excise taxes to the Federal Government, almost none of which will be returned for highway purposes.

This means that Michigan's program may have to be materially curtailed. Even with the generous appropriations that have been made, there will not be enough money to do all that is required in the way of constructing and improving our State's roads.

The situation calls for highway authorities in Michigan to adopt a different point of view toward building toll roads. That program, all but dead, should be revived.

Construction of self-financing toll roads would materially supplement the work that can be done by available State highway revenue funds.

If Congress has sidestepped its responsibility, it is more than ever incumbent upon Michigan to accept hers. That can be done by less cross pulling between the State highway department and the Michigan Turnpike Authority.

UNESCO

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. CARNAHAN. Mr. Speaker, since the end of World War II, the attention of the Congress has been increasingly focused on international affairs. The measures involving American relations with the rest of the world that have come before us will have a profound influence on the future of this Nation—indeed on the future of the free world.

We have voted huge sums to build America's defenses and to strengthen the defenses of our allies. We have given willing conent to American patricipation in a sequence of regional organizations—the Organization of American States, the orth Atlantic Treaty Organization, and the Southeast Asia Treaty Organization. These are major components of the framework of collective security that we are endeavoring to construct.

We have approved the expenditure of huge sums for economic reconstruction and rehabilitation of the free nations with whom we are associated. We have, further, taken steps to remove barriers to international commerce by reciprocal reductions of tariffs and to simplify customs procedures. We have supported a program of technical cooperation to improve conditions of life in underdeveloped lands.

In taking these steps I am convinced that we have acted wisely and with forcsight. They are important components of the world peace we are striving to establish. But both the Government and the people of this country long ago recognized that guns and planes—that economic aid and greater trade, of themselves will not make us secure nor insure peace. This realization was expressed in the initiative taken by this country in the formation of the United Nations and its collateral organizations. We have since reaffirmed it by our continuing support of the U. N.

The popular backing given the U. N. is by no means uncritical. The United Nations has been subjected to its share of criticism—much of it intelligent and constructive.

We are all aware that the United Nations Educational, Scientific, and Cultural Organization has been singled out

for particularly bitter attacks from some quarters.

I will not burden the Members of the House with a detailed discussion of these attacks. But I would like to call to the attention of the membership the procedure followed by a well-known national organization in regard to criticism of UNESCO in the past.

A few years ago, because UNESCO had become a subject of controversy, the executive committee of the American Legion appointed a special committee of distinguished legionnaires to study UNESCO and the criticisms made of it and report their findings. Ray Murphy, of Iowa, a past national commander, was made chairman. After an exhaustive inquiry which consumed 18 months, the special committee submitted its report which will be presented to the national convention in October.

It is a lengthy document but I can commend it to the attention of the Members of the House as a painstaking, thorough, and objective study. I believe that the American people are indebted to Past Commander Murphy and his committee members for their unselfish efforts to execute what must have been a difficult and probably thankless assignment. I feel, also, that the Legion national executive committee is to be complimented on the judicious manner in which they are handling a controversial matter.

Good as it is, I feel that the full report is too long to place in the RECORD. Therefore, I am asking that the conclusions reached by the special committee be made a part of the RECORD.

THE CONCLUSIONS OF A REPORT BY SPECIAL COMMITTEE ON COVENANT OF HUMAN RIGHTS AND UNITED NATIONS (UNESCO) TO THE NATIONAL EXECUTIVE COMMITTEE, THE AMERICAN LEGION, INDIANAPOLIS, IND., MAY 5, 1955

Your special committee finds:

1. That UNESCO is not favorable toward world government; that the programs and functions of UNESCO are not such as to tend toward world government; that the United States National Commission individually and as a group are strongly opposed to world government;

2. That UNESCO is not atheistic; and

3. That UNESCO is in no sense or no degree communistic.

The special committee recognizes UNESCO and the United Nations as facts of life. They could not at the fateful hour in history that gave them birth have come into being without the aid, the cooperation and the membership of the United States of America. For 10 years they have been important elements in the bipartisan foreign policy of the United States. For two presidents they have been an essential arm of government. Like every American, we share the deep sense of disappointment, at times tending to despair, that has resulted from the inability of the United Nations to achieve a sound and, as we had dared to hope, an enduring peace. Long, long ago Christ said "Peace on earth to men of good will." It is because men not of good will have reigned in the Kremlin that the United Nations has in grave crises appeared impotent. Given good will among all men and all rules, its full potential for peace can be realized. On April 21, 1955, President Eisenhower said:

"Our programs of national action are not in any manner a substitute for United Nations action in similar fields. Every instance of effective measures taken through the United Nations on a human problem improved the ultimate prospect of peace in the world. Therefore, I strongly recommend that the United Nations technical assistance program, in which 60 governments participate and which is carried out by the United Nations and its specialized agencies be supported in continuing and adequate manner."

And the President said:

"Neither can we be secure in our freedom unless everywhere in the world, we help to build the conditions under which freedom can flourish by destroying the conditions under which totalitarianism grows—poverty, illiteracy, hunger and disease. Nor can we hope for enduring peace until the spiritual aspects of mankind for liberty and opportunity and growth are recognized as prior to and paramount to the material appetites which communism exploits."

Gentlemen of the national executive committee, we leave our report with you, happy at least that a time-consuming onerous and at times unpleasant task has been done. We could do no other than to report without fear or favor the facts as we have found them, and to state conclusions which an overwhelming weight of the evidence justifies.

We have been deeply disturbed by an intolerance and implacability of attitude that we have found all too prevalent and which can serve no one well.

We counsel, if we may, against name-calling, against disparagement of men whose only crime is that they differ with us, against organizations whose names are fair and whose fame is great, whose achievements are magnificent.

We are now engaged in global war, wherein, as the President has said:

"The forces of freedom and the forces of tyranny are met in a struggle in which the battlefields are indeed the minds and the souls of men."

It has been said that:

"The most deadly weapons in this age of the undropped bomb and the unfired gun are the spoken word and the expressed idea" (Roger D. Green, Associated Press).

Grievous a blow as the collapse of Russian imperialism would be to the Communist revolution, communism would not die, for it is an idea, and for future generations of freemen that idea will remain a deadly danger. The idea, the dialectical materialism of communism, must be met with an idea of greater validity, the idea of the freeman deriving his individual rights from God. There can be no certainty now that the idea of the freeman will prevail, though it can never die as long as somewhere, even in some far place, one man still free in spirit and allegiance to God yet lives.

We of America and the American Legion have work to do. Let us be about our Master's business.

Respectfully submitted.

WILLIAM G. MCKINLEY,
PAUL M. HERBERT,
Rev. GORDON L. KIDD,
JACOB ARK,
MRS. HAROLD S. BURDETT,
Vice Chairman.
RAY MURPHY, *Chairman.*

MAY 5, 1955.

Old Age Assistance

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Senate Joint Resolution 10

Whereas the Federal social security law permits recipients of old-age and survivors insurance benefit payments to supplement these benefits by earnings up to a specified amount in covered employment without a loss of such benefits; and

Whereas such provision encourages those who can do so to engage in productive employment; and

Whereas the Federal law governing grants to States for old-age assistance does not allow such supplementary earnings without a loss of benefits; and

Whereas the basic purpose of the two programs—old-age and survivors insurance and old-age assistance—is the same, namely to safeguard against old age dependency: Therefore be it

Resolved by the Senate of the 69th General Assembly of the State of Illinois (the House of Representatives concurring herein), That we respectfully request the Congress of the United States to make provisions which would permit recipients of old-age assistance to supplement their old-age assistance benefits by earning an amount equal to that permitted recipients of old-age and survivors insurance benefits without a loss of such benefit, by and with the consent of the legislatures of the respective States which have State old-age assistance plans; and be it further

Resolved, That a copy of this resolution be sent by the Secretary of State to Senator PAUL H. DOUGLAS, Senator EVERETT M. DIRKSEN, and to each Member of the House of Representatives in the State of Illinois.

Adopted by the senate June 27, 1955.

JOHN WM. CHAPMAN,
President of the Senate.
EDWARD H. ALEXANDER,
Secretary of the Senate.

Concurred in by the house of representatives June 30, 1955.

WARREN T. WARD,
Speaker of the House of Representatives.
FRED W. RUEGG,
Clerk of the House of Representatives.

The Rose as the National Flower of the United States

EXTENSION OF REMARKS
OF
HON. HARLEY O. STAGGERS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. STAGGERS. Mr. Speaker, I am privileged to submit the names of the following prominent citizens in my Second Congressional District of West Virginia, who, together with myself, wish to add our voices to the current proposal to petition the United States Congress to designate the rose as the national flower of the United States.

The rose indeed personifies beauty and grace, majesty and leadership, sweetness and purity, love and tenderness to the great multitudes of Americans in this 48 States. God made all flowers to grace our lives, but none fulfills the overall role of messenger of inspiration, of victory, of consolation, of devotion, and of love—as does the rose.

It is my honor to enter into the CONGRESSIONAL RECORD the name of the following citizens from Keyser, W. Va., who have made known their wishes that the rose be designated as the national flower of the United States:

Mrs. J. Clark Bright, Mrs. W. H. Kolkhorst, Mrs. Eleanor Dove, Mrs. R. A. Stoutamyer, Mrs. Herman Davis, Mrs. George Sheetz, Mrs. Ernest A. See, Mrs. George R. Spotts, Mrs. Roy A. Leatherman, Mrs. Ralph E. Casteel, Mrs. S. B. Jeffries, Mrs. Evelyn Bright, Mrs. Helen Bownall, Mrs. Charles A. Steiding, Mrs. Ernest E. Church, Mrs. J. P. Davis, Mrs. G. H. Klinestiver, Mrs. James W. Goldsworthy, Mrs. William H. Chappell, Mrs. William C. Clements, Mrs. Robert D. Chapman Mrs. R. L. Bridgers, Mrs. Roy H. Davidson, Mrs. Thomas Bess, Clyde W. Gardner, Lester H. Oates, John M. Hamilton, and Donald Heare.

A United States Congressman

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mrs. KELLY of New York. Mr. Speaker, the August edition of the Catholic Digest, a well written and edited magazine of national circulation, features an excellent article on our distinguished colleague, TORBERT MACDONALD, of Massachusetts. I am proud to serve with him in the House of Representatives. I congratulate the gentleman and I commend the Catholic Digest for the presentation of a most enjoyable and interesting story. The photographs that accompany the article are quite unusual and they make a vivid contribution to the story.

In the short time that he has been a Member of the House, Mr. MACDONALD has proven his ability and his determination to follow in the footsteps of those great statesmen from the Commonwealth of Massachusetts who have left their mark of influence on American education, industry, religion, literature, law, and culture.

I include the story from the Catholic Digest:

A UNITED STATES CONGRESSMAN—MEET REPRESENTATIVE MACDONALD—HE HAS A JOB LIKE YOUR MAN'S JOB IN CONGRESS

SAM RAYBURN leaned toward the microphone on the Speaker's rostrum, and said: "If the Members will rise, I will now administer the oath of office."

In every part of the Hall, Representatives rose in waves from their seats. The steady buzz of conversation faded into silence. All but 7 of the 435 Representatives were on hand to take the oath of office. It was the opening day of the 84th Congress of the United States.

RAYBURN knew personally most of the men and women standing before him. There was the usual crop of new faces, too—56 of them, to be exact. In the fifth row on the Democrats' side of the aisle was one of the freshmen, TORBERT MACDONALD, of Massachusetts.

At noon that Wednesday, January 5, the clerk had called the roll; first, to see if a quorum was present; then a second time, to elect a Speaker of the House of Representatives.

You can find MACDONALD'S first vote on page 7 of the CONGRESSIONAL RECORD. RAYBURN received 226 to JOE MARTIN'S 198. In the list of those voting for Democrat RAYBURN, under M, you'll find "MCCARTHY, MCCORMACK, MCDOWELL, MCMILLAN, MACDONALD."

Just 8 days later, TORBERT MACDONALD was elected to the House Committee on Interstate and Foreign Commerce. Looking on from the gallery that afternoon were his pretty wife, former movie star Phyllis Brooks, his two eldest children, and his proud parents.

He was the first Democrat elected from Massachusetts' traditionally Republican Eighth Congressional District. The eighth takes in some wealthy Boston suburbs; but Democrat MACDONALD won last November's election. His margin: 9,000 votes.

Some 2 weeks after the session opened, his Democratic colleagues elected MACDONALD majority whip for the New England congressional delegation.

Many parents dissuade sons or daughters from entering politics. A Congressman is not always regarded with respect. Yet, the successful politician who is elected to the House of Representatives has enormous power and responsibility.

The average Congressman represents 373,400 citizens. During the last 5 years he has had a vote in the spending of an average of $53,600,000,000 a year. And he has a hand in making decisions which ultimately touch the lives of most of the earth's inhabitants.

If there is such a person as an average Congressman, he is somewhat past middle age, more often than not has already served a few years in Congress, and usually has had some political experience prior to his election. It is safe to generalize, then, that the average Congressman is no babe in the political forest.

Three-fourths of the legislators in the average session of Congress are college graduates; many are lawyers; more than half are veterans.

It isn't easy to obtain information about the national and racial backgrounds of Congressmen. Their religious backgrounds are better known. A survey of the 77th Congress revealed that some 71 percent of the Members were Protestants, 18 percent Catholics, and just over 1 percent Jews. MACDONALD is a Catholic.

Although the House of Representatives does not begin its sessions until noon, the average Representative is at his desk early in the morning. If he wants to keep his hand on the pulse of public opinion in his home State, he must examine his mail carefully. Most Congressmen answer every letter.

During the morning, visitors from back home drop in at the Representative's office; and other Congressmen may visit him to discuss legislation. As the session moves forward, each Member of Congress must participate in committee meetings. Many such meetings begin during the morning, and continue most of the day. This accounts for some absences from the floor of the House.

To assist him with his work, the Congressman has an office staff which usually includes one administrative assistant and several secretaries.

Like a majority of his congressional colleagues, TORBETT MACDONALD, of Massachusetts, is a lawyer. After graduating from Harvard law school in 1946, he served as legal assistant to Eric Johnston, then czar of the movie industry.

Then he became, successively, a New England trial attorney for the National Labor Relations Board; a legal adviser to the congressional labor committee for its European survey; and legal adviser to his old friend, Senator JOHN KENNEDY, in connection with a 1953 labor-and-manpower survey of defense in Western Europe.

When the Democrats were looking around for a candidate to oppose the Republican incumbent in the Eighth Congressional District, they asked MACDONALD if he would take the nomination. He accepted—and won, much to the surprise of even his own State Democratic committee.

As a teen-ager, MACDONALD learned leadership in athletics. His first try was a flop. He went out for high-school football in his hometown, Malden, Mass., but failed even to make the squad.

However, the next year he transferred to the nearby Medford High School and made the State's all-scholastic eleven. A natural athlete, he also became captain of the Medford track team and a star basketball player.

After his high-school graduation in 1934, MACDONALD attended Phillips Andover Academy, where he was put on the scholastic honor roll, and became captain of the baseball team as well.

For 4 straight years, he starred in baseball, football, and track at Harvard. In 1939 he ran on the Harvard-Yale track team that toured Europe. The following year he was captain of the Harvard football squad.

When he was graduated in 1940, he turned down a Rhodes scholarship; instead, he signed, for a handsome bonus, as an outfielder with the New York Yankees.

"I traveled with the Yankees for that summer," he recalls. "But their regular outfielders then were Keller, DiMaggio, and Heinrich. You can see what chance I had of breaking into the line-up."

He entered Harvard Law school in the fall of 1940; and paid for his tuition with his summer baseball bonus and salary.

When the Yanks gave MACDONALD another bid in 1942 for spring training, he gave them a final no; he hasn't donned a glove since, except to toss a few balls around with his son, Torbert, Jr.

In January 1942, MACDONALD quit law school to enlist in the Navy. He served with Torpedo Squadron 12 in the South Pacific; received a leg wound, and won the Silver Star for gallantry in action.

Shortly after his discharge as a Navy lieutenant in 1945, he married Phyllis Brooks, whom he had met before the war while she appeared in a play in Boston. Although she was one of the better-known Hollywood stars at the time, she quit her career when she married.

"She's a really marvelous girl," says her admiring husband. "I had to go back to law school to get my degree. We had to live on practically nothing. But she never complained. A happy family life is more important to her than anything else."

The Macdonalds have purchased a home in Washington, D. C., where they live with their 3 children, Torbert, Jr., 9; Laurie, 7; and Brian, 2 years old.

Congressman MACDONALD'S background is fairly typical of that of his colleagues in the House.

Congressman Young Invites Nevadans to Discuss Problems

EXTENSION OF REMARKS
OF
HON. CLIFTON (CLIFF) YOUNG
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. YOUNG. Mr. Speaker, it is the responsiblitity of a Congressman to keep in close touch with the people he represents.

Upon my return to Nevada during the adjournment of Congress, I will make an official business tour of the 17 counties in my State.

The prime purpose of these visits will be to meet with Nevada voters to discuss problems where my office may be of assistance and to receive views and suggestions regarding national policy.

A temporary office will be established in various communities, and local citizens will have an opportunity to confer informally with their Representative in Congress. A member of my Washington staff will accompany me and assist me.

No appointments are necessary for these conferences.

Following these congressional clinics and throughout adjournment, I will maintain a full-time office in Reno, Nev., and I can be reached by writing post office box 206 in that city.

Dates and locations of the congressional clinics are listed.

Operations of the TVA

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Saturday, July 30, 1955

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a signed editorial from the August 1955, issue of the Farm and Ranch magazine. The editorial is written and signed by Mr. Tom Anderson, the publisher of the magazine, which is published in Nashville, Tenn. The editorial contains several interesting sidelights of the operations of the TVA, as observed by one of the citizens of that area.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STRAIGHT TALK

(By Tom Anderson)

Here in the Tennessee Valley TVA is almost holy. I guess 90 percent of the people are for TVA—and against socialism. Almost all politicians, housewives, businessmen, sportsmen, and newspapers of all political parties are for TVA.

TVA for 22 years has been the main plank in the platform of virtually every valley politician. When TVA budgets are cut the valley politicians bawl like newly weaned calves. And the votes pile in. For a valley candidate for office to criticize TVA would be like attacking the church, or motherhood. Automatic political suicide. Even the press goes along practically 100 percent with TVA. (For a long time my friends and associates have been expressing the hope that I'd have the good sense to lay off TVA.)

THANK YOU, AMERICA

We residents of the valley, according to TVA, saved $70 million in the year ending June 30 through low-electric rates. Thank you, America. We heat our homes with electricity here, it's so cheap. You might say we're putting the heat on you. As someone well said, "The Tennessee River flows through 3 States and drains the other 45."

A 500-kilowatt-hour monthly power bill in a Nashville home is $6.90. In Asheville, N. C., just a few miles outside TVA territory, it is $9. A medium-size merchant in Nashville (6,000 kilowatt-hours) would pay $78. The same power in Atlanta would cost him $163.

If the Government can provide power that much cheaper than private industry, then why shouldn't the Government provide everybody's power? And why just power? Why not groceries? And automobiles? If the Government is more efficient than competitive business, then it could make a reasonable profit on the power it sold to all of us, and on the groceries, cars, homes; a guaranteed annual profit for the Government and everybody—on everything.

TVA now has 16 steam plants built or building, which will produce about two-thirds of its electricity and have no relation to the development of the Tennessee River, making TVA the world's largest buyer of coal.

If TVA figured its operations like the Government forces private utilities to do, and paid only 3 percent for its money, it would already have lost $169 million. TVA does not now include in its rates the cost of its money or its share of the taxes. And those two things are almost half the total cost of electricity. Thus, the famous TVA yardstick is really only 18 inches long.

Private power companies pay about $750 million in Federal taxes and nearly $470 million in State and local taxes each year. TVA pays no Federal taxes and only about $3,400,000 in local taxes.

The investor-owned utilities turn over to the tax gatherer 23 cents from every dollar they take in. For example, if TVA paid local, State, and Federal taxes on the same basis as Southern Bell Telephone Co., TVA would pay, not its present $3,400,000 tax, but more than $76 million. And instead of a profit it would have a huge loss.

Cheap power? Not at all. Almost half of each power bill we valley residents pay is charged to the taxpayers of the Nation. I want to pay all of my power bill, just as I want Farm and Ranch and all other publications to pay their fair share of the postage bill.

DIXON-YATES, THE DEMAGOG'S DELIGHT

Some time ago President Eisenhower said he could see no good reason why Memphis couldn't build its own powerplant instead of asking the TVA to build a new steam plant. Now that Memphis has decided to build its own plant, the politicians are joyfully digging the grave for Dixon-Yates.

The Socialists are already maneuvering to have Government own and operate all atom-power electric plants. It would be a tragedy if private enterprise were prevented from providing its tremendous human and material resources, and its competition which is so vital to progress and discovery.

The jobs are too big for private power? No. They were in the thirties; there was a depression on, remember? It was hard to raise money to buy a light bulb, much less a dam.

HOW TO PUT TVA ON A BUSINESS BASIS?

TVA should (1) sell its own bonds and stocks, just like any other business. Congress should make no more appropriations for steam plants or hydroelectric plants solely for power. If the plants are needed, private enterprise will build them and pay taxes on them. (2) Be made to continue to pay on its power investment until the debt is eliminated. (3) Pay the same State and local taxes it would pay if it were a private power company. (4) Pay the same interest on its outstanding debt which it would be charged as a private company. (5) Not be allowed to take in any new territory, nor build any more steam plants. (6) Pay Federal income taxes on same basis as private utilities. (7) Quit making fertilizer for commercial sale. (TVA makes about 200,000 tons of fertilizer a year, most of which is sold to the chosen few—mostly cooperatives.) (8) Give municipalities, cooperatives, and other public bodies no advantage in buying power. Treat everybody equally. (9) Keep books and report to Congress on same basis as the Federal and State regulatory authorities.

The above proposals would inevitably mean higher TVA power rates. But they would put TVA and other public power projects on a self-sustaining, self-liquidating, taxpaying, nonsocialistic basis—lock, stock, and dam.

Why not? If TVA is what its advocates claim, how would it be hurt? TVA is a big boy now. Twenty-two years old. Almost grown, we hope. A big bank account of his own. Good job. A booming business.

How much longer is he going to want an allowance? He's welcome to keep his feet under our table—being our flesh and blood—but ain't it high time he paid his room and board?

Amending Natural Gas Act

SPEECH
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 28, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6645) to amend the Natural Gas Act, as amended.

Mr. WILLIAMS of Mississippi. Mr. Chairman, as I stated a few minutes ago on the floor, I do not believe that we can exempt the production of natural gas from Federal control, and place controls on it at the same time. However, I have been willing to go along with section 3, in the interest of attempting to clarify the situation with regard to the status of natural-gas production. I have been willing to go along with most of these controlling amendments. However, when we reach the language in subsection (e) on page 5 of this bill, we find that we are going further than Congress actually has a right to go.

What we are doing in subsection (e) of this bill is placing a ceiling on existing contracts. Let us read the language for just a moment:

Whenever, in connection with an increase in the price of natural gas under the provisions of an escalation clause, the Commission, pursuant to subsection (d), has made a determination as to the reasonable market price of such natural gas, the natural-gas company shall be obligated to pay only such part of the increase in price as results in a price which does not exceed such reasonable market price.

As far as that goes, certainly I have no objection to the language in subsection (e). However, the language goes further:

And, except as otherwise provided in this subsection, the contract containing such escalation clause shall continue in effect according to its terms as though this subsection had not been enacted.

That is, in effect, ex post facto. I think perhaps we would have a right to declare those contracts null and void, certainly voidable at the option of either party to the contract, in the event the price should rise above a reasonable market price.

However, I do not believe the Federal Government has the right under an

existing contract to change its terms so as to force one party to discharge his obligation unless he receives the contract price for his commodity.

This, in effect, puts the production of natural gas right back in a utility status. It is confiscatory in the sense that it refuses the producer a price that he has previously contracted for and forces him to sell at a price less than he had agreed upon previously. I think that this language should be taken out of the bill.

I think perhaps we should have written language into the bill, if we wanted to write this into the bill, which would have made these contracts terminate under these conditions and provide for their renegotiation. I do not believe that we can enforce the terms of a contract under any condition unless both parties to the contract agree to change that contract.

I hope the substitute amendment will be accepted in the interest of protecting contractual rights.

Higher Federal Taxes on Gasoline and Motor Fuel Not the Answer

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. SCHWENGEL. Mr. Speaker, we have heard a lot of testimony before the Public Works Committee about the need for this enlarged Federal highway program and how it should, or should not, be financed.

As a representative from Iowa—America's leading farm State—I am quite naturally concerned about how farmers feel about the proposed increase in the Federal gasoline tax and how they feel about some of the other aspects of the program as well.

Iowa, like most of the other States, has its own problems of acute traffic congestion today, but there is some question in my mind as to whether the true solution is for the Federal Government to levy higher and higher gasoline and fuel oil taxes upon farmers and other highway users, while at the same time calling upon the State to apply to costly Federal-aid projects increased sums of State revenue derived from the same taxpayers.

As it is, our State tax on gasoline has twice been increased during the past few years, and is now double the rate of 10 years ago. The Iowa State Highway Commission now has $40 million a year to spend on primary roads, and that, coupled with $200 million that has been authorized for toll-road construction, will put our highways in pretty fair shape—unless we find that an unusual amount of this State money will now have to be devoted to costly projects for national defense.

The farmers of Iowa, as highway users, pay heavily under the State gasoline tax, although not to the same degree as they pay the Federal tax, which for years has been levied on the motor fuel they use on the farm as well as that used in their highway vehicles.

In Iowa, one out of every five gallons of motor fuel purchased is for nonhighway use—mostly agriculture. This is about twice the one gallon in ten ratio of nonhighway use that prevails throughout the Nation as a whole.

The natural distate which Iowa farmers have for the Federal gasoline tax is understandable when you realize that there are more than 275,000 farm tractors now being used on the 203,000 farms of Iowa, and that these tractors and other farm machines consume about 250 million gallons a year. That, in terms of a 2-cent Federal gasoline tax, adds up to $5 million a year—or $7.5 million under a 3-cent tax—in Federal taxes on gallonage not taxed by the State.

Even if the Congress now sees fit to grant tax refunds or exemptions for nonhighway fuel—and thus makes the Federal gasoline tax an out-and-out tax upon highway use—an increased Federal tax will still fall heavy upon Iowa farmers, who own and operate about 39 percent of the trucks and 27 percent of the passenger cars in the State.

Figures compiled by the United States Bureau of Public Roads show that the revenues of the State gasoline tax have increased by 192 percent since 1939—nearly tripled—although the total vehicle registration in the State has increased by only 48 percent during the 16-year period. Certainly this is some indication of the high tax load farmers, as highway users, now bear.

Farmers, of course, are and always have been vitally interested in roads, but the roads which interest them most are the ones which have been receiving attention under the regular highway programs carried on by the State. They are interested in the super-highway aspects of the Federal program, but do not want to see it accomplished through the proposed increase in gasoline taxes of the Fallon bill.

One other aspect of this highway program that we have heard a lot about is safety. Hardly anyone who has stood up to speak in favor of this highway program has failed to mention something about all the lives that will be saved by the building of these new and faster highways.

Being an insurance man myself, I am not unfamiliar with some of the studies that insurance companies have conducted along those lines, and am inclined to believe that safety is not a very good argument for the building of all these public speedways.

Accident records of some of the big, well-engineered turnpikes have almost invariably shown a higher death rate in terms of vehicle miles traveled than the other highways of the State.

Just last week at the committee hearing, one of the tire men testified—not in connection with safety but in relationship to wear and tear—that speed and long, uninterrupted stretches of road tend to generate tire heat, which he said is a major factor in shortening the life of the tire. Apply that tire strain factor again to the relatively high rate of speed the vehicle travels on such a road, and you have perhaps one of the causes of so many serious accidents on these superhighways.

One argument that does impress me is the military and defense need for a highway program of the scope indicated—but the question then arises that if these improvements are truly defense items, why should they not be paid for like jet bombers, battleships, and tanks—out of general taxes paid by all citizens—not by increased levies upon highway users as a class.

North American Airlines and Free Enterprise

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. WICKERSHAM. Mr. Speaker, surely there was no intent to raise an iron curtain right here in the United States raised by Americans against Americans. I should like to take these few minutes to tell you some facts.

A tremendous amount of national energy is spent on the fight against slavery and anarchy overseas. We must realize that at the same time the same battle must be waged at home to keep the freedom we cherish.

Could it be possible that one Government Agency, the Civil Aeronautics Board, has unintentionally become an iron curtain drawn between the aviation industry and men of initiative who want to enter the passenger field?

The CAB was the result of 1938 legislation: "An act to create a Civil Aeronautics Authority and to promote the development and safety and to provide for the regulation of civil aeronautics."

Has the Board promoted the development of air transportation in the American spirit of free enterprise? Quite the contrary. The Board, perhaps because it did not realize the effects, has chosen to promote the development of the grandfather lines—those carriers operating in 1938. There were only 17 then. There are only 13 now. And soon there may be only 11; then maybe 9, then 7, then 5, then 3, then maybe only 1. Not a single new trunkline carrier has been authorized by the Civil Aeronautics Board in the 17 years of its existence.

Small feeder lines have been allowed into the passenger field, but only because they would not compete with the big boys. Four freight lines have been given the right to fly the skies, but only because their revenue is less than a drop in the billion and one-quarter dollar bucket—1.4 percent to be exact.

North American Airlines is the sole survivor of many companies who have been crushed trying to get through the defenses of CAB against competition and free enterprise. One of its principal officers, Stanley Weis is originally from my

district. The traditional rights of an American to run his own business in the public interest are being badly mangled in the struggle. Not one carrier has made it through the Iron Curtain of discrimination, the barbed wire of regulation and the barrage of adamant refusal to allow even a fair hearing.

Is this development as stated in the title of the act which I quoted above? Surely it was not meant to be an imperious, absolute dictatorship. Again and again North American has been pounded back by rejections of applications for certification. North American's perfect safety record has been slandered by a member of the Board who had full and official knowledge of their accident-free operation. Surely this was not intended on his part. He has an opportunity to rectify the same.

North American—a company with the courage to join battle—is critically wounded. If it dies free enterprise will be killed by its side. The grandfather carriers will continue to monopolize the once free American air. There will be no one to challenge.

I respect the major airlines; however, today the 4 big airlines collect more than 73 percent of all trunkline revenue. These are the same companies that were serving the infant air passenger business in 1938. Air transportation has increased 40 times since then, yet no new company has survived the bloody battle of certification.

Aircoach, the greatest innovation in passenger traffic, was the invention of North America. It was bitterly resisted by the mail-subsidized monopolies. They said: "We just cannot afford to take the chance." They were finally forced by North American's low fares to adopt it. Even today, however, passengers pay one-third more on certificated aircoach than on North American.

Are the big companies—with the help of CAB—desperately trying to hold the line of unnecessarily high fares?

Passenger air travel has mushroomed. In 1954 alone its growth was over three times as great as the total industry in 1938. Every flying plane in America is needed to carry this gigantic load. Yet the CAB is using every weapon it has to shoot down North American, and with it free competition—American style. It would deprive the people of the United States of desperately needed air transportation. It would force those who cannot afford the inordinately high fares of the certificated carriers to be earthbound in this air-minded age. It would cripple the aviation industry—just as it has been doing for almost 20 years.

Any company with know-how, resources, and the desire to serve the public should be allowed to compete. No Government agency should have the arbitrary power to put them out of business, as long as the interests of the American people are being served just because the incumbent companies do not want competition. Actually the competition indirectly aids the big companies.

Has the Civil Aeronautics Board failed the public by acting in the interest of a select group instead of the public it was established to serve by violating the very law which created it? Any such protection of big business against democratic competition is illegal.

If there is any Iron Curtain it must be lifted from the runways of all American airfields, by forcing the CAB to act in the interest of the people—not in favor of any bloc.

Yesterday the CAB took the first small, timid, trembling step in the right direction. It voted to await final execution of North American until the courts had a chance to review the legality of the regulations on which North American is being grounded. I think this shows, to same degree, that the new Chairman, Ross Rizley, has a spirit of fairness and grasps some of the practical consequences of killing off the air-coach pioneers.

The situation at the CAB was not Mr. Rizley's making. Last year it was brought out in floor debate that half of the CAB's enforcement budget was spent in a relentless vendetta against North American and other independent carriers. This was in direct conflict with the intention of Congress. This is the situation into which Mr. Rizley walked. The thinking of the majority of the Board has been inflexibly bent on warfare against new ideas, new enterprises, and new competition. There has long been a minority, Josh Lee and Joe Adams, who have fought valiantly in the public interest.

I should like to urge that the CAB go back to the act. I think that the Board now has a great opportunity to be of real service to the country, but it must hereafter move forward courageously, expeditiously, and administer all of the act, including the provision for entry and new competition. The CAB has been dangerously close to being an instrument of a few major carriers—the enforcer of the policies of certain companies rather than the administrator of the will and policies of Congress. Many Members of Congress are becoming greatly alarmed.

The Board can prove itself by handling the North American case in a constructive way. It cannot sit by and hope that the problem will disappear. Its job and function is to solve the problem—and not kill off the very assets which it is supposed to regulate. It should act without delay.

Confiscation or Compensation

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks, I wish to support and include herewith the statements of Congressmen JAMES P. RICHARDS and BROOKS HAYS relative to the payment of equivalent value of confiscated German and Japanese assets and commend them for the action taken by the Foreign Affairs Committee on this problem. For the first time during recent years hearings were held by a committee in the House on this vitally important question.

On July 1 and 11 hearings were conducted before a House Foreign Affairs Subcommittee relative to the payment of full compensation for those private properties owned by German and Japanese nationals which were vested by this Government. These assets were seized by the Office of Alien Property under the authority of the Trading With the Enemy Act which was essentially designed as a part of our economic warfare so that these properties could not be used in any manner detrimental to our war effort. However, it should be noted that the bulk of these assets were not in fact sequestered until after the war and such a program continued until 1953. Certainly, the permanent retention of these properties without the payment of just compensation stands out in marked contradistinction to what the United States has historically adhered to since the founding of our country.

One need not reiterate that the sanctity of private property has long been a recognized principle of this Government. It is inherent in the very concepts of our free enterprise system and has been stated over and over again from the days of Alexander Hamilton to the present time. Unquestionably the viciousness of such abuse to private property is best summed up in the words of our own beloved Speaker SAM RAYBURN, who denounced the policy of confiscation in stating that—

> Every writer upon international law in America from that time to now who has been recognized as an authority has taken the position that the most savage doctrine ever announced by any people anywhere was that private property should be taken for the satisfaction of a public obligation.

Truly, the theory upon which those German and Japanese properties were sequestered not only does not apply now but it is in diametric opposition to the postwar aims of this Government. Our policy is predicated on the basis that the Federal Republic of Germany is now to assume the status of an equal partner in the alliance against Communist aggression. Yet, how can an equal partnership be maintained or cooperation prevail when the policy of confiscation is directed against the individuals of that nation, a policy which still treats them as enemy aliens—as distrusted people. It can only be expected that Western Germany can become an effective partner in the Western coalition just so long as the people of that nation support the alliance.

In speaking out against the principle of confiscation, the Honorable Daniel Bell, one of the outstanding bankers of this Nation and former Under Secretary of the Treasury stated:

> I refer, of course, to the question as to whether our country, representing a bulwark of freedom and moral principle, has the ethical right to confiscate the property of private persons because of the fortuitous circumstance that they were within enemy territory during World War II. No charge is made or could be made that this property was confiscated because of the

war crimes or similar offenses of its owners. On the contrary, in many cases the property confiscated belonged to persons hostile to the Axis regimes who placed their assets under our protection, having confidence in our institutions and integrity.

In short, the confiscation of these so-called enemy assets is without regard to the guilt or innocence of their owners and reflects a disturbing philosophy utterly foreign to American concepts of morality and justice.

The recent summit conferences made it clear that Germany is of key importance in easing world tensions, and it is imperative that it continue a course of close alliance with the Western Powers on a basis of mutual respect and friendship. The aforementioned hearings clearly evidence the policy of confiscation without compensation presents a barrier to complete understanding and harmony between our two countries. Our leaders of the Foreign Affairs Committee, evidencing the true statesmanship that they continually display in guiding our country through these critically important times, well recognized the importance of resolving with the maximum of speed possible this grave moral issue which is a source of major irritation between our two countries. As also evidenced from the enclosed documents of Congressmen RICHARDS and HAYS, it can be readily be seen that final decision by the House in this matter is a necessary adjunct to the proper relationship between our countries. In order to realize the maximum benefits from the hearings and pressed with the urgency of presentation of this matter to the full House during the 84th Congress, they combined their broad policy consideration with Interstate and Foreign Commerce Committee's historical and technical background. It was well recognized by our Foreign Affairs Committee that the resolvement of this question of full return and the consequent benefits derived in our relation with Germany commands House attention at the earliest possible time. Moreover, the appended analysis of the hearings and transmittal statements bring into the House record the report of a Senate committee which likewise looked into the matter and established that the foreign-policy interests of our Government demand that full restitution be made for the property so seized. They further held that—

Since the conclusion of the Second World War, the Congress has authorized expenditures in excess of $3 billion for the economic rehabilitation of Germany. This financial support was furnished in an effort to sustain the democratic areas of Germany as a bulwark in the death struggle between representative democracy and Communist totalitarianism. By like token, similar expenditures have been made to support the rebuilding of Japan. These appropriations have undoubtedly resulted in recuperation of these nations from the devastation remaining after World War II. However, the good will which might otherwise have resulted from such generosity has been diminished by the action of this Nation in continuing to expropriate property of individual citizens of those countries. There can be little question but what these individuals have been alienated by the shortsighted policy of confiscation which has been pursued by the United States Government since World War II.

Certainly the program of payment of full compensation for the property can also be supported solely as a matter of national self-interest as well as on international, legal, and moral grounds and the creation of good international relations. Our Government has continually encouraged the program of investments abroad by American citizens and industry. Therefore, the continued policy of confiscation of private property by this Government does not only put this property in jeopardy but lessens the effectiveness of protest by this country against the action of other nations who would insist on violating the rights of American property owners. The United States cannot long continue to wield a double-edge sword of supporting confiscation at home and condemning it abroad.

To suggest that only small amounts of some dollar limitation be returned to individuals only lacks merit. Confiscation of large amounts if accepted in principle would be disastrous to our own expanded foreign economy. Further, confiscation of any amount would defeat the principle involved. As was so aptly stated by Mr. Hermann J. Abs, an outstanding leader in German banking, financial, and governmental circles:

It is of vital and urgent necessity for the policies of the Western World and its interests abroad that the United States, as the most important nation of our community, take the lead in the defense and restoration of private rights, thereby setting a decisive step in dissolving the moral disintegration and legal confusion into which we are more and more getting entangled.

During this present time of international uncertainty and tensions throughout the world, the payment of just compensation of vested property to its thousands of individual owners will have the worldwide effect of this country's reaffirmation to the concepts of international justice and the established rights of the individual. To do less in this instance will be to do an irreparable harm to this Government as a leader of the free countries of the world.

The full statements of Congressmen RICHARDS and HAYS are set forth below:

HOUSE OF REPRESENTATIVES,
Washington, D. C., July 27, 1955.

HON. J. PERCY PRIEST,
Chairman, Committee on Interstate and Foreign Commerce,
House of Representatives,
Washington, D. C.

MY DEAR MR. CHAIRMAN: I believe that Chairman RICHARDS of the Foreign Affairs Committee has already officially transferred to your committee House Joint Resolutions 264, 265, 268, and 272, together with documents and files pertaining to this legislation. It is my understanding that the testimony which was taken in two hearings before the Ad Hoc Subcommittee of which I was chairman are being printed and that the printed copies will be forwarded to you. Other members of the Ad Hoc Subcommittee were Mr. PILCHER, Mr. WILLIAMS of New Jersey, Mr. VORYS, and Mr. BENTLEY.

Mr. RICHARDS concurs with my feeling that perhaps this supplementary letter will supply additional information that might be useful to your committee in initiating further hearings and studies in connection with the resolutions and bills. We recognize that your committee has become familiar with the subject matter in view of the fact that H. R. 6730 which, as I understand, embodies the views of the administration, was referred by the Speaker to the Committee on Interstate and Foreign Commerce.

Our subcommittee heard a number of proponents of the joint resolutions and also witnesses in opposition, including representatives of the Departments of State and Justice, both of which agencies indicated that they could not support payments for all of the properties involved. Instead, they expressed support for a limited return calling for payments to individuals up to $10,000 each, as set out in H. R. 6730.

Among the first witnesses supporting the joint resolutions was Dr. Charles S. Collier of George Washington University, and I was naturally interested in his point of view since he was my instructor in constitutional law at the above institution some 35 years ago. Perhaps the legal basis for the proposals will be found to be adequately set forth in Dr. Collier's statement. He and other proponents of the resolutions presented the viewpoint that in justice and equity there should be no arbitrary dollar limitation.

The committee's attention was also called to the Senate committee report (the Dirksen report, No. 1982, 83d Cong.) which reviewed this question and made certain criticisms of existing policy with reference to claims of German and Japanese nationals. I am sure you will find the Dirksen report and hearings contain much relevant testimony and comment regarding the pending bills. You will also want to review the testimony of a number of witnesses who had something to say as to the overall question of permanent seizure without compensation, it being their contention that the United States had up until World War II a firm policy of returning to former enemy aliens any properties that had been held during wartime.

The committee will also be inquiring into the applicability of the Paris reparations agreement and the Bonn convention to the issues to be presented. In the light of the present world situation, particularly the desirability of promoting close ties with the Governments of Germany and Japan, I feel that the matter of determining a correct policy with reference to these claims is something to engage our best thought and consideration. This points up the helpfulness of a current review of the history of these relationships. I am confident, too, that passages in the testimony referring to congressional debates following World War I will be called to the attention of your committee. Several witnesses urged the United States not to use funds of private German and Japanese citizens for the payment of debts owing by their governments to the United States. This is covered in the testimony which was heard by our subcommittee.

No one could question the policy of requiring the German and Japanese Governments to make payments for damage and personal injury inflicted on our own citizens and their properties, and I presume that this will be fully considered at all stages of legislation and treaty negotiations. Along this line, it was advocated during the hearings that any reparations paid should be paid by such nations as a whole and constitute a burden on all their people rather than a special burden on the few based on the circumstances of their having held assets in this country. This is a moral and policy question which touches foreign policy considerations and I am sure that your committee will want to explore the matter fully.

As a member of the Foreign Affairs Subcommittee which visited Germany in 1951 to study occupation policies, I acquired a

better understanding of the necessity for setting up conditions that would make it possible for Germany to continue a close alliance with the Western Powers and that the basis for this would be mutual respect and friendship. For this reason I feel that sources of major irritation between our countries should receive the attention of congressional committees. Due to the consideration of the resolutions so late in the session it became apparent that if the Foreign Affairs Committee was to consider the problem fully it would necessarily take a considerable period of time for study and historical review. It was the feeling of the full committee that the most propitious course would be to combine the broad foreign policy aspects of interest to the Foreign Affairs Committee with the technical and historical background of your committee, and therefore that the transfer of full information relative to these hearings should be made for the benefit of your committee. As I construe the action of our committee, this was the primary motive in having the matter referred to you, and I trust that it will be possible for us to give it an enlightened and proper consideration in the House early in the next session. At any rate, my own personal interest in the problem has been sharpened as a result of these studies and I want you to know that I am at your service if you find that I can be helpful.

BROOKS HAYS,
Member of Congress, Fifth District, Arkansas.

COMMITTEE ON FOREIGN AFFAIRS,
July 21, 1955.

Hon. J. PERCY PRIEST,
Chairman, Committee on Interstate and Foreign Commerce, House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: During the latter part of March 1955 4 identical resolutions (H. J. Res. 264, 265, 268, and 272) designed to improve the relations of the United States with Western Germany and Japan by providing for the payment of equivalent value for the private properties of their nationals seized by our Government during and after the war were introduced and referred to the Committee on Foreign Affairs.

As chairman of the committee, I designated an ad hoc subcommittee, chairmaned by the Honorable BROOKS HAYS, to consider this matter. Subsequently, on July 1 and again on July 11, 1955, public hearings were held by that subcommittee and all witnesses desiring to be heard were given an opportunity to present testimony.

At the outset, it was realized that the subject matter involved not only serious questions of highly important policy, but matters involving questions of possible concurrent jurisdiction of the Committee on Foreign Affairs and the Committee on Interstate and Foreign Commerce. As these resolutions had been referred to the Committee on Foreign Affairs it was felt that their importance warranted consideration as soon as possible. During the course of the subcommittee hearings a number of important facts were developed. Representatives of both the Department of State and the Department of Justice testified that they could not support payment for the full amount of properties seized. They supported payment to individuals only of a maximum of $10,000, as proposed in H. R. 6730, which had been introduced on June 8, 1955, and referred to the Committee on Interstate and Foreign Commerce. Testimony by various witnesses raised questions concerning the equity of the proposed payment of only a portion of the value of the properties seized.

It was brought out in the hearings that a Senate committee within the last 2 years had conducted an intensive investigation of this whole matter. See Senate Report 1,982, 83d Congress, 2d session.

Several witnesses traced the historical treatment accorded by our Government to such properties in the past.

Some questions were raised about the applicability of the Paris Reparations Agreement and the Bonn Convention to the problem at hand.

A number of witnesses contended that the United States ought not to be put in the compromise position of using private funds of private German and Japanese citizens for the satisfaction of any of the public obligations of the governments of these two countries.

As the subcommittee hearings developed, it became apparent that this entire problem, although of great concern to the Foreign Affairs Committee, was intricately interwoven with earlier legislation which historically has been handled by the Committee on Interstate and Foreign Commerce. It also became evident that proper consideration of these joint resolutions by the Foreign Affairs Committee would take many more months of study than would necessarily be the case with your committee, particularly in view of its familiarity with the legislative origins of this proposal.

Accordingly, after the approval of the subcommittee and after conversations with you, it was decided, by unanimous vote of the Committee on Foreign Affairs, that I would request that these resolutions be referred to the Committee on Interstate and Foreign Commerce.

In order that full advantage may be taken of the information developed in them, I am having the subcommittee hearings printed and copies will be sent you as soon as they are received from the Government Printing Office. It is hoped that this will facilitate the transition from our committee to the Interstate and Foreign Commerce Committee.

If your committee desires any further information in this regard, I shall be happy to cooperate to the fullest extent.

Sincerely yours,

JAMES P. RICHARDS,
Chairman.

Chances for Ending the Cold War

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. DURHAM. Mr. Speaker, on the eve of the departure of the members of the Joint Committee on Atomic Energy for the 80-nation conference in Geneva, Switzerland, on the peacetime uses of atomic energy, I should like to insert in the CONGRESSIONAL RECORD a very thoughtful and impressive statement by ex-Senator Frank Porter Graham, of North Carolina. Dr. Graham set forth his private views on the current chances for ending the cold war for the Charlotte, N. C., News, and his article was reprinted in the July 26 issue of the Chapel Hill Weekly. While he was president of the University of North Carolina, when he was a Senator, and during his present assignment in the United Nations, Dr. Graham has always raised his voice in the cause of peace and the brotherhood of man. Dr. Graham's words have such deep implications for the conference in Geneva on development of the atom for peacetime purposes, as well as for the many problems that lie ahead in our relations with other nations of the world, that I would like for the Members of the Congress to have opportunity to read his thought-provoking statement, which follows:

WORLD'S HOPE FOR PEACE IS DESCRIBED BY FRANK GRAHAM

(EDITOR'S NOTE.—Former United States Senator and president of the University of North Carolina, Dr. Frank P. Graham put down his private views for readers of the Charlotte News recently on current chances for an end of the cold war. Knowing the interest in Chapel Hill in Dr. Graham and in peace, the Weekly reprints the article here.)

(By Dr. Frank P. Graham)

NEW YORK.—In seeking to answer your question as to the present prospects for relaxing the tensions of the cold war and for taking more definite steps toward peace, I wish first of all to say that I claim no special knowledge or competence. I speak with more of the general hope now felt by the people of the world than with any expert knowledge in the possession of the statesmen at Geneva.

The conference at Geneva has gotten off to a good start with friendly gestures on both sides. This itself is somewhat of a change from the blasts and counterblasts which have sometimes characterized the opening conferences of the two great power groups.

FIRST ISSUES

The immediate issues which divide the Communist and non-Communist world are: (1) the reunification of Germany with real freedom in elections and with real freedom in its own decisions concerning rearming and membership in the democratic community; (2) free elections in the Eastern European nations, promised in the Yalta agreement in accordance with the principle of the self-determination of peoples, which is also a basic principle of the United Nations; (3) the continuance of American bases in many lands as a part of the defensive strategy of the free world; (4) progressive and effectively enforcible disarmament of all types of forces and weapons of war and mass destruction; (5) the opening of knowledge and contacts between the two worlds; (6) the promised ending of subversion as part of an international apparatus; and (7) (not on the agenda but in the background of the Geneva Conference) the question of the admission of Communist China in the United Nations, subject to requirements of the United Nations, along with the question of admission of all nonmember nations as part of the goal of universal membership.

NONE INSOLUBLE

None of these issues are progressively insoluble except as adamant positions make them so. These main issues provide the opportunity for carrying out in action the good faith of the friendliness and good will with which the conference of the Big Four has auspiciously and hopefully opened in Geneva.

We must hope with good will and pray with faith that this outward friendliness has an inner and sincere significance. In this age of peril the year 1955 may become the year of hope which has three foundations: (I) The United Nations; (II) the Big Four conference; (III) the program of atoms for peace.

TEN HARD YEARS

I. The United Nations, after 10 troublous years, has been morally strengthened by the redeclaration by 60 nations of their interdependence on, their faith in, and their support of the United Nations. The United

Nations, with the full support of the United States led by President Truman, had made it clear, by its stand in Korea, that peace must not mean either appeasement of aggression and tyranny or drifting into a third world war. The United Nations, as a source of hope, had helped to achieve a ceasefire in Palestine, Indonesia, Kashmir, and Korea; had helped to cool off hot spots in Iran, Greece and Berlin; and is helping a little to cool the hot waters in the Straits of Formosa, and has helped many millions of people to achieve their own self-determination in Libya, Eritrea and Indonesia.

In quiet, patient work, day to day, the United Nations is helping people to find the moral equivalent of war in worldwide campaigns and programs against poverty, hunger, illiteracy, disease, unfair discriminations, colonialism, and the war system itself. With all its limitations and frustrations, the United Nations, by the support reaffirmed in the commemoration of the 10th birthday at San Francisco, is in 1955 a renewed source of hope for all mankind.

II. In Geneva this week President Eisenhower and Prime Ministers Bulganin, Eden, and Faure and their associates, open another chapter of 1955 as a year of hope of better things to come. This hope is based not only on the personalities of these leaders and the power of their countries for changing the climate of the cold war in a divided world. It is also based on the widening consciousness of the peoples of the earth that the third world war, now held off by the knowledge of its consequences for all people, might be started against design by some irresponsible spark in the global tinderbox or by some local war expanding beyond its boundaries which would precipitate the fear of a strategic jump ahead in the desperate potentials of atomic war.

Now that it has been made clear by the united strength of the 10-year policies for peace with freedom that no totalitarian tyranny of world empire can override free peoples, it is the prayer tonight of Buddhist, Hindu, Parsee, Taoist, Shintoist, Muslim, Jew, and Christian, that the negotiations at Geneva will mean a more decisive turn in world affairs toward the self-determination, well-being and peace of all people. It is the common prayer of people everywhere that the muster of nations decisively shift from the lineup of two worlds with arms and atom bombs against the family of man to one world of the family of man against arms and atomic bombs. This is the challenge and hope of the Big Four in Geneva. Prayers in the minds and hearts of people of many communities in many lands are for the efforts of our President and all the Big Four during the days to come.

III. While thermonuclear power, as presently directed, casts its lengthening shadow across the earth and darkens all the homes and hopes of men, the third hope of the year 1955 is in the effectuation of a real program of atoms for peace. The two worlds still tend to drift toward the narrow but deep abyss which might engulf all nations in the total annihilation of all people and their accumulated civilization. Man, nations, and the atom have the capacity for good and evil.

INHERITANCE

All the children of men carry in their subsubconscious, preconscious, and conscious natures the animal inheritance of hundreds of million of years and the savage inheritance of hundreds of thousands of years, deep and explosive beneath the nurture of a few thousands years of civilization. The nature of man, when explosive and uncontrolled in its capacity for evil, and the nature of the atom, when explosive and limitless in its power for death and destruction, might bring to an end this ancient man and his accumulated civilization after billions of years of slow evolution to the age of man the decade of the atom. In the providence of God the physical descent of man from lower species has been undergirded by the spiritual ascent of man in the image of God toward a deeper consciousness of one God and the equal brotherhood of all people.

The evolution of states from city-states to empire-states to feudal-states to nation-states has brought the people of the world to the alternatives between a totalitarian-world-police state or the more effective cooperation of nation-states in a more adequate United Nations for a more inclusive collective security of freedom, justice, and peace in the world. The evolution of atomic power in the hands of man in the absolute national state is the greatest threat which has come to the survival of the human species on this planet.

Secretary General Dag Hammarskjold, Under Secretary Ralph J. Bunche, and Prof. Walter G. Whitman, Secretary General of the International Conference on the Peaceful Uses of Atomic Energy, and representatives of all the atomic member nations in the United Nations, are working on policies and plans to make effective the President's suggestion of atoms for peace which was unanimously adopted by the General Assembly of the United Nations.

Nothing less than (1) the spiritual depth of the power of the consciousness of the fatherhood of one god, (2) the democratic power of the breadth of the idea of the equal brotherhood of all people, and (3) the organic development of a more adequate United Nations, are all needed for the spiritual transformation of the nature of man, the democratization of society and the cooperation of nations for the use of science, technology, and the humane studies for a fairer and more creative life for all people.

WAYS TO PEACE

In competitive coexistence and in widening the areas of the cooperation of nations for health, education, technical assistance, economic development, reciprocal trade, cultural exchange, progressive and enforceable disarmament, and the humane uses of atomic power, will be the ways through which the universal yearning of the people for peace shall transform the high potentials of the world for war into the cooperation of nations for freedom, justice, compassion, and peace on earth.

In the love of God and man which transcends all races, colors, creeds, boundaries, and curtains, and with a sense of brotherhood with all people whether across the narrow streets, across the hard tracks or across the wide seas, we would, in spite of all illusions, frustrations, and fears, pray with faith and work with patience in the long and difficult pilgrimage of the people for peace and freedom in the eternal adventure toward the kingdom of God "who made of one blood all the nations of men to dwell on the face of the earth."

What General Ridgway Finds Wrong With United States Defenses

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 30, 1955

Mr. SIKES. Mr. Speaker, I submit for reprinting in the CONGRESSIONAL RECORD the full text of a letter addressed to the Secretary of Defense, Mr. Charles E. Wilson, by Gen. M. B. Ridgway, retiring Chief of Staff of the United States Army, under date of June 27, 1955, which was released by the Department of Defense on July 15, 1955. General Ridgway has held three of the highest military posts in the world today—Supreme Allied Commander in the Far East and in Europe and United States Army Chief of Staff. He has pointed out that the United States must be ready to fight more limited wars and needs more mobile units; that our defense will suffer if too much reliance is placed on nuclear weapons. The destruction they cause is so great that nations may agree not to use them. Therefore, General Ridgway pleads for stronger ground forces in being.

The letter follows:

[From the U. S. News & World Report of July 29, 1955]

WHAT GENERAL RIDGWAY FINDS WRONG WITH UNITED STATES DEFENSES

DEAR MR. SECRETARY: I shall depart from the active ranks of the United States Army on June 30, 1955, thereby vacating the offices I currently hold. Having spent 38 years as a United States soldier on active service around the world, I trust I may be permitted, as I terminate this service, to summarize for you certain of my concepts concerning the security and well-being of the United States, all of which I have expressed, in one form or another and from time to time, as Chief of Staff, United States Army, and as a member of the Joint Chiefs of Staff.

I do so within the statutory provisions of the National Security Act, as amended, which delineate my functions as a military advisor to you, the National Security Council, and the President.

I do so with full awareness of the quickening tempo of international intercourse; of the growing realization among all peoples of what the President brought into such clear focus when he said: "it seems clear that there is no longer any alternative to peace"; of the fateful developments which may have their genesis in the conferences which, beginning in New York and San Francisco, are to continue later in Geneva.

I am mindful of the great responsibilities that continue to devolve upon you as the President's principal assistant for national defense. I would be neglecting my duty if I did not reaffirm prior to my departure my convictions regarding the military defense of the United States. I wish to comment on the general nature of the Soviet threat, the variable strategy permissible to the U. S. S. R. for general war, the specific United States commitments in reaction to the Soviet threat, the United States strategy to meet these commitments, and a viable United States military strategy for "cold war" situations. Finally, I will discuss briefly my view of the role of a military advisor in the formulation of national policy.

GENERAL NATURE OF THE THREAT

In today's world-power climate, in spite of recurrent peace offenses, the scope and dimensions of the threat which faces America are measurable in terms of the fundamental attitude of hostility by the Soviet regime toward the free world and especially toward the United States; in terms of the Communist capability for conducting political subversion throughout the world; and principally in terms of the strength of all major components of the continually expanding Soviet bloc military power.

As a result of this continued increase in Soviet bloc military strength unmatched by a comparable increase in allied strength, the United States and its free world allies are faced by Communist armies, navies, and air

forces formidable in size, modern in material and techniques, and deployed threateningly along the periphery of the Iron and Bamboo Curtains from the North German plain to the maritime provinces of eastern Siberia. The dangers inherent in this situation, and particularly the dangers in the preponderant deployment of land forces, are evident at every significant point of contact between the Western World and the Communist bloc.

As long as the Soviet Communist bloc is on the offensive, it is able to retain the initiative in its undertakings; and the centrality of its power base gives it the strategic advantage of being able to concentrate with small risk of detection at any point on its perimiter.

In the nuclear arms race, the day of nuclear plenty for each of the two major world power groups draws nearer; the cost of fabrication drops; and hence the day when even smaller powers may likewise possess such weapons is already foreseeable. Common appreciation of the consequences of unlimited nuclear war may well result in general unwillingness to employ these weapons, in recognition of the mutual disaster which would follow wherein the peoples, property, and institutions of much of the world would vanish.

In a situation of nuclear plenty, mutual cancellation of nuclear advantage can occur in terms of mutual devastation; or, depending on the degree of parity, in terms of mutually limited use; or, finally, in common refusal to use nuclear weapons at all. It seems doubtful that the U. S. S. R. would initiate employment of nuclear weapons in the face of a preponderance of nuclear weapons possessed by the United States. On the other hand, should the Western nations initiate their use, the U. S. S. R. would have no choice but to respond in kind, in the hope that the resultant destruction to the West would circumscribe the ability of the United States to continue effective prosecution of such a war. In the light of this major possibility for the future, it is at least debatable whether the United States really has the freedom to rely preponderantly on nuclear weapons to exert its military power.

Moreover, it appears prudent to assume that Soviet strategists are even now giving consideration to a course of action which would put on the United States the onus of initiating the use of military nuclear firepower, making certain that the United States and its allies know they can reasonably expect retaliation with nuclear weapons by the Soviets, simultaneously with the initial assaults of the Red armies

Under these conditions, since national objectives could not be realized solely by the possession of nuclear capabilities, no nation would regard nuclear capabilities alone as sufficient, either to prevent, or to win a war.

VARIABLE STRATEGY PERMISSIBLE TO THE U. S. S. R. FOR GENERAL WAR

A mere statistical evaluation of the ratio of military power potentials between the Soviet bloc and the free world is not sufficient to determine detailed Soviet general war strategy. Instead, Soviet military potentials would first have to be translated into Soviet minimum military capabilities, and thereafter into Soviet general war strategy. For a general war within the next 10 years, the Soviets would have to gain their objectives of the defense of the U. S. S. R., the control of Eurasia, the severance of lines of communication between the United States and its allies, and the reduction of the warmaking power of the United States and Canada. The attainment of these objectives would have to be integrated in such a manner that the prizes the Soviets would hope to acquire would not be merely the pickings of a vast ash heap of devastated animal life, or of a human race debilitated by the effects of radiation. On the contrary, the prize would have to be worth the effort expended and the chances taken to get them; that is, they would have to materially improve the power position and the extension of Soviet dominance.

The Soviet potentiality for gaining these prizes is based on Soviet bloc military forces, which comprise large ground forces supported by integral tactical air forces, supplemented by aid-defense forces, and including a minor surface navy, a threatening submarine fleet, and a long-range air force growing in capability.

To use these forces in the attainment of Soviet war aims without modification to or retrenchment from their objectives, the Soviets would have to acknowledge conditions which over the next 10 years could vary from an extreme of clear United States nuclear superiority to full nuclear parity, with vast stockpiles of weapons and of delivery vehicles available to both sides.

Thus the greatest imponderable with respect to probable Soviet strategy concerns the Soviet capabilities and intentions with respect to the use of nuclear weapons. For all practical purposes, nuclear parity between the U. S. S. R. and the United States will exist when the U. S. S. R. achieves the ability to deliver critical damage to the United States-allied war-power sources with fusion weapons. In this situation, neither side will have a nuclear advantage, whether the lack of advantage is proven by mutual devastation or mutual withholding of use, or depending on the degree of parity, in terms of limited use. There is little reason to doubt that the U. S. S. R., like every other nation, would refer to avoid the use of nuclear weapons. For these reasons it is probable that as nuclear plenty is approached and as the relative advantage of United States nuclear superiority diminishes, Soviet strategy will be directed toward the creation of situations which will preclude the use of nuclear weapons on a worldwide basis.

The variable character which general war may assume over the next 10 years, then, makes the best Soviet strategy in each different circumstance the employment in their normal role of conventional Soviet ground forces, supported by the Soviet Air Force and the Soviet Navy. Such a strategy is completely consistent with Soviet war objectives, with Soviet strategic doctrine, with Soviet military potentialities, and with the physical nature of the great land mass it occupies. There is no reasonable basis for expecting Soviet strategy necessarily to duplicate United States-allied strategy, and thus to gamble on a capacity of accomplishing, by a single means, an extremely formidable task. This task, even if successful in accomplishing the reduction of United States warmaking power, would attain only one of the major Soviet war objectives. Again it seems logical to expect that all Soviet war objectives would be combined to form an integrated Soviet war aim.

I recognize that the foregoing position is not reflected in current United States strategy with respect to airpower. I recognize that, since United States power centers are beyond the effective reach of the Soviet tactical ground-air team, the Soviets, too, have been forced to develop a strategic bombing arm. I am well aware of the requirement for a continuing evaluation of all elements of the Soviet potential. I am also well aware that, in planning for success in war, allowances must be made for special circumstances and unpredictable actions.

My carefully considered position, long advocated, is based realistically on military factors that are associated with Russian and Soviet history, the tradition of the Soviet offensive-defensive, and the present Soviet military force structure and capabilities. Moreover, it is, I believe, consistent with the entire pattern of recorded military history to date, and, in the light of all human experience, will prove to be consistent with the pattern of the future. These factors must be accorded the full weight they demand by responsible United States planners both within and outside the military services.

UNITED STATES COMMITMENTS IN REACTION TO THE THREAT

In a world whose determination to combat the Communist menace waxes and wanes, the United States, by example, persuasion, pressure, inducements, assistance, and agreements, has established itself as the leader of the Western resistance. The United States has sought and signed allies around the world. For purposes of the common defense, it has entered into numerous commitments, some vague and some specific, to take actions, to deploy forces, and to provide material support to Canada, 20 Latin American countries, Berlin, West Germany, Spain, Yugoslava, 11 NATO nations, Libya, Ethiopia, Saudi Arabia, Iran, the 2 ANZUS nations, the additional 6 Manila Pact nations, Korea, Japan, the Republic of China, and to the United Nations organization.

No one knows when those ominous sight drafts may be presented for payment. No one can tell at this time the form or scope of performance these commitments may require of the United States. But they obviously may involve action by United States military forces in many different types of climate and terrain, such as the mountains of Greece and Korea or the jungles of Indochina.

UNITED STATES STRATEGY TO MEET COMMITMENTS

In general, the foregoing commitments express the intent of the United States:

(a) To meet force with force.

(b) To be prepared to meet and defeat limited aggression in small perimeter wars, whether or not nuclear weapons are used.

(c) To be capable of defeating Soviet bloc military forces if general war should occur, whether or not nuclear weapons are used, and in widely varying terrain and climates.

In my view, the present United States military forces are inadequate in strength and improperly proportioned to meet the above commitments, specific or implied, for the following reasons:

(a) The Soviet Communist bloc has created and is prosecuting a continuous state of conflict as a matter of national policy. They have shown the intention and capability to capitalize on subversion or on local war for military and political advantage in China, Greece, Czechoslovakia, Malaya, Korea, Indochina, and other places, in spite of the superior United States strength in long-range air forces, although this superiority has been obvious to the world since World War II. As the point in time approaches, possibly between 1958 and 1962, when Soviet nuclear weapon and delivery developments will give the Communist bloc the capability of inflicting critical damage on the United States warmaking potential, coupled with a concurrent improvement of Soviet air-defense capability, the United States nuclear-air superiority will have lost most of its present significance.

(b) The free world military forces deployed around the perimeter, other than those in Western Europe, are in the position of being military detachments, which are not mutually supporting, which have little or no strategic mobility of their own, and which are difficult to reinforce because of the lack of truly mobile and adequate military reserves.

(c) Present United States military forces cannot support fully America's diplomacy. If military power is to support diplomacy effectively, it must be real and apparent to all concerned, and it must be capable of being applied promptly, selectively, and with the degree of violence appropriate to the occasion.

(d) While a mobile ready force element is provided for in published policy statements, the actual development of a mobile

ready force must compete with increasingly emphasized continental defense, and with, in my opinion, overemphasized nuclear-air requirements; all of which are requirements related primarily to general war.

In view of the free world's appreciable manpower superiority over the Communist bloc and of the economic potential of the United States, it is my view that the free world has ample resources to confront the Soviet bloc enemy in whatever form of aggression the Soviets choose. The advantage of interior lines on the Communist side can and must be countered by the advantage of strategic mobility on the free world side. In addition to properly deployed strength, mobile reinforcements are the only effective means of countering the threats growing out of the Soviet ability to concentrate at will, and the United States is the only source of mobile reserves at the present time.

It is my view that the commitments which the United States has pledged create a positive requirement for an immediately available mobile joint military force of hard-hitting character in which the versatility of the whole is emphasized and the preponderance of any one part is deemphasized.

VIABLE MILITARY STRATEGY FOR COLD WAR SITUATIONS

Currently, the means made available for supporting the United States military strategy for both cold and general war are limited. The present United States preoccupation with preparations for general war has limited the military means available for cold war to those which are essentially by-products or leftovers from the means available for general war.

A wide choice of military means, resulting from properly proportioned, modernized forces, is required to fill the present large gap in effective deterrence resulting from United States preoccupation with long-range bombers as the principal deterrent.

United States strategy, backed by adequate and proper military strength, should make full provision for the following:

(a) Every physical action taken in furtherance of the basic United States military strategy should be taken only after considering, individually and in sum, the probable psychological effects of the action on the U. S. S. R., United States nationals, United States allies, and neutral nations. Such actions should be designed to counter the Soviet policy of instilling fear with a United States policy of creating confidence.

(b) A strong position of tangible free world strength must be maintained. Continued United States adherence to the concept of collective security is fundamental to the maintenance of free world strength; coalitions must stand shoulder to shoulder or suffer the danger of disintegration from within.

(c) An increase in the readiness and strategic mobility of uncommitted United States and British Commonwealth forces is required to support the strategy, and availability of troops of other key nations for additional deployments in United States and United Kingdom transportation to areas where they are needed is an important aspect.

(d) Soviet satellite aggressions should be treated as limited or local wars until the aggressor is defeated or the United States and its allies are prepared for general war.

(e) United States reaction to satellite aggression should not be conditioned by a fear of Soviet intervention or unduly prejudiced by a fear of possible maldeployments of United States forces. If sufficient forces are available from the outset such maldeployments could be readily and quickly rectified.

(f) The satellite cordon should not be reduced by military force as long as its existence produces advantages for the free world.

(g) The United States should give all practicable assistance to our allies in their efforts to suppress Soviet-Communist-inspired civil disorders.

THE MORAL ASPECT

I should like to add a word on the importance of the moral factor in all human relationships, especially when preparing a strategy to protect America's security. Just as the ultimate and most deadly threat of communism is the destruction of the religious and moral principles which, imperfectly as they may have been observed, yet have guided man to new heights of dignity and self-respect; in seeking to insure America's security, so also we find the same threat in the increasingly significant ignoring by our planners of the consequences of omitting the moral factor in considering the use of the immense destructive capability which now exists in the world. There is a responsibility on every one of us to evaluate this moral factor, along with all the scientific and other practical factors in seeking solutions to these mammoth problems.

MY VIEW OF THE ROLE OF A MILITARY ADVISER

In the foregoing pages, I have sought to outline a broad concept of the strategy which, as I see it, is most likely to serve United States interests. In doing so, it has been my intention to discharge my responsibility as a military adviser, from within the field sanctioned by law. In the light of current national military policies, this responsibility is not always clear, even to those to whom the responsibility is assigned.

In closing, I should like, therefore, to outline my view of the proper role of the Chief of Staff, United States Army, as a military adviser.

In March 1953, while still Chairman of the JCS, General Bradley expressed one view of the Joint Chiefs of Staff role as military advisers: "Generally * * * we should confine our part to pointing out the military implications and military capabilities * * *. Perhaps some people might feel that the Joint Chiefs of Staff should stand up and resolutely and strongly recommend a national policy which we would prefer, but to date I have not been convinced that this is a proper role for a military leader."

In his message transmitting Reorganization Plan No. 6 on April 30, 1953, President Eisenhower expressed the view that "Professional military leaders must not be thrust into the political arena to become the prey of partisan politics."

Earlier, in 1951, on April 26 to be exact, the Joint Chiefs of Staff were criticized publicly by Senator Robert A. Taft as being "absolutely under the control of the administration," and that their recommendations were "what the administration demands they make." During my period of duty as Chief of Staff, events have made it appear that the criticism once leveled at my predecessors might be better grounded in the future than in the past.

National policy matters which are discussed at the level of the Joint Chiefs of Staff as military advisers to the President, National Security Council, and Secretary of Defense, are seldom, in this day and age, separable into purely military and nonmilitary problems.

I view the military advisory role of a member of the Joint Chiefs of Staff as follows: He should give his competent professional advice on the military aspects of the problems referred to him, based on his fearless, honest, objective estimate of the national interest, and regardless of administration policy at any particular time. He should confine his advice to the essentially military aspects. When testifying as Army Chief of Staff before the Subcommittee of the Committee on Appropriations in the Congress on June 28, 1947, General Eisenhower expressed the following attitude in support of this view:

"I appear before you only as a professional soldier, to give you a soldier's advice regarding the national defense. I am not qualified to proceed beyond that field; and I do not intend to do so. It is my duty as Chief of Staff to tell you gentlemen what I believe to be necessary for national security."

If the military adviser's unrestricted advice is solicited he should give his considered opinion, for in today's climate national security planning is broad and encompasses many aspects. The President, in the message to which I referred earlier, has stated that the Nation's military plans "must incorporate the most competent and considered thinking from every point of view—military, scientific, industrial, and economic." However, in my opinion, the military advisor should be neither expected nor required to give public endorsement to military courses of action against which he has previously recommended. His responsibility should be solely that of loyal vigorous execution of decisions by proper authority.

This aspect is perhaps the most difficult one for the military adviser, particularly as he strives to keep himself detached from domestic politics at the time domestic political forces attempt to use him for their own purpose. In his role of adviser, he gives his best advice. In his role as a commander, he implements decisions. Both roles must be respected by civilian officials, as he must respect theirs. In this regard, as the political climate shifts and changes, differing assessments will be made of his proper role; but whatever the situation, he must remain outside the field of partisan politics. It is incumbent upon civilian officials to see that he stays outside and to protect him from becoming involved.

I am well aware that my remarks here and elsewhere may be taken, indeed, they have been so labeled, as special pleading for outmoded special interests. I have been pictured in some quarters as opposing emphasis on airpower. The exact contrary is true, I am opposed to overemphasis on airpower. as I am opposed to overemphasis on any military force where dependence on that force exceeds its capabilities, and impairs the Nation's overall military potential.

As Chief of Staff, United States Army, it has been my duty to advance the primary interests of United States security over and above Service interests. While disavowing any Army claim to an excess of national interest, I would specifically point to the Army's long experience, past success, and tested judgment in fighting the wars of the United States with all forms of military power.

The Army has no wish to scrap its previous experience in favor of unproven doctrine, or in order to accommodate enthusiastic theorists having little or no responsibility for the consequences of following the courses of action they advocate. While the Army is adapting itself readily to the employment of new weapons and new techniques, nothing currently available or foreseeable in war reduces the essentiality of mobile, powerful ground forces, the only forces which can seize the enemy's land and the people living thereon, and exercise control of both thereafter.

The United States Army has for 180 years served America's security. It will continue under new leadership its proud tradition of loyal and dependable service.

It has been my proud privilege to have been a member of that magnificent institution in the profession of arms—the United States Army.

Respectfully,

M. B. RIDGWAY,
General, United States Army, Chief of Staff.

The Housing Bill

EXTENSION OF REMARKS
OF

HON. IRWIN D. DAVIDSON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 30, 1955

Mr. DAVIDSON. Mr. Speaker, I would like to make my position on the housing legislation perfectly clear. I am an advocate for public housing. As a member of the Committee on Banking and Currency, I sought to have that committee report an adequate housing bill. I feel that it is axiomatic that not alone in a city like the city of New York, but in many communities throughout the United States, there are hideous slums to be cleared. We cannot clear slums unless we have decent housing in which to relocate those displaced by the destruction of the substandard dwellings in which they lived. Private industry, by reason of the terrifically increased building costs, has been unable to do the job. Public housing is the only answer.

The United States Senate saw the light. Its bill provides for 135,000 units of public housing. In my committee we were only able to find approval for a bill which provided for 35,000 units of public housing. When this bill reached the floor today, the Republican leadership was unanimous under the guidance of the ranking Republican Member on the Committee of Banking and Currency in its determination to eliminate public housing from the bill entirely. I am sorry to say that with the help of some of my colleagues, it succeeded.

My first instinct was to vote against what remained of the housing bill because this was not a bill designed to provide decent housing for the great masses of people now subsisting in sordid dismal shelters; this bill was and is a continuation of the bonanza which has gratified the real-estate lobby.

The action in the House of Representatives today is unhappy. Many who have been pontificating about the necessity of doing something to curb juvenile delinquency ripped public housing out of the bill. Others who have successfully obtained literally billions of dollars in farm subsidiaries refused to lift a finger to clean up the blighted areas of the teeming cities of America. They called the housing program socialistic. They find nothing socialistic or paternalistic in farm subsidiaries or windfall handouts, while slums and blighted areas in our cities grow steadily worse and increase in size. My experience as a judge in a criminal court has convinced me beyond any doubt that crime, especially juvenile crime, is bred and fostered by the sordid, unhealthy conditions which exist in substandard homes and slum areas. It is in these areas that policing activities, fire and health programs are taxed to the utmost.

It is equally clear that Federal assistance is needed to help the State and local governments combat the growth of slums, provide adequate low-rent housing, and eliminate juvenile delinquency. I am convinced that the agencies concerned with the administration of our housing laws are in need of renewed direction by the Congress, and that our Housing Act itself is in need of legislative revamping. Last year Congress amended the Housing Act to include an authorization for the FHA to insure urban renewal and slum-clearance projects. The purpose of the law is obviously laudable, but despite many applications which have been made for Federal assistance, FHA has not approved a single one.

At the public hearings held by the Committee on Banking and Currency, Mr. Cole, the Housing Administrator, was questioned at length by me. At first there was some question as to where the responsibility and the jurisdiction for slum clearance and urban redevelopment might lie. Mr. Cole indicated that the administration of section 220 of title I was primarily the responsibility of FHA.

He pointed out that when "a community desires to clear and redevelop a given slum or blighted area, it proceeds by going to the Urban Renewal Administration and asking for planning funds," and then stated:

> Heretofore there has not been very much of a closely coordinated effort between FHA and Urban Renewal.

I have no desire, Mr. Speaker, to castigate the Federal Housing Administrator who stated at the hearings that he agreed with me and was himself "not satified with the swiftness of the program."

Renewed questioning brought out this fact: Not a single application for slum clearance and urban redevelopment had been granted under section 220 because the FHA had established no policy of appraisal or cost evaluation.

The bill which the House Banking and Currency Committee reported contains a provision which the Senate has already approved and which was contained in the bill I introduced earlier this year. The phrase "estimated value" is replaced by inserting "replacement cost." This change, together with a realistic allowance for builders' profits by the FHA should go a long way toward the rapid approval and construction of urban renewal and slum-clearance projects.

The committee report also emphasizes the fact that under the cost-certification provisions of the Housing Act there will be full protection against "windfalls" under section 220, multifamily rental projects. The cost-certification section has been amended by the committee by the adoption of a provision contained in my bill. This new safeguard will close a loophole which exists in the present law. Rental housing eligible for FHA insurance under section 200 containing from 5 to 11 dwelling units is made subject to the cost certification provisions of section 227 now applicable only to projects containing 12 or more units.

Thus, the builder, in his application for a mortgage, must agree that upon completion of the physical improvements to the mortgaged property or project, he will file a sworn certificate subject to the scrutiny of the Government's accountants as to the actual cost of the improvements, and if the mortgage loan exceeded the actual cost, the builder must promptly repay any excess, the "windfall" surplus, over the approved percentage, and apply it to the reduction of the principal amount of the mortgage. No excess could then find its way to the builder's pockets.

It is essential too, for the proper administration of this law, that the FHA overcome its investigation jitters and promptly proceed with a workable housing program.

There is another very important provision contained in the committee housing bill. That is the housing which we have approved for the educational institutions of the country. With the increasing shortage of trained scientific personnel the more we can do in any way to help foster and encourage higher education the better. This provision to aid in the construction of housing and other facilities at these educational institutions is modest indeed when the need is considered. As an indication of the gravity of the situation I would like to include here with my remarks, Mr. Speaker, a letter I recently received from the able chancellor of New York University, Henry T. Heald:

NEW YORK UNIVERSITY,
New York, N. Y., July 14, 1955.

The Honorable IRWIN D. DAVIDSON,
House of Representatives,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN DAVIDSON: I understand that the Banking and Currency Committee of the House has approved a bill dealing with the college housing loan program. A similar bill, S. 2126, has already been passed by the Senate.

This legislation is extremely important to American colleges and universities and I hope very much that it will be finally passed in this session of Congress. I know that the Congress has a great deal of important work to do in a relatively short time, but I hope that it will be possible to secure favorable action on the college housing legislation.

Thank you very much for anything you may be able to do to help.

Sincerely yours,
HENRY T. HEALD, *Chancellor.*

Mr. Speaker, the Banking and Currency Committee considered another provision contained in my bill. I had proposed a study of the desirability and feasibility of establishing a program of insurance to protect small homeowners, whose dwellings are covered by mortgages insured under Federal law, against loss of their equity in their homes in cases where they are unable to make the mortgage payments as a result of economic conditions beyond their control. After discussion in executive session the committee determined that the question was worthy of further study and referred it to the housing subcommittee. I believe this a good start toward the establishment of an insurance fund to protect the small homeowners' equity.

I voted for the substitute housing bill because had I not done so, there would have been no chance for public housing whatsoever. At least now this emasculated bill will go, with the more realistic Senate bill, to the conferees. I am convinced that these conferees will come up with a bill far more in consonance with the aspirations of the people and far more consistent with what our people need and have been hoping for.

Fort Vancouver National Monument

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. MACK of Washington. Mr. Speaker, 8 years ago I presented to Congress a bill to authorize the establishment of a National Monument to preserve one of the most historical sites in the entire western part of the North American Continent. Congress approved my request and authorized the establishment of Fort Vancouver National Monument.

By so doing, Congress preserved for future generations part of the history of our western frontier which stems from an act of a previous Congress some 145 years before.

In January 1803, the Congress of the United States appropriated, at the request of President Thomas Jefferson, the sum of $2,500 for an expedition to the Pacific ocean for the purpose of extending the external commerce of the United States. Thus was born the famed Lewis and Clark Expedition the sesquicentennial of which we are celebrating this year.

Meriwether Lewis and William Clark blazed the trial to the great Northwest frontier and were soon followed by a constantly increasing flood of pioneer settlers. This vast new country required trading posts and so the Hudson Bay Company's established Fort Vancouver which has been aptly called the cradle in which the civilization of the Northwest country was nurtured.

Fort Vancouver, established in 1825, was the largest Hudson Bay Company establishment, and was the headquarters for this company for all its activities between the crest of the Rockies and the Pacific Ocean, from Russian Alaska to Spanish California. From this post stemmed all the commerce and culture, the development and civilization of the Oregon country. Its historical significance transcends not only State lines, but international boundaries.

Fort Vancouver was the western terminus of the famed Oregon Trail, and it was here, under the guidance of the Hudson's Bay Company's famous factor, John McLoughlin, that the planning and intrigue was carried on by which Great Britain hoped to gain possession of all the country north of the Columbia. At the same time, his very fine administration of the area, and his many acts of kindness to the pioneer American settlers, endeared him to all the people with whom he came in contact.

After the treaty of 1846 placed this territory under the American flag, the site of the Hudson's Bay Post became Vancouver Barracks, the first United States Military Establishment in the Northwest. Fort Vancouver has inscribed for itself a long and honorable chapter of thrilling events of great significance to the historians and others interested in the preservation of early Americana. Here were stationed, at one time or another, such famous officers as Ulysses S. Grant, Phil Sheridan, George B. McClelland, George E. Pickett, Nelson A. Miles, Frederick Funston, and George Catlett Marshall; truly a famous roster.

The Army post at Fort Vancouver continues active to this date. Known variously as Camp Vancouver, Columbia Barracks, Fort Vancouver, and Vancouver Barracks, it long served as military headquarters and supply point for the Pacific Northwest. Though now much reduced in size, it commemorates the role of the United States Army in the settlement and development of the American frontier.

Its international recognition also continues, for Pearson Field at Vancouver Barracks was the landing point of the pole-vaulting Russian fliers in 1937, about whom the famous explorer Vilhjalmur Stefansson said: "They found the world of transportation a cylinder; they left it a sphere."

The Fort Vancouver National Monument will be dedicated on August 13, just 2 weeks from today. Secretary of the Interior Douglas McKay will officiate at the dedication and an impressive ceremony and celebration has been planned. It is being sponsored by the Stockaders, a Vancouver, Wash., organization named in memory of the Hudson's Bay days and the original Fort Vancouver stockade.

In behalf of the Stockaders, Vancouver and Clark County citizens, I extend to all Members of Congress a cordial invitation to attend the dedication and celebration. You should by all means see first hand the results of actions taken by two Congresses of the United States over a span of 145 years.

More Notes on Price Supports

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. THORNBERRY. Mr. Speaker, in the July 28, 1955, issue of the Taylor Times, there is an editorial by Mr. Henry Fox, well-known author and writer who has always shown a keen interest in and an accurate understanding of the problem of the small farmer.

The editorial by Mr. Fox entitled "More Notes on Price Supports" is one which I consider very timely and which I know every Member of Congress will want to read.

I therefore respectfully request that it be inserted in today's CONGRESSIONAL RECORD:

MORE NOTES ON PRICE SUPPORTS

Even here in a farming area, you still find people who shake their heads and say they don't know about this price-support business, it sounds like artificially maintaining prices.

Well, maybe it is, whatever that means, but look at it this way:

The several million farms in this country are each a separate business, run by individuals who are mostly unorganized, and despite that they have succeeded in producing all the food and fiber that this country needs, with some to spare. But being individual units, they have no marketing system they can control, except through the agency of their Government.

It's one thing to say a farmer ought to grow what he can get the most for and trust to luck to make a profit, the same as other people do, only it doesn't work that way and very few others function under such a system.

Take the car manufacturers. There are only 3 big companies, doing about 75 percent of the total business, and all told only 5 or 6 companies. If there were only 3 big farmers in this country, raising 75 percent of the cotton, corn, maize, etc., and 3 or 4 others raising all the rest, they wouldn't need any government support prices, they'd just hold the food off the market until they got what they had to have.

Or take tractor manufacturers. The same thing is true. There are only 7 or 8 companies making all the tractors and other farm implements for all the farmers in this country.

And even so, car manufacturers and tractor manufacturers have price supports, in the form of tariffs.

As long as the farmland is divided up into small units, and we for one hope it will stay that way forever, because if there's anything that keeps a democracy functioning it's a lot of small people who are their own boss and are economically uncontrolled by anybody else, then there has to be some method devised to let a farmer know when he starts a crop about what he can get for it when he finishes it. It's the most stabilizing fact in farming today, and it is now being proved right here in Williamson County.

Our only complaint is that the present Agricultural Department, headed by Secretary Benson, doesn't have much faith in it. Secretary Benson has lowered the support price at every chance he got, contending for example that 70 percent of parity is better for the farmers than 90 percent. Parity as you know means a fair price, and what this means is that Secretary Benson believes 70 percent of a fair price is better than 90 percent of a fair price. When he ran for President, Mr. Eisenhower criticized the Democrats for supplying the farmers only 90 percent of parity, saying they were entitled to 100 percent. Now 100 percent of fairness never did seem like too much fairness to us, but it seems like at least 30 percent more than Secretary Benson believes in. Equal justice to all, except farmers, and 70 percent is enough for them.

HENRY FOX.

The White House

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. LATHAM. Mr. Speaker, I believe the Members of Congress will enjoy the address by Sherman Adams, Assistant to the President, given at the national sales executive annual meeting in New York City on June 9, 1955:

THE WHITE HOUSE

Your President told me that the qualification for holding this platform is to have (as he put it) a wonderful idea. "Other vir-

tues which the speech should possess," he said "must be drama and spontaneity."

You can get all of these in a package, at a somewhat higher price, over at the 46th Street Theater. Such requirements, imposed upon a staff officer of the President of the United States, consecrated by tradition to seek complete anonymity, remind me of a young couple I heard about the other day.

This couple resolved to get married but the girl made one condition. That condition was that John should first save $1,000. Time passed and along toward the following June she asked him one day how much he had been able to save toward the $1,000. Thirty-five dollars, he said. Near enough, said the girl.

That is about the way you will have to settle with me.

We in the Eisenhower administration are not given credit for reporting effectively our accomplishments. These add up, if you enumerate them, to rather an impressive total. Too many people are critical not so much of what we do, but what we fail to say we do.

It is not my purpose to engage in any long exposition of the accomplishments of this administration. What I propose to do is to speak of our two principal objectives and how we have sought to attain them.

You gentlemen are professional salesmen. There is one thing that everyone of you know. You know that, while slogans and smart literature and slick sales talk help to sell, you nevertheless have to have a product. Sooner or later you know that the public, your consumers, must have confidence in that product. Your job is to see to it that your prospective consumers find out about that product.

We in the Eisenhower administration know that this is an important part of our job, too.

Now, there are two products, if I may paraphrase a little, which free government can sponsor and promote, which are infallible ingredients of a successful administration. They are not new. They are immediately accepted as basic criteria of a sound and progressive administration. No administration, demonstrably effective in convincing the people of its ability to deliver such products, has ever been repudiated. Those products are peace and prosperity.

I often think of the remarks a farmer in my native Vermont once made to a summer boarder. He lived up on one of those rocky side hill farms. His cow and old mare were not much but skin and bones, and he was as poor as a crow himself. One day a summer boarder whom he had known a long time came by. He was out harrowing among the rocks. She said, "Hiram, why don't you sell out up here and come down on some decent land where you can make a living?" "Well," said Hiram, "I ain't so poor as you think I be. I don't own this con-dummed place."

As sales executives you know the value of a product that can be relied on to stand the test of usage. Trade names soon disappear from the market places unless they represent sound and trustworthy standards of excellence.

In 1952 a vast majority of the voters of America, believing that things were not as sound and trustworthy as they should be politically, asked the Republican Party for a new demonstration of fundamental Americanism—a departure from radical design in government—a rededication to the more conservative and reliable political faith of our forefathers.

Inflation was exhausting the great economic heart of the Republic. The peace for which we had so long fought and so earnestly prayed continued to be mired down in the mud of Korea. Confidence in Washington had reached an alltime low with gimmick after gimmick being used in an effort to persuade the people that all was well.

Into this picture moved Dwight D. Eisenhower, one of the greatest patriots and one of the ablest and most devoted citizens this country had ever known—a new sales executive, if you please. His responsibility and purpose was to revive not only the soul of this God-fearing land but likewise to reconstitute its economic life. He gave the Nation's citizenship new cause to believe, not in gimmicks, but in the solid salable substance of basic American principles.

What have been the results—and for sales executives it's only results that count.

First, how well have we made out on making good on the prosperity question?

Sounder monetary and credit policies have steered us safely past the twin destroyers—depression and inflation.

Further, such policies have achieved a stable dollar, controlled the cost of living. They have provided prudent management of the public debt. They are reducing the expenses of Government; they will balance the budget.

New tax policies have added incentives to investment, encouraged capitalizing on opportunities, removed injustices from the overburdened.

Such policies have keenly accepted social responsibilities to care for the poor, the afflicted, the aged.

They have put Government out of competitive enterprise with its own citizens. The program for the disposal of rubber plants received international acclaim as a demonstrated achievement in getting Government out of private business.

Such accomplishments (which are by no means all) are measurable in results—in facts, figures, in cold statistics.

In May, 62.7 million people were employed—a million over April, and an all-time high for May.

Unemployment is dropping. Unemployment in May was down sharply, by almost half a million under April. It is 800,000 less than a year ago. If you are interested in percentages, it is 25.5 percent under last August.

Industrial production rose in April to an index of 136, one point below the all-time record. But listen, the figure for May is expected to show a further rise—perhaps a new all-time record. American business is planning great increases in plant and equipment in the second and third quarters of 1955. The third-quarter rate will equal or exceed the peak third quarter of 1953. The figure is something like 28.8 billion for the third quarter. Compare that with the first quarter rate of 25.6 billion.

The figures for personal consumption during the first quarter were at an annual rate of $242 billion. The figure for April will be about $3 billion higher. It is still going up.

Retail-store sales in April were up 7 percent over a year ago.

Personal income in April rose to a new record—an annual rate of $295.6 billion—a billion higher than March, and $11 billion higher than April of last year.

Disposable personal income—the amount you have to spend—reached an annual rate of $260.6 billion in the first quarter. In April it had risen to something like $263 billion.

These facts and figures are noteworthy as indicators of conditions today. Their greater significance is what they mean for tomorrow. Do they really carry the promise of continued public confidence?

There is one reason, of course, why there is in our time a greater degree of confidence not only for today, but for tomorrow. It is evident in public opinion polls, in stock market trends, in figures of industrial expansion, in countless other barometers that reveal what people are really thinking. That confidence finds its chief expression in the devotion of the country to its President, Dwight Eisenhower.

Yet there are reasons beyond personality or great capacity. These can be expressed in much more tangible terms. Our people today want to know about plans for the future. They want acts, deeds.

What is your Government for its part doing to inspire and promote this confidence for the future?

I promised not to tax your patience with long enumerations. What you are really interested in is what's ahead.

Let us give all due credit for today's bright picture to the brains of management, the skill of labor, and the driving force of creative selling. But let's look at what we in Government are doing to encourage an even greater prosperity.

First, let's look briefly at fiscal management. We have learned that certain acts have certain results. One of the techniques of fiscal policy is the application of the principle of flexibility to the decisions regarding discount rates, mortgage financing, management of the debt service, better control of the levels of Government spending.

The majority of the people of this country like to live within their income. They think Government ought to, also. Balancing the budget has been no idle promise. It was our determination, and we are going to achieve it. And we will do it by no ruthless grinding down of necessary public expenditures. It will be balanced (and soon, we hope) by better management of the whole business of government, and we know there are a lot of improvements yet to be made.

We shall continue to eliminate Government from the field of competition with private business. In numerous instances the Government has already withdrawn from much activity. In the months ahead this effort will continue until the Government in this regard is once again within the limits of its proper function and purpose.

We have been watching lately the expansion of consumer credit. We completely removed the heavy hand of Government from this field of control. We don't propose to reimpose it. Yet we believe that sound credit growth is essential to a sound national economy. Yet we believe the adoption of more reasonable policies in financing certain types of loans is wise management.

Yet another act in which your Government is presently engaged is in the preparation of public works planning and projects. Tomorrow must bring better highways to America. We are earnestly trying to provide a plan for a national highway system consistent with our national needs. We believe that the American people are behind us.

In yet another field—public works—we are making a broad inventory of needed building construction, conservation, power, and flood-control projects to be undertaken not only by the Federal Government, but by the cooperation of Federal, State, and local governments, and private initiative. I can report that the progress in this direction has already been substantial.

All of these facts and figures reflect present day progress, the plans and projects for tomorrow that are building a faith for the future that will carry us on to unprecedented goals.

Now about the second great objective, and the one that overshadows all of our concerted efforts. No audience such as this needs to be reminded that the struggle for a peaceful world is the great goal of our era.

Today we see peaceful overtures, but we are not complacent about their significance. We see prisoners being released—not enough, and too long held. We have not forgotten either the motives for their detention nor are we misled by the reasons for their release.

We have not allowed ourselves to be plunged headlong into a catastrophic war,

needlessly and uselessly. This administration will never involve American youth in a futile and avoidable conflict. But we resolutely continue to reject policies both of weakness and of vacillation. If there are in these brief remarks any grand ideas it will be the indelible impression left upon you that your Government is solemnly dedicated with its every resource to gain peaceful goals.

What are the evidences of this determination? Let me name three. The President a year and a half ago outlined a plan for the adaption of atomic power for peaceful purposes.

What has become of this idea?

A hundred and fifty years ago a merchant in Boston, then the center of the American whaling industry, said: "When the last whale is killed, the lights of the world will go out." Now lights are being lit by the ingenuity of man's creative mind. Not only are we preparing for the use of atomic energy for ourselves, but you will be interested to know that we have already initialled agreements with eight free nations for the exchange of information to permit them to earn the same privilege. Other such agreements are expected to be approved within the next few days, and others will follow.

In addition, we are at this moment actively engaged in developing plans for assisting other free and independence-loving peoples to acquire research reactors for peaceful uses.

What has this got to do with peace?

There are human instincts common to all people. Among them is the desire for self-expression and self-betterment. In the long run, our efforts for peace will be strengthened by plans designed to help other free people to help themselves—and to gain more and more of the advantages that modern science has discovered for the use of mankind.

The next policy pursued by this Government is in the field of foreign trade. Too often the word reciprocity is being mistaken for a one-way street. We are concerned, as we should be, when American workers lose their jobs through the competition of foreign products. Yet we ought better to understand that there are about 4½ million workers in industry and agriculture who produce and manufacture commodities and products that are sold in foreign markets. This is roughly 7 percent of the employed people of America's labor force. Yes, we are concerned with the displacing effects of competition of foreign goods, but we are equally concerned with failing foreign markets which displace American farmers and American workmen just as much.

The programs for military and economic assistance for our allies have strengthened the whole fabric of resistance to communistic aggression. Remember that the purchases of our own goods and products to supply the needs of these programs not only help to save our own scalps, but are as sustaining to the American worker and the American farmer as the products and commodities domestically consumed.

And now for the third great effort toward peace. As most of you well know, we still continue to find among the many free and neutral nations the belief that the United States is committing itself to eventual war. You and I, of course, do not think so. We think our best chance to deter war is a superlatively strong military program. Yet we seem to have lost track of one thing. Peace, like the preservation of freedom, or of equality of opportunity, or anything else that forms a part of the American heritage has to be worked for to be preserved. It isn't just handed out to us—ready-made and indestructible—as a reward, so to speak, for high motives and good conduct. It is just as important to have it clear to the citizen of India, for instance, as to us, that the cause of peace is our greatest and sole ultimate goal.

It, therefore, seemed appropriate to the President to put a man of extraordinary capability at work with his whole energy to solving one of the intricate problems precedent to the attainment of peace. This whole task lies, of source, within the framework of State Department policy. One great element of that task is set off for the time being in an effort to promote acceptable principles for disarmament. While disarmament is but one facet of the ultimate objective, it is the first and most important initial approach. This program has been entrusted to Harold Stassen, an official uniquely qualified to promote an understanding among ourselves, and among all people, of the peaceful policies of the United States.

Now, all this effort, at home and abroad, has brought us a greater prosperity and is bringing us closer to a peaceful world.

I am often asked this question—What can I do (or what can this organization do) to help?

In answer, let me say that you people, perhaps as much as any one group in the Nation, are especially fitted to make a contribution. Each in your own individual capacity is persuasive and able to exert an effect upon the opinions of other people. We ask no arbitrary conformity nor, indeed, the acceptance of any principle or program to which anyone is conscientiously opposed. But if you believe in these goals, if you think these products—peace with prosperity—are worth your effort, do what you can to support those public policies you believe best designed to achieve them.

There is not one of you but who has influence for good with others. Let me close with a parable that President John Dickey of Dartmouth College used to impress these principles upon the alumni of Dartmouth.

He said, "No man ever pursued the truth very vigorously without bumping into other men, many of them comfortably at rest, and others moving with equal vigor on the same quest, but in the opposite direction. In this sort of human hive in which we live each of us assumes a sense of responsibility for the realization of his individual greatness."

An old fable says all that needs to be said.

"The people who lived in a certain village having occasion to hold a feast in honor of one of their number who had returned from another country after long absence, and all of them being without great wealth, agreed among themselves that each should bring a bottle of wine which he might pour into a large cask which had been provided.

"One, thinking to save his wine to his own use, said to himself, 'If I fill my bottle with water and empty it with the others, it will not be observed.' But behold, when the villagers assembled and when the time arrived that the wine should be drawn off, only water flowed forth from the cask.

"All the people had acted with the same thought, each one saying to himself, 'Lo, my contribution will not be missed'."

Dixon-Yates Story—Creeping Dictatorship

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 30, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the July 28, 1955, issue of the St. Louis Post-Dispatch. The editorial, entitled "The Repair Jobs Still Ahead," follows:

THE REPAIR JOBS STILL AHEAD

The logical next steps, now that Dixon-Yates is dead, are to repair the damage it caused, insofar as possible, and to set up safeguards to prevent similar damage from recurring bills to accomplish these purposes, have been introduced in Congress by two members of the Joint Atomic Energy Committee, Senator ANDERSON, of New Mexico, the chairman, and Representative HOLIFIELD, of California.

The Anderson-Holifield bills would make it mandatory for all Atomic Energy Commission members to have access to all information concerning the Commission's business. Commissioner Murray has charged that AEC Chairman Admiral Strauss failed to tell him vital facts about the Dixon-Yates deal. Admiral Strauss neglected to consult Mr. Murray and possibly other Commissioners before asking the Justice Department to handle the settlement of the contract.

The latter matter is of continuing pertinence. The Dixon-Yates combine expects several million dollars—the exact amount has not been stated—in settlement; Members of Congress who opposed the deal declare the contract never became binding and no damages, therefore, are due. Admiral Strauss' maneuver in appealing to the Justice Department would have the effect of cutting off the joint committee's supervision of the settlement.

The trend to one-man rule of independent agencies which Senator ANDERSON and Representative HOLIFIELD are trying to halt in AEC is observable in TVA and SEC, also, Brigadier General Vogel, President Eisenhower's appointee as Chairman, has shown continuous hostility to the purposes of the agency he anomalously heads. He has set up a sort of martial law in the TVA board similiar to the regime Admiral Strauss has instituted at AEC. At SEC, Chairman Armstrong has acted as errand boy for Presidential Assistant Sherman Adams, and, like Vogel and Strauss, withheld from his fellow Commissioners information essential to the performance of their duties.

This creeping dictatorship among the independent commissions can only be expected to spread to still others and to grow worse where it is already in effect, unless active measures are taken to root it out. When AEC, TVA, and SEC have been restored to their independent and nonpartisan status, the appropriate committees of Congress would do well to take a new look at all the other independent agencies as well, to make sure that their independence is not being encroached upon by the executive department.

Facts About Natural Gas

EXTENSION OF REMARKS

OF

HON. JOHN J. DEMPSEY

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1955

Mr. DEMPSEY. Mr. Speaker, it is evident that the greater part of the opposition to this legislation, which proposes to amend the Natural Gas Act, is due to a lack of understanding of the true facts concerning the production and marketing of natural gas. I want to present just a few of the many facts which, I believe, are not fully understood.

During the debate argument has been advanced that the reason consumers in New York pay $2.40 per thousand cubic feet for gas is largely because of the cost of natural gas at the well. The record shows that the gas consumed in New York costs 8 cents per thousand cubic feet at the well. If that gas were to be delivered free of any cost into the pipeline and that item were to be entirely removed as a factor in the price to the consumer, the people in New York would still pay $2.32 per thousand cubic feet. The price paid to the producer is only 3⅓ percent of the price paid by the consumer.

There are about 8,000 independent producers of natural gas now supplying the various pipelines which carry the gas into the consuming areas. It is a highly competitive market, which means that no producer can demand and get an excessive price. During all of the years when there has been no Federal regulation of the price of gas at the well the cost has not been increased in proportion to the advance in price of the consumer. The records bear this out fully.

The reason for the close vote on this measure can be attributed mainly to the opposition voiced by governors and mayors in the gas consuming populous eastern States who fail to take into consideration what Federal control of this gas production at the well could involve. In the first place, exploration and production of natural gas is strictly a risk enterprise. Exploration and drilling are the only ways to develop fields which will insure a continued adequate supply for the Nation's consumers. A considerable portion of the money invested is expended in what is termed wildcat operation—searching for new supply sources—and brings no return when the operator fails to find gas. That happens frequently in wildcat operation. If this search for and development of new fields is continued the producer must receive a price for his gas which will at least in part justify the chance he takes. That is true of any risk business. When a fair and equitable return is not possible, these wildcat operations, which insure a gas supply, will cease. In fact the decision of the United States Supreme Court in the Phillips case already has materially cut down this necessary exploration.

It is significant that the Federal Power Commission has pointed out that it has taken the position that Federal control of natural gas production was not intended by the Congress, is impracticable and very difficult to administer. Until the Congress acts to correct the law so that the divided and dubious interpretation made by the Suprem Court is nullified there will be continued and more serious curtailment in development of our natural gas resources.

From the purely fiscal standpoint of the Federal Government and the State Governments in the natural gas producing areas this curtailment of exploration and development of our natural gas resources is a serious matter. A considerable part of the gas producing fields are in the public lands States, where Uncle Sam owns from two-thirds to three-quarters of the lands overlying the gas fields. In addition the States themselves own a portion of these lands. The royalty return, therefore, goes into the public treasuries as a benefit to the taxpayers.

If these facts were generally understood I believe most of the opposition to this legislation would end. It certainly is not wise for the Congress to take any action which will jeopardize the future natural gas supply for the millions of consumers. That would be an economic disaster. Unless we approve this legislation and insure an adequate natural gas supply we are inviting that disaster.

White House Ceremony Commemorating Issuance of United States Postage Stamp Atoms for Peace

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. REES of Kansas. Mr. Speaker, it was my honor and pleasure to be included among those who attended ceremonies at the White House yesterday, marking the issuance of a postage stamp Atoms for Peace. This ceremony, conducted under the direction of the Postmaster General and the President of the United States, was most impressive and effective. I should add that representatives of foreign countries, in Washington attended the ceremony. I am sure Members of Congress, as well as others, will be interested in the statements of the President of the United States, the Postmaster General, and the Chairman of the Atomic Energy Commission. They are included herewith:

REMARKS OF THE POSTMASTER GENERAL, ARTHUR E. SUMMERFIELD

Mr. President, distinguished representatives of other great nations, fellow Americans, and ladies and gentlemen, the Post Office Department is highly honored in having this ceremony here at the White House with the President of the United States and so many distinguished guests in attendance.

We are gathered here to dedicate the atoms for peace United States postage stamp, which goes on sale in Washington today, and throughout the Nation tomorrow. Traditionally the postage stamps of a nation are pictorial representations of its glories. They serve as reminders to the citizenry of great men and women who have gone on before, of the natural wonders that Almighty God has bestowed upon the land and the accomplishments that have made the Nation great.

But, this stamp that we dedicate today is different. It is unique. It does not deal with the past. It is concerned rather with the future. It does not deal with material achievement. It commemorates an ideal.

It does not proclaim purely nationalistic glories. It expresses a hope for all the world. This stamp prominently features the quotation taken from the December 8, 1953, address of President Eisenhower before the General Assembly of the United Nations. Quoting the President: "To find the way by which the inventiveness of man shall be consecrated to his life."

This stamp is an ambassador of good will and of hope. It is truly a symbol of our highest aspirations. It carries the rallying cry of a great crusade for permanent peace which so long tragically has eluded mankind. The message of this stamp is America's answer to a fateful choice, that of a more abundant life rather than the catastrophe of atomic warfare.

We believe the issuance and the use of the 120 million of these atoms for peace commemorative stamps, each carrying its dramatic message will be a powerful instrument in humanity's quest for a permanent world peace on mutual confidence and trust. It is in this spirit that we dedicate the issuance of this atoms for peace stamp here today.

Distinguished guests, it is now my pleasure to present the Chairman of the Atomic Energy Commission, the Honorable Lewis Strauss.

REMARKS OF ADM. LEWIS L. STRAUSS, CHAIRMAN OF THE ATOMIC ENERGY COMMISSION

Mr. President, Mr. Postmaster General, and distinguished guests, a more fortunate moment could not be chosen for this ceremony to dedicate this stamp. In just 11 days, on August 8, there will be convened in Geneva the first International Conference on the Peaceful Uses of Atomic Energy, the conference which we had the honor to propose. There, the United States will join with more than 60 other nations in an exchange of information concerned solely with the benign and bountiful atom and not with its powers of destruction.

I am reminded of another international conference also held in Switzerland 80 years ago. On that occasion, nations large and small gathered to establish the Universal Postal Union. It is by reason of that international agreement that the stamp which we dedicate today will carry its message of atoms for peace across frontiers to the far places of the earth.

Over the years, the International Postal Union has become the most durable and perhaps the most successful of all agreements among nations, and it has contributed in large measure to the free communication of ideas, which is the bloodstream that nourishes science.

We hope most devoutly that, given good faith and cooperation, equally enduring and even more beneficent results will flow from this new gathering of nations in Switzerland to promote the peaceful atom.

In the inspiring words of your address to the United Nations, Mr. President—words now partly emblazoned upon this stamp which the Postmaster General and his Department have devised—we are determined to find the way by which the inventiveness of man shall not be directed to his death, but consecrated to his life.

ADDRESS OF HON. DWIGHT D. EISENHOWER, PRESIDENT OF THE UNITED STATES

Mr. Postmaster General, distinguished members of the diplomatic corps, my friends, as the Postmaster General has said, we have here a stamp that looks to the future, and its design has followed that conception. Yet, it tends also to pose to us a question that is as old as history: Shall the inventiveness of man be used for good or for evil?

Every discovery we have made, even the use of fire to warm our bodies, to cook our food, has also been used as one of the devastating weapons of war to bring destruction to enemies. Every single thing that man has discovered can be used for good or for evil depending upon the purpose of man. This would seem to imply that man indeed has to look within himself before he can predict with any certainty, with any possibility of accuracy whatsoever, before he can determine what will be the final results ofg a great invention such as the discovery of nuclear fission and nuclear fusion.

The United States, as you well know, has been attempting to do its part in promoting the peaceful, the good uses of this new science. The Chairman of the Atomic Energy Commission has outlined some of them to you. And, I should like to go further and leave no stone unturned in order to discover new ways in which all of us nations that love peace can, without threat to anybody else, without fear for our own security, move forward in this field.

Now, because of this belief, because of this feeling, because of this hope, I call your atatention to what I think is a fortunate feature in the design of this stamp. We have the world bound together by new forces, bound together by the natural forces of science, and of nature, not split by them.

I hope, I devoutly pray that this is an augury of what will occur in the future—that through these great benefits, there will become so deeply impressed upon our minds the benefits that can come from this new science, that finally men will look within themselves and find the courage to reject the impulses of their own avarice, their own selfishness, their own greed, be it individual or national, and attempt, at least in this kind of work, to proceed toward the good of us all.

CONCLUDING COMMENTS BY POSTMASTER GENERAL SUMMERFIELD

Thank you, Mr. President. It gives me great satisfaction to present to you, Mr. President, the first album of these atoms for peace stamps.

It is a pleasure to present the Hon. John Foster Dulles, Secretary of State, with a similar album.

Senator CLINTON P. ANDERSON, chairman, Joint Committee on Atomic Energy, we take pleasure in presenting you with this album.

Senator BOURKE B. HICKENLOOPER, member, Joint Committee on Atomic Energy, we are pleased to present this album to you.

Congressman CARL T. DURHAM, Vice Chairman, Joint Committee on Atomic Energy, this album is presented to you with our compliments.

Congressman W. STERLING COLE, member, Joint Committee on Atomic Energy, it is a privilege to present you with this commemorative album.

Chairman Lewis L. Strauss, Chairman of the Atomic Energy Commission, it is most fitting that we present you with this commemorative album.

Identical albums of these new atoms for peace stamps are being sent to representatives of the 84 countries invited to the United Nations International Conference on Peaceful Uses of Atomic Energy to be held next month in Geneva, Switzerland.

We are gratified that so many of these representatives have joined us in this ceremony today.

We are confident the conference starting on August 8 will be fruitful and useful to men of good will the world over.

Government Clinics

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. MILLER of Nebraska. Mr. Speaker, it has been my custom every other year, during adjournment to hold government clinics in each of the 38 county seat towns in my district. These meetings are not political, but merely question and answer periods to give folks an opportunity to visit with their Representative and to ask questions. It also gives me an opportunity to report on my stewardship in Congress.

The first hour is devoted to school students, entitled "Youth Wants To Know." The last hour is for adults who may attend. Following is the schedule of clinics for the period from October 10 through October 20:

Monday, October 10: North Platte, 2 to 4 p. m,. (gas company building); Tryon, 7 to 9 p. m.

Tuesday, October 11: Stapleton, 2 to 4 p. m.; Thedford, 7 to 9 p. m.

Wednesday, October 12: Mullen, 2 to 4 p. m.; Arthur, 7 to 9 p. m.

Thursday, October 13: Chappell, 2 to 4 p. m.; Oshkosh, 7 to 9 p. m.

Friday, October 14: Grant, 10 to 12 a. m.; Ogallala, 2 to 4 p. m.

Monday, October 17: Brewster, 2 to 4 p. m.; Broken Bow, 7 to 9 p. m.

Tuesday, October 18: Lexington, 2 to 4 p. m.; Kearney, 7 to 9 p. m.

Wednesday, October 19: Burwell, 2 to 4 p. m.; Ord, 7 to 9 p. m.

Thursday, October 20: Loup City, 2 to 4 p. m.; Grand Island, 7 to 9 p. m.

All meetings will be held in the county courthouse unless otherwise indicated. The public is invited.

America Victorious in Propaganda Battle at Geneva

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following:

AMERICA VICTORIOUS IN PROPAGANDA BATTLE AT GENEVA

(By Edgar Ansel Mowrer)

GENEVA.—Judged by my standards the four-power conference has been an enormous success. Merely for the West to have got out of it with a whole skin having made no new unnecessary and dangerous concessions to the Russians would have been a real triumph. And this the West has accomplished. Here, thank God, is no new Yalta.

But our side has done far better. By skillful teamwork punctuated by the theatrical but effective appearance at the right moment of General Gruenther and Admiral Radford, Eisenhower, Dulles, and Harold Stassen have won the propaganda battle, the only sure struggle of this meeting.

The American disarmament plan has, in the words of one veteran observer, rocked Europe. The Geneva newspaper La Suisse, which is steadily on our side, commented triumphantly: "If suspicion continues to poison world politics it is not the fault of the United States."

The Paris Monde, neutralist and spitefully anti-American, called the Eisenhower offer a thunderclap. Certainly it caught the Russians completely off guard and floored them for the count of nine. During that period they lost the propaganda fight, in the opinion of the most experienced referees.

But is that all? What else, the reader may ask.

FALSE HOPES

What else did you expect? From the beginning it seemed to this student of world affairs that the high hopes raised of making real progress toward German unity, toward a European security system, toward any sort of disarmament which the West could accept without risking a surprise attack later on were without serious foundation.

The Russians came to this conference not to realize but to prevent German reunification on any but their own terms. They are working still to prevent the rearmament of West Germany, or at least to limit it and slow it down. Their idea of a European or a worldwide security system is one that will abolish thermonuclear weapons wherein the West is superior and stabilize conventional weapons on levels that will leave the Communist bloc looking down upon its enemies and intended victims.

Even in the easier matter of raising the Iron Curtain there has hardly been any progress. The Bulganin-Khrushchev-Zhukov troika had already raised the curtain some. They have not really gone farther.

CREEPING DANGER

But what of the thermonuclear fear that was supposed to have convinced even hardened Bolsheviks that henceforth no country can afford or presumably survive a major war? Haven't the Russians and the Americans shown each other that they intend no major aggressions?

Well, in my judgment, neither the U. S. S. R. nor the United States of America has ever really believed that the other would attack. The danger has been and is the gradual expansion of the Soviet system by a series of minor aggressions based on a mixture of subversion and force. That danger remains exactly as it was before this conference. As for the H-bomb, the Russians are good enough poker players—unlike their Western counterparts—to show no signs of the anxiety which they must surely feel.

Conceded, the Russians were amiable and obviously are seeking a period of less strained relations with the West. But for what purpose? To enjoy the benefits of growing cooperation, or to lull their opponents into a false security while the U. S. S. R. attains superiority in armaments?

That question is as unanswered as when the conference started. It happens to be the heart of everything.

Older people forget and young Americans have never realized that twice before the Russians have become all sweetness. The first was during the NEP period when the young U. S. S. R. absolutely had to have time to repair the damages of war and revolution. The second was in the thirties when the U. S. S. R., through fear of Hitler, joined the League of Nations it had hitherto scorned and sent Maxim Litvinov to Geneva to seduce the bourgeois peoples with sweet words and empty promises. None of this prevented the U. S. S. R. in 1939 from ganging up with Hitler in a pirate raid on civilization.

NOT AROUND CORNER

Others may think that atmosphere is important and the spirit of Geneva something wonderful. I am unable to believe that, because I managed to persuade an amiable Soviet radioman to drink a bottle of ginger ale, "The peace we fought for is just around the corner," as Paul Hoffman imprudently wrote recently.

In the words of France's former premier and foreign minister, Georges Bidault, "The cold war has been buried while the war of nerves gets hotter."

Or in the words of Italy's veteran diplomat, Ambassador Massimo Magistrati, "This

conference is remarkable because everything has gone exactly as expected"—expected, that is, by trained experts like Magistrati. Everything except the propaganda battle, which the American team has won handily.

The Most Wonderful Work

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. SCHWENGEL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I take this opportunity to call the attention of my colleagues to the growing threat to the proper division of responsibility between our three branches of government. Many people express concern, but few people have given the problem the thought and study that the esteemed president of the State University of Iowa, the Honorable Virgil Hancher, has given in trying to warn our people of the dire consequences if present trends continue. He expressed his concern most eloquently in an address at Ohio State University recently. I am privileged to have a copy of that address. I ask that it be printed here so that all of us can have the benefit of the thinking of one of America's great educators.

The address follows:

THE MOST WONDERFUL WORK

(By Virgil M. Hancher)

It is a privilege and an honor to be invited to deliver an address in this series, so fittingly dedicated to the memory of the late Dean Walter J. Shepard. I am deeply touched by it because I have no claim, as of right, to stand in the learned and graceful tradition of which Dean Shepard and my predecessors in this series are the exemplars. It is now more than 20 years since Dean Shepard delivered his presidential address on Democracy in Transition to the American Political Science Association, an address which was witness enough, if witness were needed, to the breadth and penetration of his powers of observation, and to the equanimity and understanding with which he was enabled to interpret the transition from one political epoch to another. One is honored to stand in the shadow cast by his stature, and to have some part, however small, in keeping his memory alive.

Unhappily, 20th-century democracies seem little concerned to provide that leisure and reflection which many of us believe to be indispensable, if our society is not to rush headlong into the abyss. We are under a spcial debt of gratitude, therefore, to scholars and men of affairs who have distilled the wisdom accumulated from the knowledge and experiences of a lifetime into such form that we may absorb its essence in the most palatable way. In our own country I have in mind Walter Lippmann's book, The Public Philosophy, and the late Carl Becker's The Declaration of Independence, Freedom and Responsibility, and How New Will the Better World Be? We are indebted to the last century, and especially to Victorian England, for many successful men of affairs who wrote with distinction on political and related subjects. Such, for example, were Walter Bagehot, editor of The Economist, of London, and author of Physics and Politics, Lombard Street, and The English Constitution; and Sir Henry Maine and his Ancient Law and Popular Government; and Sir Henry Taylor and his little-known but classic work, entitled "The Statesman." Our society today seems not conducive to that happy line of doers and thinkers which was so prolific in the last century. The line is dying, and we can ill afford to let it die. Let us hope that the memory of Dean Shepard and the inspiration of his life and writings will bring forth a new generation of doers and thinkers so much needed in the hurried and heedless age in which we live.

My theme has to do with government, and on it I must speak as a layman. An undergraduate major in political science, a degree in jurisprudence from one institution and in law from another, 16 years in the active practice of law in a metropolitan center, and more than 14 years as the president of a State university may qualify one to speak as a doer, but hardly as a thinker or writer. Indeed, the circumstances under which a university president is able to think, if he ever finds occasion to think beyond the immediate problems of his office, are such that the result of his reflections would most appropriately be entitled "Meditations in a Boiler Factory." Knowing, as you must have known, that I was neither a scholar nor researcher in the field of government, you will not expect me to bring to you any facts or theories not known to those skilled in the science and art of government. Rather, I assume that you must have expected me to speak as one who has had practical experience in observing the operations of government, and who, from that experience, has developed certain hopes and concern about the governmental problems of our time. On this basis, I speak to you willingly, because good government, the very best government, is a matter of the most urgent concern to us all. Indeed, we may say, in a quite literal sense, that it is a matter of life and death. Fifty and more years ago the scope of governmental activities was so restricted that the decisions of government, while of concern to a particular person from time to time, only infrequently touched or concerned the general body of the citizens. Today its decisions affect the lives and fortunes of us all. At any moment decisions may be made which will determine the very existence of our civilization. If, as Tallyrand is alleged to have said, war is much too serious a business to be left to soldiers, so government has now become much too serious a business to be left to politicians.

I. One hundred sixty-eight years ago the Constitutional Convention of 1787 convened in Philadelphia, and began the deliberations which produced the Constitution of the United States. That document is said to be older than the constitution of any other presently existing government. Probably the framers of the Constitution never realized the durability of the instrument which they had created. Certainly some of them would have been satisfied, if they could have been assured on the day the convention adjourned that their handiwork would bind the States together in relative peace and prosperity for as long as 30 years. They could hardly have foreseen, although the more imaginative among them may have hoped, that it would serve as a frame of government for 166 years, during which the Nation would expand from the Atlantic to the Pacific, would expand from a population of 4 million to 164 million people, and would develop a material civilization unparalled in human history. So great has been the praise of this instrument that many have agreed with Mr. Gladstone, who once said:

"As the British Constitution is the most subtle organism which has proceeded from the womb and long gestation of progressive history, so the American Constitution is, so far as I can see, the most wonderful work ever struck off at a given time by the brain and purpose of man." [1]

As you will note, it is from this quotation that I have taken the title for my remarks.

Because under this Constitution we have had the good fortune to develop an economy which enables us to lead the world in material abundance, it is assumed far too often that our only contributions to Western civilization have been material ones. This I believe to be untrue. Indeed the prospect of material abundance with all hope and promise that it implies for the have-not nations is only one among our major American contributions to civilization. On another occasion,[2] as some of you are aware, I expressed the opinion that our country had made at least four significant contributions to Western civilization. They are:

1. The application of the Federal principle to the government of vast territories and large populations;

2. The doctrine of the judicial review of unlawful or arbitrary executive or legislative action as a safeguard to the citizens against tyrannical encroachments by Government;

3. The mass production and distribution of goods and services, requisite to the maintenance of a high standard of living; and,

4. The concept of universal opportunity for education.

The first two contributions were political contributions directly related to our Constitution and its interpretation, and they bear witness to political genius of a high order. It was the failure to invent and apply the Federal principle which undoubtedly made inevitable the ultimate dissolution of the Roman Empire and the transformation of the British Empire into an association of commonwealth nations rather than into a Federal union. And the doctrine of judicial review, while sometimes criticized, has undoubtedly been a safeguard against the arrogancy of power. But it is disturbing to recall that these two contributions were made, or at least had their inception, more than a century ago, and that, in the succeeding 100 years, we have made no comparable contribution to political thought or action. What has happened that this should be so? Have the wisdom and the cunning of the men of 1787 deserted us? Have we political knowledge and sagacity adequate to the tasks before us? These are relevant questions because we have no assurance that our destiny is written in the stars. If the study of history shows anything, it shows that nations are born and die, and that civilizations flourish and decay. I have stood at Byblos, as have countless others, and have seen the marks of seven civilizations which have flourished upon that site in 5,000 years. In our own time we have seen nations and empires fall, and rise, and fall again. Our Nation has survived many shocks and dangers. We trust that it will survive them all. But it has survived none more threatening than those which now will put it to the test.

We face the dangers of atomic power, and all the problems which arise from it, because the decisions of Government which once seemed far away and of little moment, now by one false step may bring us to unprecedented disaster. We face the peculiar dangers of communism, for although this is not the first time that we have been opposed to vast military power, we now face a different thing—different in kind as well as degree—half political, half religious—combining all the power of the soldier and the zeal of the missionary—quite unlike anything we have ever faced before. Finally, we face an unprecedented increase in popu-

[1] Gladstone, William E. Kin Beyond the Sea, North American Review, September-October 1878, vol. 127, p. 185.

[2] Commencement address, An American's Credo, University of Toledo, May 27, 1947.

lation. In 1789 the United States had less than 4 million people. We now have 164 million. It is predicted that 20 years from now, in 1975, we shall have 220 million. If my daughter, a junior in the university, lives her allotted 3 score years and 10, she may expect to be part of a population of 300 million. Here is something new in our experience—a fact quite as shocking and explosive as the atomic bomb.

We face the triple threat of the atomic bomb, of communism, and of expanding population. Are we prepared to meet and deal with them? Are our Governments—State and Federal—geared to their present and future tasks?

In my judgment we are not prepared for the problems that lie ahead, and we are not prepared because we have surrounded the framers of the Constitution and their work with an aura of sanctity and awe, without honoring them as they would have desired by bringing their wisdom and sense of reality to the needs of our time. After all, imitation is the sincerest flattery.

Our tasks are complicated because there appear to be certain developments now in progress which would set one branch of Government in opposition to another and would tend to weaken our Government as a whole at the very time when it most needs to be strong. I should like to discuss these developments with you, for although you have already observed them, they and their implications seem not to be understood by the wider public, and, therefore, they are matters for our concern.

II. The first and in some ways the most important of these developments is the revolutionary and unconstitutional struggle now in progress for the supremacy of the legislative over the executive branches of our Governments—Federal and State. Whatever your views may be about the merits of parliamentary government, there can be no doubt that the supremacy of the legislature is a constitutional heresy under our form of Government. No branch was intended to be supreme over the others.

The framers of the Constitution secmed clear upon two points—that the people cannot legislate and that the legislature cannot administer. They believed in a representative government and in the separation of powers. This was their faith, and what departs from it is heresy. Yet we are departing from it; for, unless the signs of the times are misleading, we have been witnessing for 20 years a gigantic struggle of increasing intensity and bitterness for the supremacy of the legislature over the executive branches of Government, both State and Federal.

This struggle is not open and above board. It is more covert than open, and probably more unconscious than conscious. No formal amendment to the Constitution is involved. It involves, instead, the slow, but irresistible, erosion of the power and authority of the Executive, as bit by bit the legislative power circumscribes and diminishes the range of Executive action. The intent with which this is done is immaterial, and the fact that it is often done by well-intentioned men is irrelevant. The result is the same whatever the intention. If you are killed in an automobile accident, you are just as dead when killed by a well-intentioned man as by a bad one.

Unless some new factor is introduced, the struggle will continue until a victory has been won. This may take fifty or a hundred years. Perhaps only the historian, viewing it from the 22d century, will be able to see when it began and when it ended. But as the battle now stands, there can be but one outcome. Inasmuch as the executive branch is without effective power to curb the legislative branch, and inasmuch as the legislative branch in a hundred small ways and some large ones, including the power of the purse, has effective means to curb the executive, the ultimate victory must go to the legislative branch under the conditions which now prevail.

The weakening of our governmental structure and functions, as this struggle proceeds, is regrettable in view of the triple dangers which we face. It is doubly regrettable because it turns on an issue which the framers of the Constitution thought that they had settled. As I have said, the men of 1787 believed that the people could not legislate and that the legislature could not administer. The people cannot legislate because they have neither the time, nor the information, nor the basis for a wise and considered judgment. The legislative power, therefore, ought to be exercised by those who can act for the people—for all of the people, the young and the old, the voters and the nonvoters, the rich and the poor, the weak and the strong, the living and the dead, and the generations yet unborn. The legislature cannot administer because there are functions in life that do not merge. The legislature can determine general policy; it cannot see to the specific application of it. It can say "when" and "why," but never "how." If it determines broad policy, it will have no time for specific applications. If it concerns itself with specific applications, it will become a many-headed executive that will be no executive at all. It will fail in administration and will have no time for policy. Thus the state will suffer. I realize that in Britain the executive has been developed out of Parliament without loss of liberty or effectiveness, but this is not true of France. Moreover, there is nothing in our history or traditions to indicate that our development would be as fortunate as the British, nor is there anything to indicate that Britain's sternest tests may not lie in the years ahead. In any event, the framers of our Constitution believed that there were three kinds of governmental powers and that in general they should be separated into 3 corresponding branches of government—the legislative, the executive, and the judicial branch. We now seem to be departing from the beliefs of the men of 1787, not so much by challenging their principles as by ignoring them, not so much by amending our Constitutions—State and Federal—in a direct and open way, as by subverting them and eroding them under the constant, accumulative pressure of legislative power.

What is the evidence upon this proposition? In the Federal Government, the pressure of the legislative power is exerted principally through congressional investigating committees and through the power of the purse. Congressional committees serve a necessary and useful purpose when they seek to determine sound national policy; but that function seems increasingly overshadowed in prestige and public attention by investigating committees designed to harrass the executive. What is the position of the Secretary of State on the defense of Formosa and the Pescadores? What is the position of the Secretary of the Interior on public power? What is the position of the Secretary of Agriculture on price supports for farm crops? What about the Dixon-Yates contract? What is the Secretary of Defense doing about the Army, the Navy, the Marines, the Air Force? What is the Secretary of the Treasury doing about the stock market? What is anybody, what is everybody, doing about subversives? In all of this the legislative branch appear to be seeking more than information. It is a reasonable inference that it is exhibiting doubt and distrust of the executive department, a doubt and distrust which is thereby communicated to our own people and to foreign governments, and that, by these harassing and embarrassing procedures, it seeks to bend the executive to the legislative will.

It may be appropriate to observe in this connection that by far the most significant fact about the Army-McCarthy hearings was never brought into focus for general public attention. This most significant fact was not the clash of personalities involved, or whether one was right or another was wrong. most significant fact was that the hearing was not a contest between equals. It was not a contest between equals because the Army is not free to deal with the Senate as the Senate is free to deal with the Army. It is not free because the Army is not free to apply pressure—subtle, indirect, difficult to prove, but pressure nonetheless—to the Senate or the House. Indeeed, under our form of government, it has no means of doing so. The Senate, on the other hand, both collectively and individually, has undoubted power in this regard. Consider, for example, the power of the purse. An aggrieved general has no recourse against the Senate, but an aggrieved Senator, quite apart from specific provisions incorporated in an appropriation bill or other law, can withhold or delay appropirations, and an aggrieved Senator can withhold his vote. No reason need be given. The Senator merely votes "No," or he fails to vote. This ever-present threat, in the Senate and the House alike, is a powerful weapon. It explains why even the most modest request from the Hill to any executive departments is almost invariably answered within the day, or why some explanation for the delay is forthcoming, if it is not answered.

It is within the bounds of reason to believe that congressional investigations and pressures upon the executive department will continue until 1 of 2 things happens: Either the President and his Cabinet must be chosen from the Congress, or they must appear before the Congress and be answerable for the conduct of their offices. In the absence of some striking change in law or opinion, this result seems inevitable.

The erosion of the executive power has taken a somewhat different form within the States. There the executive power is seldom great to begin with, and beyond the power to recommend budgets and legislation, to make appointments, to exercise the veto, and to act as ceremonial head of the State, the Governor often has little authority other than that given him by the prestige of his office and the influence of his personality. Frequently, too, the heads of other executive departments are elected directly by the people. They are coequal with and independent of the Governor. Thus, with the executive power of the State subdivided and weakened, the task of encroachment is an easy one. The chief devices in this regard are restrictive legislation, legislative supervisory or interim committees, and the power of the purse. Legislative supervisory committees, as the term is used here, are those continuing or perennial committees which possess power, between sessions of the legislature, to review the operation of state departments, boards and agencies, to appropriate funds for emergencies, to recommend appropriations and new legislation, and generally to exercise such other powers as are granted to them or which may accrue to them through the reluctance of those with whom they deal to challenge their assumptions of authority. Some of these committees may and do exercise as much real authority as the Governor himself, and the day may not be distant when the chairman of such a committee will be in effect the chief administrative officer or "prime minister" of the State.

Moreover, the legislative power over the purse is a hardy perennial. Appropriations can be and are passed in detail with provisos and stipulations as to their use. This is a dangerous practice and bad government, but there is nothing to stop it except the self-restraint and sense of justice of the legislators. While these attributes are characteristic of the vast majority of legislators, it may be doubted that they are characteristic of the bodies in which they serve. Disregard of legislative and consti-

tutional mandates for reapportionment, disregard of practices and procedures which they demand of executive agencies, disregard of orderly methods of procedure, and other similar actions are not indicative of that self-restraint and sense of justice which will hold in check encroachments upon the executive power.

Thus by various devices the legislative power seems destined through the years to erode the powers of the executive and reduce them to its will, or what is equally probable, to substitute its own committee structure in the exercise of real executive power—all without the trouble or inconvenience of amending the Constitution. Our ancestors thought that this was the way to oppressive, or even tyrannical, government. It is for our generation to decide whether they were right or wrong.

I have now dwelt at some length on one of the major constitutional heresies of our time. Next I should like to deal with another heresy, implicit if not expressed, in our Constitution. It is the heresy of the omnicompetent citizen.

The omnicompetent citizen is the citizen who is able to perform any or all of the functions of government without previous preparation and at a moment's notice. We do not indulge this theory in other walks of life. We assume that a dentist who pulls a tooth or a surgeon who removes an appendix should demonstrate some knowledge of the undertaking. Our reluctance to demand exact knowledge of public affairs from those who solicit our suffrage leads to strange and unfortunate consequences.

It plays a large part in the current struggle for legislative supremacy. It leads to legislation without basis either in knowledge or understanding. It leads to false economies and unwarranted assertions of waste and extravagance, for reasons outlined by Canon Liddon of St. Paul's Cathedral as long ago as 1879:

"Waste is a relative term. Before we can say with certainty whether or not a particular action involves waste, we must know what the agent thinks is best and what he is aiming at. Those who are in great enterprises generally appear wasteful to those who confine themselves to small ones."

And by Edmund Burke:

"Mere parsimony is not economy * * *. Expense, and great expense, may be an essential part of true economy * * *. Economy is a distributive virtue, and consists not in saving but in selection. Parsimony requires no providence, no sagacity, no powers of combination, no comparison, no judgment." [1]

Taxes can be saved by failing to build or repair highways, by closing schools and colleges and universities, by eliminating garbage disposal, fire departments, and police protection, in short, by eliminating the functions that government is designed to perform. But this is not the way to statesmanship. The genius of the statesman is seen in the making of wise choices. The "back to the grass roots" movement rests upon the theory of the omnicompetent citizen. But a thousand "grass roots" physicists would never have made the atomic bomb. Those who stand at the grass roots may be close to the problem, but far from its solution. The grass roots are always far from the mountain tops, and proximity may not compensate for breadth of view.

The theory of the omnicompetent citizen assumes that any man can do anything. We see two diverse, dramatically diverse, illustrations of it in our contrasting attitudes toward the Vice Presidency and the Presidency of the United States. The reasons which lead to the nomination of a candidate for the Vice Presidency, while rarely as frivolous as those recited in "Of Thee I Sing," are still not the reasons at work in the nomination of a President. The Vice President has no duty that could not be provided for by the Senate itself. And his only other function is to succeed to the Presidency if that office falls vacant. That being his prime function, should the Vice Presidency ever be vacant? Or, if it may be vacant some of the time, why should it be filled any of the time?

Of the 33 persons who have served as Presidents of the United States in the last 166 years, seven, or more than one-fifth, have come to the presidency by direct succession from the vice presidency. By this route we have acquired a new President on the average of once in every 24 years. Moreover, during that period the office of Vice President has been vacant for a total of more than 33½ years—22½ years of that time because of the succession of that officer to the presidency, and an additional 11 years because of the death or resignation of the Vice President while he held that office. An office which has been vacant for more than 33 years out of the last 166, or one-fifth of the whole period, can hardly be regarded as an office indispensable to our welfare, security, or safety. And if the succession can be provided for when there is no incumbent Vice President, why should there be a Vice President at any time?

Because of the increasing age and experience demanded of Presidents, and because of the tremendous burdens which we have placed upon them by the enormous concentration of functions in that office, it will be surprising if the number who die in office does not increase rather than decline in the years ahead' Should we not, therefore, provide for some mode of succession that would assure an incumbent more obviously fitted for the Presidency than is guaranteed by the Vice Presidential nomination of a political convention which considers that its work is done and desires nothing so much as to adjourn and go home?

Just as we demand too little of the Vice President and believe that any citizen who will take the office is competent to perform it, so we assume any man elected to the Presidency to be automatically competent to assume the inhuman burdens of that office. Consider now the principal functions of the President:

He is the Chief of State, that is, the ceremonial head of the state.

He is the political head of the state.

He is the administrative head of the state.

He is the Commander in Chief of the armed services.

He is the head of his political party.

The mere enumeration of these functions of the President without regard to other demands upon his time and talents should be enough to show that the office is too comprehensive, too varied, too exacting, and too isolated to be filled by any one man. Society has no right to place such demands upon any one man. The monarchs of Great Britain reign, but they do not govern. The Prime Minister governs, but he does not reign. Moreover, the Prime Minister is primus inter pares, the first among equals, and the authority and responsibility in which his office shares is a cabinet responsibility. The responsibility and authority are collective, not personal. But the President's authority and responsibility are personal and ultimate. He may delegate, but he may not share. He, and he alone, must bear both the authority and the responsibility.

Each of the above functions might be discussed at length. But it is not my purpose to do more than to show the need for a review and reevaluation of those aspects of our Constitution and governmental procedures which assume a competency that men cannot be expected to possess. No great business corporation would place upon its chief executive officer such a variety of exacting and responsible corporate functions as those concentrated in the Presidency of the United States. Must we admit that our great corporations are more solicitous of the brains and bodies and lives of their ablest men than are our people and their Government; and that those corporations, unlike the people and their Government, are wise enough to know that the best decisions are those made by men unwearied by burdensome and unnecessary duties and undistraught by overwhelming responsibility? Both our selfish and our unselfish interests lie in the same direction.

III. As has been abundantly clear throughout my remarks, I believe that we owe a very great debt to the men of 1787 for devising a frame of government that has proved to be both adaptable and permanent. I think we owe it to their memory to see that the Constitution which they gave us is adapted to new times and new conditions. If, in doing so, we abandon any of the basic political principles upon which their action was based, we should do so only after carfeul deliberation to assure ourselves that we are right and they were wrong; and, in any such event, I would hope to see us move directly and not by subterfuge. The framers of the Constitution were not infallible, but they had among their number many wise, experienced, and learned men. We shall do well, therefore, to be certain of our premises when we differ from those men.

What I have said so far makes it clear that the Constitution—that most wonderful work—has not prevented the rise of serious problems. There are many others. The consideration of them would extend this presentation unduly, but for the record and to keep them before us, we might take note of some of them.

Should the executive and legislative branches of our governments be immediately and constantly responsive to "the will of the people," that "will" which seems incapable of precise definition? Do we, for example, need some legislative agency, beyond the pressures of frequent elections and beyond the passions and prejudices of the passing mood, which can serve as a great council of state which will have power to review and improve, but not obstruct, proposed legislation?

How do we restore confidence and secure acceptance of governmental decisions? There is a spirit abroad which makes many people unwilling to accept any decision in which they have not participated or to which they have not expressly consented. This is the negation of the basis for representative government. It could lead to anarchy.

How can we make governments aware that the acceptance of their decisions rests more upon moral authority than upon physical force?

How can we have responsible government without intolerable oligarchy, or responsive government without mediocrity?

What about government at the grassroots? Are our local governments, city, township, county, and State, more honest and efficient and competent than the Federal Government? And what are local and what are national problems?

What about the problem of excessive units of government? The State of Iowa has approximately 2,650,000 people, and it has more than 7,000 units of government, exclusive of the State and its agencies, to govern them. It has 99 counties, because that was a sensible number in the horse-and-buggy days. The horse-and-buggy days are gone, and the 99 counties remain. The 7,000 units of government may have been needed before there were telephones, automobiles, and paved roads. Those units are costly. While the people groan under the taxation required to

[1] Burke, Edmund. The Works of the Right Honorable Edmund Burke; Little, Brown & Co., 1894, vol V, p. 195.

support them, it is only with the greatest reluctance that they will review the necessity or utility of such units. Why do our people who have a passion for the newest machines and latest automobiles have an equal passion for old and archaic machinery of government?

Why is the electorate so indifferent? Why, even in a presidential election year does it require the most strenuous efforts to get a substantial majority of the voters to the polls, and why is voting for local candidates in a primary election in an off year so low as to be a national scandal?

How much time and attention can the private citizen be expected to give to political matters? Do we ask more than we have any right to expect? Two of the most durable, orderly and successful organizations in the history of mankind—the Roman Empire and the Roman Catholic Church—have existed without popular elections. Is popular government too burdensome to work?

Certainly, with these and other problems before us, we have a call to action. Few problems are more pressing and urgent than those which might affect our Government adversely as we attempt to live with the difficult problems of the next half century.

Certainly we must recognize that we may have missed our great opportunity for world leadership toward peace and prosperity. In 1919 that leadership could have been ours for the taking. The nations of Europe were tired and battered; Russia was laid low by revolution; and Asia had not yet awakened. Opportunity knocked at our door and we turned her away. How different was the situation at the end of World War II. Europe—our natural ally—was devastated and exhausted; Russia had become a mighty power; and Asia had awakened. Now, if we lead at all, we can lead only half the world. Our great opportunity may never return. When the historians of the 22d century write the history of our times we may be described as "the nation that missed the bus," the nation that came to maturity and turned aside from its opportunity, only to discover upon looking back that the center of world affairs was Asia, and not Europe or America.

What was lacking in the years following World War I, when our great decision was made? It was not wealth or machines or factories or any material power or even constitutional arrangements (although our Constitution is not a model for the conduct of foreign affairs). It was men that we needed—great men, men of vision. And we did not have them. Even the best of constitutions will not work without good men.

And so a part of our task, as de Tocqueville and Macaulay and many others have pointed out, is to learn to seek out our best and to be governed by them. This is a prodigious task. Because so many of our ancestors fled from some oppression or tyranny, we have never grasped the fact that government can be more than the sovereign, that it can be the servant of the people. Opinion polls consistently show that not more than 1 parent in 5 wants his son to enter upon a political career. Somehow we must change that ratio. We must change it by changing the attitudes which produce it. We are certain to be governed by someone—if not by the best, then by the mediocre or by the worst. Dependent as we are upon government for the public functions and services indipensable to a complex and civilized society, we can hardly survive incompetence in government. Neither must we put an undue strain upon those good men who are now brooding over our affairs. We can lighten their load and relieve their burdens by recruiting good men to aid them in the tasks of government. And we can do this with a sense of work well done, because few things can be more rewarding than the maintenance of government of a high order. And, as F. S. Oliver wrote in his book, the Endless Adventure, nothing can be more fascinating than the endless adventure of governing men. To that adventure—the endless adventure of governing men—we must call the youth and ability of our time.

AEC Estimates Power Costs for Japanese Reactor

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. YATES. Mr. Speaker, earlier this year I filed a bill for the construction of an atomic reactor in Japan. In connection with that project, I directed an inquiry to the Atomic Energy Commission requesting an estimate of the possible cost of producing electricity from a reactor capable of producing 60,000 kilowatts. It is interesting to note that the reply of the Atomic Energy Commission estimates that if the power output from the reactor could be increased to 100,000 kilowatts without significantly increasing the capital cost and with fuel elements of longer life and lower fabrication costs which should result from further experience, the power cost might eventually be as low as 11 to 15 mills per kilowatt-hour, which compares favorably with the 12 to 14 mills per kilowatt-hour quoted for steam power in the Hiroshima area.

In order that the entire viewpoint of the Atomic Energy Commission may be known on this important matter, I attach its letter dated June 17, 1955:

UNITED STATES
ATOMIC ENERGY COMMISSION,
Washington, D. C., June 17, 1955.

Hon. SIDNEY R. YATES,
House of Representatives,
Washington, D. C.

DEAR MR. YATES: This is in response to your letter of June 6, 1955, requesting information with respect to the construction of an atomic reactor in Japan.

The estimated cost of generating electricity can only be discussed in very general terms because many factors enter into the net cost of power. One must consider the exact location of the plant, the size of the generating unit, the way in which the plant is financed because the cost of money affects the "fixed charge" rate, and the plant-use factor or use pattern, as well as the cost of the fuel. Reliable information on electric power generation in Japan, and other foreign countries, is not readily available.

Construction costs in Japan do not appear to be very much different from those in the United States. We have made some studies which indicate that a second pressurized water reactor with minimum modification from the Shippingport plant, built in Japan, might show electric power generating costs initially as high as 40 to 50 mills per kilowatt-hour. This assumes a power output near the minimum 60,000 kilowatts specified for the Shippingport plant and current conservative estimates of fuel fabrication costs and fuel element life, as well as a relatively low plant-use factor typical of the average steam-power plant in Japan. Assuming that the power output from the reactor can be increased to 100,000 kilowatts or more without significantly increasing the capital cost and that fuel elements of considerably longer life and lower fabrication costs will result from experience and development effort, the net cost of electricity from this reactor might eventually be as low as 11 to 15 mills per kilowatt-hour, which compares favorably with the 4 to 5 yen (12 to 14 mills) per kilowatt-hour range quoted for steam power in the Hiroshima area. Whether or not such performance can actually be achieved can only be determined by operation of the Shippingport plant with continued effort on plant improvement. This is believed to be as realistic an appraisal as can be made at the present time, although admittedly it shows considerable uncertainty. Other reactor types currently under development present about the same picture. We are confident that expected advances will result in still lower power costs, but the uncertainties for any type are still large.

Your second question concerns possible risks of radioactive danger to the surroundings and possible diversion of fissionable material for weapons purposes. There is no serious amount of radioactivity discharged during normal operation of a properly designed plant, and the plant and building can be designed to contain any release of radioactivity resulting from the worst foreseeable accident. Precautions can be taken to insure that the hazard to the neighborhood would be no greater than with other industrial plants.

A nuclear powerplant can be so designed that its use for production of atomic weapons would be very difficult. The United States could not assist in the building or operating of a plant in Japan without the assurance by the Japanese Government that the plant or any nuclear fuel supplied would not be used to develop or produce atomic weapons. Nevertheless, it would be misleading to say that there was absolutely no possibility that a nuclear plant could be seized and modified to produce some weapon material. Any nuclear powerplant in the contemplated power range would produce weapon material if sufficient effort were expended on modification and providing the necessary separations plants and other ancillary facilities. It would be likewise misleading to deny that some future enemy might consider such a powerplant a target for attack. At the same time, any kind of power plant or any industrial plant might equally well be considered a target for attack.

We have attempted to put these risks in proper perspective. However, it would be the responsibility of the Japanese to determine whether the risks can be accepted.

I trust that these answers will be helpful for your purpose.

Sincerely yours,

K. E. FIELDS,
General Manager.
R. W. COOK,
Deputy.

Effects of Imports of Tuna on the American Tuna Industry

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. WILSON of California. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following letter from Mr. H. F. Cary, gen-

eral manager of the American Tunaboat Association:

AMERICAN TUNABOAT ASSOCIATION,
San Diego, Calif., July 25, 1955.

The Honorable BOB WILSON,
Member of Congress, House Office Building, Washington, D. C.

DEAR MR. WILSON: In our recent discussion you asked these questions:

(1) Does the tuna industries (producers and processors) import problem arise primarily or solely from the importation of canned tuna from Japan? (2) Do you consider that a limitation on canned tuna imports alone will relieve the situation?

The answer to both questions is "No."

This is the basis of our reply:

1. Tuna imports in all forms threaten the ability of the United Sates tuna industries (producers and processors) to continue in business.

2. Tuna imports in frozen form are heaviest, have grown most in recent years, and constitute practically the whole of the present problem.

3. Full remedial action designed to be both effective and equitable should embrace imports of tuna from Japan in all forms.

4. Partial, emergency remedial action to aid the group most affected, the producing industry, should be addressed to frozen tuna imports.

The course of international trade in tuna has been violently changed by trade agreements entered into by the United States. This bad situation has now been worsened, rather than improved, by the new trade agreement on tuna products.

These agreements brought a record total of canned tuna in oil into the United States in 1950, caused a shift in attention to frozen tuna thereafter which has brought successive record high imports annually, and also diverted canned tuna in oil trade largely to canned tuna in brine.

There is a basic inequity in comparative tariff treatment of all these products—this affects the tuna industries separately.

The producing industry (fishermen and boatowners) is affected by all forms of imports.

The processing industry (canners), represented by those who buy all or most of their frozen fish from Japan, is affected by tuna canned in brine and oil.

The processing industry (canners), represented by those who buy most of their supply from domestic producers, is affected by tuna canned in brine and in oil, and by frozen tuna imports to the extent that these same companies do not buy the same percentage of imports as others to equalize their raw material costs.

We have set forth what group is affected by any or all forms of these imports. Let us see what has recently happened and is happening to each form of import to determine where the burden lies.

In 1951 the processors and producers petitioned the Tariff Commission for an escape-clause action on one of the products from Japan—tuna canned in brine. This was rejected by a split vote. This is what has happened to imports of tuna canned in brine and in oil from Japan in each full year since that time:

	Pounds processed weight
1952	22,777,000
1953	32,363,000
1954	28,644,000

In 1951 the producers after conferring with the State Department sought the imposition of a tariff on frozen tuna. This was defeated in the Senate after opposition expressed by the State Department and processors. This is what has happened to imports of frozen tuna from Japan in each full year since that time:

	Pounds round weight
1952	50,985,000
1953	77,112,000
1954	98,060,000

There has been a relatively stable situation in canned-tuna imports (oil and brine combined). This may be analyzed by quarters, as follows:

[Processed weight in thousands of pounds]

Quarter	1952	1953	1954	1955
January-March	5,834	6,436	7,385	6,610
April-June	5,038	7,195	8,953	.....
July-September	5,498	12,276	5,869	.....
October-December	6,268	6,583	6,430	.....

A comparison by months will reveal the same relative stability.

There has been a rapid growth and no stability in imports of frozen tuna from Japan, which may be analyzed by quarters as follows:

[Round weight in thousands of pounds]

Quarter	1952	1953	1954	1955
January-March	7,712	9,550	15,822	23,781
April-June	9,711	23,510	35,777	.....
July-September	22,395	35,150	31,048	.....
October-December	11,167	9,152	15,322	.....

Let us compare imports of both canned and frozen tuna in terms of round weight for the first 5 months of 1955 with a comparable period for each of these years:

[In thousands of pounds round weight]

Period	Canned	Frozen
January-May, 1952	18,960	14,912
January-May, 1953	22,774	23,724
January-May, 1954	28,876	38,576
January-May, 1955	21,048	46,032

For these periods we find these comparisons may be made:

1. Imports of Japanese canned tuna in 1955 were 11 percent more than in 1952, 8 percent less than in 1953, and 21 percent less than in 1954, a consistent decrease.

2. Imports of Japanese frozen tuna in 1955 were 209 percent more than in 1952, 94 percent more than in 1953, and 19 percent more than in 1954, a consistent increase.

3. Imports of Japanese canned tuna represented 56 percent of the total of both canned and frozen in 1952, 49 percent of the total in 1953, 43 percent of the total in 1954, and 31 percent of the total in 1955—a consistent decrease.

Returning to the answers to your questions.

1. It is apparent from this information that imports of canned tuna are not the sole or primary problem in imports.

2. It is apparent from this information that a limitation on canned goods imports alone would not solve the problem of keeping an American tuna fishery.

3. It is apparent from this information that the lack of any equality of treatment of imports of frozen tuna, which enters duty-free or quota free, causes the full weight of all imports to fall almost exclusively on the domestic producer (boatowner and fisherman).

4. It is apparent from this information why processors who buy all or most of their fish supply abroad want nothing done on frozen tuna imports (which enter duty-free and which have steadily increased), and everything done on canned tuna imports (which are already dutiable and have recently decreased).

The Department of State has recently written that in considering this situation the Government intends to take into account the interests of all concerned in a fair and equitable manner.

This is what the producers have asked. They have suggested no solutions that would do otherwise.

Yours very truly,
AMERICAN TUNABOAT ASSOCIATION,
H. F. CARY, *General Manager.*

The Highway Bill

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. RABAUT. Mr. Speaker, we have failed to give the American public a much-needed highway program. I do not wish to point the accusing finger at any one group—for I sincerely feel that we must collectively stand responsible to the American public for failing to eleviate a problem that permeates our variated channels of commerce and industry.

I vigorously opposed the Eisenhower bond-issuing arrangement that was introduced under the rule by which the bill was brought to the floor. The committee's bill which provided for a "pay-as-you-go" tax plan sought to distribute the cost over the Nation as a whole, but met with defeat when extraneous matter was introduced that was designed to raise the ire of a large portion of the membership. I voted for the committee's bill on the grounds that the present emergency conditions of our Nation's highways required that some program be put into effect in the interest of public safety—if for no other reason. The death tolls on our highways, which for the main part are due to the inadequate accommodation of our roads, points directly to the necessity of remedial legislation for highway construction. It is reported that we daily kill 100 Americans and critically injure 3,000. The estimated economic loss approaches $4.5 billion annually. This type of negligence, I fear approaches moral culpability—and finds no justification on the grounds of partisan political considerations or for the need of providing a banker's bonding program.

Aside from failing in our moral obligation to the public we have also hindered seriously the economic development of our country. The automobile industry is the principal utilizer of highways; whether for travel, commerce or travel-communication. The vitals of our Nation are arterially connected by our roads and highways. Today we are producing 3 million vehicles in excess of the number we retire to the junk heap every year. Every year we compound further the problem of congested highways—but every year we fail to come forward with a workable solution. To continue this folly in the face of these startling facts can only be adjudged as governmental irresponsibility toward

the critical needs of our people and their economy.

Mr. Speaker, I call upon the leadership and my colleagues to seriously contemplate the seriousness of this problem which is no longer merely economic, but moral as well. The needless loss of life and the economic waste which evolves therefrom should make firm our resolve to vigorously attack this problem next session and deliver to the people the means for providing adequate and safe highways.

Stockpiling of Anthracite Coal

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. FLOOD. Mr. Speaker, it has been said that we are specially expert in preparing for past wars and that we always seem to have difficulty in anticipating the realities of future wars. In less than 40 years 2 great world wars have occurred in which this country found itself quite unprepared. It required in each case considerable time to marshal our productive forces and military might. The ever-present danger that another one will break out is now our greatest concern.

It is not difficult to identify at least some significant differences between a possible third world conflict and World Wars I and II. This would be the length of time that we may have to assemble our military power to meet the enemy attack. In those former times we were extremely fortunate that the fields of battle were a long way off. Also, we had powerful allies who were able to absorb rather fully the shock of the first 2 years of each war.

Fortunately, this gave the United States time to bring its industrial and military power into a state of readiness. It is a safe conclusion, however, that we will not have such an extended period for preparation in the future. Neither can there be any assurance that a future war will be fought exclusively on foreign soil. Instead the probabilities are that war will be brought directly to America first, possibly an attempted surprise attack. Our former leisurely process of preparation probably cannot be repeated. We cannot afford to be unprepared.

In both former experiences it was necessary that our great energy resources be quickly and completely mobilized for war. Petroleum supplies were at once reserved for their dominant military uses. This would be no less necessary for the future. Oils and gasoline are essential for our airplanes, our ships, and our mechanized land units. These military facilities would again make a first call upon the petroleum supplies of this country.

It is equally evident that a large share of the greatly increased energy needs for war mobilization would, as in the past, descend with great weight on the coal industry. The bituminous coal mines would again probably absorb most of the shock. Production of less than 400 million tons in the late thirties was expanded to more than 600 million tons by 1944.

Because of strategic locations of the deposits an important segment of this increased burden again would be shifted to the anthracite mines of this country. An annual production of less than 50 million tons before World War II was boosted to 56 million tons in 1941, 60 million tons by 1942, and almost 64 million tons by 1944. This large increase in mine output required time.

But fortunately there was time to prepare for increased production: To bring back discharged miners, to pump water from abandoned mines, to refurbish the facilities and install new equipment. In all probability time for such adjustments will not be available in a future war.

Under these circumstances, there is a most solid basis for legislation authorizing the Federal Government to accumulate an adequate stockpile of weather-resistant anthracite coal of sufficient proportions to absorb some of the early shock of expanded energy needs.

We should also recognize that a future war may quickly disrupt our transportation system and create an immediate need for many strategically placed mineral fuel stockpiles. The fuels most vulnerable to attack would probably be the oil and gas flowing in pipelines. A few well-placed bombs could disrupt the flow to the major industrial areas of the country of much of the supply of not only oil but also natural gas.

There is under way a continuous expansion in the consumption of mineral fuels but much of this new burden has recently been shifted to petroleum and natural gas. Petroleum especially would be required in large volume for many irreplaceable military uses in time of war. It would also be subject to the easiest destruction through bombs, since many oil pipelines are in vulnerable positions.

Fortunately many emergency fuel needs could be supplied from strategically located stockpiles of anthracite coal. This hard coal will maintain itself with almost no loss over periods of several years. Such stockpiles would be immediately available for many uses, both in essential industries and for heating homes.

A program of stockpiling, if properly synchronized with the present uneven and restricted production of anthracite coal, would do much to improve the economic health of vital depressed mining areas, and maintain them in a state of readiness in event of another great world war.

Our national stockpiling program has been directed preponderantly to the accumulation of various types of products, especially minerals that are available only from foreign countries or where major parts of the supply come from distant producing centers. Ocean-going shipping is especially vulnerable to submarine attack which can disrupt the flow of vital commodities. It seems equally important that we should also stockpile other essential materials which require time to produce.

The availability of adequate stockpiles of coal, especially of the anthracite variety, could add significantly to our preparedness. Such stockpiles would relieve the burden on other types of mineral fuel and permit rapid readjustment to stringent circumstances.

Even though we do have large reserves of coal which are adequate for all future needs, the unmined coal is not available to meet urgent needs. It will take time to rehabilitate an industry that has been subjected to unfortunate competition for so many years. It is this element of time that may very well be in shortest supply and also the greatest single determining factor in national survival.

Ebasco Costs at EEI Plant at Joppa

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. YATES. Mr. Speaker, last year I had occasion to place in the RECORD correspondence with the Comptroller General of the United States pertaining to my inquiry as to whether the Government of the United States was liable for additional costs in connection with the construction of the powerplant of Electric Energy, Inc., at Joppa, Ill., as a result of miscalculation or mismanagement by Ebasco Services, Inc.

I am in receipt of a further communication from the Comptroller General dated July 26, 1955, and in order that the record may be complete, I am attaching it as a part of my remarks:

COMPTROLLER GENERAL OF THE
UNITED STATES,
Washington, July 26, 1955.

Hon. SIDNEY R. YATES,
House of Representatives.

DEAR MR. YATES: This is in response to your informal inquiry of July 14 as to whether there has been a change in my opinion expressed in a letter to you dated July 26, 1954, that the Atomic Energy Commission is legally obligated to absorb through power rate increases the increased construction costs of the Electric Energy, Inc., power plant, in view of the findings set forth in part I of our report on AEC contracts for electric power, issued March 31, 1955. I wish to advise you that there has been no change of opinion as to the Government's liability.

In my letter of July 26, 1954, I stated:

"Examination has been made of the contracts pertaining to both the Paducah and Portsmouth installations, and it is my opinion that the Atomic Energy Commission is legally obligated to absorb the increased construction costs of both power plants under the contract escalation clauses whereby the rates charged for power are based upon actual construction costs."

I also stated that no audit by this Office had been made of the actual expenditures involved but that our Division of Audits had made a survey as to the reasons for the increased construction costs of the EEI power plant and had concluded:

"An important factor in the cost increase was labor difficulty * * * The exact effect on

the increased construction cost of the strikes, slowdowns, and overmanning to prevent jurisdictional disputes as contracted with possible management efficiency in labor utilization and labor relations is not measurable. It is also possible that the initial estimates of labor costs were unrealistic. We can only conclude that labor costs make up the major portion of the overall increase in cost."

The findings set forth in part I of our report on AEC contracts for electric power, issued March 31, 1955, were based on a more complete and thorough review of the circumstances surrounding the large increases in the construction cost estimates of the Joppa powerplant; however, these findings are consistent with those included in my letter of July 26, 1954. The March 31, 1955, report states:

"Based on our review, we are of the opinion that the basic reasons for the increases in Ebasco's estimates are:

"a. The original estimate was based on inadequate information.

"b. The labor problems encountered were greater than anticipated.

"c. The management activities at the site were not adequately performed."

You might be interested to know that subsequent to the release of part I of our report on AEC contracts for electric power, the General Manager of the Atomic Energy Commission, by letter dated April 21, 1955, advised the Comptroller General that a settlement between EEI and Ebasco Services, Inc., had been reached which provided for Ebasco to receive no profit for its services on the Joppa powerplant. The estimated reduction in construction costs is $2,882,000, subject to a final audit to be made. The AEC will receive the benefit of this reduction in construction costs through power rate decreases under the terms of the contract.

The General Accounting Office has now completed an audit of the actual expenditures made by EEI for construction of the Joppa powerplant through September 30, 1954. Our report on this audit will be issued in the near future at which time I will send you a copy.

Sincerely yours,

FRANK H. WEITZEL,
Assistant Comptroller General of the United States.

Need for a Veterans Hospital in the Washington Metropolitan Area

EXTENSION OF REMARKS
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. HYDE. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include a letter from the Vice Commander, American Legion, Department of Maryland, which points out the vital need for a veterans hospitals in the Washington metropolitan area.

THE AMERICAN LEGION,
DEPARTMENT OF MARYLAND, INC.,
July 29, 1955.

MR. DEWITT S. HYDE,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN HYDE: We of the American Legion, and in particular those of the Southern Maryland District, whom I represent, are deeply concerned with the vital need for adequate veteran hospitalization facilities in the Washington metropolitan area.

Of particular interest is the fact there are an estimated 285,000 to 300,000 veterans of World War I, World War II and Korea living in an area which includes the District of Columbia, Fairfax, and Arlington Counties in Virginia, the city of Alexandria and the Maryland counties of Montgomery and Prince Georges. Of this number, 30,000 have service incurred disabilities, many of which will require future hospitalization.

This area is now served by Mount Alto Hospital which has only 300 beds available and is an extremely inadequate and obsolete facility. This was formerly a girls' school and was taken over in 1921 by the United States Veterans' Bureau to provide badly needed hospitalization for a much smaller number of veterans than now populate our area. It is my understanding that even the Veterans' Administration feels Mount Alto is obsolete and any expenditure for repairs or remodeling would involve a gross waste of Federal funds.

I would also mention that many of the veterans in the area will require hospital service in the future to which they are legally entitled because of their personal funds will be inadequate. While I am primarily concerned with the immediate problem of the Washington Metropolitan area, I would also point out that from the standpoint of Maryland veterans, relief is needed for the Fort Howard and Perry Point Hospitals. Additional facilities in this area would relieve the pressure at these other points and would further assure many veterans who now need hospitalization, an opportunity to receive the attention which would once again make them useful assets to the community and to our country.

We of the American Legion will be most happy to work with you in every possible way to bring to a full realization, an adequate structure, properly located, to serve the men who did not hesitate to serve the Nation.

With sincere appreciation, I am,
Cordially,

DAVID L. BRIGHAM,
Vice-Commander,
Department of Maryland.

Mrs. C. H. Woods, a Mother of the Year

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. SPRINGER. Mr. Speaker, as the Members of Congress know, each year the American Mothers' Committee of the respective States names a mother of the year. This year, the honor in Illinois went to a fine woman in the 22d Congressional District of Illinois, Mrs. C. H. Woods, of Lincoln.

To have achieved the Mother of the Year Award, a woman must have lived up to high qualifications designated by the American Mothers' Committee. One of these is that she shall be a successful mother as evidenced by the character of her individual children. She also must reflect a strong religious and spiritual integrity and, in addition, the traits of courage, cheerfulness, patience, affection, kindness, understanding, and homemaking. Such a woman must have a sense of civic and international understanding and be active in community betterment. Mrs. Woods combines all of these qualifications and truly represents the mothers of Illinois in all of her responsibilities attached to her role as State Mother of 1955.

The Illinois ceremony this year was held on the campus of Lincoln College and Gov. William G. Stratton, of Illinois, presented the certificate to Mrs. Woods as the Illinois mother of 1955. Under unanimous consent, I include herewith an article from the Lincoln Evening Courier of April 25, 1955, giving an account of this presentation:

GOVERNOR STRATTON PRESENTS AWARD TO MRS. C. H. WOODS

Highlight of the mother award ceremony here Sunday afternoon was presentation by Gov. William G. Stratton of a certificate to Mrs. C. H. Woods, of Lincoln, the Illinois mother of 1955. She represents, he said, the qualifications of motherhood: devotion, wisdom, courage, faith, and understanding.

It is these which are the sustaining qualities of life, Governor Stratton said. Motherhood is something enduring, something eternal yet all too often people wait until too late to honor their maternal parent. Motherhood is the highest honor which can come to any woman.

The Lincoln woman's greatest reward, the governor pointed out, is her children and grandchildren, who were seated in places of honor.

In presenting the Illinois award, the State executive said the tribute to Mrs. Woods embraces all mothers of Illinois. As the governor was presented by Raymond Dooley, who presided, the crowd stood.

In responding, the 1955 mother award recipient said it was a particular honor to receive the award from the governor. The occasion, she said, "is overwhelming and a wonderful thing, one reviving both sorrow and joys."

Dr. Daniel A. Poling, editor of the Christian Herald and speaker of the day, said it is the hand that rocks the cradle that moves and rules the world. While wars never settle anything and mothers' sons die needlessly, nevertheless they provide the chance to win the peace. "If they had failed, we would not be here honoring motherhood today. They have promised us a better tomorrow by an enlightened and enriched freedom."

Allocation of Contracts for the Construction of Vessels in American Shipyards

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MAILLIARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. MAILLIARD. Mr. Speaker, I have recently introduced H. R. 7700, relating to the allocation of contracts for the construction of vessels in shipyards on the Atlantic, gulf, and Pacific coasts, and on the Great Lakes.

It is of the utmost importance that shipyards vital to the national security shall be capable of expanding, in times of emergency, to maximum capacity. Facilities alone are of no use unless trained personnel are available to build, repair, and convert seagoing vessels. This was forcibly brought out during the

almost 2-year delay in the shipbuilding program during World War II—trained personnel were not available to perform the work, even after facilities were available.

The ability to maintain a labor pool of skilled workers is dependent upon a continuing volume of shipbuilding, conversion, and repair work. Where these skills are developed in the shipyards through apprentice and training programs, the first reduction in shipyard work accompanied by even temporary layoffs of these skilled personnel results in their seeking employment elsewhere, usually in a more stable industry. Fluctuations in shipbuilding activity add to the difficulty of maintaining a nucleus of trained and skilled shipyard personnel for wartime expansion, or even for peacetime demands.

The problem is to maintain a nucleus of skilled personnel in strategic areas, capable of being expanded to maximum capacity in minimum time. The three main areas for the building, repair, and conversion of seagoing vessels are at present the east, west, and gulf coasts, and prospects for further development of Great Lake facilities appear good. In order to maintain a nucleus of skilled personnel, skilled workers must be induced to stay in the shipbuilding industry. The percentage of the total of skilled workers employed should, then, approximate the percentage of the total which would have to be employed in each area in time of emergency.

The purpose of H. R. 7700 is to assure, insofar as it is practicable, that ship construction, repair, and conversion work benefiting from Government subsidies will be distributed on a geographical basis to maintain shipyards and skilled personnel on all coasts in a state of at least minimum readiness for a national emergency.

At the peak of World II employment in 1943, a total of some 840,000 productive workers were employed in the industry, in both Navy and private shipyards. Geographical distribution was as follows: Pacific coast, 35.4 percent; Atlantic coast, 46.5 percent; Gulf Coast and Great Lakes, 8.1 percent.

Currently, approximately 99,100 persons are employed by private shipyards; approximately 15 percent of this number are nonproductive clerical and supervisory personnel. Geographical percentages are: Pacific coast, 14 percent; Atlantic coast, 55 percent; Gulf coast, 19 percent; Great Lakes, 2 percent.

The Department of the Navy has some 91,431 persons productively employed. Of this number, 53,692 are on the east and gulf coasts combined, and 37,739 are employed on the west coast.

The Department of the Navy has allocated funds to the Bureau of Labor Statistics for the purpose of collecting data concerning shipyard employment. The system was worked out by the combined efforts of the Navy, Maritime Administration, Bureau of Labor Statistics, anr representatives of the Shipbuilders Council of America. The purpose is to determine the number of people employed on a month-to-month basis, broken down as to the kind of contracts upon which they are working. The response from the private shipyards has been disappointing so far however, since only about 50 percent of the yards have cooperated in this effort.

On the basis of figures submitted by the Bureau of Labor Statistics for employment in shipbuilding and repair for August 1953 and August 1954, the percentage of geographical distribution of employment was as follows:

	August 1953		August 1954	
	Number	Percent	Number	Percent
Private yards:				
Atlantic coast	77,300	60	57,500	58
Gulf coast	24,700	19	21,400	22
Pacific coast	14,900	12	11,900	12
Great Lakes	5,800	------	4,500	------
Inland	5,400	------	4,200	------
Total	128,100	------	99,500	------
Navy yards:				
Atlantic coast	78,300	65	67,600	63
Gulf coast	----------	------	----------	------
Pacific coast	43,100	36	40,100	37
Great Lakes	----------	------	----------	------
Inland	----------	------	----------	------
Total	121,400	------	107,100	------
Grand total for all yards:				
Atlantic coast	155,600	63	125,100	60
Gulf coast	24,700	9	21,400	10
Pacific coast	58,000	23	52,000	25
Great Lakes	5,800	------	4,500	------
Inland	5,400	------	4,200	------
Total	249,500	------	207,200	------

On the basis of these figures, as well as the others noted in previous paragraphs, it would appear that in order to maintain, percentagewise, the proper ratio of employment of each coast to the others, approximately 54 percent of the total should be employed on the Atlantic coast, approximately 29 percent should be employed on the Pacific coast, approximately 9 percent should be employed on the gulf coast, and approxmately 8 percent should be employed on the Great Lakes. This ratio would assure that each coast had a nucleus of skilled workers as a basis for training others in time of national emergency.

If the provisions of H. R. 7700 are applied, there would be some safeguard against the shifting of skilled workers from the shipbuilding industry to another industry. When private ship construction and repair work is slack, Government contracts would be let in the area, thus keeping those skills occupied.

I have introduced this bill at the end of the session in order that the cognizant departments of the executive branch of the Government might have an opportunity to study the subject and report on the bill. It is quite possible that because of the specialized nature of the several subdivisions of the industry that a separation should be made between repair and construction, particularly since repair work is generally dependent upon the physical location of the ship to be repaired and is not readily controllable by law.

Obviously, any percentages determined to be valid would be subject to review. In this connection, in view of plans to improve conditions of access to the Great Lakes, it is conceivable that this area might develop in importance in the shipbuilding and repair field. It is also possible that further separation should be made between private and Navy yards, since employment in the latter is directly controllable by the Government and their function is to support the operational forces of the United States Navy, which bears little relationship to mobilization expansion requirements of the merchant marine.

It is my sincere belief that the provisions of H. R. 7700 at least suggest a solution to a very real national problem. I hope that it will be possible, after proper study by the departments, for the Committee on Merchant Marine and Fisheries to direct its attention to this bill so that it may be properly improved and offered for the consideration of the Congress.

Double LL's of Pennsylvania Have Lots To Offer

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 30, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Phil A. O'Neill, president, Crolly Advertising Agency, Wilkes Barre, Pa., in which Mr. O'Neill analyzes the market area comprising Luzerne and Lackawanna Counties. This article appears in the current issue of Markets of America:

LACKAWANNA AND LUZERNE MARKET—THE DOUBLE "LL'S" OF PENNSYLVANIA OFFER EVERYTHING AN ADMAN CAN ASK FOR

(By Phil A. O'Neill)

Scranton-Wilkes-Barre at a glance

Population (metropolitan area)	710,860
	710,860
Dwelling units	197,600
Retail sales	$628,000,000
Apparel store sales	52,680,000
Automotive sales	94,590,000
Drug store sales	13,310,000
Food store sales	173,108,000
Furniture and appliance sales	37,900,000
Gasoline service sales	18,340,000
General merchandise sales	71,356,000

Here in these two great industrial, mining, manufacturing, and agricultural counties is an unusual market of prime interest to every buyer of advertising.

The double "LL's" have the distinction of having 5 UHF-TV stations; 2 of these were the first 1 million-watt stations in the United States of America, which makes Luzerne and Lackawanna Counties one single market.

The first million-watt station is an NBC basic buy, the second carries ABC and DuMont shows (both are located in Wilkes-Barre). In Scranton there are powerful CBS and ABC affiliates and a good regional independent.

There are 11 radio stations; 7 major daily and 2 Sunday newspapers in the double "LL's" trading area, plus a host of English-speaking and foreign-language weeklies. There are many other attractive attributes about the double "LL's" little known to the national advertiser.

Here in the double "LL's" lies America; for almost every European and Asiatic nationality that ever landed on the shores of this country is represented here. True to the great American tradition, this heterogeneous mass of people from other lands work and play in concord, side by side, each retaining a portion of their picturesque native habits and culture, and at the same time blending harmoniously into the multicolored pattern of American life.

A warm hand of welcome and genuine hospitality is extended to you to visit here. We are proud of our double "LL's" and promise to dispell any false ideas you may have of the Pennsylvania hard-coal regions. A network of highways lead into the double "LL's," and the extension of the great Pennsylvania Turnpike now under construction, when completed, will make the double "LL's" one of the most important distributing centers in Pennsylvania.

Two nationally known bus lines and 10 railroads give direct connections with all parts of the United States. Here you will see fine homes, modern hotels, restaurants, stores, and shops, well-kept public parks, country clubs, lakes, and historically known landmarks, churches of every denomination, public and parochial schools, colleges, and private institutions of learning equal to or exceeding any in the United States. If you like to fly, come by plane on the wings of Allegheny, American, Colonial, or TWA Airlines direct to the double "LL's" modern airport.

Within the trading area of 50 miles is a population of nearly 2 million people. The double "LL's" are the most economical points from which to serve this vast population, and the logical distributing centers for the 17 counties of northeastern Pennsylvania's marketing area. Rich in history, resourceful in industry.

DIVERSIFICATION

The double "L's" with Scranton, Wilkes-Barre and Hazleton as the major cities are a beehive of action to transform these two anthracite producing counties into one of Pennsylvania's most industrially diversified sections of this great State.

In every city, town and borough, there are well organized forces of civic-minded men and women giving of their time, talents and money to make Luzerne and Lackawanna counties industrially secure.

Even the coal companies are no longer just "hard coal" minded. One of the largest anthracite producing companies in the world located here in the double "L's", recently changed its corporate name to make possible new and progressive developments of natural resources and other products so essential to the rebirth of the Pennsylvania hard-coal regions.

MANUFACTURING CENTER

This industrialized rehabilitation and manufacturing, instead of mining, now plays the prominent role in the economy of the Scranton-Wilkes-Barre-Hazleton trading area. The chamber of commerce of any of these cities will be more than glad to supply volumes of statistical material to show you the progress made since the end of World War II. A very substantial housing boom has accompanied this industrial expansion, and the number of new shopping centers with huge supermarkets is truly phenomenal, and new car sales in the double "L's" are fantastic.

A large labor pool is one of the double "L's" greatest assets. Upwards of 80 percent are American-born, with nationalities of the remaining percentage Polish, Italian, Austrian, Russian, Irish, Czechoslovakian, Welsh, English, German, and Lithuanian and at least one naturalized American representing all the other nations of the world, with plenty of inherent talents to be trained in any phase of manufacturing, distributing, or selling.

POPULATION CONCENTRATION

The double "L's" are the largest market in northeastern Pennsylvania, strategically located in an area of one of America's greatest concentrations of population forming a market for the national advertisers of untold potentialities.

A look at a map shows that the double "L's" are within convenient distance to all commercial nerve centers in the world, and with an approximate 40 million people living within a 250-mile radius.

So, if you have anything to sell it can be sold here. If you are an industrialist looking for a place to relocate or establish a branch plant, come to the double "L's". It's a Mecca for the merchandiser, the manufacturer, the wholesaler, and distributor.

Surplus Agricultural Commodities

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 30, 1955

Mr. UTT. Mr. Speaker, one of America's burdens of this decade is her responsibility of seeing to it that our great abundance of agricultural products finds its way into the hands of deserving, friendly peoples of the world. Unfortunately, our price support program has heaped upon us a great surplus of food which not only finds us hoarding our abundance, but being burdened by the very cost of storing it. That cost now exceeds $1 million per day. I am convinced that in the sight of God and the history of mankind America must either find a means of distributing this surplus or certainly face a penalty.

Recently, there has come a ray of hope for solving America's problem of her abundance. For the first time in the history of our price support program the Department of Agriculture, under Republican leadership, has devised an aggressive plan for reducing our inventory of surplus in a way which could prove to be an example to the rest of the world of the advantages of America's free enterprise system. The United States Department of Agriculture has announced the appointment of Francis Daniels as sales manager and vice president of Commodity Credit Corporation. We are finally preparing to distribute our excess of agricultural products throughout the world, not by dumping or wasting our abundance, but by sound, aggressive selling in the world's free market. America should be encouraged that this program is headed by a man who is a product of our free enterprise business system.

No doubt there are some who would profit by the continued growth of America's surplus stockpile. However, the majority of our citizens, I am sure, will feel relieved to know that something is being done about introducing this great store of food into the world markets where it is sorely needed.

No program such as this can be inaugurated without the strong opposition of some who, perhaps, have profited for many years from the continued accumulation of these surpluses. I, therefore, submit that strong support and encouragement should be given those men in our Department of Agriculture whose responsibility it is to dispose of them. The entire commodity stabilization program of the United States is under the immediate supervision of Assistant Secretary of Agriculture, James A. McConnell. I believe a tribute should be given to this man's perseverance, hard work and personal sacrifice in this present service to our country.

No doubt Mr. McConnell's greatest personal desire would be to spend the remaining years of his life on his farm in northern Pennsylvania enjoying the companionship of his children and grandchildren. Many years of hard work and personal business success has earned for Mr. McConnel the right to such a life.

However, he, like many of us, feels that America's future may well be on trial at the present time and that unless we succeed in making democracy, free enterprise and our great productive resources of benefit to all, America's great gains of the past may be lost to the future. Here are some of Mr. McConnell's recent accomplishments concerning our surpluses which I feel are worthy of commendation:

First. He is singularly responsible for creating the position of Sales Manager and Vice President of Commodity Credit Corporation, the appointment of Francis Daniels to that position and the working out of an aggressive plan of selling America's surpluses.

Second. He has encouraged a policy of reducing the investment of our Government in storage facilities for these surplus products. In this regard, he eliminated the necessity of using 28 additional mothball Liberty ships from the San Francisco area for surplus-grain storage in the Northwest. I am informed that the grain originally destined for ship storage has either been sold or scheduled for storage in conventional grain warehouses located in California, at a greatly reduced cost to the taxpayer.

Third. Through Mr. McConnell's efforts a representative of Portland Commodity office has been located in California and has successfully reduced grain surpluses there to the point where it now appears that all oversupply in California may well be eliminated before next harvest.

Fourth. He has arranged for three representatives from California to be seated on the advisory board of the Portland office of Commodity Stabilization, thus giving our State of California representation in the matter of handling and disposing of surplus commodities.

Fifth. At Mr. McConnell's insistence over 500,000 tons of surplus grains have been sold on the Pacific coast during the past 30 days. Most of this has gone for export into trade channels of the free world.

For a long time I have been a critic of wasteful practices by some of our Government bureaus in the handling of

surplus commodities. I am encouraged that something is being done about it. I hope that Mr. McConnell's aggressive program and the selling job to be executed by Mr. Francis Daniels will be given the wholehearted support of the Congress.

GI Loans

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorandum released by the Veterans' Administration today:

Effective today, July 30, veterans purchasing homes with the aid of GI loans will be required to make a down payment of at least 2 percent, and the maximum time for repayment of loans will be set at 25 years, the Veterans' Administration announced.

Similarly moderate credit requirements are being placed in effect by the Federal Housing Administration for homes purchased with FHA-insured mortgages.

Since April 23, 1953, the VA has had no mandatory down payment requirement, and the mortgage repayment period could run as high as 30 years.

Today's action, VA said, was taken after a thorough study of national economic conditions, especially those prevailing in the residential construction and mortgage financing fields. The new requirements are expected to help protect prospective GI loan applicants against increased prices of homes, overextension of credit and financial risks. Further, they should tend to stabilize the mortgage market by eliminating the 30-year no-down-payment loan which currently is being traded at widening discount margins.

The new requirements are not retroactive. They are not applicable to purchase of homes for which VA has issued certificates of reasonable value prior to July 30, or in cases where requests for appraisals actually have been received in VA offices prior to July 30.

Also, the requirements will not apply to GI loans made solely for the replacement or reconstruction of residential property that has been destroyed or substantially damaged by flood, fire, or other similar catastrophies, nor to repair, alteration, or improvement loans.

The most recent VA figures show that the average price for GI homes purchased with no downpayment has been about $10,500. Under the new regulations the downpayment requirement for such a house would be $210.

A VA study of the 407,000 VA home loans closed in 1954 revealed that veterans had made an average downpayment of $1,100. On those loans made in 1954 with downpayments, the average downpayment for new houses ran 11 percent, and the average for existing homes was 15 percent.

The study revealed that 2 out of every 5 new home loans, and 1 out of every 5 loans for existing dwellings were made with no downpayments. One-twelfth of the mortgages on existing homes and a little more than one-third of the mortgages on new homes had 26- to 30-year maturities.

On other occasions since the GI bill loan program was established in 1944, VA credit requirements have varied.

Credit controls were first imposed in July 1950 when a 5-percent downpayment was required for most GI loans. In October 1950, under the Defense Production Act, downpayment requirements ranged up to 45 percent, and the repayment period was limited to 25 years on homes costing under $7,000, and 20 years on homes over that amount.

Downpayment requirements were eased on three separate occasions—in September 1951, and June and October of 1952—before credit controls were removed entirely on April 23, 1953.

The VA emphasized that it would maintain a constant study of the housing situation, and make adjustments in credit requirements as might be indicated.

Encircling Movement

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial from the Hampton Union and the Rockingham County Gazette, Hampton, N. H., Thursday, July 28, 1955:

ENCIRCLING MOVEMENT

The ponderous, long-heralded summit conference, from which the world expected little and hoped for much, will go down in history as the scene of the Eisenhower challenge, probably the greatest stroke of statesmanship in our time.

As western newsmen struggled desperately to send home reports of progress and optimism, when the key issues of German reunification and European defense had both been kicked under the table for resurrection at the the foreign minister level at some later date when Russia's Bulganin had once more repeated the threadbare Soviet formula for disarmament of other nations, when the meeting seemed hopelessly fouled up and rapidly disintegrating, President Eisenhower let the peace-loving Russians have it.

In the same simple, friendly, but deadly earnest manner of his earlier addresses in Geneva, he called upon the masters of the Soviet to exchange with the United States complete blueprints of each other's military establishments. Further, he invited them to take all the aerial photographs they wished over the United States—extending the same privilege to American flyers over the U. S. S. R. in return. He emphasized that the exchange of military installation blueprints was to cover the United States from end to end and to extend likewise across the vastness of the Soviet Union.

The jolt that turned the tables and placed President Eisenhower in command of the situation was received by the Russians in stony silence. Premier Bulganin, as chairman, adjourned the meeting.

Such a proposal is obviously not to the Reds' liking. But will they dare to reject it? If they turn it down, their protestations for peace and amity and understanding are forever gone with the wind that generated them. If they turn it down, they can never again charge us with warmongering. And if they should accept the President's challenge, the Iron Curtain comes crashing down. The secret fastnesses of the Urals, the slave camps of Siberia, the wretchedness and poverty of the Russian people and the Soviet satellites will be revealed to all the world. The days of the Kremlin hierarchy will be numbered. And if they accept, we suspect there is little about our Military Establishment for them to add to the intelligence data they already have.

Either way, General Eisenhower has taken the summit.

Republican Administration Imposes Unneeded Credit Controls on Veterans' Housing

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. TEAGUE of Texas. Mr. Speaker, the administration is playing politics with the veterans' housing program. The Veterans' Administration announced that effective today, July 30, veterans' purchasing homes with the aid of GI loans will be required to make a downpayment of at least 2 percent and the maximum time for repayment of loans will be set at 25 years.

The Servicemen's Readjustment Act of 1944 specifies that a veteran's loan may be guaranteed for a period of 30 years and sets no requirement for a downpayment. The amount of downpayment and the length of the mortgage term are the prerogatives of the lender and may be set by the lender at his own discretion within the maximum and minimum prescribed by law. We now find the administration tampering with the veteran loan guarantee program and in fact imposing credit control on veterans who wish to purchase a home guaranteed by a VA loan. This action by the administration represents a victory for the mortgage bankers and certain of the lending interests who have been campaigning for several months to impose credit controls on veterans.

These attempts came to the attention of the Veterans' Affairs Committee and were the subject of hearings on April 26, 1955. I would like to read a statement which I made at the beginning of the hearings regarding the campaign by lenders and also the statement by Mr. Ralph H. Stone, Deputy Administrator, Department of Veterans' Benefits:

VETERANS' HOUSING PROBLEMS

HOUSE OF REPRESENTATIVES,
COMMITTEE ON VETERANS' AFFAIRS,
Washington, D. C., April 26, 1955.

The committee met, pursuant to call, at 10 a. m., in room 356, Old House Office Building, OLIN E. TEAGUE, chairman, presiding.

The CHAIRMAN. The committee will please come to order.

For the past several months numerous items have appeared in the Wall Street Journal and various other business and builders' publications to the effect that there was an extensive boom in home building, and that the Government should take steps to curtail it.

Knowing that World War II housing benefits will expire in the next couple of years, of course this committee is very much interested in what happens along that line. I would like to read you a few of the statements that appeared in the different publications.

A spokesman for the Life Insurance Association of America made this statement [reading]:

"It is evident therefore that measures need to be taken promptly by Government and private groups to dampen down the boom in housing.

"The basic cause for this boom is excessively easy credit. This is certainly no time for 30-year, no downpayment mortgage loans guaranteed by the Veterans' Administration. Such terms are an open invitation to a boom-bust situation in home building, and they actually penalize the veteran by contributing to a high price for his house. We urge that Congress act promptly to require some downpayment and a shorter maximum amortization period on VA mortgage loans."

Fortune magazine has had a big spread, Is Housing Out of Hand? The sum and substance of what they say is: "A wholly unhealthy situation which calls for reappraisal and remedy."

The Kiplinger Newsletter, on April 16, 1955, had this to say:

"Government officials want to slow housing down, skim off the froth. They are convinced that the housing boom is moving a little too fast. They think they should act to take the edge off it in the near future, so that an excessive boom this year won't bring a sharp slide next year. We wrote you about this feeling some weeks ago—how it is crystallizing.

"How to go about it? Well, a number of things are now in mind: (1) Make the VA and FHA field offices tighten up on advance commitments to put a damper on speculation among builders of mass housing projects. (2) Ask Congress to give President power to set VA and FHA mortgage terms. (3) Get VA and FHA to boost the downpayments. ((1) and (2) are most likely.)"

Considerable publicity has been given recently to action by FHA to list certain cities throughout the country—Dallas, Tex.; Tucson, Ariz.; and others—as being overbuilt and as result curtail the issuance of commitments in those cities. There have been some reports that such action is contemplated by the Veterans' Administration.

These hearings were called in order that the VA may review the status of the loan-guaranty program and point out to the committee any aspect of the program's operation which it considers weak or undesirable and advise the committee of any plans which the Veterans' Administration may have to require downpayments, shorten the mortgage term, or limit the issuance of certificates of reasonable value in specific areas. If there is an unhealthy and undesirable situation in the veterans' housing program, the committee wishes to be advised of such circumstances. If such conditions do not exist, these rumors should be put at an end, since they have a detrimental effect upon the operation of the program as a whole.

Mr. Stone, we are glad to have you and your people with us. I am sure the committee's staff has told you generally what we would like to hear. With that, I will turn it over to you.

STATEMENTS OF RALPH H. STONE, DEPUTY ADMINISTRATOR, DEPARTMENT OF VETERANS' BENEFITS; THOMAS J. SWEENEY, ASSISTANT DEPUTY ADMINISTRAOR FOR LOAN GUARANTY; AND P. N. BROWNSTEIN, DIRECTOR, LOAN MANAGEMENT AND LIQUIDATION SERVICE, VETERANS' ADMINISTRATION, WASHINGTON, D. C.

Mr. STONE. I will make a few opening remarks. I have a prepared statement here I would like to present to the committee.

Of course, there have been a lot of stories, rumors, articles in the newspapers, about the possibility of overbuilding. We do not feel that there is overbuilding in the veterans' field at all.

The CHAIRMAN. Anywhere in the country, Mr. Stone?

Mr. STONE. Not right now, no, not in the veterans' field. Some of the FHA reports referred to overbuilding and there apparently is some overbuilding in rental units. Rental units overbuilt will probably reduce rents in rental units; a lot of our veterans then may be content to stay in the lower-priced rental units. There may not be the urgent desire to find a home. That is purely problematical.

As far as we are concerned, we have no idea of recommending regulating or anything of that sort of a downpayment or shorter term of mortgage. We feel that is entirely up to the lending people. Our job is to do what we can do to secure the homes for our our veterans. We are going to continue that policy insofar as the Veterans' Administration is concerned.

The only thing that we will present in the statement, is the reasons for the VA actions to date and the proposals we contemplate which we have thought of doing, purely, as good business. We do not feel that closing costs add to a mortgage or have any part in the value of a house. We feel they should be paid in cash at the time of the sale, or purchase of the house. That is the only thing we have in mind at all of doing.

Mr. Sweeney will give this report to you. I just want to reaffirm insofar as our policy is concerned, we have no thought of any further regulations, of curtailing or even endeavoring to curtail anything. Our great number of applications are curtailing it enough, in just making the backlog in existing work.

It is apparent from the statement by Mr. Stone that the Veterans' Administration had no intention of imposing a down-payment requirement or shortening the mortgage term.

Mr. Stone stated that these policies are entirely up to the lending people and that the Veterans' Administration's job is to secure homes for veterans. We now find the Veterans' Administration in an about-face position, imposing credit restrictions on veterans, yet no facts have been presented which indicate that previous policies had been unsound.

We know that the administration had made a big point of credit controls when it was seeking office—in fact, part of its campaign was the removal of all credit controls. Yet immediately on assuming office, the administration started clamoring for standby credit controls. An attempt was made by the President to gain authority to control housing credits in the Housing Act of 1954 and the amendment was defeated by the House of Representatives. Apparently, the administration has now decided that it will be unable to get control of housing credit in the name of the President and is seeking to impose controls through the Administrator of Veterans' Affairs and the Commissioner of the Federal Housing Administration. The administration's new credit control will undoubtedly make it much more difficult for many veterans to obtain a home and will seriously impair the veterans housing programs right at a time when World War II veterans must act if they do not wish to lose their guaranteed loan privileges. The administration's new credit control will undoubtedly result in a windfall to lenders through increased discounts on VA guaranteed mortgages, with the veteran ultimately paying the bill. In view of the fact that the administration has been specifically refused authority to impose such controls, there is considerable doubt in my mind whether real authority exists for the Administrator of Veterans' Affairs or the Commissioner of the Federal Housing Administration to exercise authority which was denied the President.

Changes in the veterans housing program should be based strictly on the needs of the veterans being served by the program and should not be motivated by the desires of mortgage bankers and lending groups, and the political ambitions of the administration.

Is This Economic Imperialism?

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial from Foster's Daily Democrat, Dover, N. H., Thursday, July 28, 1955:

IS THIS ECONOMIC IMPERIALISM?

American businesses engaged in foreign operations are a pet hate of the Communists and their dupes. They are commonly denounced as economic imperialists, bent on ruthlessly exploiting the peoples and resources of the world.

American oil companies which conduct operations abroad are a standard target. That's quite logical—for oil is one of the most important weapons in hot wars and cold. The Iron Curtain nations would like nothing better than to see the free world short of oil. It would be a prelude to ruinous economic and military decay.

Actually, the record of American oilmen overseas is an inspiring one. A first-class example is found in the Saudi Arabian development, conducted by the Arabian American Oil Co. Enormous problems had to be faced and conquered—at tremendous cost and effort. Success has been spectacular. Last year production was almost 348 million barrels—an all-time record. Some 141 wells were yielding crude oil as 1954 ended. During the year the company spent the equivalent of $50 million for supplies, ocean and air freight charges, and related expenses, using nondollar currencies wherever possible.

Equally spectacular has been the social and economic impact on a country which had changed but little over the centuries until the oil men came. The company has undertaken great projects aimed at raising health standards. It has introduced modern farming methods and stimulated and encouraged local crafts and enterprises. Almost 65 percent of its working force of 21,858 people is made up of Arab nationals. They receive excellent wages, along with food, housing, clothing, and recreational benefits.

In short, American enterprise has brought wealth and civilization to Saudi Arabia—even as it has developed vast oil resources the free world urgently needs.

Excerpts From Memorial Day Address by Judge James L. McCrystal

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Monday, August 1, 1955

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from the Memorial Day address by Judge James L. McCrystal, a very able lawyer and very able judge of the Common Pleas Court of Erie County, Ohio. The excerpts from his address were published in the Sandusky Register-Star-News on June 1, 1955.

There being no objection, the excerpts from the address were ordered to be printed in RECORD, as follows:

HIGHLIGHTS OF MEMORIAL DAY ADDRESS BY JUDGE MCCRYSTAL

At Memorial Day services at Oakland Cemetery, when Judge James L. McCrystal of Erie County Common Pleas Court, delivered the main address, he spoke of the evil forces of communism and of what America must do to combat it.

He said, in part:

"On this Memorial Day when the world is besieged by the diabolical forces of communism and the free peoples of the world are being slowly enslaved, it becomes increasingly apparent that this Nation and its people are the last hope to save the world and civilization. It we cannot turn back these forces of evil the world is doomed to slavery and barbaric destruction.

"As we honor our departed comrades today let us ask ourselves some questions. What was the spirit that motivated many of our comrades to give up their lives on the battlefield? What was it they were fighting to preserve and protect? What is that faith that carried this Nation from its humble beginnings to the leadership of the world?

"Another question often asked is: What has made us the greatest Nation civilization has ever seen? Is the answer in our great industrial power, great educational systems, the vast amount of individual and collective wealth and luxury that we possess? To some short-sighted individuals these are the causes of our greatness and the means with which we can best resist the forces of communism.

"These great accomplishments of this Nation of which we are justly proud, are not the causes of our greatness but only the effect and the result of the real cause.

"History records that the men who fought with George Washington, William Henry Harrison, Oliver Perry and Andrew Jackson did not posses much of this world's goods and luxuries or have the benefit of much formal education. During this early period of our history this Nation had no material, financial or educational advantages that even remotely compared with those of England and Continental Europe.

"Indeed it was not until a century or more later that we reached the top in these fields. Yet during that same period of history over 40 million people migrated from England and Europe to the United States. This migration might still be going on at an even faster pace had we not stopped it some 30 years ago by immigration laws. This migration was the greatest and largest in the history of the world.

"Why did these people leave the land of their birth where the material advantages far outweighed those of this barren wilderness? Why did so many of our ancestors give up good positions in the Old World to come here as common laborers? What is this great force that causes men to give up their homes and their lives? The answer to all these questions is a unique combination of religious and political benefits known as Americanism.

"This great faith is distinctly American. It never existed before and now exists only in this country. It was born in Independence Hall in 1776. The Declaration of Independence is the Bible of Americanism and the rock upon which this Nation was built and the foundation upon which rests the last hope for world peace.

"In substance this Nation is committed to a belief in God, that men are created equal in the eyes of God and the law; that men possess all the rights of this world and that governments in and of themselves have no rights or powers and only possess such rights and powers as are expressly delegated to them by the people.

"Unfortunately this political philosophy does not exist in any other nation of the world and is not recognized by the United Nations.

"Our great Nation subscribes to the principle that man is created in the image and likeness of God and can best work out his own destiny on this earth when he is free from the fear of arbitrary governmental power.

"It is the essence of Americanism that man is the master of his government and not its slave. We believe that spiritual and material freedom is the only possessions worth living for and that all the wealth of the world can never be a substitute for these ideals.

"We must therefore never lose sight of our most priceless possession, the spirit of Americanism. It would gain us little to defeat communism abroad if we lost our freedom at home. Let us never make the mistake of trading our freedom for material or financial gains or any other delusion of welfare or security or ever let the Government do for us that which we can best do for ourselves. This Nation reached its greatest heights when its people were jealous of Government and suspicious of arbitrary power.

"On this solemn occasion let us ask divine guidance and promise ourselves and our posterity that we will rekindle that flame of Americanism which led this Nation through much darker days than we face now, for if that flame of Americanism ever dies, the world we know will die with it."

Schedule of Conferences With Constituents

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. McCULLOCH. Mr. Speaker, I believe that a Congressman should be in his district to confer and visit with his constituents whenever possible.

When the Congress adjourns next week, I expect to return home and to be available for conferences and visits with residents of the Fourth District in the courthouse of each county seat between 9 a. m. and 4 p. m., in accordance with the following schedule:

Lima, Allen County: Monday and Tuesday, August 15 and 16.

Wapakoneta, Auglaize County: Wednesday, August 17.

Greenville, Darke County: Thursday, August 18.

Eaton, Preble County: Friday, August 19.

Sidney, Shelby County: Monday, August 22.

Celina, Mercer County: Tuesday, August 23.

Troy, Miami County: Wednesday, August 24.

No appointments will be necessary. Any problem with, or opinion concerning, the Federal Government will be proper subject for conference.

Of course, I will be glad to see residents of the district in my Piqua office any time that the Congress is not in session, except on the days scheduled above.

TVA Power Financing

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, August 1, 1955

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I made before the Senate Public Works Subcommittee on the TVA power financing bill, on July 27, 1955.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR LISTER HILL BEFORE SENATE PUBLIC WORKS SUBCOMMITTEE ON TVA POWER FINANCING BILL, JULY 27, 1955

It is with a deep sense of responsibility to the record of the past and a keen awareness of the challenge of the future that I appear before this committee. You are considering important legislation affecting TVA. This is, I believe, the first time in 15 years that TVA has requested an amendment of its statute to adapt that basic charter to changing times and circumstances. The managers of this public-power system have come to this committee, composed of the elected representatives of the people who are the owners of the system, and have recommended that TVA be authorized to issue bonds to finance additional power-producing facilities. They are asking the committee and the Congress to sanction the use of higher-cost capital, at the same time stating their belief that the objectives of the act can continue to be promoted even though future capital additions are financed from bond proceeds, and not solely from earnings and appropriations by the Congress.

Now I have great confidence in the staff which developed the plan approved by the board of TVA, and which is, with minor changes, embodied in the bill introduced by the Senator from Oklahoma, Mr. KERR. I feel a deep sense of gratitude to the management of TVA, for they have translated into an unrivaled record of achievement the hopes and the faith written into the TVA statute when it was adopted in 1933. I was one of the authors of the act creating TVA. Today, I am the only Member of the Congress who served on the conference committee appointed to adjust the differences between the House and Senate when the TVA Act was adopted. I am the only one

who has had the satisfaction of participating year by year in the consideration of legislation affecting TVA, first as a member of the Committee on Military Affairs of the House of Representatives, later from my seat on the Appropriations Committee of the Senate. Although my voice alone can be heard today, I know I speak for those who were my colleagues on the committees of the conference—for the great and lonely Senator from Nebraska, George Norris, who had the vision of this vast development first and who labored unceasingly for its realization. I know I speak for the late distinguished Senator from Oregon, Charles L. McNary, who gave his unwavering support to TVA, for the late Senator Kendrick, of Wyoming—for all of them—when I say that the reality of TVA's accomplishments has outstripped our dreams. Every member of this committee knows how often the result is otherwise.

If the committee will tolerate a little reminiscence, I should like to remind you that TVA is peculiarly a child of Congress. The TVA statute was not one of the many measures recommended by the Executive and adopted in early 1933 to meet the desperate emergencies of the depression. Twice in the preceding decade legislation foreshadowing the act of 1933 had been adopted by the Congress after extended hearings and debate. Twice such legislation had failed to receive the approval of the President. It was in Congress, not in the executive departments or the Office of the President, that the ideas embodied in TVA were developed. It was in the committees and on the floor of Congress that the act was written section by section, and I must confess when I reread it, I recognize the scars which bear testimony to the long and patient construction. It is not a slick job of professional drafting. It is prolix and repetitious. Its provisions were modified, strengthened and agreed to after weeks and months of public debate. The TVA idea was not conceived in secret meetings between persons who might be benefited.

TVA was not born out of selfish or sectional interest nor was it the conception of a single political party. The leaders in the fight to conserve the war properties at Muscle Shoals for the people and to make them the nucleus of a great development were not at first representatives of the area concerned. Nor were they members of the political party dominant in the area. We of the South joined statesmen from the Great Plains and the mountainous West, and the bipartisan support which had been cemented through more than 10 years' struggle in the Congress stood firmly together in 1933 as we endeavored to create a nonpartisan, nonpolitical, independent agency to undertake the development of the resources of the Tennessee Valley region for all the people's benefit. We were deeply concerned that politics should be kept out of TVA. Congress laid down the basic policies in the act with bipartisan accord. We wanted to make certain that those policies could be changed only by Congress and after public debate. So we made TVA an independent agency, corporate in form. We gave its board staggered terms of 9 years each and required of them a special oath of belief in TVA. We added a section then unique in Federal legislation, requiring that "no political test or qualification shall be permitted or given consideration, but all appointments and promotions shall be given and made on the basis of merit and efficiency" (sec. 6).

In many respects the agency created was unique. To the best of my knowledge, TVA is still the only Federal agency directed by its statute to see the job of resource development as a whole, to consider the interrelation of land and water, of forests and mines, to unify and give leadership to a regional effort. There was nothing particularly new about most of the responsibilities assigned to TVA, particularly those related to water control. Other rivers had been made navigable through the expenditure of public funds. Flood control was not a novelty. Electricity was being produced at dams owned by the Federal Government, and distributed by preference customers to individual consumers. Federal programs of various sorts for the conservation of natural resources were being undertaken throughout the country in 1933. The tasks were not new, but the kind of agency we created to carry out the policies adopted was different.

We departed from the conventional Federal pattern of administration in many ways. Most importantly, we meant the TVA to be a bulwark against the steady push of centralization. Even then we realized, and increasingly we know today, too many decisions are made in Washington; too many papers are required; too much is decided by remote control. The men who decide are too far from the problems. In the TVA Act we specified that the headquarters of the Board should be located in the region, away from Washington, close to the work to be undertaken. We tried our best to make the Board's authority equal to its responsibility, to place the power of decision in its hands. We did not visualize its members as errand boys subservient to centralized control in Washington. We wanted to be able to hold the Board accountable for results. So we put TVA employees outside the regular classified civil service. We placed responsibility upon the Board directly for the selection, the training, the promotion, and the compensation of its employees, for the purchase and the sale of land and equipment. We permitted the agency to sue and be sued in the courts.

We were firm about policy in the act, clear, I believe, although at times perhaps verbose, about objectives, but we were silent on details. We did not try to foresee every situation which might develop and to prescribe the course of action to be pursued. So far as power production was concerned, we made clear that power was to be regarded as a tool—just as the fertilizer the Board was directed to produce at Muscle Shoals would be a tool, just as the navigation channel would be a tool—a tool to develop the economy of the area, to raise the standard of living of the people, to expand the economic opportunities of the men and women living in the region. TVA was intended to be a demonstration for the Nation of what can happen when power is so regarded, when rates are established at levels designed to promote abundant use and general economic growth and not to provide a maximum of earnings for the power systems' owners. TVA was intended to show what can be accomplished when there is a conscious effort to keep costs down—capital costs, operating costs, all the way from the generator to the consumer.

I have been disturbed a little recently because it seems to me that these basic objectives of the TVA power program might be forgotten in preoccupation with the financial success of its operations. I am proud, of course, when it is reported that TVA has earned an average of 4 percent on the power investment over more than 20 years, for I learned long ago that generation and transmission is the least lucrative end of the power business, and that is the part owned and operated by TVA. The distribution is by the municipalities and the REA cooperatives. I am immensely gratified to know that by the end of the current fiscal year TVA will have paid into the Treasury more than $200 million out of power earnings. But I am distressed when I read testimony or hear statements which indicate that because TVA, like privately owned power systems, shows a good record of net earnings accruing to its owner, it has assumed some kind of obligation to emulate the practices of private power companies in all respects. With all the earnestness I can command, let me suggest that TVA has a higher end to serve. The devoted efforts of the many men who labored for so many years would be dishonored if TVA came to be judged by the extent to which its financial structure, and its operating costs, resemble those of privately owned utility companies. That is not the objective of TVA. The reverse should be true.

When we worked to create the statute section by section, so far as power was concerned we hoped we were building something that would stand as a beacon, a goal for the private power companies to approach. TVA was created for a public purpose. It must be judged by the degree to which that purpose is upheld. We told TVA to make electricity available to the greatest number of consumers at the lowest possible cost, and to have particular concern for the domestic and farm consumer. You know that we have seen the percentage of electrified farms rise from 3 to 93, and the use of electricity on the farm increased from under 10 million kilowatt-hours to 1.5 billion kilowatt-hours a year. We have been the total number of consumers in the area now served by TVA rise from 275,000 to 1,350,000 and the average use of domestic consumers increase from 600 kilowatt-hours to about 5,000 kilowatt-hours a year. We have seen this area become the best appliance market in the country, and we know what that means in terms of living standards. This committee has heard the record from those representatives of TVA best qualified to tell it. Those are the figures that record the degree to which objectives have been realized. Those are the objectives which must be safeguarded as TVA moves to revenue bond financing. This Nation needs the TVA power system. Power consumers all over the country need it to lead the way, to pioneer in new ways to make electricity serve the people. To show what happens when the owners of a system direct that its operation shall be wholly in the public interest. That is the idea of the yardstick.

We talked about the yardstick endlessly when the creation of TVA was under consideration. I am startled now when I hear it interpreted by private-power spokesmen from the platform, over the air, and on my television screen. If I have not exhausted the committee's patience, let me explain just how we intended the operations of TVA to benefit consumers all over the country. Let me describe the problem we were facing. In the Nation as a whole there was too little electricity and consumers were paying too much. That was generally agreed. But no one knew what people should be paying, what a fair rate should be, a rate which would cover all the costs of operation which a prudent owner would incur and provide a fair return on the investment. Then, as now, the power business was by nature a monopoly free from the disciplines of competitive business. It had to be regulated in the public interest.

But the regulatory commissions were handicapped. They were limited in jurisdiction, and frequently concerned solely with restrictions on the rate of return earned by the companies after operating costs had been met. Nobody had the data to judge whether operating costs were accurately reported or prudently incurred. There was a special mystery about the costs of power distribution as distinguished from generation and transmission.

The truth is that nobody, including the private utilities, appeared to know how their rates were established and what their costs really were. They just knew they were making money. We did not know what TVA's costs would be, nor at what level rates should be set. We simply had faith that the prin-

ciple of low rates and high use would work. We prescribed protection against some of the abuses common in private operation, discrimination between customers, for example, and we made sure our objectives were clear. But we did not attempt to fix the rates in the act and we did not know what the financial results of the policies would be. We took a chance. And TVA has proved us right. The rates established in the contracts between TVA and its distributors have covered all the costs of operation, including depreciation. They have earned a rate of return, in addition, 4 percent to TVA, an average of 8 percent to the distributors. TVA has proved that a power system can be operated as a public service and stay in the black.

Now I do not remember a single suggestion that we expected TVA in some mysterious fashion to set ideal rates which should be therefore established throughout the country. That is the notion you would get from the utility propagandists. We recognized that the cost of producing electricity varies. In the Northwest, for example, it can be produced more cheaply than in the Tennessee Valley. We had one firm conviction—that electricity should be made available to the people everywhere in this country at the lowest possible cost for each power system. And we felt TVA could help. We determined that every cost incurred by TVA and its distributors should be reported. We hoped that the Congress, the State regulatory commissions, private power companies themselves, and the public generally, would learn to compare the cost items in the several categories, to discover the reason for variables, to the end that electricity rates should be established on the basis of fact about costs, not in response to pressure or propaganda. In 1935 we amended the TVA Act to spell out exactly what we had in mind.

Let me read from the third paragraph of section 14 of the act:

"For the purpose of accumulating data useful to the Congress in the formulation of legislative policy in matters relating to the generation, transmission, and distribution of electric energy * * * and to the Federal Power Commission and other Federal and State agencies, and to the public, the Board shall keep complete accounts of its costs of generation, transmission, and distribution of electric energy and shall keep a complete account of the total cost of generating and transmission facilities constructed or otherwise acquired by the Corporation * * * and a description of the major components of such costs according to such uniform system of accounting for public utilities as the Federal Power Commission has, and if it have none, then it is hereby empowered and directed to prescribe such uniform system of accounting, together with records of such other physical data and operating statistics of the Authority as may be helpful in determining the actual cost and value of services, and the practices, methods, facilities, equipment, appliances, and standards and sizes, types, location, and geographical and economic integration of plants and systems best suited to promote the public interest, efficiency, and the wider and more economical use of electric energy. Such data shall be reported to the Congress by the Board from time to time with appropriate analyses and recommendations, and so far as practicable, shall be made available to the Federal Power Commission and other Federal and State agencies which may be concerned with the administration of legislation relating to the generation, transmission, or distribution of electric energy."

Perhaps we were naive. I do not know whether the reports so elaborately prepared and presented annually by TVA and its distributors are used as we intended. I do know that electricity rates have come down and use has increased, while power system earnings have risen. When I see a chart showing in concentric circles the extent to which rates have been reduced in the area surrounding TVA, when I check upon the financial reports of the companies serving those areas, I see the yardstick at work, if not in the studious and technical way we expected it would be, surely in a highly effective manner. When I remember that the electrification of rural America through REA had its beginning in TVA's first organization of farm electric cooperatives, I see the yardstick at work. When I contemplate the vast quantities of power provided by private companies for vital installations of defense and at less than their normal charge for industrial loads, I know the yardstick has been used, however grudgingly.

From this long background I testify today. I hope this committee will resist the temptation to limit the flexibility the agency will require to offset, at least in part, some of the costs of private financing by the more precise timing of system additions which freedom from the appropriation process should make possible. I do not believe that every issue of bonds should require the same slow process of justification and approval, that an appropriation request requires. These are revenue bonds. They will rely for their security upon a continuation of efficient management. I am deeply opposed to the suggestion that the power of decision should rest in the Secretary of the Treasury, not in the Board of TVA. The Secretary of the Treasury is not responsible for the TVA power system. He has not sworn to promote the principles of the TVA Act. This goes to the heart of TVA. I hope the committee will reject the suggestion. I am against the adoption of a policy under which the Federal Government as owner would demand excessive withdrawals of cash. I am for the Kerr bill. I believe that its adoption would be in harmony with the public purposes of the TVA, and I believe it embodies better business principles than do the revisions proposed by the Bureau of the Budget. It gives to management authority sufficient to discharge its responsibilities.

If this committee approves and Congress adopts the Kerr bill we can continue to hold the Board of TVA accountable for results. If we accept the Budget revisions we will have our choice of culprits if this power system fails to lead the way in responsible management in the future. We can blame the Bureau of the Budget, the Appropriations Committees of House or Senate, or the the Treasury. We will dilute the very quality which has brought TVA world-wide esteem. We will be giving this public power system something less than the best. We will be inviting delay and confusion. We will be going backward, not ahead. We must advance. We are not through pioneering.

Just 2 years ago I made an extended visit to TVA. I visited laboratories and workshops, multipurpose dams and giant steam plants. I talked to workmen handling great earth-moving equipment, to engineers and draftsmen. I met with mayors and businessmen, with editors and farmers. I wanted to see for myself to illuminate the mass of documents I read about TVA every year. I visited projects in Mississippi, in Kentucky, Virginia, North Carolina, Tennessee, and Alabama.

My heart was stirred every time we visited the majestic structures which hold the waters back until the river's flow can be usefully employed for man. At each one I stopped to read the simple plaque of dedication. The names of the members of the Board are not honored there. No engineer, or architect, is listed for credit. Each one has the same inscription—just one line which says: "Built for the people of the United States."

This is the people's power system, designed and built and operated for their benefit. TVA has earned our confidence and trust. TVA must be preserved.

Remanufacture of Imported Watches To Increase Their Jewel Count

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Monday, August 1, 1955

Mr. BEALL. Mr. President, in view of recent discussions concerning the proposed bill H. R. 7466, which would prohibit the remanufacture of imported watches to increase their jewel count, the following is an excellent analysis made by the Tariff Commission under date of July 28, 1955. This report points out a number of weaknesses in the bill and stresses that it would establish a new precedent in customs procedures as well as "a departure from the general principle of encouraging processing of imported articles in the United States." The study further warns that "in practical effect, such increases in rates of duty would be the equivalent of internal taxes," that "the administration of the measure would involve added burdens not only on customs officers but also on importers" and that even "the title of the bill is incorrect."

I ask unanimous consent to have this analysis made a part of the Appendix of today's RECORD.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

UNITED STATES TARIFF COMMISSION,
Washington, July 28, 1955.

MEMORANDUM FOR THE HOUSE COMMITTEE ON WAYS AND MEANS ON H. R. 7466 AND H. R. 7467, IDENTICAL BILLS TO AMEND PARAGRAPH 367 OF THE TARIFF ACT OF 1930 WHICH DEFINES SUBSTITUTES FOR JEWELS IN IMPORTED WATCH MOVEMENTS

INTRODUCTION

The proposed legislation, if enacted, would amend paragraph 367 (i) of the Tariff Act of 1930 to read as follows (new language italicized):

"(i) For the purposes of this paragraph and paragraph 368 the term 'jewel' includes substitutes for jewels. *For the purposes of the preceding sentence, the term 'substitutes for jewels' includes, without limitation, each place in any movement, mechanism, device, instrument, assembly, or subassembly where a jewel (as defined in the preceding sentence) is placed or inserted and serves a mechanical purpose as a frictional bearing, whether such jewel is so placed or inserted in a foreign trade zone (notwithstanding the provisions of the act of June 18, 1934, as amended (19 U.S.C., secs. 81a–81u)), or in a bonded warehouse or otherwise in customs custody, or (except for the purposes of subparagraph (b) of this paragraph and paragraph 368 (b)) elsewhere within the United States within 3 years after the date of release from customs custody. The Secretary of the Treasury is authorized to make regulations to enforce or otherwise carry out the provisions of this subparagraph, which regulations may include provision for any bond,*

and for any declaration or other form of proof, he deems necessary."

The amendment would "enter into force as soon as practicable, on a date to be specified by the President in a notice to the Secretary of the Treasury following such negotiations as may be necessary to effect a modification or termination of any international obligations of the United States with which the amendment might conflict, but in any event not later than 180 days after the date of the enactment of this act."

The proposed legislation is designed as a deterrent to "upjeweling" imported watch movements in the United States, which practice domestic producers of jeweled watch movements claim to be prejudicial to the sale of their watches having more than 17 jewels. This practice involves the importation of jeweled movements and converting them in the United States into movements with a larger number of jewels. A number of years ago, a practice developed of upjeweling in the United States imported movements with 1 jewel to movements with 7 jewels, but subsequent trade-agreement reductions in rates of duty and rising costs of such upjeweling brought the practice to an end. In recent years, upjeweling has been confined principally to converting important movements with 17 jewels to movements with as many as 25.

The earlier practices of upjeweling involved rather substantial processing in the United States. The imported movement had to be disassembled, the plates and bridges jeweled, markings changed, the parts reassembled into a movement, and the movement timed. In recent years upjeweling has been facilitated by technological developments in the watchmaking field, such as the Duo-Fix and similar devices. The utilization of such devices not only has facilitated upjeweling but also has improved the quality of the finished product.

RELATIONSHIP OF UPJEWELING TO TARIFF TREATMENT OF IMPORTED WATCH MOVEMENTS

The only important incentive to upjeweling at present is the wide disparity in tariff rates applicable to movements with 17 or fewer jewels and those with more than 17 jewels. The attached table 1 sets forth the rates of duty prescribed in paragraph 367 of the Tariff Act of 1930, as modified, on watch movements, assemblies, and subassemblies, and parts. The rates on all movements having 17 or fewer jewels (or none at all) vary according to the size of the movement, jewel count, the number of adjustments, whether the movement is designed to operate for a period in excess of 47 hours without rewinding, or is self-winding, or could accommodate a self-winding device. The highest rate possible on a 17-jewel movement totals $9.10, computed as follows:

On a movement not over 0.6 inch in width, inclusive of 7 jewels	$2.50
For the 10 additional jewels	1.35
For 9 adjustments [1]	4.50
For self-winding feature	.75
	9.10

[1] Includes 1 adjustment for isochronism, 2 for temperature, and 6 for position. Although 6 position adjustments are possible, even very high-quality watches ordinarily have no more than 5 adjustments.

Most watches that enter the country are marked unadjusted and are being admitted without the assessment of adjustment duties. All movements having more than 17 jewels are dutiable at $10.75 each, regardless of size, adjustments, etc. As long as the duty on a movement with more than 17 jewels appreciably exceeds that on a movement with 17 jewels, plus the cost of converting such movement into 1 with 18 or more jewels, the incentive to upjewel will exist.

The Bureau of Customs of the Treasury Department issued a ruling (T. D. 53753) on March 16, 1955, that watch movements specially engineered, constructed, designed, or prepared to facilitate upjeweling after importation by omission of jewels and substitution therefor of metal caps, bearings, bushings, or bouchons contain "substitutes for jewels" within the meaning of paragraph 367 (i) in each position customarily occupied by a genuine or synthetic jewel, but in which a metal cap, bearing, bushing, or bouchon has been placed at the time the movements were prepared for exportation to the United States. The ruling, which became effective in June, may deter certain upjeweling practices encountered in recent years. However, it is no deterrent whatsoever with respect to other practices involving movements which, at the time of importation, have no "substitute" jewels in the places in the movements where the real or synthetic jewels are ultimately installed after importation into the United States.

ANALYSIS OF PROPOSED LEGISLATION

The bills under consideration propose to meet the problem of upjeweling by defining the term "substitutes for jewels" in paragraph 367 (i) to include "each place" in a movement where a jewel or substitute for a jewel "is placed or inserted and serves a mechanical purpose as a frictional bearing, whether such jewel is so placed or inserted in a foreign trade zone * * *, or in a bonded warehouse or otherwise in customs custody, or * * * elsewhere within the United States within 3 years after the date of release from customs custody." Approaching the problem in terms of a solution based upon a completely arbitrary definition of the term "substitutes for jewels" is both indirect and confusing. A substitute for a jewel is a "thing," not a "place." The present definition of "jewel" in paragraph 367 (i) as including "substitutes for jewels," when coupled with the proposed definition of "substitutes for jewels" as including "each place" in a movement where a "jewel" is inserted or placed, literally could mean that a "jewel" is a "place" where a "place" is inserted or placed. This absurdity could be overcome and the substance in the first two sentences of the proposed paragraph 367 (i) could be more clearly and accurately stated if the following language was substituted:

"(i) For the purposes of this paragraph and paragraph 368, (1) the term 'jewel' includes substitutes for jewels, and (2) any duties assessable shall be computed on the basis of the total number of jewels, so defined, as are incorporated into any movement, mechanism, device, instrument, assembly, or subassembly at any time prior to, or within 3 years after, the date of release from customs custody of such movement, mechanism, device, instrument, assembly, or subassembly."

However, even if the language of the bills was clarified as above indicated, there would still be involved a departure from the general principle that imported articles are classified for tariff purposes according to their character and condition at the time of importation. To the extent that the proposed legislation would increase duty rates by reason of upjeweling in the United States, the duty would not be one which is imposed upon, or by reason of, the importation of the movements, but rather one which is imposed upon domestic processing of the imported movements. This, again, represents a departure from the general principle of encouraging processing of imported articles in the United States. In practical effect, such increases in rates of duty would be the equivalent of internal taxes.

The Commission is not unmindful of the various provisions in the tariff laws which make the actual use of imported articles in the United States determinative of their tariff status. As far as the Commission is aware, however, all such provisions which have been enacted in the past grant preferred tariff treatment to certain classes of goods used (or processed) in certain ways in the United States and are clearly distinguishable from a provision such as is proposed in the bills under consideration which would affirmatively impose increased rates of duty on imported articles by reason of processing applied in this country after their release from customs custody.

To the extent that the proposed legislation would provide for increased rates of duty on watch movements by reason of their being upjeweled in the United States, such legislation, if enacted, would be inconsistent with obligations of the United States under the Swiss trade agreement, unless the President took the action which is provided for in section 2 of the bills.

Since almost any of the watch movements being imported with not over 17 jewels could be upjeweled in the United States after release from customs custody to movements with over 17 jewels, the administration of the measure would involve added burdens not only on customs officers but also on importers, including those who had no intention of participating in, or being a party to, upjeweling transactions.

Effectively plugging up tariff loopholes is often difficult. Legislation may overcome tariff avoidance practices previously encountered, but may not sufficiently anticipate potential new practices which importers may devise. The Commission wonders, for example, whether defining a substitute for a jewel as a "place" in a movement where a jewel is "placed or inserted" is adequate to provide for a domestic processing involving the complete substitution in the United States of a bridge with, say, two or more jewels for a jewelless bridge in the imported movement. In such a situation, the question would be whether jewels per se are placed or inserted in the movement. It also seems possible that importers might find in the provisions of paragraph 1615 (g), Tariff Act of 1930, as amended, a feasible method of avoiding the full impact of the $10.75 duty on watch movements having more than 17 jewels. Paragraph 1615 (g), as amended, provides for partial exemption from duty in the case of (1) any article returned to the United States after having been exported for repairs or alterations, and (2) any article of metal (except precious metal) manufactured in the United States or subjected to a process of manufacture in the United States, exported for further processing, and thereafter returned to the United States for further processing. Articles within the purview of paragraph 1615 (g) are dutiable only on the value of the processing done abroad.

The title of the bills is incorrect. It indicates that paragraph 367 of the Tariff Act of 1930 defines substitutes for jewels in imported watch movements. Paragraph 367 contains no such definition at the present time.

TABLE 1.—*Rates of duty on watch movements, assemblies and subassemblies, and parts*

Paragraph No	Description	Full rate [1]	Reduced rate [2]
367 (a)	Watch movements, and time-indicating, time-keeping, or time-measuring devices, instruments, and mechanisms, whether or not designed to be carried or worn on or about the person; all the foregoing, if under 1.77 inches wide, whether or not in cases, containers, or housings:		
(2)	Having no jewels or only 1 jewel and in width—		
	Not over 0.6 inch	$1.50 each	$1.35 each.
	Over 0.6 but not over 0.8 inch	$1.35 each	$1.12½ each.
	Over 0.8 but not over 0.9 inch	$1.20 each	$1.12½ each.
	Over 0.9 but not over 1 inch	$1.05 each	$1.05 each.
	Over 1 but not over 1.2 inches	93 cents each	93 cents each.
	Over 1.2 but not over 1.5 inches	84 cents each	84 cents each.
	Over 1.5 inches	75 cents each	
(1)	Having over 1 but not over 17 jewels and in width—		
	Not over 0.6 inch	$2.50 each	$2.50 each.
	Over 0.6 but not over 0.8 inch	$2.25 each	$2.02½ each.
	Over 0.8 but not over 0.9 inch	$2 each	$2 each.
	Over 0.9 but not over 1 inch	$1.75 each	$1.75 each.
	Over 1 but not over 1.2 inches	$1.55 each	$1.35 each.
	Over 1.2 but not over 1.5 inches	$1.40 each	$1.35 each.
	Over 1.5 inches	$1.25 each	$1.25 each.
(3)	Any of the foregoing having over 7 jewels shall be subject to an additional duty of.	15 cents for each jewel over 7	13½ cents for each jewel over 7.
(4)	Any of the foregoing shall be subject for each adjustment of whatever kind (treating adjustment to temperature as two adjustments), in accordance with the marking as hereinafter provided for, to an additional duty of.	$1 for each adjustment	50 cents for each adjustment.
(5)	Any of the foregoing constructed or designed to operate for over 47 hours without rewinding, or if self-winding, or if a self-winding device may be incorporated therein, shall be subject to an additional duty of.	$1 each	75 cents each.
	Any of the foregoing having under 7 jewels and having a bushing or its equivalent (other than a substitute for a jewel) in any position customarily occupied by a jewel shall be subject to.	The full rates specified above in respect of such article.	
(6)	Having over 17 jewels	$10.75 each	
(b)	All the foregoing shall have cut, die sunk, or engraved, conspicuously and indelibly on 1 or more of the bridges or top plates: The name of the country of manufacture; the name of the manufacturer or purchaser; in Arabic numerals and in words the number of jewels, if any, serving a mechanical purpose as frictional bearings; and, in Arabic numerals and in words, the number and classes of adjustments, or, if unadjusted, the word "unadjusted."		
(c) (1)	Parts for any of the foregoing (except bottom or pillar plates or their equivalent, bridges or their equivalent, and jewels) imported in the same shipment with complete movements, devices, instruments, or mechanisms provided for in subpar. (a) of this paragraph (whether or not suitable for use in such articles), but not including all the parts in such shipment which exceed in value 4 percent of the value of such complete articles).	45 percent ad valorem	
(2)	Bottom or pillar plates, or their equivalent	½ the duty for the complete article for which suitable.	½ the current duty for the complete article.
(3)	Assemblies and subassemblies (unless dutiable under (c) (1) above) consisting of 2 or more parts or pieces of metal or other material fastened or joined together:		
	Balance assemblies	50 cents per assembly	35 cents per assembly.
	For the purposes of this subdivision a balance assembly shall be an assembly consisting of a balance staff, balance wheel, and hairspring, with or without other parts commercially known as parts of a balance assembly.		
	Other:		
	For any jewels therein	15 cents per jewel	9 cents per jewel.
	For any bottom or pillar plates or their equivalent therein	The rate specified in (c) (2) above	The current rate in (c) (2) above.
	For other parts or pieces of metal or other material fastened or joined together therein (bimetallic balance wheels which are not parts of balance assemblies, and mainsprings with riveted ends, each to be considered as 1 part or piece).	3 cents for each part or piece	2 cents for each part or piece.
	The duty on any assembly or subassembly shall be	Not more than the duty for the complete article for which suitable, and not less than 45 percent ad valorem.	Same rule applied to current rates.
(4)	Other parts (except jewels)	65 percent ad valorem	55 percent ad valorem.
(d)	Jewels suitable for use in any article dutiable under this paragraph or par. 368, or in any compass or meter.	10 percent ad valorem	
(e)	Dials under 1.77 inches wide, for any article provided for in subpar. (a) of this paragraph, and imported separately.	cents each and 45 percent ad valorem	2½ cents each and 45 percent ad valorem.
	Dials for any articles provided for in subpar. (a) of this paragraph, whether or not attached thereto, shall have cut, die sunk, engraved, or stamped, conspicuously and indelibly thereon the name of the country of manufacture; which marking, if the dial is imported attached to any of the aforesaid articles, shall be placed on the face of the dial in such manner as not to be obscured by any part of the case, container, or housing.		
(f)	Cases, containers, or housings designed or suitable for containing any article provided for in subpar. (a) of this paragraph, whether or not containing such articles, and whether complete or incomplete, finished or unfinished (except containers used for shipping purposes only):		
(1)	Made of gold or platinum	75 cents each and 45 percent ad valorem	75 cents each and 30 percent ad valorem.
(2)	In part of gold, platinum, or silver, or wholly of silver	40 cents each and 45 percent ad valorem	40 cents each and 30 percent ad valorem.
(3)	Set with precious, semiprecious, or imitation precious or semiprecious stones, or prepared for the setting of such stones.	do	Do.
(4)	Of base metal and not containing gold, platinum, or silver	20 cents each and 45 percent ad valorem	10 cents each and 25 percent ad valorem.
(5)	Any of the foregoing cases, containers, or housings, if enameled, shall be subject to an additional duty of.	15 percent ad valorem	
(g)	The foregoing cases, containers, and housings shall have cut, die sunk, or engraved, conspicuously and indelibly on the inside of the back cover, the name in full of the manufacturer or purchaser and the name of the country of manufacture.		
(h)	For the purposes of this paragraph the width of any movement, device, instrument, or mechanism shall be the shortest surface dimension through the center of the bottom or pillar plate, or its equivalent, not including in the measurement any portion not essential to the functioning of the movement or other article.		
(i)	For the purposes of this paragraph and par. 368 the term "jewel" includes substitutes for jewels.		
(j)	An article required by this paragraph to be marked shall be denied entry unless marked in exact conformity with the requirements of this paragraph.		

[1] Rate provided for in Tariff Act of 1930.

[2] Rate currently in effect under Swiss trade agreement. This column includes increased rates proclaimed by the President in July 1954 on most of the movements in par. 367 (a), as a result of "escape clause" proceedings under sec. 7 of the Trade Agreements Extension Act of 1951, as amended.

The Boxcar Shortage

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, August 1, 1955

Mr. MURRAY. Mr. President, a subcommittee of the Interstate and Foreign Commerce Committee, under the chairmanship of the able senior Senator from Washington [Mr. MAGNUSON], last week conducted hearings on the freight car shortage, which this year will be the worst in several years. Yesterday the New York Times carried a detailed story on the shortage. The gist of the Times' findings are indicated by the subheads, which say: "Grain Movement, Industrial Boom Catch Railways With Their Rolling Stock Down. Shortage Is Growing. Peak Is Expected By October—Belated Race Is On To Rebuild Carrier Fleets."

Mr. President, I ask unanimous consent that the New York Times story, entitled "Missing Boxcars: "Who's To Blame?" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MISSING BOXCARS: WHO'S TO BLAME?—GRAIN MOVEMENT, INDUSTRIAL BOOM CATCH RAILWAYS WITH THEIR ROLLING STOCK DOWN—SHORTAGE IS GROWING—PEAK EXPECTED BY OCTOBER—BELATED RACE IS ON TO REBUILD CARRIER FLEETS

(By Robert B. Bedingfield)

Just how big is the freight car shortage—if any?

The Interstate Commerce Commission has just called upon the railroads to cooperate in a national effort to get maximum service from the existing supply of freight cars—roughly, 1,700,000. This seems to assume a major shortage of equipment.

The same conclusion has been suggested in recent weeks by some Congressmen who have been denouncing the railroad for standing still in freight car numbers while accepting $1,597 million in Federal tax incentives for the 330,500 cars they have ordered since 1951.

These observations notwithstanding, the railroad freight car shortage is not all that it appears—in dimensions, cause or probable duration. There's no disputing, however, that the Nation's railroads in recent weeks have experienced a demand for freight cars that is greater than at any time during the past few years.

Even the Association of American Railroads, the carriers' official spokesman, acknowledges a shortage of 11,961 cars in the week ended July 9. This shortage was distributed among 41 of the 130 Class I roads. (These are railroads that have operating revenues of $1 million or more a year. They handle about 98 percent of the Nation's rail freight business.)

PEAK DUE IN OCTOBER

Some AAR officials think the shortage may increase progressively during the next 2 or 3 months until it reaches a mximum of about 20,000 cars in October. Then the corn crop will be moving and supplies for the country's annual big Christmas shopping spree will be speeding to store counters. The last time the railroads were so tight for equipment was in 1952, when Korean war supplies were being rushed to the West Coast.

The current tight freight car situation centers mainly in box cars, especially in the better grades and special sizes used for hauling merchandise, and more particularly the type of manufactured goods that moves in less-than-carload lots.

This is the class of freight that interstate truckers have been most successful in getting away from the railroads. The main reasons for its return to the rails are the months-long trucking strike on the west coast, settled only recently, and the shorter trucking strike in southern New England, just ended last week.

The latter strike was reflected in an increase of 38 percent in traffic of the New York, New Haven and Hartford Railroad this July over July, 1954. But those who know him best agree that Patrick B. McGinnis, New Haven's president—who was a rail statistician in Wall Street long before he became a railroad president—is not a man to buy a fleet of new $6,000 boxcars just to stand by for possible truck strikes.

STEEL BOOM BIG FACTOR

Box cars also have been in peak demand in recent months as a result of the unusually heavy production schedules of the automobile and construction industries. This has lifted steel production to a record level and increased coal production by more than 40 million tons for the year to date. A relatively tight situation in hopper cars has resulted and there have been some shortages of gondolas.

The box car situation is the only real worry spot, however, and it has become more acute as the grain harvest has rolled north.

This year's wheat crop is not the record-breaker of some other recent years, largely because of drought in the Southwest. The railroads under normal traffic conditions probably would not encounter too much difficulty in handling it with the existing freight car supply. But conditions in wheat are not normal by any means. The Government's crop loan program has resulted in the storing of so many hundreds of thousands of bushels of wheat that the 1955 crop has made and will continue to make a lot of false stops and starts.

Grain that normally would go into country elevators around Kansas, for example, and later be transshipped to flour mills in the North and East, has reached Kansas and stopped on the sidings. Elevators there already are overflowing with grain—grain stored in 1954. As a result, the boxcar becomes a warehouse until some arrangement can be worked out by the Government for relocating the old grain. One of the favorite storage spots again has been the mothball fleet in the Hudson River and on Puget Sound and the Columbia River.

This year there has also been a pressing need for cars to move several million bushels of grain from the Kansas, Nebraska, and Missouri growing areas into Oklahoma and Texas, where drought has made some storage space available.

The railroads themselves, of course, can't entirely escape blame for car shortages. Only 28,405 new freight cars were placed in service by domestic carriers last year, the smallest number since 1939. The backlog of unfilled orders dropped to 13,624 cars by the end of 1954, from roughly 8 times that figure 3 years earlier. This, coupled with a higher rate of retirements than had been experienced in 3 prior years, resulted in the car fleet shrinking to 1,735,553 cars.

This was just about the number of cars the carriers had in 1950, when they agreed with the Government that for an economy based on partial mobilization the minimum goal should be 1,850,000 cars.

The carrying capacity of the railroads was further reduced last year by the fact that, with carloadings at their lowest levels in 16 years, many roads not only cut capital outlays but also slashed maintenance expenditures to the bone. As a result, a large percentage of the freight car fleets—and particularly those of some of the big eastern systems—lapsed into "bad order."

While a 5 percent bad order is considered normal, by April 1 this year more than 17 percent of the Baltimore & Ohio Railroad's 86,603 cars were unserviceable and 16.4 percent of the Pennsylvania's 181,847 cars were out of operation. The New York Central, while it had only about 8 percent of its fleet in bad order on April 1, had scrapped more than 16,000 cars during 1954.

As traffic has increased, these railroads have announced sharply stepped-up repair programs and, with scores of other roads, have begun ordering new freight cars in volume. This reflects a decision reached in Chicago during June at a special meeting of members of the Association of American Railroads. The agreement was that the carriers before the year was out would place orders for 38,000 additional cars. Through June their orders had amounted to 27,102. Estimates are that another 11,000 cars had been ordered in July alone.

Meanwhile, the railroads have been wary of talking too much about the shortage, its cause or its cure. They want to hang onto the privilege to write off for income tax purposes in 5 years the cost of new equipment. This incentive has effectively allowed them to defer paying taxes on the increased earnings made possible by new equipment.

The increase itself is merely relative. The 3.2 percent on investment earned by the railroads in 1954 was about one-third the return enjoyed by many manufacturing industries.

Codification of Postal Service Laws

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. CELLER. Mr. Speaker, I have today introduced the bill H. R. 7768, to revise, codify, and enact into law title 39, United States Code, entitled "The Postal Service." This bill has been prepared under the supervision of Hon. Abe McGregor Goff, Solicitor of the Post Office Department, by Mr. Louis J. Doyle, Mr. Wendell W. Campbell, and Mr. Adam G. Wenchel of his office, in cooperation with the Willis subcommittee of the Committee on the Judiciary through its law revision counsel, Dr. Charles J. Zinn, and the assistant law revision counsel, Mr. Cyril F. Brickfield. I am glad to acknowledge the close harmonious cooperation of the Department with our committee.

The bill is intended to restate in one place all the existing laws relating to the postal service. During the coming recess it will be subjected to further study by the committee staff, the Post Office Department and other interested agencies, and if the need for further refinement develops, it will be taken care of before the bill is reported. The bill has been submitted to the Congress by means of an executive communication from Hon. Arthur E. Summerfield, Post-

master General, and the Department is aware that certain of the sections may need to be rewritten. The purpose of submitting the bill at this time is to have something formal before the committee upon which departmental reports may be requested with the view of having a perfect bill at the beginning of the next session.

Reduced Taxes Possible Under Hoover Economies

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Monday, August 1, 1955

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Reduced Taxes Possible Under Hoover Economies," which was published in the Columbus (Ohio) Dispatch.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REDUCED TAXES POSSIBLE UNDER HOOVER ECONOMIES

Throughout the extensive and detailed work of both Hoover Commissions, and especially during the course of the second and last one, the possibility of large and substantial Government economies has been inherent.

This is an issue that has never lost its importance, even though the interest it has attracted has more often been so much greater than any actual accomplishment resulting from it.

Senator BYRD, who since 1933 has never allowed the Nation to forget the wastefulness and prodigality of the Federal Government, has recently pointed out again just what this continued overspending means to us.

Perhaps the greatest direct evil is reflected in the loss of the purchasing power of our dollar. From 1940 through 1952, Senator BYRD has pointed out, the dollar lost 4 cents in value on an average in each of those years—48 cents in all.

This has meant an equally rapid rise in the cost of living and an equally restrictive and repressive effect upon all of those people who work for a living and especially those—mostly widows and others more or less dependent on a stable economy for economic safety—who must rely upon pensions, small fixed incomes, and even relief for existence.

This upheaval in our economy has forced wholesale readjustments. But more than this it has faced all of us with the dangers of temporary or permanent insolvency and threatened the value of our basic virtues of frugality and thrift, the foundations of our economic independence.

It has been accompanied by unconscionably high tax rates, and has made it impossible, even in these times of our greatest peacetime prosperity and prospects to reduce our Federal debt or to relieve our people of any substantial part of the scandalously heavy Federal tax burden.

Former President Hoover has said definitely that should a reasonable proportion of the recommendations his commission has made ever become effective, taxes could be reduced by several billions overall, and the Government still have ample funds with which to operate its necessary functions, including defense and the more and more extensive social obligations facing it.

This is a point for some serious public consideration. More importantly it is a point for some serious congressional and executive consideration.

The point will be resisted by those who now benefit from the waste and overlapping and completely unnecessary expenditures.

The good of the Nation, however, demands that some action be taken on the Hoover recommendations and that the country be saved from unnecessary future hardship because of current squanderings.

Conveyance of Certain Land to City of Milwaukee, Wis.

SPEECH
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. HOFFMAN of Michigan. Mr. Speaker, the amendment is very simple. It is offered in support of our present foreign policy as well as to protect civil rights.

As you may know, I have not been so enthusiastically in support of our foreign policy as advocated by our former Secretary of State, our present Secretary of State, as some others.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. HOFFMAN of Michigan. I yield to the gentleman from Massachusetts.

Mr. McCORMACK. That includes the present administration, I assume?

Mr. HOFFMAN of Michigan. Insofar as the present administration and the Secretary of State follow Dean Acheson in giving away certain of our liberties, surrendering our national independence, if it should be the policy, my answer would be "Yes."

Now if I may get back to the explanation which the Speaker so kindly thought I should make to the Members. Inasmuch as we have spent billions upon billions of dollars in trying to win the friendship of other nations and other places, it seems to me that recent activities in connection with the port of Milwaukee should have some publicity, and that the port of Milwaukee should be open, not closed to our friends and allies abroad as well as to our own people from other States.

On April 14, 1954, the Kohler Co., near Sheboygan was struck by the UAW-CIO. That is Walter Reuther's outfit—the same Reuther who with tongue in check, not so long ago announced that he was a friend of the farmer. His principal lieutenant, the secretary-treasurer of that organization, Emil Mazey, who has been a professional organizer since 1933, has been over in Sheboygan directing the activities of the strikers under the supervision of Mr. Reuther. There have been some 500 instances of violation of the law. Mazey, as far as I know, although he has been involved in many, and many a scene of violence and rioting, was convicted over there for the first time, something new, something amazing, something startling in labor circles—for seldom are the "brains" prosecuted or convicted. Usually it is just the poor misinformed, misguided picket—or innocent bystander who is nabbed and hauled off to jail. Then what happened? The plant continued operations and at a profit—and with local workers—and in spite of the failure of a mayor and a governor to protect the civil rights of the people of the city and State the pickets did not close the plant because they were not able to.

Then, just recently, 2 ships from abroad came over the Atlantic from our friends in Norway loaded with clay, which is absolutely necessary if the factory is to continue operations. They came over and 1 of them attempted to dock in Sheboygan, which is the lake port for the plant. It could not discharge the cargo because of the picket line and because the Socialist mayor would not give the people, who wanted to unload the ship, protection. Nor would the governor protect his own people while unloading. So that ship sailed away and it went to Milwaukee to the harbor where this land, which is owned by the United States, is located, and which is proposed to be given to the city of Milwaukee. What I am trying to do by this amendment is to make sure that the United States Government by making this gift to the city of Milwaukee, and putting this United States property under the control of the city of Milwaukee, must not by implication, lend support to this affront to Norway. Where is the State Department? What has it done to remedy this insult, this affront to Norway?

After the ship could not unload in Milwaukee, it went to Montreal. There it was unloaded. Then the cargo was put on freight cars and the railroad company attempted to send the clay down through the western side of Michigan via the Northwestern Railway. That is where I became interested. The union in Muskegon, still under the direction of Walter Reuther, a great patriot, or is he, attempted to prevent those cars going through Muskegon on the railroad, the Pennsylvania system, on down through the Fourth Congressional District. Well, they did not succeed. They finally moved the cars over to Sheboygan. I hope the gentleman from Texas, sitting in the front row here [Mr. PATMAN]—I hope you are getting this now—because while this has nothing to do with the Federal Reserve System, it does have something to do with our interstate and foreign commerce and the Federal Reserve will not be any good unless we can continue to carry on this intra and interstate commerce not only in this country between the States but with foreign governments. The cars got over again to Sheboygan and again the mayor failed to protect the railroad company in its effort to make delivery.

But more about Reuther, his lawlessness, and the harm he does the country, next week.

Conveyance of Certain Land To City of Milwaukee, Wis.

SPEECH
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. HOFFMAN of Michigan. Mr. Speaker, I assure you that if I had known a point of order would be made, I would have objected to consideration of the bill. The bill provides that the United States convey a small piece of land which is adjacent to the harbor in Milwaukee. The amendment provides that title shall not pass until city authorities open the harbor to domestic and foreign commerce. An amendment is germane when it is akin to or relevant to the subject matter of the bill—Speaker Carlisle, March 17, 1880, Cannon's Procedure, pages 196–201. With as much reason might it be said that an amendment that the city should not take title until it paid the purchase price was not germane. But I will try to get my point across. When the cars to which reference has been made got back in Sheboygan, the pickets went out on the city streets where the rails crossed the street and stopped the cars from going to the plant. Mind you, this was the cargo that came from Norway—think of it, from our friends, our international friends, our allies, if you please. A fine way to create and hold good will, friendship. Milwaukee would not let a ship from our friends discharge cargo of dirt-clay here in an American port. A fine way to promote foreign trade. Perhaps if the clay had been unloaded a cargo of dairy products might have been sold by Wisconsin farmers—or a shipload of Milwaukee beer. Now if they sent those ships over to Grand Rapids where my colleague from the Fifth District [Mr. FORD] lives, or to the port of Holland, or Ottawa, or over in my district, they would get it unloaded because over there we enforce the law, and if they sent it down to St. Joe or Benton Harbor, they would get it unloaded. When someone said to me: "Well, the factory is not there," my reply was, "They can move their factory, and we will give them protection from these goon squads whether it is Walter Reuther, Mazey, or some Communist who directs the goon activities under the advice of the international officers.

Just recently due to the publicity which was given to this situation by the Chicago Tribune and the Milwaukee Journal, just recently, the Governor, whose name happens to be Kohler, but who has no financial interest in the Kohler firm, just recently he has said that if necessary he will call out the State troops to protect citizens and their property.

Now, it is a strange situation, is it not, when we have to call out State troops to promote international good will? But think, now, think of the situation where we not only with our billions of dollars but the services of our soldiers are trying to show to the other people of the world, trying to demonstrate to them our freedom and convince them we want them to be free; yet in Wisconsin they cannot unload their own cargoes, that our citizens are not free to handle the merchandise they send across the sea. What kind of capital do you suppose the Russians and the Communists will make out of that situation? Cite that situation as the lack of freedom here? Russia seeks foreign trade—we reject it—at the order of a union boss.

Mr. LAIRD. Mr. Chairman, will the gentleman yield?

Mr. HOFFMAN of Michigan. I yield.

Mr. LAIRD. The trouble we are having in Wisconsin has been stimulated from your State.

Mr. HOFFMAN of Michigan. The gentleman is right about that. Walter Reuther and Emil Mazey and our Governor, Mennen Williams, a Democratic Governor, who has refused the extradition of one of those goons, stands back of the Wisconsin goon squads.

Mr. LAIRD. Our Governor has shown very strong leadership in the past 2 weeks.

Mr. HOFFMAN of Michigan. Just lately he has seen the handwriting on the wall; but our Democrat Governor, Mennen Williams, will not honor the request for the extradition of one of those goons who is harboring in Michigan, the city of refuge, not in the Fourth District, but over on the east side, which is the city of refuge for goon squads and racketeers.

Mr. HINSHAW. The gentleman spoke of the other world a moment ago. Is he speaking of one of these satellites 250 miles out of our orbit?

Mr. HOFFMAN of Michigan. That is a new way to spend money. I had not heard of that until yesterday. But if we follow our present trend the goons, the racketeers, the extortionists of labor will control whatever situation may arise.

Settlement of Texas City, Tex., Disaster Claims

SPEECH
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

(Mr. HYDE asked and was given permission to revise and extend his remarks.)

Mr. HYDE. Mr. Speaker, this bill has more merit to it than any claim bill which has come before the Committee on the Judiciary since I have been a member of that committee. Justice, equity, and compassion, it seems to me, compel this Congress to adopt this bill. If there is anything wrong with the bill, I would say it is the restrictions that the committee placed upon it; that is, restrictions on the amount of individual recovery. For my own part, I think it is rather unconscionable to put a limit on the personal injury damages such as has been placed in this bill, but, of course, I am obliged to bow to the will of the majority of the committee in that respect.

Mr. WILLIS. Mr. Speaker, will the gentleman yield?

Mr. HYDE. I yield to the gentleman from Louisiana.

Mr. WILLIS. Is there any doubt whatsoever in the gentleman's mind on the proposition that if this explosion had occurred and the operator had been a private corporation, the private corporation would have been liable?

Mr. HYDE. There is absolutely no doubt in my mind in that respect. As a matter of fact, I put the same question to the attorneys for the Government who appeared before our committee and testified on this bill, some of whom testified at one point in opposition to it, and they did not express any doubt in their minds, either, in that respect.

Mr. WILLIS. I might say that I am a member of the Committee on the Judiciary, too, and that is my opinion. But I think that is very significant and should be considered by the House, that had the plant been in the operation of an individual corporation, there would be no question as to where the responsibility would lie for the accident.

Mr. CELLER. Mr. Speaker, will the gentleman yield?

Mr. HYDE. I yield to the chairman of our committee.

Mr. CELLER. Is it not true also that the Committee on the Judiciary as a matter of grace rather than as a matter of law has allowed these claims; and furthermore, the charge that is made that the insurance companies would profit is unfounded; that is, the insurance companies will not profit by this bill?

Mr. HYDE. That is absolutely right. The insurance companies will not profit. I think one of the misunderstandings about claims bills before this Congress is the matter of legal liability. If there is any legal liability then claims bills would not come to Congress. They would be adjudicated in court.

Mr. BRAY. Mr. Speaker, will the gentleman yield?

Mr. HYDE. I yield to the gentleman.

Mr. BRAY. The injured party has already exhausted his remedy at law, has he not?

Mr. HYDE. That is true.

Mr. BRAY. And this is not in the nature of any legal claim against the United States. It is a matter of relief according to who was responsible for the accident?

Mr. HYDE. Yes, that is right. I might say, however, that there probably would be some dispute here as to the matter of blame, but it is not a question of blame, and I shall try to explain that if I get sufficient time.

Mr. HAND. Mr. Speaker, will the gentleman yield?

Mr. HYDE. I yield.

Mr. HAND. Is this claim based on any negligence on the part of the Government of the United States?

Mr. HYDE. No.

Mr. HAND. It is a matter of grace?

Mr. HYDE. This is a matter of justice.

Mr. HAND. Has the committee considered a similar situation in South Amboy, N. J.?

Mr. HYDE. Not to my knowledge.

Mr. HAND. I thank the gentleman. We will see that you do.

Mr. HYDE. We will be glad to consider it.

I might say, on the question of negligence, that issue is not before the Congress. However, the fact remains that the courts have said that here was a product being shipped under a Government program, and it was a highly dangerous product, which cannot be denied, because the product exploded and killed over 560 people and injured over 3,000. As a matter of fact, the Supreme Court in that connection said this:

Following the disaster, of course, no one could fail to be impressed with the blunt fact that FGAN would explode.

In a dissenting opinion, the Court, on a matter of fact—this is not a question of opinion, now, but a matter of fact—said:

In addition, there was a considerable history over a period of years of unexplained fires and explosions involving such ammonium nitrate.

So you have a dangerous product, dangerously explosive, being shipped under a Government program and exploding in this little city of Texas City. It did all of this damage. To my mind it cannot be distinguished in any manner whatsoever from the Port Chicago disaster where an ammunition ship exploded and this Congress voted to pay claims in that case.

Disgraceful Performance

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks, I include an editorial from the San Antonio Light of Saturday, July 30, 1955, entitled "Disgraceful Performance." This editorial has to do with the action of the House in defeating the proposals for the establishment of a highway program.

The Light suggests that the President call a special session of Congress to deal with this problem. Having voted for the highway bill, I join in that suggestion. We should either stay here until the job is done, or the President should call us back to do it.

The editorial follows:

DISGRACEFUL PERFORMANCE

The performance of the House of Representatives in voting down any form of Federal highway legislation was sickening.

In 12 hours of action in 2 days on the House floor Congressman after Congressman expressed his great concern at the slaughter on our highways and the great economic loss the American people were suffering.

The need for a Federal highway bill, they kept saying to each other, is not in question.

Then, when their names were called, they voted down any form of Federal aid at all.

Some of them, when the final vote was announced, laughed aloud, as though they had done something amusing.

Up in the galleries, enjoying this display, were the lobbyists who today are being held responsible for the defeat of the various bills.

Many of them represented industries and associations that have fought for good roads for many years, but who found that they didn't really want them if they were going to cost any money.

The lobbyists won a battle but they lost the war because they represent industries that cannot survive unless the highways of America are made adequate within the next few years.

Down on the floor the Congressmen were running the lobbyists' errands and deserting their own party leadership.

Today many of them have the decency at least to be somewhat ashamed of themselves.

And the lobbyists are telling everybody that they really were for a road bill and that they didn't expect Congress would become so panicked under lobby pressure that nothing would result at all.

If these gentemen are to be accepted at their word—and that is a gigantic "if"—then we agree with Republican House Leader MARTIN that President Eisenhower should call a special session of the Congress and make it sit in Washington until it does its duty.

There is nothing funny or politically smart about sabotaging a Federal highway bill.

About 200 Americans died in our chaotic traffic while these Representatives of the people were issuing pious statements and finding a way to save their own political hides.

Now let them act like the statesmen they pretended to be.

Let them forget their miserable and petty differences.

Let them sit down together, with their eyes off the galleries, and do the job the American people are demanding of them.

And let them sit there until they do.

Write Your Serviceman

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. MOULDER. Mr. Speaker, I am shocked to learn that even though our Armed Forces have the transportation equipment and facilities for mail delivery service to members of our Armed Forces overseas, and the Post Office Department is likewise supplied with such facilities necessary to provide such mail service, yet mail service to members of our armed services overseas is disgracefully lacking. Nothing is more important for good morale in the Armed Forces than a letter from home.

I received the following letter from a fine young lady of a prominent Jefferson City family on this subject as follows:

JEFFERSON CITY, MO., *July 7, 1955.*

Hon. MORGAN M. MOULDER,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: You have often heard the saying "Write your serviceman," yet how many of them never receive their mail?

I speak from experience for I have a brother stationed at Port Lyautey, North Africa, and even though there are planes arriving at their airbase daily from the States, there is only one plane a week that carries mail. This plane is limited to 180 pounds of mail—this includes military mail.

Most of these boys are not away from home and families from choice; therefore mail is especially important to them, and we gladly share all local news with them by mail.

I realize the complaints you receive are many, yet any help in speeding mail to our servicemen would certainly be appreciated and not forgotten.

Sincerely,

DORIS WALZ.

Mr. Speaker, I respectfully suggest that this matter be thoroughly investigated.

Yalta and Potsdam Blind Spots

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr SMITH of Wisconsin. Mr. Speaker, the evils of the Yalta and Potsdam agreements are becoming more clear. The ultimate damage to these United States may never be known. Apologists for the sinful conduct of our war leaders are on untenable grounds.

Under leave to extend my remarks, I am inserting an article by Mr. William Henry Chamberlin, an outstanding journalist, who has been right consistently in appraising the debacle at Yalta and Potsdam. His article appeared in the article section of Human Events on July 23, 1955:

HINDSIGHT, FORESIGHT, AND BLIND SIGHT

(By William Henry Chamberlin)

Those who as politicians or publicists bear some share of responsibility for the botched foreign policy of the Roosevelt administration have a standard retort when the disastrous consequences of Yalta and other appeasement deals with Stalin are pointed out. Such criticism, they declare, is based on hindsight. It is implied, or openly stated, that the critics are showing a cheap after-the-event wisdom, that there was no alternative at the time to the courses which were followed.

As the events of wartime diplomacy recede into the perspective of history, it becomes clearer that the conspicuous blunders of Roosevelt's political conduct of the war can all be traced to one master illusion. This was that the Soviet Union under its Communist rulers would be a trustworthy, reliable, peace-minded associate in the reconstruction of the world after the end of the war.

Had there not been this central blind spot of illusion, it is scarcely conceivable that some of the blunders of detail could have been or would have been committed. The ruling out of all diplomatic flexibility by the vainglorious "unconditional surrender" demand; the permanent industrial desolation of Germany contemplated under the Morgenthau plan; the failure to seize Berlin and Prague in the closing weeks of the war or to divert to the Balkans the forces which were wasted in a useless landing in Southern France—these mistakes all stemmed from the one big error: that the Soviet Communist dictatorship was a trustworthy ally and that Soviet penetration of the heart of Europe could be viewed with complacency.

The same observation holds true for the concessions in Manchuria and elsewhere at Nationalist China's expense that were fatuously made to bribe Stalin to enter the war in the Far East; and for the failure to consider the possibility of a quick peace with Japan which would have eliminated the necessity for the Soviet intervention in the Orient that opened up a Pandora's box of calamities, including the Communist conquest of China and the war in Korea.

Now when it is glibly asserted, as it was in the war years, as it still is by diehard apologists for Yalta like Walter Lippmann, that there was no alternative to the policy of Soviet appeasement that was followed, two questions may fairly be asked. First, did the Soviet record before Yalta suggest that a dominant position for the Soviet Government in Europe and Asia would promote the interests and security of the United States? Second, were voices of warning raised, pointing to the probable grave consequences of acquiescing in and sometimes underwriting the annexationist ambitions of a regime with the unlimited aspiration for world domination that is inherent in international communism? The answer to the first question is an emphatic "No." The answer to the second question is an equally definite "Yes." Let's look at the record.

Before the Yalta Conference, which took place early in February, 1945, there were no less than 8 major actions of the Soviet Government, well-known to official Washington, which should have inspired the gravest doubts as to Soviet intentions and good faith.

1. The Soviet Government, after posing as an irreconcilable enemy of fascism, signed a pact with Nazi Germany on August 23, 1939, which cynically divided up eastern Europe between Communist and Nazi tyranny.

2. In violation of a pact of non-aggression between the two countries, the Soviet Red Army invaded Poland in September, 1939. The Soviet authorities behaved with the utmost brutality in the part of Poland which was annexed, deporting over a million men, women and children to slave labor under such bad physical conditions that about a quarter of them perished.

3. In violation of similar treaties, the Soviet Union overran and annexed the small Baltic Republics, Latvia, Lithuania and Estonia, in 1940. There was a repetition of the mass deportations which had been practiced in Poland.

4. Again in violation of a non-aggression treaty, the Soviet Government attacked Finland on November 30, 1939, fought an aggressive war for 3½ months and annexed about one-tenth of Finland's territory, land that was historically and ethnically Finnish.

5. The Soviet Government, even when it received increasing amounts of American and British aid after Hitler's attack in 1941, consistently refused to consider making good the wrongs that had been inflicted on Poland and the Baltic States.

6. The Soviet Government, with characteristic cynicism, took the exposure of one of its own most revolting "war crimes," the massacre of some 15,000 Polish officer war prisoners in the Katyn Forest, near Smolensk, and elsewhere as an excuse for breaking off diplomatic relations with the legitimate government of Poland. This occurred in the spring of 1943; from this time the Soviet Government intensified its efforts to impose on Poland a Red Quisling regime, dominated by Communists.

7. When the Red Army approached the Polish capital, Warsaw, in the summer of 1944, the Soviet radio broadcast appeals in Polish for an uprising. When the Polish underground forces, nationalist in political sympathy, went into action against the German garrison the Red Army stood still and the revolt was suppressed with frightful loss of life, accompanied by the complete destruction of the city of Warsaw.

8. After overrunning Bulgaria in 1944 the Soviet authorities took care to shut out the United States and the other Western powers from any effective voice in the negotiation of a Bulgarian peace settlement. This was in line with the general Soviet policy of setting up puppet Communist-dominated regimes in every country "liberated" by the Red Army.

Surely these were "Stop, Look and Listen" signs which should have been heeded by American negotiators at Yalta.

And, contrary to a legend spread by the Roosevelt apologists, there was no lack of warning voices, voices of foresight, not hindsight, about the dangers of associating the American Republic with Communist tyranny in a phony crusade for the four freedoms and the Atlantic Charter. On June 29, 1941, former President Hoover said, and he could scarcely have been more right in his prediction:

"If we go further and join the war, and we win, then we have won for Stalin the grip of communism on Russia and more opportunity for it to extend over the world."

Senator Robert A. Taft was equally foresighted and farsighted. Here is an excerpt from his radio address of June 25, 1941:

"In the name of democracy we are to make a Communist alliance with the most ruthless dictator in the world. But the victory of communism in the world would be far more dangerous to the United States than the victory of fascism. There has never been the slightest danger that the people of this country would ever embrace Bundism or nazism. * * * But communism masquerades often successfully under the guise of democracy, although just as alien to our real principles as nazism itself."

Senator STYLES BRIDGES, as early as September 12, 1943, was calling for "more spine and less servility" in dealing with the Soviets. And Senator BRIDGES challenged the whole appeasement policy when he said in the Senate on January 14, 1944:

"Americans want to know whether the national life and independence of any people in Europe—whether in the Baltic region, the Balkans, or Western Europe—have been endangered by American commitments or the failure to make strong American representations. Americans want to know how Poland, which was the only full ally England and France had at the beginning of the war and which has been so horribly ravaged, is to be rewarded for its loyalty and supreme sacrifices."

Human Events can point to a record of foresight, not hindsight and not the blind sight of the internationalist crusaders. In the issue of February 21, 1945, immediately after the contents of the Yalta Agreement were partially revealed, Felix Morley branded as attempted deception the inclusion in the Yalta statement of affirmation of faith in the principles of the Atlantic Charter, in an article entitled "For Yalta, Read Munich."

This writer can look back to a piece which he contributed to Human Events, "Shadows of the Holy Alliance" (issue of March 21, 1945) as an accurate analysis of the causes of the failure of the embryonic United Nations. An article on "European 'Settlements'," of October 3, 1945, points to the unjust boundary settlements and the mass deportations in Europe as "a far cry from the principles of national self-determination, equality of economic opportunity, and ultimate disarmament in the Atlantic Charter, and from the lipservice paid to freedom and democracy in the Moscow, Yalta, and Potsdam declarations."

American nationalists, sometimes misrepresented as isolationists, have nothing to be ashamed of in their estimates of the world situation, as the foregoing citations, and many others which could be added, show. The people who have been consistently wrong have been the crusading internationalists who got the country into two wars in pursuit of vague idealistic goals which most emphatically were not realized in the Treaty of Versailles, still less in the decisions of Teheran, Yalta, and Potsdam. It is among them that one must look for the true "illustrious dunderheads," to toss back a phrase which a writer of detective stories, Rex Stout—transformed overnight into a self-esteemed expert on foreign affairs—applied to conservative American nationalists.

The list of their mistakes is too long to be covered up, even though this group is in control of a disproportionately large share of organs of mass communication and public opinion. They exaggerated the danger from Hitler and they displayed a pathetic blind sight in regard to the danger from Stalin. In diplomacy and in war, they muffed one opportunity after another.

They were wrong in placing U. N. ahead of United States, regarding the United Nations as the cornerstone of American foreign policy. They were wrong in considering France, in the light of its showing in the Second World War and in the war in Indochina, as a bastion of American defense and pouring billions of dollars into the French sieve. They were wrong in hastily and almost gloatingly writing off Nationalist China. They were wrong in denying to American soldiers, fighting against big numerical odds in Korea, the full backing of American air and nuclear power. They were wrong in accepting German rearmament, if they accepted it at all, very halfheartedly.

It is not only for the sake of historical accuracy that the record of who showed foresight and who showed blind sight should be set right. For the man who once justified and still justifies Yalta will usually rise like a trout to the bait of Soviet appeasement and neutralism. Those who have been proved wrong so often in the past are not reliable guides for the future, whether their sphere is politics or the molding of public opinion.

The Abandoned Farmer

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. CANNON. Mr. Speaker, I am this morning in receipt of a letter from a Missouri farmer in which he says the price of hogs is lower than a snake's belly in a wagon rut. And he points out that when the price of hogs is down, the price of corn follows.

He says the price of wheat is under pressure but the railroads are charging more to ship it than ever before and then not supply half enough cars and his wheat is dumped out on the ground waiting and deteriorating until the railroads get good and ready to haul it to market.

He insists that the Department of Agriculture has done nothing for the farmer since they decided to get rid of the family sized farm and plough under the small farmer and his children. He offers to trade Secretaries with the Department of Labor and wants a Secretary that will raise farm prices every time they raise union wages.

He also is willing, he tells me, to trade some farm Congressmen for a few of these city labor Congressmen that are

doing such a wonderful job getting everybody's pay raised except the pay of the farmers who work harder and longer hours and render a more indispensible service than anybody else in the Nation.

He says these "danged Congressmen" over here in Washington are raising city pay so high that they are drawing all the farm labor into the city and he must rely on machinery to work his farm—and then they raise the price of farm machinery, and everything else the farmer uses, so high, and pay him so little, for what his farm produces that he does not have money to buy the machinery.

Mr. Speaker, I hope the Secretary will ease up a little on the farmer and let him have enough income to at least keep his head above water in this wonderful prosperity and high wages and high prices everybody else in the countr, is enjoying except the farmer.

And speaking very seriously, Mr. Speaker, may I call attention to the fact that the farm Congressmen have throughout this session cooperated with the labor Congressmen in securing fair wages and adequate living conditions for the wage earners of the Nation. We did so because we feel that agriculture has a common cause with labor. Both are exploited by the same predatory interests. But turnabout is fair play and we hope that in the next session labor will return the favor and support legislation insuring a fair share of the national income to the farm men and farm women who are feeding the Nation more bountifully today than ever before in the history of America.

Helpful Echoes From Geneva

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 1, 1955

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Helpful Echoes from Geneva," written by Frank R. Kent, and published in the Washington Sunday Star of yesterday, July 31. I commend this excellent article to the attention of all Members of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HELPFUL ECHOES FROM GENEVA

(By Frank R. Kent)

Probably the most significant tribute to the success of the Geneva Conference and that of President Eisenhower in the dominant role which he played there came not from his friends at home but from his enemies. Particularly was this notable among the editorial and columnar critics who, from the start, had disparaged the notion that any good could come out of the meeting of the Big Four heads of state and discouraged the idea that talking with the Russians was a sound suggestion.

For many weeks these critics, for some curious reason, had joined with the Democratic National Committee publicity performers, aided and abetted by the propagandists of the ADA, the CIO, and Senators such as MORSE, of Oregon; HUMPHREY, of Minnnesota; and KEFAUVER, of Tennessee, in a campaign of sneering and jeering at the President. They pictured him as a weakling who did not know what it is all about. They insisted that Mr. Dulles does all his foreign-policy thinking for him and that his mind was principally occupied with his golf game. Of course, none of this was true, but it was strictly along the Democratic committee line the intent of which was to lay a foundation for an antiadministration attack upon Mr. Eisenhower as a presidential failure who should not be renominated.

In the course of 6 working days at Geneva, Mr. Eisenhower changed all this. He at once became the outstanding personality at the conference and in the world. He did this not by asserting himself; not by "throwing his weight around"; not by ostentation or showmanship; not by propaganda. He achieved it simply by being himself. Beyond question he is the most completely honest, completely truthful, completely sincere man who has spoken for this country either at home or abroad in the last 23 years. He impressed these qualities not only upon his colleagues about the conference table but also upon countless millions who heard and read what he said; also upon the several thousand correspondents, editors, reporters, and publicists who were at the Geneva Conference and some of whom were hostile to him.

It is interesting to note that only one of these thousands thought it worth while cabling his paper that the President had sent for General Gruenther of the NATO to come to Geneva because he wanted to play bridge with him at night. Well, what of it? And why not? The overwhelming point of view of the journalists on the job at Geneva was that General Eisenhower had put on a performance of which all Americans had a right to feel proud; that largely due to his earnestness and sincerity, the Conference had had a measurable degree of success; that the prospect for a continuation of this period of peace is brighter than it was.

There will, of course, now that the President is back, be dissenters, both in his own party and in the opposition in Congress. And there will be trouble of various sorts in various fields. That is inevitable. But there will be few to deny that Mr. Eisenhower has added to his personal prestige and popularity by his conduct at Geneva and by his speech last Monday in Washington. No one worth heeding so much as suggests that there was any touch of politics about the Eisenhower performance at Geneva or since. No one can accuse him of a lack of leadership. No one thinks now he should not have gone or should have taken a different line. He has not, of course, settled the most difficult problems whiih disturb the world and threaten peace. But he has at least taken steps in that direction which the great masses of men and women everywhere approve.

In addition, he has so firmly and clearly placed the position of this Nation before the world that no one either in Russia or anywhere else can again accuse us of wanting war—or him of being a warmonger. The day of that anti-American propaganda has gone. The President shot it to pieces with his inspection proposal, his two speeches, and his personality. He comes home to find his critics still howling about the Dixon-Yates contract and he finds his Secretary for Air, Harold Talbott, facing some ugly and embarrassing charges. But the Dixon-Yates business has been so blown up as to have become a bore and the Talbott affair, while certainly unpleasant, not to say malodorous, is not as politically damaging as it seems. In a year's time it probably will be forgotten. Certainly, there is not in it the kind of issue which the Democrats have been looking for in 1956. The President's work in Geneva much more than outweighs all the little stuff the opposition publicity organs and agents have dug up in a year of hard digging.

One Foot on the Soil—A Way of Life

EXTENSION OF REMARKS
OF
HON. GORDON ALLOTT
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Monday, August 1, 1955

Mr. ALLOTT. Mr. President, in line with the discussion which the Senator from Alabama [Mr. SPARKMAN] and I had the other day relative to the agricultural program, I should like to insert in the RECORD at this point an editorial entitled "On Foot on the Soil—A Way of Life," written by Lyle L. Mariner, editor of the Western Colorado Reporter, and published in the July 27, 1955, issue of that newspaper.

Mr. Mariner is a farm reporter and operates a small newspaper in Colorado. He is a very thoughtful man, and I believe his editorial deserves very careful consideration.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ONE FOOT ON THE SOIL—A WAY OF LIFE

(By Lyle L. Mariner)

Steel has gone up $7.50 a ton—that's in the pig state. A new round of wage hikes means finished products will advance many times more than that per ton.

Lambs dropped $1.50 per hundred last week.

Most wholesalers and retailers look with apprehension at each new quotation on equipment and appliances of all kinds. Many are up 5 percent or more, again.

Farm products price index shows overall 4 percent drop this year.

Where does this place the farmer in the economic picture?

Not long ago people spoke so glibly about farming being a "way of life" rather than a business. They pointed to the many advantages of living on the farm, and the education in self reliance it gave the rural youngster who later could excel in the city if he chose.

Today, the continuing downward trend of farm products in an economy that continues to spiral upward is forcing factory methods upon the busines of raising food just as it is fostering big business in the cities, as opposed to the small operator.

We see dairies becoming "factory to consumer" links with milk moving directly from the cows to tanks and the city distribution center. Handling the milk on the farm is almost a phase of the past.

We see feeding of livestock almost entirely a factory, with the feeders expecting losses a couple of years out of five. This means the small operator cannot afford to take the chance of any permanent operation which would sustain his farm because he could not afford to lose in those 2 years. One big loss in one year not long ago wiped out many small feeders.

Wheat growing has long since become a factory operation. In many cases not even buildings are to be seen on the farm. Planting crews move on in the late fall and the harvesters complete the job in the summer.

Fruit and vegetable growing is becoming a large-scale operation where small profit

per acre is the rule, thus excluding only the most efficient or forcing the small operator into working at a wage part of the year in order to maintain his family.

In some areas large retail groups handle almost every step from growing to the consumer.

Is it best for our economy that those who benefit from higher and higher wages should receive food at a level which means a loss or starvation living for small farm families? Generally the prices at the store are no less than before, because each round of wage boosts absorbs any lowering except at the producer end. However, at least the wage earner is allowed to keep more of his new increases to purchase more of the modern conveniences.

We know of many farmers and ranchers today who are showing losses. Probably most of them are, not counting those who are trying to stick it out in the worst of the drought areas.

What is the answer? Can the small farms be run more efficiently and better? Some can, of course. There are lots of farmers still failing to use modern methods, but they appear to be only a little less in trouble than the best. Many, like small-town businessmen, due to financial reasons are unable to make improvements or enlarge their farms as they would like because they must first support their families.

A family operation is bound to be rather inefficient in the light of meager profits to be had in farming today. A farmer cannot keep his tractor and other farm machinery going profitably more than a few months out of the year. The depreciation counts up much faster than if the machines were used constantly on large operations. The small farmer has to divide his time between too many tasks to make a streamlined factory operation out of any of them, and if he hires men he can only keep them busy part time compared to the factory-type agricultural units.

When then is the outlook for small farmers? On the brighter side, there are more and more getting out of food raising and going into towns. The future would appear to be poised for better prices and better living for those who remain, but how many will survive our present trend?

Perhaps the answer to some of our problems is at hand. For others, there appears to be no solution except in factory operation methods or a new system of Government supports.

Even the problems with answers would require some factory-type coordination and even Government regulation if they are to be handled in time to save some farmers and ranchers. We are thinking particularly of the economic loss of shipping livestock hundreds of miles and then shipping meat back to the very areas from which it came. The freight difference on the live animals alone would mean the difference between profit and loss for the grower. But, would he get the difference without some Government control?

Fruit and vegetable growers could probably get more for their products if more of it were canned and sold over a year-around period instead of within a couple of weeks at harvesttime. Other like examples are numerous.

Perhaps the final question to be asked in this brief discussion of current farm problems would be: Do we want more Government regulation, or do we want to continue as we are except possibly with the help of county planners who would work with individual farmers and help them share equipment and other items in order to streamline their operations? Do we want to keep the inefficient operators as competition, or should we speed the day when there will be fewer farmers and therefore more demand for products raised by those remaining?

Government supports as we have known them in the past only complicated the problems, and the surpluses accumulated are still aggravating the situation to a large degree. We are giving away millions of dollars worth of surpluses to other countries. We are allowing more millions to rot. Drought has stopped much production. And yet we are not reducing our surpluses enough to open up new markets for current production.

As each year goes by the surplus picture may change, although we are learning every year how to produce more on each acre. The facts still revolve around supply, demand, rising costs, and factory methods. Can we work out a program that will correlate these factors and develop a plan that would be flexible enough to aid the small efficient farmers?

We'll leave the discussion right there. Can intelligent people work out answers, or have we come too far down the road where only big business, monopoly, and big labor can exist?

Swiss Independence Day

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. REUSS. Mr. Speaker, the Swiss became free on that historic August 1, 1291, when they declared to the Hapsburg monarchy and other tyrants that the cantons of Schwyz, Uri and Nidwalden were joined in an everlasting league against external oppressors. Later, this freedom was extended to include 19 other cantons to make for today's total of 22.

When the Swiss and the Americans signed their Treaty of Friendship and Commerce on November 25, 1850, there was cause for rejoicing in both these freedom-loving lands on either side of the Atlantic. The Swiss Government then hailed the pact as a treaty of friendship whereby the two freest people on earth will treat each other reciprocally on a footing of equality.

Five months before, in a letter to the United States plenipotentiary negotiating the treaty in Bern, United States Secretary of State Clayton characterized the attitude of the United States in these words:

> We regard as brothers and benefactors of the human family those enlightened patriots in continental Europe, who have continued steadfast in their purpose to give to their countrymen such permanent institutions as Washington and his contemporaries gave to America.

Switzerland and America have much in common despite the discrepancies in size and language, although many Americans still speak the major tongues spoken in Switzerland—French, German, and Italian.

Both nations have similar constitutions. They enjoy the highest standards of living in the world. Both believe in individualism, but maintain stable governments. Their national governments were created to serve the people and not the other way around.

Like the Americans, too, the Swiss have a keen competitive spirit. For the Swiss, the manufacture and sale of fine watches, precision instruments and fabrics play a major role because Switzerland has no natural resources to speak of. Consequently, the money needed to buy goods abroad must be made through high competence in manufacturing.

The Swiss, therefore, have sold us their precision goods and timepieces, and bought from us farm products, tobacco, automobiles, and other manufactures. And the trade balance in favor of the United States was nearly half a billion dollars in the years from 1936 to 1953.

But, since last year, a higher tariff on Swiss watches theatens to impair this favorable trade picture. Swiss watch sales in the United States went off about 30 percent in the 6 months following the tariff increase, and Switzerland is looking elsewhere for markets with the likelihood that it will switch some of its buying, too.

American protectionists, claiming that our watch industry is essential to the defense of the United States, were successful in getting the President to sign a bill raising the tariff wall 50 percent higher. Yet, it was revealed months later that Defense Department experts had declared that no special nor preferential treatment was owing to the watch interests here.

United States Planes Shot Down by the Russians

EXTENSION OF REMARKS
OF
HON. BARRY M. GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, August 1, 1955

Mr. GOLDWATER. Mr. President, in the southeastern part of the State of Arizona, in the city of Bisbee, one of our oldest cities, and at the site of one the largest copper operations in the world, one of Arizona's most influential newspapers is published under a rather unusual name, the Brewery Gulch Gazette. I ask unanimous consent to have printed in the RECORD some philosophical observations of the Philosopher of the Brewery Gulch Gazette, of Bisbee, Ariz.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BREWERY GULCH PHILOSOPHER SAYS

The Russians remind me of something that happened in the early days of our neighboring community, Douglas, many years ago. A local citizen made it a practice to celebrate every payday, and whenever he got drunk he came out in a fighting mood; he was always arrested and given 5 days in the hoosegow (juzgado) to sober up and repent. One day he appeared before the police judge and requested permission to spend 15 or 20 days in the jailhouse, such time to count against any such sentences in the future when he might be busy and would not have time to serve out such punishment. His petition was denied, however. But now

with the Russians apologizing for shooting down one of our planes, it is conceivable that they might come up with 2, 3, or 4 apologies at one time, a sort of package deal. Our State Department might, and probably would say, "Why all of these apologies? You shot down only one plane this time." And the Russians could say, "That is very true, but the additional apologies and expressions of regret will be for the planes that we will shoot down in future. This will save some paperwork on the part of our apology-regret department, which is likely to be overworked from now on, considering the way things are likely to be going."

Exceptional Service Award to Assistant Secretary Milton

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, August 1, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the Army Times of July 30, 1955. It is entitled "Assistant Secretary Milton Receives Exceptional Service Award." Secretary Milton has a very outstanding record as Assistant Secretary of the Army, and we are very proud of his fine service.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ASSISTANT SECRETARY MILTON RECEIVES EXCEPTIONAL SERVICE AWARD

(By Steve Tillman)

WASHINGTON.—In appreciation of his outstanding contribution in the guidance he has given the Army in solving problems connected with the Reserve program, Hugh M. Milton, Assistant Secretary of Army for Manpower and Reserve Forces, was presented with Defense's Exceptional Civilian Service decoration by departing Army Secretary Robert Stevens.

This column of May 14 had as its lead item "Hugh Milton, Reserve Chief, Has Genius for Conciliation." On June 30 this story appeared in the Appendix to the CONGRESSIONAL RECORD.

In the preparation of the citation, Mr. Stevens made reference to Milton's ability to bring together disagreeing factions with the statement, "Throughout, his achievements have been tempered by a human approach to all problems."

The citation that accompanied the decoration:

"For exceptional performance as Assistant Secretary of the Army (Manpower and Reserve Forces), from 19 November 1953 to 21 July 1955. He, by his diligence and industry, coupled with a wealth of military background secured as a citizen soldier over a period of 35 years, has promoted the welfare, efficiency, and training of both the Active and Reserve Forces of the United States Army.

"Throughout, his achievements have been tempered by a human approach to all problems, resulting in a vitalization program which assures a full military career for the greater majority of Reserve officers on active duty, the raising of pay and living standards of personnel of the United States Army, and continuity in our combat units by his support of operation Gyroscope. He has also been instrumental in educating the public and the Congress to the need for adequate Reserve Forces to support the Active Forces, as evidenced by his long and hard work on the National Reserve plan.

"Hugh M. Milton, by these and other equally important achievements, has distinguished himself and reflected great credit upon the Army and the United States."

Senate Majority Leader Lyndon B. Johnson

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. PATMAN. Mr. Speaker, the people of this country are anxiously awaiting news concerning the progress of the recovery of our outstanding majority leader of the United States Senate, the Honorable LYNDON B. JOHNSON. The reports coming from his devoted and faithful wife are good at this time and are received happily by many thankful hearts.

Editorials have appeared in practically every newspaper in the United States. One that I would like to insert in the CONGRESSIONAL RECORD at this time, is from the July 28, 1955, issue of the Paris News, published at Paris, Tex., by Mr. A. G. Pat Mayse. The tributes quoted from some of the largest newspapers are typical of those which appeared in many other newspapers. I am in accord with the sentiments expressed by these editors and publishers, including Mr. Mayse.

The editorial follows:

NATIONWIDE PRAISE OF LYNDON JOHNSON

Sudden and serious attack of illness that took Senator LYNDON JOHNSON from his place in Congress resulted not only in his associates in Congress and every branch of government expressing sorrow, coupled with the hope that he would soon be able to resume his work. For hundreds of newspapers over the United States spoke of his ability and services, giving him recognition probably never before given a Member of Congress. Some of the one sentence tributes were:

Chicago American: LYNDON JOHNSON of Texas, has been a leader of Republicans as well as of his own party.

Boston Post: Senator LYNDON B. JOHNSON is one of our few high officeholders with the capacity of serving the Nation and his party, too.

Salt Lake (Utah) Tribune: The Texas Democrat has proved an outstanding leader not only for his party in the Senate, but for the Nation itself.

St. Louis Post-Dispatch: One of the ablest members of either branch, the Texan is largely responsible for the dispatch with which the 84th Congress has been doing its work.

New York Herald Tribune: As Senate Democratic leader, Mr. JOHNSON has won the respect of legislators in both parties as a capable and devoted officer of Congress.

Washington Star: By tact, good will, and level-headedness, he has managed to work with the Republican President and to make a creditable record for his party, too.

Texas may well be glad we have such a representative in the Senate, and also that the Senator will be able presently to resume his place unless providence should decree otherwise.

Central California Farmers and Conservationists Applaud Lostetter Report

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. REUSS. Mr. Speaker, I have on July 27, 1955, called to the attention of this House a flagrant instance of secrecy in Government and attempted deception by a branch of the executive arm of Government. I refer to the Department of the Interior's suppression of an important conservation document which completely contradicts the views of Fish and Wildlife Director John Farley.

Mr. Farley tried to explain away my attack on his Department's laxity in enforcing the Federal regulation against duck baiting on the ground that California club owners were feeding "hungry ducks" when they shot migratory waterfowl within 200 yards of their guns.

The suppressed document prepared by Clinton H. Lostetter, a career biologist for the Fish and Wildlife Service, described the California duck baiting as "a disguised attempt to circumvent Federal regulations—a deceptive maneuver by the duck clubs through administrative channels to get legalized baiting."

In a few days the Department of the Interior will be issuing its 1955 regulations on duck baiting. Yet the Lostetter report which so thoroughly punctures Mr. Farley's alibi for the game hogs remains locked up in the Department of the Interior.

I have received heartening news today from representatives of California rice farmers and conservationists that speaks highly of Clinton H. Lostetter and his efforts to help both the California farmer and our migratory waterfowl.

The telegram received by me today states:

Hon. HENRY S. REUSS,
House Office Building,
Washington, D. C.:

In regard to California duck-baiting attack publicized in Fresno Bee, July 29, and San Francisco Chronicle, July 30, please be advised Clinton H. Lostetter, biologist, United States Fish and Wildlife Service, has done an outstanding job in this district and has succeeded in coordinating the complete cooperation of farmers, sportsmen, and waterfowl conservationists interested in the wintering grounds of the Pacific flyway of wild ducks and geese.

Mr. Lostetter expressed the opinion of the great majority of our members who also feel the opening of the waterfowl season prior to October 22 in central California will be extremely detrimental to agriculture and not in the best interests of good waterfowl conservation.

RICHARD DES JARDINS,
President, Cal-O-Ro Rice Growers, South Dos Palos, Calif.; Cochairman, Fresno-Merced Counties Crop Depredation Committee.

J. MARTIN WINTON,
Waterfowl Representative, Sportsmen's Council of Central California, and Cochairman Crop Depredation Committee, Fresno and Merced Counties.

It is time that the farmers, duck hunters, conservationists, and the American people find out if the Fish and Wildlife Service has become the tool of duck-baiting interests, and if Director Farley has been fooling the public by his claims that violations of the Federal regulation against duck baiting are justified because hungry ducks need to be fed.

If Mr. Farley's skirts are clean, he should be willing to release the Lostetter report. But if Mr. Farley has been deceiving the American public, the Government should release Mr. Farley.

Money Rates Up

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 29, 1955

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following article, written by Ralph Hendershot, financial editor of the New York World Telegraph and Sun, which appeared in the July 29, 1955, issue of that paper:

MONEY RATES UP—BANKS ACT AS RESERVE AND TREASURY EXPERTS FAIL TO EASE STRAIN OF LOANS

(By Ralph Hendershot)

On Wednesday several large New York banks lifted interest rates on loans to brokers and security dealers to 3¼ percent from 3 percent. The increase will apply on accommodations for the brokers and dealers themselves as well as for their customers. The action probably signalizes a general hardening of interest rates all along the line.

The accelerated rate of business has been placing a strain on available credit for the past several months. But bankers have been reluctant to lift interest rates because of the rather large amount of Government financing which must be taken care of this year. The situation could have been eased to some extent if reserve requirements had been lowered, but the Federal Reserve people are currently not in the mood to encourage borrowing.

Bankers generally are not disturbed by the credit situation, except in the case of instalment and home mortgage advances, but they are concerned over the reappearance of inflationary forces, particularly those let loose by the recent wage increases. Generally speaking, they would like to see the business boom slowed down a bit and, of course, they are not averse to larger bank earnings.

CREDIT POLICY CHANGING

Gradually over the past year or so, the Nation's socalled easy-money policy has been undergoing a change. Steps have been taken very quietly to place the economy back under the control of those who pull the credit strings. The Treasury Department and the Federal Reserve Board have been working closely together in that development even though they are credited with being completely independent.

This trend reflects the basic difference between the New Deal-Fair Deal thinking on money questions and that of the Republicans now in power. The change had to be very gradual, however, for fear of disturbing business. The former operated to a marked degree on the borrow and spend theory, whereas the latter sought to supplant inflation with business confidence.

But of late there has been danger of excessive confidence. The action of the stock market and the sharp increase in sales of automobiles have been looked upon by some as danger signals. The fear is that the business boom might build up to a point where a bust would follow. And the best way to keep the boom under control, the more conservative leaders believe, is by tightening up on credit.

EXPERT HANDLING EXPECTED

However, Wall Street bankers do not anticipate any sharp increase in interest rates. They hope that the Federal Reserve and the Treasury authorities will utilize their credit powers much like an expert driver takes a team of fast-stepping horses around a curve in the road. Moreover, they are confident this can and will be done.

Congressman Hand Reports

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. HAND. Mr. Speaker, for the information of all the people in my congressional district I wish to include in the RECORD a summary of the accomplishments of the 1st session of the 84th Congress, with some comments thereon. Of necessity, this report can only touch the high spots and not all of them. It is well to remember that this is the first year of the session and that another full legislative year lies ahead of us before the work of this particular Congress can be properly evaluated. For the purpose of convenience I shall divide this report into sections, the first of which will be the national economy.

NATIONAL ECONOMY

Under this head early actions of the Congress extended until April 1, 1956, the existing excise taxes, the so-called nuisance taxes or luxury taxes, and the 52 percent corporate income tax. While it appears that under the present state of the national debt and some unbalance of the current budget, such an act was necessary, its necessity was to be regretted, and I am very hopeful that early in the next session further relief can be given to the excise taxes which we modified in 1954, and that some relief can likewise be given to the excessive rate of corporate income tax.

The Federal minimum wage was increased from 75 cents to $1 per hour in connection with all activities in interstate commerce. This seemed to me to be very much justified since the former minimum scale had become unrealistic with the passing of the years. This is of particular importance to those engaged in the clothing industry and the textile industry in our district because it tends to increase wages in the South and thus bring them to a more fairly competitive position with our northern factories. This increase was advocated to me by an almost unanimous opinion of both labor and management in our congressional district.

In view of the enormous increase in commercial air transport, we have authorized a 4-year program of airport construction, providing in excess of $60 million a year in grants and aids to States for the improvement and development of local airports.

HIGHWAYS ARE UNFINISHED BUSINESS

It is regrettable in the extreme that in the closing days of Congress the House refused the final enactment of a multi-million-dollar program of highway construction. The President's program, which I supported, would have provided a splendid program financed at least in part by a bond issue. There was great objection raised to the bond issue feature on the perfectly correct ground that the issuance of bonds would add to the cost of the program by the payment of interest, but I was not able to see just what all the fuss was about, because this is the characteristic way that States and localities build their highways, and since highways last for a very long time, there seems no reason why they should not be paid for on this sort of basis rather than impose very drastic taxes all on today's motorists. It was the greatly increased rate of taxes on gasoline, diesel oil, tires, and other automobile use taxes which led to the final defeat of the bill, after the President's program was rejected.

At this time, it seems very probable to me that a proper program, probably on some compromise basis, will be enacted during the next session of the Congress.

INTERNATIONAL AFFAIRS

The most important acts adopted under this head was H. R. 1, which extended until June 30, 1958, the authority of the President to make reciprocal trade agreements and to further reduce tariffs. As is well known, I doubt very much the wisdom of this type of legislation, which wholly abdicates the constitutional control of Congress over the tariff situation, and I am particularly concerned about its effect on our very large glass industry and the thousands of people employed in that industry in our southern New Jersey area, together with its effect on textiles and a number of other important fields of trade.

Recognizing, of course, the importance of foreign trade to our national economy, I still have not been able to see where this act is truly reciprocal and that we have gotten corresponding benefits from foreign countries. As I say, I think that an amendment should be written to it, which I have advocated for some time, which would restore to Congress the right of veto over any trade agreement which Congress considers dangerous to the economy of our country or to a section of it.

The other most important program was a continuance of the so-called foreign operations program, both military and economic. Whether you approve of this program or not, there is a dangerous situation which has developed and which continues to develop wherein the Congress has literally been appropriating more money to the program than the program can actually spend, and this

year the House Subcommittee on Appropriations, of which I am a member, did succeed in cutting $500 million off the new money appropriated for this purpose. These cuts were fully justified and will still give the program more money than it can possibly use during the current fiscal year.

THE PRESIDENT AT GENEVA

By all odds, the most important accomplishment in the foreign field during the course of the year was not an accomplishment of Congress at all, but by the President of the United States at his so-called summit Conference in Geneva. While, of course, no agreements were entered into and no agreements were expected to be entered into, it is my opinion that the President did a magnificent job of diplomacy in Geneva and that he truly created a more friendly feeling than has existed between the United States and Russia for the last 20 years, and has laid a magnificent groundwork for future negotiations. It is quite conservative to say that the prospects for peace are better right this day than they have been for many years in the past, and under the inspired leadership of President Eisenhower there is reason to hope that we might be on the verge of great accomplishments.

NATIONAL SECURITY

The regular draft law, which has been in effect for some years, was extended another 4 years as the result of apparent bitter necessity. A very much modified and changed program of Reserve training was finally enacted which may or may not prove to be effective. Personally, I doubt it. A really effective law in lines of what the Pentagon wanted could not pass the Congress and the compromise result is not a very strong piece of legislation. Very frankly, I am not greatly impressed with the necessity of such a Reserve training program, for one reason because the Pentagon now has such a law which if they would administer it correctly would probably be sufficient for their purposes.

THIRTY-ONE BILLION FOR DEFENSE

To indicate the complete determination of the Congress to maintain our defenses at a very high level, we passed appropriation bills this year totaling about $31 billion, the major part of which was apportioned to the Air Force, and I am hopeful that in the very near future we can begin to reduce, to at least a reasonable extent, these enormous expenditures—which have nevertheless provided us with a first class fighting machine in case the necessity should arise. I have frequently commented that we should spend at least a part of our effort toward a real and concentrated effort to achieve the means of peace, and I am encouraged to observe that the President has created a new department, whose only duty is to provide plans for improving the prospects of peace. This is a healthy change.

VETERANS AND SERVICEMEN

Not a great deal of significant legislation was passed in this field, largely because the groundwork for proper assistance to millions of veterans has been very well laid in the past and the United States rightly has a program which is more generous than the program that any nation has ever adopted at any time, for our veterans and servicemen. The important thing that was done was, of course, the allowance of perfectly adequate appropriations for the Veterans' Administration which ought to permit them to carry on their work in an efficient and generous style. Among some of the specific acts which were adopted was providing substantial increases in incentive pay—anywhere from 6 percent to 25 percent—for members of the Armed Forces which, while an expensive bill, is in the long run an economy because it tends to keep highly trained personnel in the Services and induces them to reenlist, and in the long run is much less than the cost of training new and green recruits. Public Law 88 extends to June 30, 1956, the Veterans' Administration program for direct loans for purchase or building of homes. Public Law 118 extends to July 1, 1959, the provisions of the Dependents Assistance Act and in addition to that a new and thoroughly studied bill has passed the House, which sets up an entirely new, and I think improved system of dependents benefits.

The relationship of the New Jersey congressional delegation, both Republicans and Democrats, with our great service organizations, continues to be most pleasant and cooperative.

AGRICULTURE

The best accomplishment for agriculture in our own particular district is a negative one. The Congress passed by a very narrow vote an act which was designed to restore price supports for basic commodities so-called 90 percent of parity. I voted against this provision. It is contrary to the President's program and definitely contrary to the best interests of agriculture generally and certainly contrary to the interests of agriculture in our State of New Jersey. We, who are engaged in the production of perishable fruits and vegetables and eggs get no benefit whatever from it, and as a matter of fact the egg industry in particular suffers a detriment from it as the result of the artificially supported prices of feed grains which will gradually come down under the present program as support prices are decreased. I say this despite the passage by the House of this bill, because the Senate has not and probably will not take it up, and if they do, the President will undoubtedly veto it, which brings us back to the original law passed in 1948 which provides for the gradual reduction of the support program.

It is a matter of great regret to all of us who have been interested that we have not been able to get the Department of Agriculture to take any real steps of benefit to the egg industry in South Jersey, which has been severely hit lately by a number of factors including the high cost of feeds and overproduction, and of course their troubles were accentuated by the hurricane of 1954, causing a great deal of damage, but with fully expected decrease in the price of feed grains, the outlook for the future seems to be somewhat more hopeful.

The Agriculture Department appropriation bill seems to me to have quite adequate provisions for all legitimate purposes and includes for the most part all of the recommendations that I have had from my friends in the District and from the great farm organizations of New Jersey and the country.

SOCIAL SECURITY, HEALTH, AND WELFARE

I have had the interesting experience of serving on the Appropriations Subcommittee for this department and I can report from personal knowledge that we have allowed very adequate appropriations for all of the departments involved, and especially for medical research into the cause and cure of the great killers of mankind, heart disease, cancer, and many others, and have just recently allowed very adequate funds for the further implementation of Salk polio vaccine to carry out the President's program that no child in America who cannot afford the vaccine will be denied its use.

MEASURES OF SPECIAL INTEREST TO THE DISTRICT

Of some unusual interest at least to the seashore area of our Second Congressional District is the culmination of my work to provide approximately a million dollars this year for beach erosion problems in Atlantic and Cape May Counties, and of interest to the entire district is additional appropriations to the Weather Bureau to permit them to greatly improve and implement their assistance for the early detection of hurricanes and a new law, Public Law 71, which authorizes the Government to make a complete study of the occurrence of hurricanes in New England, New York and New Jersey coastal areas, and elsewhere, to determine methods not only of earlier warnings but of other emergency methods to ameliorate the enormous damage which these great storms cause.

This report would be entirely too lengthy, as perhaps it already is, if I went into the hundreds of details which are involved in our appropriations bills, which are of enormous benefit to one or another groups of our people.

I can conclude with a personal note that I have had an extremely busy, interesting and, I hope, helpful year, and I am looking forward to seeing more of you in the months to come.

During the last few weeks of this legislative year, and especially during the last week or two, I had the privilege of serving on four separate conference committees with Members of the Senate in connection with various appropriation bills, and it is a matter of great personal pride to me that my colleagues in the House and I have been largely instrumental in reducing suggested appropriations by close to a billion dollars. You will permit me to have a real sense of satisfaction from having been a part of this very considerable saving of taxpayer's money.

The State of the Union is good:

America is enjoying peace, and an unprecedented prosperity.

Ninety-Dollar-a-Week Family Entoiled by Creditors

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. MULTER. Mr. Speaker, the following article, written by J. A. Livingston, which appeared in his column, Business Outlook, in the July 30, 1955 issue of the Washington Post and Times Herald, is deserving of our attention:

NINETY-DOLLAR-A-WEEK FAMILY ENTOILED BY CREDITORS

(By J. A. Livingston)

This is the pathetic story of a couple who couldn't say "no" to a salesman—the story of a man, a wife and 2 children under 6, whose lives for the next 4 or 5 years will be entoiled by debt.

It's a grisly sample of man's inhumanity to man which could only occur during free and easy prosperity. Judge for yourself.

The husband, 26, earns about $90 a week in a factory near Philadelphia. But his boss threatens to fire him. Constant telephone calls and personal visits of collectors have been an annoyance. Desperate, he goes to a credit clearing house. The clearing house totes up his obligations to $4,075, as follows:

Finance company (A)	$517
Finance company (B)	478
Finance company (C)	338
Finance company (C), different town	287
Savings and loan association	1,080
Big city bank (A)	245
Big city bank (B)	419
Big city bank (C)	195
Small-town bank	85
Garage	48
Mail order firm	63
Fuel oil company (A)	59
Fuel oil company (B)	82
Department store (A)	96
Department store (B)	14
Furniture store (A)	35
Furniture store (B)	34

In addition, he owes $6,850 on his home. The original mortgage was $6,900, which is about the market value. So he has paid off only $50.

You wonder, How can anyone whose take-home pay, after deducting taxes, social security, union dues, etc., is hardly $300 per month and whose equity in his home is nil, find 17 business organizations willing—even anxious—to extend him credit?

You can understand what happened in the case of the garage. The man left his car to be fixed, promised to pay, and didn't get around to clearing up the account. Similarly, with Fuel Oil Co.-A. He ran up a bill, couldn't get any more credit, then switched to Fuel Oil Co.-B. These are involuntary creditors.

The same excuse can't be offered for the banks. Lending—sound extension of credit—is their profession. In one case, the wife bought a freezer on time and gave three references. The appliance company guaranteed payment to the bank. The bank, being protected by the appliance company, didn't check too hard on the reference. Ditto, 2 other banks, on other appliances. The fourth made a personal loan.

Another professional lender, a Federal savings and loan association, cheerfully provided the money when the couple wanted to modernize their home.

And how did the personal finance companies get into this story? Simple. As the husband got entoiled with banks, the furniture stores, the department stores, he decided to consolidate his debts. He borrowed from Finance Co.-A to pay Tom, Dick, and Harry, but not Paul. So, after a while he tried Finance Co.-B to take care of Paul, plus a new collection of Toms, Dicks and Harrys, and so it went. Two different offices of the same finance company made loans to the couple. Yet, a call from one office to the other—a routine check—would have revealed the debtor's plight.

The sellers wanted to sell. The lenders wanted to lend. Investigation would have delayed "progress."

And the denouement?

The credit clearing house has proposed a consolidated plan of payment—$100 a month. The wife's to go to work. Even so, it will take about 5 years to pay off, since interest on some of the debt continues.

Who's to blame? The husband and wife were indiscreet. They let their wants run away with them. But they were young and inexperienced with lenders. As I see it, the family was victimized. But not by loan sharks. These creditors are staid financial institutions, whose presidents stand for the sanctity of contract, safety of deposits, stability of investment and caution.

The incident poses questions for all of us and, particularly the Federal Reserve Board: Is this an exceptional case? Or, is it an example of caution to the wind—of credit and sales laxity, which comes in gilded ages when easy profits smother conscience and commonsense? Is it a signal—possibly a very early signal—that corrosion underlies this golden glitter we call prosperity?

Milwaukee Sentinel Endorses Fallon Bill

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1955

Mr. REUSS. Mr. Speaker, the Milwaukee (Wis.) Sentinel in a recent editorial praised the farsighted and courageous work of the House Public Works Committee. This editorial has an unusual understanding of the complex problem of financing adequate highways and endorsed the Fallon bill as the answer to this urgent national problem.

The editorial follows:

ROAD VICTORY NEAR

The enlightened action of the House Public Works Committee in reporting out an adequate Federal highway bill brings close to victory the campaign of the Sentinel and other Hearst newspapers for better roads.

The bill, written by Democrat Representative FALLON, of Maryland, still must be approved by the House and agreed to in conference by the Senate.

Its passage will climax nearly 3 years of continuous effort by these newspapers for an adequate highway system:

A system built to handle modern traffic safely—straight, wide, graded, divided highways with access control wherever needed.

One plan the Sentinel and the other Hearst newspapers published in February 1953, called for construction of the 40,000-mile national system of interstate highways entirely at Federal expense.

We said that if money was needed, why not use the $2 billion collected annually from highway users in gasoline taxes and the 10-percent excise tax we all pay when we buy a new car.

The administration bill of February 1955 called for construction of the interstate system through a revenue bond issue. The Government would pay 95 percent of the cost.

The Fallon bill of June 1955, levies tax increases and will pay 90 percent of the cost.

Because the Fallon bill will do the job and because the House Public Works Committee, despite crushing pressures, had the courage to report it after many days of intense and heated private discussion, we are for it.

Tribute To Harry M. Farrell, Late Enrolling Clerk of the House

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein a tribute to Harry M. Farrell, late enrolling clerk of the House.

Fresh from service in the Army of the United States, in which he served from 1917 to 1919, Harry M. Farrell began his service with the House of Representatives on July 4, 1919. His loyal, intelligent application to duty soon marked him as a capable, efficient employe of the Congress. His capacity for service was of the highest order and never varied during his long devoted career. He made notable and conspicuous progress in this chosen field as a servant of the legislative establishment.

Just prior to being placed on the roll of the House as Assistant Librarian, under the Clerk of the House, he assisted in establishing the first gymnasium for Members in the space now occupied by the legislative counsel. He was the first instructor in the gymnasium. Nature had well equipped this fine young man with a splendid physique. He had been an outstanding football player in college. Endowed with powerful shoulders he was a fast, natural boxer. Among the Members he engaged in boxing bouts with in the new gym was the former lightweight champion of the Navy, the late Honorable Fred A. Britten, who was then a prominent Member of the House and later to become chairman of the Committee on Naval Affairs.

Harry Farrell was possessed of a keen mind and strong character. He was direct in his conversations and his ready wit revealed the power of his intellect. His dry humor was intermingled with the vitality with which he tackled his duties every day.

From Assistant Librarian he was appointed assistant enrolling clerk, April 10, 1921. He became enrolling clerk of the House March 1, 1924, by appointment by the late Hon. William Tyler Page, then Clerk of the House. It was in this highly technical field of service to the House of Representatives that the mental stamina and infinite patience served him well, for it is in these little observed but highly important functions of the enrolling clerk where the slightest error may disrupt the legislative path of

actions by the Congress. He justified the confidence of his trust and is said to have been one of the most capable enrolling clerks ever to have served the House.

From December 31, 1931, until February 20, 1947, there occurred a break in his service with the House. During this period he was employed by the Department of Agriculture. Two years after his return to the enrolling clerk's position the House of Representatives created, on January 27, 1949, the position of minority enrolling clerk, in which capacity he served during the time his party was in the minority.

His death in Washington on June 24, 1955, removes from the service organization of the House one of the finest, most able, and steadfastly loyal servants of the House of Representatives. He will be missed by us all but his pattern will be remembered and is worthy of emulation.

Twentieth Anniversary of Catholic War Veterans of the United States of America

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. DORN. Mr. Speaker, during the week of August 14, the Catholic War Veterans of the United States of America will celebrate their 20th anniversary national convention at the Hotel Commodore in New York City.

The convention will see the report of progress made by this national veterans group in the fields of Americanism, Catholic action, leadership, veterans' affairs, and youth welfare. The high spot of the convention will be a gala testimonial banquet to honor the military vicar of the United States Armed Forces, His Eminence Francis Cardinal Spellman, at which time the Honorable James P. Mitchell, United States Secretary of Labor, will be the featured speaker.

In returning to New York City, the birthplace of the organization, Catholic War Veterans are stressing their 20 years of service "to God, to country, and to home."

The Catholic War Veterans of the United States of America was founded by the Right Reverend Monsignor Edward J. Higgins, LL. D., in 1935, "to promote zeal and devotion for God, for country, and for home," the basis of its constitution.

In the course of its two decades of existence, the Catholic War Veterans has to its commendable credit the fact that it has spotted and fought totalitarian and brutalitarian philosophies of both the right and left and stood firm on the solid stand of freedom of the individual and personal independence of its citizenry under the law.

The Catholic War Veterans of the United States of America have received many commendations from agencies in government, in business, in welfare and hospital work, in rehabilitation, in child guidance, in patriotic, fraternal, veteran, and religious spheres. It is recognized by the Veterans' Administration in the handling of cases before it.

It has been commended by several United States Presidents, and a great many American statesmen.

Programs have included: summer camps for youngsters; informative material exposing fascism, nazism, and the cancerous core of Communist propaganda, broadcast and information bulletins on veteran benefits; support of youth groups, establishment of scholarship; fight for veterans' rights and spiritual comfort of our comrades; proper burial for veterans and care for their widows and dependents; exposure of intolerance, bigotry, and disloyalty; promotion of activities which tend to strengthen the moral fiber of nation and its people, and build a greater spirit of faith and patriotism.

The current program of the Catholic War Veterans of the United States of America is strictly positive. The Catholic War Veterans are protagonists of right, truth, and justice. Their whole philosophy is based on the recognition of man's dignity and rendering to God the things that are God's. They insist on the recognition of the moral basis, underlying all political, economic, and social themes.

They believe in action. "It is better to light one candle than to curse the darkness." No program, no matter how magnificent, can be effective unless it is acted upon. They remember this—and act.

The two decades of Catholic War Veterans' existence have proved fruitful for our American freedom; and the future of America is safe when public-spirited, patriotic citizens who have fought for their Nation in war can continue to serve in peace.

The Catholic War Veterans is organized to serve. Size is not the measure of their service, their reputation, their loyalty, their faith, their spirit of fellowship. They take pride in their past, and are confident of their future.

James C. Self, Sr.

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. DORN. Mr. Speaker, my neighbor and friend, the late James C. Self, Sr., was one of the greatest men it has ever been my privilege to know. He was not only an outstanding industrialist but a great humanitarian, philanthropist, and he was a great American.

I have traveled over the world, and I have never seen anywhere the equal of his splendid textile villages in my home town of Greenwood, S. C. His mills, his villages, and his workers all testify to his greatness.

Much has been said and written about James C. Self, Sr., "man of the South for 1952." The following article from the Edgefield (S. C.) Advertiser gives us a splendid résumé of his career and life of service:

MR. JAMES C. SELF, SR., NATIVE OF EDGEFIELD COUNTY, GREAT INDUSTRIALIST AND PHILANTHROPIST, BURIED IN GREENWOOD SATURDAY AFTERNOON

Final rites for James C. Self were conducted Saturday afternoon in the Callie Self Memorial Baptist Church, which stands as a landmark at entrance of model Mathews Village at Greenwood.

Friends from all walks of life filled the church and stood on the church lawn as the simple services for the 79-year-old textile leader were conducted.

Several thousand persons filed through the church on Saturday morning and up to the service hour to view the body as it lay in state before a mass of floral tributes.

The church sanctuary was filled a full half hour before services began, and soon after the balcony was filled to capacity.

The carillon bells which Mr. Self brought from the New York World's Fair and placed in the tower constructed to the rear of the church sounded out hymns preceding the services and for a short time after the rites in the church had been completed.

Jan Kwist, brought from Belgium to play the carillon bells, led the Mathews choir of about 50 voices in Rock of Ages to open the services.

The Reverend J. E. Willis, pastor of the church which Mr. Self built and dedicated to his mother, led in prayer, asking that others might catch up the torch of usefulness and service and carry it on.

Dr. J. F. Lupo, pastor of the Main Street Methodist Church, read the scripture from first psalms and the 23d psalm.

The choir closed the services with Onward Christian Soldiers.

The commital rites were conducted at Edgewood Cemetery in the presence of the immediate family only.

A large representation from Boston and New York representing textile and banking interests with which Mr. Self had been associated, was present.

The chamber of commerce president, the merchants association president and the mayor of Greenwood asked that the stores be closed during the service hour out of respect to the memory of Mr. Self. Mr. Self's mills were also closed during the service hour.

Self Memorial Hospital was his gift to the Greenwood community in 1951, honoring his father and brother, both doctors.

Mr. Self headed one of the largest privately owned textile companies in the world.

While at Durham he received one of the annual Horatio Alger awards sponsored by the American Schools and Colleages Association in recognition of rags-to-riches success stories. He was unable to attend the ceremony at New York's Waldorf-Astoria Hotel and a special presentation was made at Duke Hospital.

In 1952 the former farm boy and store clerk was named "Man of the South" by the magazine, Dixie Business, founder of the South's hall of fame for the living.

Greenwood Mills has 5 plants, all in Greenwood County, employing more than 6,000. Self's only son, James C. Self, Jr., is treasurer of the company.

He was a member of the first class at Clemson College 61 years ago, digging ditches at 8 cents an hour and waiting on tables to help pay his expenses. After 1 year he had to drop out and go to work.

"I made $8 a month in a general store and had to take half of the year's pay out in a horse," he once recalled. That store burned and he found a job in another one. There he worked for 3 years and saved $150. With

that he enrolled in a business college at Richmond, Va.

"I came back to Greenwood in 1898 with nothing in the world but 2 suits of clothes and $15, and got a job as clerk and bookkeeper in a hardware store," Self said. "The next year I went to the Bank of Greenwood as a bookkeeper and in 1903 it made me cashier."

Soon afterward he got into the textile business, in which he was to become one of the South's richest men.

The Greenwood Cotton Mill owed the bank $40,000 and could not pay it. In 1908 he was made president of the mill, with the goal of making enough money to pay the debt. The machinery was obsolete and prospects were so poor that an engineer he hired advised him to forget about the project. Instead, Self went to New England machinery manufacturers and persuaded them to sell him new spindles and automatic looms for stock and notes instead of cash.

For 8 years Self tried to revive the mill, while continuing his work at the bank. But he kept remembering a piece of advice from James B. Duke, founder of Duke Power Co.

"You'll never get anywhere lending $50 on a blind mule," Duke had told him. Self resigned from the bank and became a full-time textile executive.

By that time the mill had added a second plant. Five years later he bought and enlarged the Ninety-Six Cotton Mill. In 1930 he bought the No. 2 plant of Grendel Mills, naming it Mathews Mill and doubling its size. His mills went to 3 shifts daily in 1935.

In 1948 Self announced a $20 million expansion program, without outside financial help, and in 1950 he opened the $6 million Harris filament rayon mill.

Greenwood Mills manufactures fabrics of filament and spun rayon and carded and combed cotton. Cotton goods are finished outside and then sold directly by the New York selling house, Greenwood Mills, Inc.

The Greenwood Mill employee villages are regarded as models throughout the industry. Most of the houses are single-family units of 5 or 6 rooms, designed by Self and built by his huge construction department.

Self spent millions of dollars in building schools, churches and other facilities in the villages. He brought the carillon bells from the Netherlands' World War exhibit and installed them in a tower at Callie Self Church, named for his mother.

"I learned a long time ago that you can't take it with you," Self said 2 years ago. "And I don't think much of a man who makes money in a community and then forgets all about it."

Clemson College awarded him the honorary degree of Doctor of Textile Industries in 1951, compensating in a way for the degree he had to forego in his youth.

Reared as a Democrat, Self voted for Eisenhower in 1952. He remarked at the time that the Democratic Party "has gotten away from us."

Self remained optimistic about the future of the textile industry and the South.

Self returned to Greenwood from Durham a month ago and had been hospitalized since then.

Survivors in addition to his son, include his widow, the former Lura Mathews of Kirksey and four grandchildren, James Self III, Virginia, William Mathews and Sally Self, all of the home. They are the children of the younger Self and the former Virginia Turner, daughter of Dr. and Mrs. W. P. Turner, of Greenwood.

Mr. Self rose from the strained circumstances of the early death of his father to the ownership and direction of a tremendous industrial enterprise, built entirely under his direction.

His industrial creation preceded the very large expansion of the textile industry in this State in the last quarter-century. He was one of those pointing the way for this expansion. But he also kept pace with the growth of the industry to the north of him, in the Piedmont area of the State.

His era as an industrial builder and operator spanned the period of the making merely of "gray cloth" in South Carolina to printing and finishing, and he entered those fields, too, achieving success proportionate with that he had achieved in the days of mere clothmaking.

As Mr. Self built more and more plants in the Greenwood area, that area reflected it with its general economic growth. Greenwood's development is largely grounded in the development of the Self textile industries.

The industrialist provided well for the hundreds who were employed in his plants. A retiring, almost timid man, he never became too big to treat personally with those whom he employed. Plain in his tastes, Mr. Self drove around often in old automobiles of modest cost.

He was particularly proud of the fine brick homes he provided for the employees of his mills. These homes, set in their well-kept lawns, were considered models for mill workers. A great deal of Mr. Self's personal time was given to these homes. Also, outside of Greenwood, there were small farms for those workers who preferred to live in that fashion, and Mr. Self was particularly interested in these.

Dreams, practical skill, and perseverance were all needed in the climb of a fatherless lad of 10 in impoverished postwar Edgefield County to the assemblage in Greenwood where his fellow townsmen, men high in public life and finance and in his own field of textiles met to do him honor.

A short distance in space separates the two points and very little of Mr. Self's life was lived beyond them. And yet, within their confines, he grew to such stature that, as one speaker said "future generations will have a better life as they dwell in the lengthened shadow of this man."

The story of James C. Self has been told many times and in many ways, as each writer sees a different facet of the subject. But through them all runs a central theme of confidence in the future—the big dreams of which Reuben B. Robertson spoke at the Man of the South banquet—and the perseverance and skill to make those dreams come true.

These ingredients were the warp and woof of his life, intermingled as are the yarn and filling in the cloth which comes from the many looms in the textile establishment he headed. Giving warmth and strength and color to the fabric of his life were such things as his intense devotion to the South, the section from which he sprung; his love of a good story, and his concern for the men and women who make up the operating force of Greenwood Mills.

He was known as a doer, rather than as a speaker, but in his response to the Man of the South award, he let shine through in warm fashion one of the guiding lights of his life.

"I love the South," he said on that occasion. "I love the people of the South and the traditions."

"In my more than 76 years I have seen the South rise Phoenixlike from defeat and become an important segment of the Nation. The South is being reborn. Many in other sections are seeing in the South a great potential that can inaugurate a new era.

"Today, no one who knows the facts doubts that the South has become the Nation's greatest frontier. The South has played an important part in this Nation's history. Let us ever be grateful to our forefathers, those hardy patriots who established this great country," he said.

Mr. Self was born at Kirksey in 1876—a scant dozen years beyond Appomatox—the son of Dr. James Anderson Self and Mrs. Callie Holloway Self.

He was deprived of paternal support, however, in an accident rare to this section. Dr. Self, then only 36 years old, fractured his skull skating on the frozen surface of a pond one cold winter day and died from the injury in 1886.

Country doctors, particularly in the struggling South of that day, received few lucrative fees, and not any large part of the smaller ones due them. Dr. Self left his family chiefly a farm and a heritage of character, courage, and sense of public duty that his wife shared with him.

Mrs. Self, who had attended Due West Female College as a young girl, and who had been a schoolteacher, took over the task of rearing three fatherless boys.

Callie Self Memorial Baptist Church, at the entrance to the Mathews Mill village, stands today as a tribute to the devotion which Mrs. Self gave to her sons. The long years of practice which Dr. Self never had also are compensated for in some manner by the 179-bed Self Memorial Hospital which Mr. Self built and contributed without cost to this community. One of the sons, J. H. Self, became a doctor like his father, and the other brother, W. O. Self, was a banker.

There was work on the family farm, but there was schooling, too, and when Clemson College was opened in the summer of 1893, J. C. Self was one of the 446 young men enrolled. Times were hard, and he, like many other students, helped finance their college expenses by digging ditches on the raw new campus for 8 cents an hour.

When he went home in September of 1894 and found that four bales of cotton from his mother's farm brought less than $100 in Greenwood, he accepted the inevitable—his college days were over.

His was not an unusual case in that time, however, for when diplomas were given out in December 1896, only 36 of the original number graduated.

Fifty-seven years later Clemson College conferred on Mr. Self the honorary degree of Doctor of Textile Engineering, and one of the fortunate members of the graduating class, Dr. B. Rhett Turnipseed, was among the distinguished leaders who gathered here last year to honor him as he was presented the Man of the South Scroll.

His life as a college student ended, Mr. Self turned to his own area for employment, and took a job paying $100 a year as clerk at a country store operated by J. M. Gaines. This store burned, however, and he began work as a clerk in the Durst and Mathews store at Kirksey.

This store was owned by S. P. Mathews and W. L. and J. K. Durst. Two of this group have been honored by Mr. Self in naming textile plants. Grendel No. 2 was changed to Mathews in honor of S. P. Mathews when Mr. Self acquired control of it in 1930, and now the new print cloth mill is named Durst Plant in honor of W. L. Durst. This store continued in operation as one of the chief mercantile establishments in the Kirksey area until it burned a few years ago.

Mr. Self stayed at Durst and saved enough money to go to Richmond, Va., and enroll in a business school. With a business-school diploma in hand, he refused employment in Virginia and returned to Greenwood, a move he has never regretted and for which this community can be profoundly grateful.

His first job in Greenwood was as bookkeeper in the W. G. Gambrell Hardware Store. A little later he applied for and got the job as bookkeeper at the Bank of Greenwood, where J. K. Durst, one of his former employers at the store at Kirksey, was president.

J. K. and W. L. Durst had come to Greenwood to try their fortunes. J. K. turned

his interest eventually to formation of a bank in the hamlet of Greenwood, and W. L. Durst organized the Greenwood Mill of which Mr. Self became president in 1908, six years after the death of the man who had organized it.

Mr. Self was promoted to cashier at the bank and held that post at the time he was elected president of Greenwood Mill in 1908, a turning point in his life.

He was only 32 years old at that time, but he had with him the confidence of youth. He needed it. A consultant engineer called in to look over the plant advised him that the best thing that could happen would be to have it burn down.

The mill owed more than it was worth, being in debt $10 per spindle. Mr. Self realized that modernization of the equipment was the only hope, so with an issue of preferred stock, he began negotiating with equipment concerns in the East.

How he wrangled the new machinery and put the mill on its feet is a story which has been told many times. In looking back over those days, Mr. Self still does not know how he got up the nerve to face the equipment men with nothing but the stock of the run-down mill and the confidence that he could do the job.

The little mill got its equipment, however, the first step in an unending succession of replacements whenever better and more efficient textile machinery has been available. The confidence that saw him through that first crisis enabled him to resign as bank cashier in 1916 and devote his entire attention to the mill.

In March 1921, having acquired control of Ninety Six Cotton Mill, Mr. Self was elected president of that mill.

In 1930 he bought Grendel No. 2 and named it Mathews.

He announced plans for a new filament rayon weaving plant in 1948 and completed it 2 years later. Durst Plant was the fifth unit in the Greenwood Mills system.

In recent years honors have come fast for Mr. Self from his fellow citizens of this community and from outside the community and State.

He was elected "Colonel of Industry" by the Greenwood City Council "in recognition of his philanthropic work, his industrial developments, and innumerable civic achievements and gifts to his community and the city of Greenwood."

In 1949 he was elected Greenwood "Man of the Year" by the Rotary Club. That same year he was presented a Chamber of Commerce resolution honoring him for "using his industrial genius to benefit his fellow man in his own country and for his cooperation in every movement and enterprise for the best interest of the people of this section of South Carolina."

The Lions Club elected him "Man of the Year" in 1949, in recognition of "his benevolent genius which has built in this community a business organization which serves as a model for his industry and a source of never-ending benefits for his fellow man."

The Ninety Six Lions named him "first citizen" that same year.

The South Carolina Department of the American Legion presented him its Distinguished Public Service Award for the greatest individual contribution to South Carolina during 1951. Earlier that same month he had received from the University of South Carolina a degree of Doctor of Humane Letters and in November of 1952 he was awarded the Doctor of Textile Engineering degree by Clemson College.

Lander College conferred on Mr. Self the degree of Doctor of Humanities last June.

Last April Mr. Self received from Reuben B. Robertson, of Canton, N. C., a scroll as "Man of the South for 1952."

Iowa Newspaper Denounces Infamous Status of Forces Treaties and Secret Agreements Whereby United States Servicemen Are Sentenced to Foreign Prisons

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. GROSS. Mr. Speaker, it is heartening to find still another Iowa newspaper which is aware of the fact that American servicemen and their families, stationed in foreign countries, may be arrested and tried in foreign civil courts and, if convicted, sentenced to foreign prisons or made to suffer other unusual punishments. These treaties and secret agreements effectively destroy the constitutional rights of these Americans.

It is a pleasure, Mr. Speaker, to insert in the RECORD the following editorial from the Council Bluffs (Iowa) Nonpareil:

UNITED STATES SERVICEMEN SENTENCED TO FOREIGN PRISONS

Congressman H. R. GROSS, of Iowa, recently testified before the House Foreign Affairs Committee in support of a resolution which he had introduced. It provides for revision of treaties and agreements which permit the trial of American servicemen and their dependents in foreign courts, and their incarceration in foreign prisons.

Representative GROSS pointed out that American servicemen may be tried in the civil courts of at least 14 foreign countries, including Japan, Libya, and Saudi Arabia.

There may be more than 14 countries in which American servicemen may be tried because the State Department admits the United States has concluded arrangements with other countries which, it says, in the national interest are classified. That means the names of the countries are kept secret and not even revealed to Members of Congress.

Several members of the committee expressed amazement that the United States had such secret agreements and questioned whether Representative GROSS had his facts straight. He then put into the official record a letter from the State Department admitting it to be a fact.

According to the Defense Department, 58 American servicemen were in foreign prisons on February 10 of this year. There may be more now.

Some 42 were imprisoned in Japan. It is indeed astounding that the United States would give any foreign country criminal jurisdiction over American servicemen, their wives, and children.

Incredible as it may seem, officials of the United States entered into such agreements without any real information regarding the trial procedures in the courts of these foreign nations. We do not know exactly what strange and unusual punishment is being meted out on American youth, drafted and sent into foreign service.

In some instances American boys are deprived of the protection they are guaranteed by the United States Constitution. Among other things, they may be denied the right to freedom on bail; denied presumption of innocence; denied a jury trial; denied counsel of their choice; denied a guaranty they will be convicted only if their guilt is proven beyond a reasonable doubt; denied any guaranty against cruel and unusual punishment.

Furthermore in some countries—including France—they may be at the mercy of Communist judges.

Do you realize that your son or your neighbor's son who has been drafted and sent overseas may be tried in a foreign court on some trumped-up charge, found guilty, and sentenced to a foreign prison without right of appeal?

Representative GROSS is trying to correct this situation. We believe it would be a good idea to write to Representative BEN JENSEN and Senators BOURKE HICKENLOOPER and TOM MARTIN and urge them to use their influence to cancel the treaties which permit such outrages.

The Imports Danger

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. DORN of South Carolina. Mr. Speaker, the Greenville News, published in Greenville, S. C., has a large circulation thoroughly covering the greatest textile manufacturing region in the world. Many of us here in Congress are exerting every effort to have the administration adopt import quotas on cheap Japanese textiles.

Mr. Speaker, the following editorial from the Greenville News ably points out the absolute necessity for an import quota on cheap foreign textile goods:

THE IMPORTS DANGER

In the light of the textile industry's prolonged price depression, its struggle to keep mills running and people working despite present stepped-up imports of foreign goods, and in view of fears that things will get much worse after new tariff cuts become effective in September, it seems high time official steps were taken to keep close tabs on the situation.

States whose economic well-being depends on the textile industry might profitably make use of a plan just now instituted in North Carolina. The Governor created a special three-man commission of top public officials to make a continuing study of the effects of United States trade policies on industry operations, employment, agricultural conditions, and the general economy of North Carolina. Factual information gathered in this manner should help guide those in Washington whose authority in trade matters has a direct bearing on jobs and living standards in the South.

Contrary to an impression voiced a good deal of late the textile industry has no margin of profit with which to combat foreign imports. Textile profits have been so slim for several years that there is no room in the profit margin to lower prices.

Official Government figures prove this. The data comes from the Securities and Exchange Commission and Federal Trade Commission. They report that industry profits, after payment of taxes, for the past year averaged less than 1 cent per dollar of sales. Profits on stockholders' investments in the same time averaged only 1.8 percent. So whichever way you measure industry profits, the answer is the same. They are low and

considerably below the average for all United States business and industry.

The insidious thing about the new tariff cuts, negotiated for Japan's special benefit, is that imports from low-wage Japan will hang a Damocles sword over American markets and American mills. Japanese goods, made at one-tenth of American labor cost, will cause a constant drag on American prices, wage rates, and industry operations. A ceiling will be set on progress, on earnings of American employees and investors alike resulting in forestalling textile plans for new equipment and new plants; a damper on confidence in the future.

Thinking ahead to the long-range aftermath of such a forlorn trend of events, the outlook appears grave. Obviously there is one effective answer to the problem: The setting up of quota controls so as to limit the inflow of foreign goods. Efforts are reported underway in Washington to that end. Meanwhile, the gathering of all pertinent facts on this problem, as they relate to this State, would seem imperative without delay.

What Price Integrity?

EXTENSION OF REMARKS
OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 29, 1955

Mr. ZABLOCKI. Mr. Speaker, the people of the United States want honesty and integrity in their Government—in the officials who manage the affairs of our Nation. We want a Government that we can trust and respect. We want officials who will work for the public interest, and whose conduct will be above suspicion.

I realize full well that these objectives are difficult to attain at times because our Government is a mammoth organization, composed of over 2 million men and women who, while being capable of attaining many virtues, are also subject to human weaknesses. In an organization as large as our Federal Government, we sometimes encounter persons who step out of line and violate public trust. We cannot hope to maintain the integrity of our Government unless such persons are promptly separated from public service.

It was not so very long ago that we heard agonizing cries about the so-called mess in Washington. We heard about a mink coat, about several deepfreezers, and about the 5-percent racket. We were also assured that things of this sort would not occur if the Republicans were given the opportunity of managing the affairs of our Nation.

Judging from many reports, it would appear that some people are having difficulties in living up to those promises. While it appears that the price of influence peddling may have been reduced in some instances from 5 to 4 percent, and while there has been no mention during the past couple of years of minks and deepfreezers, the present administration has run into more serious troubles in other fields.

During the past 3 years, for instance, we have heard about public officials dipping into private slush funds provided by some generous benefactors;

We have heard about mismanagement and corruption in Government procurement, with alleged bribes to procurement officers reaching as high as $50,000, and with mountains of hamburger and veritable lakes of ketchup filling Government storage bins and warehouses;

We have heard about the mess in Government housekeeping functions, criticized by even such a stanch Republican organ as Fortune magazine;

We have heard about cheese manufacturers and distributors making an overnight windfall profit of $2.5 million at the taxpayers' expense, and about shocking windfalls in housing and in the disposition of Government surplus materiel;

We have heard about the abortive and ill-fated Dixon-Yates deal, and about attempts to raid our national resources;

More recently, we have heard about a Cabinet member using his position and official stationary to drum up business from Government contractors for a firm which has been paying him $50,000 a year in partnership profits.

Mr. Speaker, under leave to extend my remarks in the RECORD I would like to insert two editorials which appeared in the July 27 and July 28 editions of the Milwaukee Journal. They are a pretty good indication of many people's feelings about ethics in Government.

The editorials follow:

[From the Milwaukee Journal of July 27, 1955]

TALBOTT SHOULD BE KICKED OUT

No administration that claims to live by what President Eisenhower has called "an uncompromising code" can long tolerate Air Force Secretary Talbott.

The investigations of Talbott's outside business activities have produced evidence of serious improprieties that show up as tarnish on "the hound's tooth."

Talbott admits—and defends—the fact that he has written on Air Force stationery to firms with defense contracts in the interests of a management engineering company in which he is a partner. He has made phone calls to the same ends. At least one company, the Radio Corporation of America, refused to renew a contract it had with P. Mulligan & Co., without an opinion from the Attorney General that it was proper and legal to continue to do business with a firm in which the Air Force Secretary was a partner.

Talbott has told the Senate subcommittee that he had contacted David Sarnoff, RCA president, about renewing the contract. He also said under questioning that he had told the Air Force general counsel that he was "terribly disturbed" because RCA had questioned the propriety of doing business with the Mulligan firm and sought to involve the Attorney General.

It has been testified that the Avco Manufacturing Co. of New York has $200 million in defense contracts with the Air Force and Navy, about half the firm's business. The Mulligan firm landed an Avco contract and Talbott played a part in approaching company officials. Other firms that have employed Mulligan since 1953—when Talbott took office—include, according to the New York Times, the Baldwin-Lima-Hamilton Corp., Olin Industries, the Greyhound Corp., and Libbey-Owens-Ford Glass Co.

The Chattanooga Times has disclosed that another large defense contractor, the Olin-Mathieson Chemical Corp., was approached by Talbott by letter in the Mulligan firm's interest. Letters indicating Talbott's activities have been introduced in testimony—letters on Air Force stationery.

Talbott's connection with the Mulligan firm was brought out at the time of his appointment as Air Force secretary. He said then that he held a "special" partnership in the firm and would not benefit from any firms holding defense contracts. But he testifies now that he is a regular partner and that there have been no "special accounts" in which just Mulligan draws profit. Talbott gets at least $50,000 a year from the Mulligan partnership.

A few of the Republican Senators insist that there is no impropriety in any of this. Senator MCCARTHY even opposed Talbott's earlier offer to quit the Mulligan firm because it would be an admission "of guilt" when there is no guilt. In view of MCCARTHY'S strange concept of what is ethical, it is not surprising to find him defending Talbott's dealings.

The position of Attorney General Brownell is surprising, however. He says he was asked by Talbott for a ruling on outside activities after the matter had been raised by RCA. Brownell says that he gave no ruling, and that such requests would have to made formally by letter to receive attention. Here's queer cooperation and concern for the standards of the "team." What kind of protection is the Attorney General giving the President—who has said that an administration must depend upon its attorney general.

But, all these matters are secondary to the need now. That need is for Talbott's resignation. It is a basic tenet of public service that there be no conflicts of personal and public interests. Talbott fostered such interest. He allowed the appearance of serious improprieties to grow. His withdrawal from the Mulligan firm now is not enough. He should be kicked out as Air Force Secretary.

[From the Milwaukee Journal of July 28, 1955]

WHY WAIT ON FIRING TALBOTT?

President Eisenhower will wait until the end of a Senate investigation before considering the case of Air Secretary Talbott and his outside business interests.

Why? The Senate is pushing the probe to find out whether Talbott's case involves what may be violation of the conflict-of-interest law. As the President says, illegality has not yet been proved.

But the President's concern should be something else—the ethics of his aides. The President himself, in speaking of the Talbott case, has said that the actions of a public official must be impeccable and that he must avoid giving even the impression of wrongdoing.

Consider these matters already made clear by the investigation to date and Talbott's own admissions:

Talbott wrote letters on Air Force stationery and made calls from the Air Force offices to get business for the firm of Paul B. Mulligan & Co.—in which Talbott held a full partnership. He was shocked when Radio Corporation of America questioned the propriety of doing business with a firm in which the Air Force Secretary received profits. Talbott, an RCA official swears, said that RCA should stop being so high and mighty.

Talbott told the Senate committee that considered his nomination more than 2 years ago that he held a special partnership in the Mulligan firm and did not participate in profits from defense contract firms. Yet he has shared equally in those profits ever since and has aided in obtaining those contracts.

Mulligan is an efficiency expert. Yet he saw no inefficiency in paying half the firm's

profits to Talbott, who took no constant active part in the business. Why? Isn't there at least the appearance that Mulligan considered Talbott's position of value in seeking business?

Certainly there is the appearance of improper use of office. Certainly in acting from the Air Force office to aid in getting contracts there was actual impropriety and very questionable ethics on Talbott's part.

What more need the President know to act? Talbott's own admissions have been enough to show that he has violated the standards the President keeps saying he insists upon.

Minority Views on the Foreign Aid Bill

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. ADAIR. Mr. Speaker, I wish to insert in the CONGRESSIONAL RECORD several pertinent excerpts from the views submitted by four members of the House Foreign Affairs Committee in a minority report on the mutual security bill—commonly known as the foreign aid bill.

This minority report, not having been placed in the CONGRESSIONAL RECORD, I believe that those who joined in voting against this bill when it was approved by the House would appreciate a restatement of some of the views set forth therein. The report was signed by Mr. SMITH of Wisconsin, Mrs. CHURCH of Illinois, Mr. BENTLEY of Michigan, and myself.

Since, by the executive branch's own figures, there was unexpended on June 30, 1955, about $8.7 billion in foreign-aid funds, the need for additional funds at this time is the more difficult to understand.

Portions of the report follow:

This marks our third consecutive report of minority views on the mutual security program. The first was on the Mutual Security Act of 1953. The second was on the Mutual Security Act of 1954. And now we feel compelled on the basis of the same objections we have heretofore enunciated to express our minority views on the proposed Mutual Security Act of 1955.

It is true that we support certain programs in this bill. Technical assistance has now become, and must remain, a people-to-people program of sharing know-how and technical skill. Helping people to help themselves brings lasting benefits with which we are in full accord. Such a program builds self-respect for peoples and independence for nations and should build reliable friends for the United States, which we sorely need. We also support other self-help humanitarian projects, typical of which is the international health program for children and mothers in the underdeveloped areas of the world. Such programs are in keeping with American history and American principles.

Just as it is important for the Congress and its Members to restate our fundamental principles—we have done this recently in the passage of House Concurrent Resolution 149 on colonialism and Communist imperialism—so we feel we must voice our opposition to a program each time it is presented to the Congress when such a program continues its disregard of such principles. The bill before this House is such a program.

The mutual security program authorized to be continued in this bill demonstrates a shocking lack of confidence in the fundamental principles which have made our Nation great. Respect is not a commodity which can be bought nor can security be attained by a mutual security program which is based on false concepts.

THE NEED FOR REAPPRAISAL

In the past we have urged what to us has seemed natural and logical—a thorough study, a reappraisal, a redefining of foreign policies, techniques and statutes concerned with the goal of international peace and security, which we all seek. The executive branch has not seen fit to do this before submitting this bill to the Congress; nor has the Congress of the United States itself, which is directly responsible to the people who foot the bills, make the sacrifices, and fight the wars, undertaken such an analysis. This program, encompassed in the proposed Mutual Security Act of 1955, has been given less consideration from the point of view of legislative analysis and evaluation than in any previous year. This is true despite the fact that, as we have pointed out in our past minority reports, this program has no foreseeable termination date.

* * * * *

THE SUPPORT OF COLONIALISM

We do not agree with the further statement in the majority report that "There is today evidence on every continent that the mutual security program has begun to give us important foreign-policy advantages."

* * * * *

The mutual security program in this bill, more than ever before in its history, illustrates the almost complete abdication of our congressional constitutional and traditional powers. The Congress has lost control over the spending and over the policies adopted by the executive branch in spending the taxpayers' money.

Indeed, the executive branch itself has lost control over the programs which it is charged with administering.

* * * * *

THE BLANK CHECK

The abdication of congressional duties and responsibilities, as already instanced by vast transferability powers, is further glaringly evidenced by the proposed blank check which is given to the Executive in this bill. The hearings on the measure disclose little account of precisely how the money requested in this bill will fit into the new requirements.

* * * * *

We do not feel that there should be any authorization for a new mutual security program until the Department of Defense has reached the point where it can come back to the Congress and give us its detailed findings on the soundness of these past programs—programs against which, we again remind the House, we filed minority views last year and the year before.

The provision in the bill establishing the President's Fund for Asian Economic Development and authorizing approximately $200 million for such purpose is a further striking example of the abdictation of congressional control over the expenditure of funds by the executive branch. Do we know which countries in Asia will be receiving assistance out of this fund? And how much? Do we even have an estimate of how much each country will be receiving beyond some "conceivable" projects? Do we know what projects will be used for development purposes? Do we have any idea of what contributions the recipient countries themselves will be making? Do we know how much the executive branch expects to spend in fiscal year 1956 out of this fund? The hearings disclose no clue to any of these questions. What is certain, and what can be stated in certain terms, however, is that if such a fund is established, $200 million will be used, one way or another, by June 30, 1958, the termination date in the bill for the fund. But for whom, for what and how much we do not know. Nor do the administrators of the mutual security program. Under the provisions setting up the fund "the President is authorized to utilize the appropriations made available for the fund to accomplish in the free Asian area the policies and purposes declared in this act and to disburse them on such terms and conditions, including transfer of funds, as he may specify to any person, corporation, or other body of persons however designed."

Nowhere in any legislation we know of has such sweeping and blanket authority been delegated on such unknown terms. We ask the Members of this House to read these quoted words slowly and carefully. We have read them slowly and carefuly. We do not feel that congressional authorization and appropriation for the continued concept of "blank check" in the mutual security program, so pointedly exemplified in the above provisions, would constitute the proper exercise of our responsibilities as representatives of our people.

Lecture Tour of Dr. Charles J. Zinn, Under International Educational Exchange Program

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. WILLIS. Mr. Speaker, the law revision counsel of the Committee on the Judiciary, Dr. Charles J. Zinn, has returned from a lecture tour of universities in Germany under the auspices of the International Educational Exchange Service of the Department of State. I believe that the exchange programs are among the most effective means of communicating our American ideas and standards to the people of other nations and obtaining a worldwide understanding that is essential for peace.

Dr. Zinn has been law revision counsel since the beginning of the 76th Congress and has supervised and directed the preparation of all new editions and supplements of the United States Code and the District of Columbia Code and the various revisions of titles of the United States Code,, which is one of the important functions of the subcommittee, of the Committee on the Judiciary, of which I am chairman.

Under leave to extend my remarks, I am pleased to include the following letter of Hon. Russell L. Riley, director of the International Educational Exchange Service, to Representative CELLER, chairman of the Committee on the Judiciary, reporting on the success of Dr. Zinn's lecture tour:

DEPARTMENT OF STATE,
Washington, July 28, 1955.

Hon. EMANUEL CELLER,
Chairman, House Committee on the Judiciary, House of Representatives, Washington, D. C.

DEAR MR. CELLER: We have just received an excellent report from our Embassy in Bonn, Germany, reporting on the visit of Dr. Charles J. Zinn, under the International Educational Exchange program. First of all, we would like to express our gratitude to you

and the Committee on the Judiciary for your willingness to relinquish Dr. Zinn's services so that he could undertake this visit. Such an understanding attitude on the part of your committee adds great weight to the effectiveness of our efforts.

If I may, I would like to quote directly from the report concerning Dr. Zinn's activities and effectiveness while in Germany:

"His tour was a complete success, bringing together a happy combination of an excellent performer with something to say and superior audiences who were happy to see him and who understood completley what he had to offer.

"It was a real pleasure to arrange Dr. Zinn's tour. The contacts which he had made during a previous visit to Germany included high officials of the Justice Ministry, both Houses of the German Parliament, leading jurists and the deans of many university law faculties. These persons were, without exception, pleased to welcome Dr. Zinn back to Germany as a lecturer and proved valuable to us in arranging his tour.

"The value of Dr. Zinn's tour lies not only in his very good performances, but perhaps even more in the great number of private conversations which he had with German jurists and parliamentarians concerning codification of the law, the American balance of power doctrine and our legislative process. Dr. Zinn devoted almost all his free time to such discussions and we have seldom observed a person willing to work so strenuously for the program."

Sincerely yours,

RUSSELL L. RILEY,
Director, International Educational Exchange Service.

Swiss Independence Day

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. LESINSKI. Mr. Speaker, it is a privilege to call the attention of this body to Switzerland's Independence Day.

A country in central Europe, Switzerland has maintained its independence since 1291. During the 664 years the Swiss people have shown the world how peoples of different languages and nationalities can live together peacefully and democratically.

We may expect this small, industrious country to serve as host to many great international conferences in the future, enabling, we hope, the governments of the world to catch the spirit by which the Swiss people govern themselves.

Mr. Speaker, I am pleased to have this opportunity of submitting the following proclamation issued by G. Mennen Williams, Governor of the State of Michigan:

PROCLAMATION—SWISS INDEPENDENCE DAY

In this 664th year of their independence, the democracy of Switzerland continues to be a beacon of freedom to all those who aspire to the benefits that only a truly democratic society can provide. Its strength is derived from agriculture and modern industry as well as the continued preservation of personal liberties within the framework of states rights. The varied nature of its population, customs, and religion has continued throughout its history yet there is a sturdy national character as distinctive as its rugged terrain.

It is important that freedom-loving peoples everywhere take this opportunity to reaffirm their determination to maintain that freedom. The Swiss democracy, dating from 1291, with a revision of the constitution in 1848, has inspired other people to seek and establish democratic government. The friendship that the United States of America and Switzerland share can do much to preserve our freedom from those who seek to destroy true liberty. Continued devotion to these high ideals by our peoples will be an inspiration to others.

Each year it is customary to observe August 1 as Swiss Independence Day.

Therefore, I, G. Mennen Williams, Governor of the State of Michigan, do hereby proclaim Monday, August 1, 1955, as Swiss Independence Day in Michigan, and urge all our citizens to join with their brethren of Swiss descent in paying tribute to the great history of the Swiss democracy.

Given under my hand and the great seal of the State of Michigan, this 29th day of July, in the year of our Lord, 1955, and of the Commonwealth the 119th.

G. MENNEN WILLIAMS,
Governor.

By the Governor:

JAMES M. HARE,
Secretary of State.

They Speak Peace, but Mischief Is in Their Hearts

EXTENSION OF REMARKS
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. LONG. Mr. Speaker, the Western World has been witnessing a most remarkable spectacle. Soviet Russia, it seems, has set out upon a course to convince the world that it really does want peace. In every conceivable manner, Soviet leaders have taken pains to give the appearance of substance to the shadow of the long-heralded Stalin "peace" offensive. No efforts have been spared to show the world that the men in the Kremlin are really reasonable, peace-loving, and trustworthy men.

However, peace—a real peace as we interpret its meaning—in order to be lasting, must be based upon trust, confidence, and mutual good faith. These are fundamental requirements for peace. I would like to believe that the Soviets want a real peace because the alternative—war in the hydrogen age—raises a specter of horror. But I cannot believe that the leaders of the Soviet Union meet the requirements necessary for the attainment of a real peace; that is to say, trust, confidence, and good faith. They have never been trustworthy. They cannot be trusted now. The long catalog of broken treaties and agreements concluded during the existence of the Soviet regime is convincing evidence of that fact. The Bible tells us, in the words of King David, in the 28th Psalm:

Take me not off with the wicked, with those who are workers of evil, who speak peace with their neighbors, while mischief is in their hearts.

Unlike the freedom-inspired nations of the world whose foreign policies are rooted in the desire to live at peace, the foreign policy of the Soviet Union is a military campaign, the ultimate objective of which is world conquest. To the Soviet leaders peace is never absolute; it is never an end in itself. The political philosophy of the Soviet State is not based upon the concept of good-will towards men, but rather it is based on the belief that all mankind is at war with itself, that the millennium will come only with the conquest of the world by communism. Communists thrive on conflict, disorder, and disharmony, and when they seek peace it is not as a permanent goal. To them peace is a tactical weapon. It is only a diversionary tactic to gain time to recoup their energies before striking with greater force.

The recent conference at Geneva was a major attempt of the Soviet leaders to demonstrate to the world their new policy of peaceful co-existence. Meeting the most powerful leaders in the West, Khrushchev, Bulganin, Molotov, and Zhukov did their utmost to convince them and the entire world of their sincere desire for peace. Indeed, the leaders of the Soviet Union came to Geneva with a smile on their faces, but there was malice in their hearts. At every turn they gave the appearance of sweet reasonableness but they conceded nothing in the course of this conference. From their mouths which have spewed forth some of the most vicious, libelous, and malicious criticism of the West, and especially of the United States, there came forth now the honeyed propaganda platitudes of the peace campaign.

What was accomplished at Geneva? Nothing. Absolutely nothing. All the Soviet leaders did after a week of talking was to create the illusion of agreement.

On the surface, Soviet tactics have changed, but while Soviet tactics have changed Soviet strategy goes on unchanged. The Soviet Union seeks world conquest; it seeks the destruction of all the positions of strength created at such great cost in time, energy, and treasure by the United States and the West; it seeks, above all else, the destruction of the United States. Let it never be forgotten that America is the principal adversary of the Soviet Union. This Nation, first and foremost, restrains the predatory ambitions of the Soviet leaders. Let it never be forgotten that the threat of war is always with us so long as the Communists do not cleanse their hearts.

In the months ahead America must be on guard. We must view all these current Soviet gestures of amity with caution and with realism. Let the President remember those wise words of King David:

Take me not off with the wicked, with those who are workers of evil, who speak peace with their neighbors, while mischief is in their hearts.

The United States should keep wide awake because the soft tones could be a Russian lullaby.

We permit ourselves to be drawn into talks with Russia. It is like playing with a rattlesnake in its coil. No good can come of it and we are bound to get hurt.

Schedule of Official Tour of the Fourth Indiana District

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. ADAIR. Mr. Speaker, with the adjournment of the first session of the 84th Congress, I wish to announce plans for my official tour of the Fourth Indiana District.

During my service in the Congress, I have made it a custom to tour the eight counties comprising the district I represent, to obtain first-hand reports on legislative and governmental matters and information from the people I serve.

These official tours, I have found to be of tremendous value in informing me of the grassroot sentiments. Opportunity is also afforded for free discussion of governmental problems in which my constituents are vitally interested.

It has been my policy to be present in the various courthouses and invite the people of these counties to meet with me.

To assure good government, I have always believed that we should keep it to the extent reasonably possible at the local level where every citizen can take part and express his views on current legislation or national problems.

I am looking forward to visiting the various county seats of the district again this fall and extend a warm invitation to all who are interested to visit with me when I am in their locality.

The 8 counties in the 4th Indiana District are: Allen, De Kalb, Whitley, Steuben, Lagrange, Wells, Adams, and Noble. I shall hold these courthouse conferences on this official tour at the following times and places and hope to have the pleasure of meeting with all interested constituents:

September 19, courthouse, Bluffton.
September 20, courthouse, Decatur.
September 21, courthouse, Auburn.
September 22, courthouse, Angola.
September 23, courthouse, Lagrange.
September 26, courthouse, Albion.
September 27, courthouse, Columbia City.

I shall be in each place from 10 until 12 and from 2 until 4 and other appointments may be made by special arrangement.

Upon the completion of the tour, I will open an office in the Federal building, at Fort Wayne, room 310, to carry on my official duties as Representative of the 4th District, and want the public to know that they are welcome to call at the office to discuss their personal legislative or governmental problems. My office in Washington, located in room 1511 House Office Building, also will be open during adjournment to enable me to carry on my obligations and responsibilities and to assist constituents.

This has been an important period in our national history and I feel we have come a long way in achieving peace and prosperity for our people. We must continue all efforts in this direction.

Fishing For Kids Only—West Branch, Mich., Leads the Way

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. CEDERBERG. Mr. Speaker, up in the 10th Congressional District of Michigan the small community of West Branch, nestled in the hills of Ogemaw County, has set an example for the Nation in interesting young America in the sport of Izaak Walton.

The community has armed itself with a strong weapon against juvenile delinquency, against boy gangs, and against atheistic communism.

A few years ago a group of West Branch citizens, whose interest in youth went beyond the mere talking about the youth problem, set about to do something for the youngsters.

The result was "fishing for kids only," which in West Branch means that the waters of the trout-abounding Weidman Creek, which winds its way through the town, is set aside for fishing solely by boys and girls under 16 years of age. And 24 property owners along the route of the creek have cooperated by hiding their "no trespassing" signs insofar as applying to the kids fishing from the creek banks of their land.

The idea of "fishing for kids only" which was pioneered in West Branch caught on quickly in Michigan and now about 40 communities are sponsoring similar projects.

Just how the proposal caught fire is described in the Kiwanis magazine as follows:

> Two years ago, Kiwanian Mickey Duggan decided he wanted to do something to keep juvenile delinquency out of West Branch, Mich. Remembering how he liked fishing as a boy, Mickey thought it might be a good idea to give the local kids a private fishing preserve. West Branch gets its name from a trout stream that cuts through the heart of town, and Mickey's plan was to restrict fishing there to boys and girls 16 years old and under. He explained his idea around town, and everyone liked it. The State conservation department stocked the stream with trout for the kids.
>
> Then West Branchers collected enough money from local sources to buy a 10½ acre plot of land bordering the stream. The kids went for the idea in a big way. Although thousands of trout were dumped into the stream at the beginning of the season, another load had to be planted.
>
> Said one parent: "We used to worry about what our children were doing after school. But now, when we know they're fishing, our worries are over." The West Branch club, meanwhile, has been busy answering letters from educators, youth leaders, law officers, and park officials all over the country who want to learn more about the West Branch project.

So when a West Branch dad's favorite trout rod is missing he usually hikes for Weidman Creek and tries to locate Junior and the rod. A lot of pops and moms got the habit of trailing junior to the stream but in some places the going was pretty rugged for mom because much of the shoreline was brush covered and much more had been used as a dumping place so out of that came another benefit for the community. Some ten and a half acres of land along Weidman Creek were donated to the city by the West Branch Kiwanis Club, the Producers Refining Co., the Precision Manufacturing Co., and Mr. and Mrs. Paul Keeler.

Today this area is a beautiful spot known as Irons Memorial Park. There are signs on the larger trees, identifying them. There is an artesian well, fireplaces, picnic tables, log catwalks across the stream, and "old swimming hole."

Some civic-minded people donated money and others donated equipment, supplies, and labor to make the park possible. The park was another fruit of "Fishing for Kids Only."

But back to "fishing for kids only."

There has been another product of the program. The youngsters of the West Branch area have come to realize the value of clean streams and streams free of tin cans and garbage so they are doing their bit to keep their favorite fishing grounds free of litter.

The "fishing for kids" program is now sponsored by the retail merchants division of the West Branch Chamber of Commerce and this group has erected signs along the protected area of the stream proclaiming:

> Mr. Fisherman, you are on your honor. This stream is reserved for boys and girls 16 years and under.

The Michigan United Conservation Club publication had this to say about it:

> Some said the project would be a passing fancy—that there wouldn't be enough kids on the stream to make it worthwhile. A few days before the season opened the stream was stocked with legal size trout.
>
> When the opener rolled around the youngsters were out on the stream by the hundreds. Being a little short on tackle, they were angling for trout with willow poles, casting rods and almost any type of fishing rig. Others rushed home and "borrowed" Dad's fly rod, net creel, and boots. Some 8-year-olds on the stream were almost hidden in their big boots.

The program has the approval of the Michigan Department of Conservation and Gerald E. Eddy, director of that department, says:

> In many places, interested civic groups have set up and reserved stretches of natural public waters for kids. The State conservation department encourages this sort of natural use wherever it appears justified. Not unnatural ponds or stocked waters, but stretches of stream where Dame Nature is still chief stockholder. It's a project that service clubs, chambers of commerce, sportsmen's clubs, and other interested civic groups might find singularly profitable.

The project is being copied by other communities in Michigan and I hope my colleagues in the House will call it to the attention of some of your civic minded constituents because I am sure my friends in West Branch do not want to monopolize the idea. I am interested in young America. I want to do what I can to interest him in baseball and other competitive sports and in fishing and in conservation and in God's great

out-of-doors. If we can direct the attention of our youth along these lines we will have need for less national concern about some of the youth problems that have been discussed on this floor during this session of Congress.

I invite my colleagues to come to the Tenth District of Michigan after Congress adjourns and enjoy our out-of-doors and our recreational areas. We have beautiful streams abounding in trout, our fresh-water lakes with game fish awaiting your lure, and beautiful Lake Huron with its perch and other fish.

The Low-Income Farmers

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. BENTLEY. Mr. Speaker, I call attention to the fact that this Congress has failed to provide the money requested by the administration to help get the low-income farm program under way. The CONGRESSIONAL RECORD contains speech after speech about the needs of family farms—especially the small farmer. But when it comes to action the low-income farmer is again the forgotten man.

The price-support and stabilization programs during the past year cost over a billion dollars. I want to make it clear that I am for price supports. The benefits went primarily to 2 million of the larger, more prosperous farmers, the ones best able to care for themselves.

There are 1½ million farmers with incomes of less than $1,000 per year. They get little or no benefits from price supports. The administration announced a program for these low-income farmers and asked for a modest fund of $3 million, plus $30 million for loans. This Congress was in the process of denying any help for this program.

It was only after Senator AIKEN spoke out in protest at the last minute on July 26 and an amendment was submitted by Senator THYE that $15 million with administrative expenses was provided for loans to the low-income farmers. The rest of the funds were denied. These low-income farmers can get additional help only by borrowing. Again they are the forgotten people.

Senator AIKEN said:

The President pointed out ways in which the low-income farmers could be helped, and he has asked for a very modest amount of money to be used in helping them. * * *

I had hoped that Congress would respond to the President's request. More than 1,000 counties, or about one-third of all the counties in the United States, are low-income counties; that is counties in which farmers who are hard up live. I regret very much that after the President had made this request of Congress, the House recently eliminated every dollar of appropriation, I believe, which would have enabled the several departments which would have cooperated to have helped improve the lot of the 1½ million low-income farmers.

I am more than disappointed, upon coming to the Senate today, to learn that the Senate Committee on Appropriations also has eliminated the funds which would have helped the President to carry out his program to improve the lot of the 1½ million low-income farmers.

President Eisenhower in sending the program to Congress said:

We must open wider the doors of opportunity to our million and a half farm families with extremely low incomes—for their own wellbeing and for the good of our country and all our people.

This Congress will go home to find that all across this country, prominent leaders agreed that the rural development program for low-income farmers was sound. They will find disappointment and regret that Congress provided only one-half the loan funds requested and denied other modest requests of $3 million to help low-income farm families.

The Sweet Uses of Adversity

EXTENSION OF REMARKS
OF
HON. W. PAT JENNINGS
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. JENNINGS. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial from the Ashville Citizen of Thursday, July 28. This editorial was written by Mr. Paul A. Rockwell, and concerns a bill which I introduced to aid the last surviving Confederate veterans.

The editorial follows:

THE SWEET USES OF ADVERSITY

(By Paul A. Rockwell)

Congress very justly passed last May a bill to pay all medical expenses of Albert Woolson, 108 years old, the sole surviving veteran of the Union Army of the 1860's.

A similar bill was introduced in Congress by Representative PAT W. JENNINGS, of Virginia, to aid the last three remaining Confederate veterans, Walter W. Williams, 112, of Franklin, Tex.; John Salling, 109, of Slant, Va.; and William A. Lundy, 107, of Laurel, Hill, Fla. Action on Representative JENNINGS' bill has been slow. Perhaps Congress believes the ex-Confederates still are able to look out for themselves.

The men who wore the gray have been taking care of themselves for a long while. After the surrenders at Appomattox and Greensboro and elsewhere throughout the South, those who had fought so long and so well went home to scenes of desolation without parallel in extent in the history of our race. The Scotch highlands after Culoden and the passage of the "Butcher" Duke of Cumberland and his English troopers may have been somewhat similar but on a vastly smaller scale. An entire civilization had been swept away, gone with the wind forever. The ex-Confederates found ruins, devestation, mourning on every side. All the South had left was courage, pride in a cause well defended, land—if taxes thereon could be met—and hands (often only one to a man) with which to labor.

For a long time the Confederate veteran often went hungry, but he had been hungry throughout most of the 4 years of war. Only after he had grown old were the various States that had seceded sufficiently recovered to vote him a tiny pension. From 1865 until his death, he usually knew what want and worry were, for they were his constant companions.

The North, on the other hand, was swollen with victory, wealth and the spoils of war. The defeated South was occupied for over 10 years by blue-clad troops, and whatever of value war had left there was gobbled up by the carpetbaggers and their henchmen. While the South suffered and struggled to remain alive, an unprecedented wave of industrial expansion, railroad building and prosperity set in at the North.

The veterans of the Grand Army of the Republic quickly banded themselves together and became a mighty political power, more formidable in time of peace than they had been on the battlefields. For over a third of a century, a man who had not worn a blue uniform in the 1860's had slight chance of living in the White House, or representing a northern State in the Halls of Congress. The slackers and war profiteers did not "have it so good" as they did between the two World Wars.

The Union veterans voted themselves and their widows the most generous pensions ever paid in the history of any nation. None of them needed to go hungry, or worry about the future. In truth, "to the victor belonged the spoils."

Under such favorable conditions, one would think the Union veteran would outlive the Confederate veteran. According to the Adjutant General's figures, 2,698,304 men and boys wore the Federal uniform during the war against the South. Many Confederate Army records were destroyed in the war, but 625,000 men is the generally accepted estimate of the soldiers of the Confederacy. Judging from the relative strengths of the two opposing armies, and granting equal stamina and average good health, there should be 13 Union veterans alive today to the 3 Confederates.

Perhaps prosperity, easy living, lack of want and worry do soften a man, make him more vulnerable to disease, an easier prey for death. If it is a privilege to live to an advanced old age—which is disputable—ex-Confederates Williams, Salling, and Lundy may be saying with Shakespeare, "Sweet are the uses of adversity."

The National Debt

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Friday, July 29, 1955

Mr. SIKES. Mr. Speaker, this is heralded as the year of America's greatest prosperity. Unquestionably America does enjoy great prosperty. It is a time when Government income should reflect this optimistic picture with a resultant balanced budget and a reduction in the national debt. Actually we do find Government revenues up—but so are Government expenditures. While business prosperity generates more Federal income, United States spending happily absorbs the increased receipts. Instead of a reduction in the amount of the national debt, we find that it continues to mount. If we cannot now have fiscal responsibility and a balanced budget, when may it be expected? The outlook is not in any sense one to encourage con-

fidence in the Nation's fiscal management.

The job of finding ways to reduce spending has gotten tougher just since last January. While reductions in the year just past were sharper than the President planned 18 months ago—in January 1954—they did not measure up to what Mr. Eisenhower predicted in January 1955.

Specifically, the President foresaw this outcome in his budget message just 7 months ago:

Income was to be $59 billion.

Outgo was to be trimmed to $63.5 billion from $67.8 billion the year before.

The deficit was to be $4.5 billion.

Now, with the year over, you can see how it came out:

Income was $60.3 billion.

Outgo was $64.5 billion.

The deficit turned out to be $4.2 billion.

Income, in other words, was up $1.3 billion from the January estimate. An end to the business recession—a vigorous upturn—did that for the administration.

Yet spending was up almost as much, a billion dollars, from the January expectations.

Actually, the $64.5 billion of spending represents not an upturn in spending, but a failure to slash outlays as sharply as expected.

Despite this record, the fact is that spending cuts were substantially smaller than the President predicted in his January 1955 budget message.

The failure to reduce spending is raising questions as to whether the administration will balance the budget even during its fourth year in office.

Revision and Extension of Sugar Act of 1948

SPEECH

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 30, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 7030) to amend and extend the Sugar Act of 1948, as amended, and for other purposes.

Mr. COOLEY. Mr. Chairman, as I explained in the outset, because of the pressure of time, it is not possible for me to discuss, with any degree of satisfaction, the details of this complicated bill. I am glad to provide for the record detailed information which I hope will be beneficial and helpful. I have prepared a statement in the nature of an analysis of the bill, which I hope will be carefully considered. Here is the statement:

PRESENT SUGAR ACT

Objective: The major objectives of the Sugar Act are to maintain a healthy domestic sugar industry, to assure adequate sugar supplies to consumers at reasonable prices, and to promote our general export trade.

Outline of major provisions: The total supply of sugar that may be marketed in the United States is determined annually by the Secretary of Agriculture at a level, which, in conjunction with existing demand conditions, is expected to produce a price fair to both producers and consumers. Shares in the total supply are assigned to domestic and foreign sugar-producing areas. Whe necessary, domestic quotas are subdivided into marketing allotments for each qualified marketer. Also, when necessary, the quota for each domestic area is subdivided into proportionate shares assigned to individual producers of sugarcane and sugar beets. Government payments are made to domestic growers who comply with the condition prescribed in the act.

Determining sugar requirements: Each December, the Secretary of Agriculture is required to determine how much sugar will be needed to meet United States requirements for the subsequent calendar year. A public hearing is held at which all interested persons, including consumers, industrial users, wholesalers, refiners, sugarcane and sugar-beet processors, and producers may present views and recommendations on the matter.

Establishing quotas: After requirements are determined, each domestic and foreign producing area supplying the United States with sugar is assigned a quota representing its share of the United States market. The law establishes fixed marketing quotas for the five domestic areas and the Philippines and residual quotas to Cuba and other foreign countries. Cuba receives 96 percent and other foreign countries 4 percent of the residual quota. Fixed quotas for the domestic areas are as follows:

Area:	*Short tons sugar (raw value)*
Domestic beet sugar	1,800,000
Domestic cane sugar	500,000
Hawaii	1,052,000
Puerto Rico	1,080,000
Virgin Islands	12,000

On the basis of an annual sugar requirement of 8,400,000 tons, domestic areas supply about 53 percent and foreign countries supply about 47 percent.

Establishing marketing allotments: One important function of the sugar program is to promote orderly marketing. This cane sometimes be accomplished through quotas alone. However, quotas may not suffice, especially when supplies in the producing areas materially exceed the quotas. If the Secretary believes that the pressure of supplies in an area is likely to result in disorderly marketing, he must allot the quota fairly among persons who market Sugar. This allotment assures each marketer of an equitable share of the market, and permits the conduct of business on a more stable day-to-day basis.

Establishing proportionate share—acreage allotments: When the indicated sugar supply for a domestic area is greater than the quantity needed to fill the quota and provide a normal carryover inventory, the act requires the Secretary to divide the market among individual producing farms. The total amount of sugarcane or sugar beets that may be harvested for sugar on a farm, is known as a farm's "proportionate share." The establishment of proportionate shares assures that each eligible farm in the producing area will receive its fair share of the market and at the same time, bear its fair share of any required adjustment in production. Among other conditions, producers are required to market within their proportionate shares if they wish to qualify for conditional payments.

Making conditional payments: In addition to the price protection afforded growers under the quota system, the act provides for direct payment to growers ranging from 80 cents per 100 pounds of sugar for production of less than 350 tons of sugar per farm, down to 30 cents per 100 pounds for production in excess of 30,000 tons per farm. The average payment for all domestic producers is about 67 cents per 100 pounds. In addition to these payments, the act affords a degree of protection to producers with respect to bona fide abandonment of planted acreage and crop deficiencies of harvested acreage resulting directly from drought, flood, storm, freeze, disease or insects. In the case of payment for acreage abandonment and crop deficiency, the payment is computed on the basis of specified percentages of the farm's normal yield.

Conditions of payments: To qualify for conditional payments, producers must fulfill a number of conditions. These are: (a) they must not employ child labor; (b) they must not market sugarcane or sugar beets in excess of farm proportionate shares; (c) they must pay fair wages as determined by the Secretary; and (d) if they are also processors, they must pay fair prices as determined by the Secretary for sugar beets or sugarcane purchased from other producers.

Processing tax: A tax on sugar provides funds to the Government which more than offset the total of all conditional payments plus the costs incurred in administering the Sugar Act. This tax is one-half cent a pound, raw value, on all sugar processed or imported for direct consumption.

MAJOR PROVISIONS OF H. R. 7030

Term of the amendment: The bill reenacts and extends for 4 years, to December 31, 1960, the Sugar Act of 1948, as amended, with further amendments dealing primarily with adjustments of quotas. The present act, in the absence of any action by the Congress, would expire December 31, 1956. The bill also extends for 4 years, to June 30, 1961, the applicability of the excise tax on sugar in the Internal Revenue Code. This tax finances the sugar-stabilizing program.

Major effects: This legislation's major effect is to open the way for United States domestic-area producers to participate with foreign areas in supplying the growth of the United States sugar market. The bill maintains unchanged participation of domestic and foreign areas in the present level of consumption in the United States market. Cuba, for a number of years, has enjoyed an increasing market for her sugar here—equal virtually to the complete growth

of sugar consumption in the United States. This legislation would open the way for United States producers to participate in the larger market constantly being created by the growth of our consumption of sugar. In addition, and to a lesser extent, other foreign suppliers would enjoy a part of the expanding market along with Cuba.

Method of assigning increases in the domestic market in 1956: An annual growth in the United States sugar consumption of approximately 135,000 tons is expected on the basis of past experience. For the calendar year 1956, the amount of the increase in our market above 8,350,000 short tons, raw value, would be apportioned 50 percent to domestic producing areas and 50 percent to the foreign suppliers—except the Philippines, which has a fixed quota—with Cuba getting 96 percent and all other countries receiving 4 percent of the 50 percent going to the foreign suppliers. The first 188,000 tons, or any part thereof, by which quotas for the domestic areas are so increased in 1956, would be apportioned 45.2 percent to the domestic beet area, 42.6 percent to the mainland cane area, 10.6 percent to Puerto Rico, and 1.6 percent to the Virgin Islands. If rising consumption should increase the quotas of domestic areas by more than 188,000 tons in 1956, the excess would be allotted on the basis of the present law's assignment of quotas.

Specific quota provisions for 1957, 1958, 1959, and 1960: This bill—

First. Assigns between the domestic producing areas and the foreign suppliers additional quotas year by year each equal to 50 percent of the growth of the United States market above the current 8,350,000 tons of consumption a year.

Second. Provides that for 1957, 1958, 1959, and 1960 the additional quotas for domestic areas producers—representing 50 percent of the growth in the United States market—will be distributed in accordance with the final quotas established for the calendar year 1956.

Third. Provide that in 1957 the total of established and growth quotas for foreign suppliers—other than the Philippines—would be distributed as follows: The first 175,000 tons to the foreign suppliers other than Cuba and the Philippines and Cuba to receive a quota computed by subtracting 175,000 tons from the sum of the quotas for foreign countries other than the Philippines.

Fourth. Provides that for 1958, 1959, and 1960 the additional quotas representing 50 percent of the growth assigned to foreign suppliers—other than the Philippines—would be distributed as follows: The first 45,000 tons to the foreign suppliers other than Cuba and the Philippines and Cuba to receive an additional quota computed by subtracting 45,000 tons from the 50 percent of the growth in the United States market which would be assigned to foreign countries.

Fifth. Provide that proration of their quota among the foreign countries other than Cuba and the Philippines be changed beginning in 1957—

(a) By assigning to those countries which exported to the United States less than 1,000 tons during the years 1953 and 1954 a fixed quantity equal to their average proration in those years.

(b) By assigning to the countries that brought in between 1,000 and 3,000 in those years a fixed quantity of 2,000 tons in addition to their further proration below.

(c) Countries whose average imports here were between 1,000 and 2,000 short tons in 1953 and 1954 receive prorations for 1957 equal to such average entries plus 30 percent thereof and for each subsequent year prorations for such countries are increased by an additional 30 percent above the prorations for the immediately preceding year.

(d) The balance of the quota for countries other than Cuba and the Philippines is prorated 37 percent to the Dominican Republic, 36 percent to Peru, 20 percent to Mexico, 5 percent to Nicaragua, and 2 percent to Haiti.

Special 100,000-ton program: To alleviate a surplus condition in the continental United States sugar-producing areas, this bill provides that the Government purchase or otherwise remove from the market 100,000 tons from the 1955 or previous crops in such areas for disposition outside the continental United States in such manner as not to interfere unduly with normal marketing of sugar. It is assumed this sugar will be distributed in the relief operations of the International Cooperation Administration.

New growers: Although the committee has not included in the bill any specific directive for distribution of additional domestic quotas to new producers, it is the belief of the committee that the act should be administered so as to benefit new producers and new producing regions as increased domestic acreage becomes available as the result of quota increases.

Restrictions on quota of foreign countries: Foreign countries which fail by a substantial margin to supply sugar to this market in years when the world price is higher than our domestic price are subject to quota curtailment in future years, unless the Secretary of Agriculture finds that such curtailment is unwarranted. Foreign countries which discriminate against the importation of agricultural commodities from this country are subject to quota suspension during each year when such restrictive measures are in effect. Foriegn countries which did not become participants to the International Sugar Agreement on or before January 1, 1957, are not eligible for increases in quotas or prorations above the 1956 level.

Direct-consumption sugar limitations: Provisions of the Sugar Act which limit the entry of direct-consumption sugar within quotas of both foreign and offshore domestic areas would be varied slightly to permit an increase in such allocations for the offshore domestic areas and to permit those foreign countries which have relatively small quotas—less than 7,000 tons—the convenience of shipping either raw or refined sugar to this market.

Proration of deficits in area quotas: The method of prorating deficits would be changed slightly to insure that increases which domestic areas receive through market participation but which they are not able to fill shall first be prorated to other domestic areas rather than to Cuba and the other domestic areas as is the case under the present act. In the event a domestic area is unable to fill a proration of a deficit assigned to it which results from increased quota due to market participation, the unfilled portion also would be apportioned to other domestic areas unless no such area is able to supply the required quantity in which case it would be added to the quota of Cuba.

Definitions and administrative provisions: The bill also contains a number of minor amendments which affect the administrative procedures under the act and other amendments which affect definitions. Sections 1 through 4 of the bill revise some of the definitions contained in title I of the act. Sections 15, 16, and 17 of the bill revise administrative provisions of the bill.

Liberalization of allotments and proportionate shares: Section 10 authorizes the secretary to consider and make allowance for the effect of drought, storm, flood, freezes, disease, insects, and other uncontrollable conditions when he allots any area quota or proration. Section 14 provides similar authorization with respect to the establishment of proportionate shares. Section 13 would permit the marketing of or processing of sugar beets or sugarcane for livestock feed in excess of the proportionate share for a farm.

Refunding of import tax: Section 23 provides for the refunding of the import compensating tax on manufactured sugar imported for use as livestock feed or in the distillation of alcohol.

Price consideration: Section 5 changes the base period for the consideration that the Secretary is directed to give to the relationship between the wholesale price of refined sugar and the general cost of living in the United States from that part of 1947 when ceiling prices were effective to the generally accepted statistical base period of 1947–49.

BENEFITS TO VARIOUS AREAS UNDER SUGAR PROGRAM

DOMESTIC AREAS

Quantity: Under the 1948 act domestic areas receive fixed quotas totaling 4,444,000 tons.

Under H. R. 7030 they will receive, in addition to their fixed quotas, one-half of future increases in domestic requirements which will increase their estimated total quotas to 4,536,000 tons in 1956 and to 4,806,000 tons in 1960.

Benefits: Domestic areas receive the following benefits:

(a) Quota premium, $1.90 per hundred pounds.

(b) Tariff, 50 cents per hundred pounds.

(c) Sugar Act payment average, 70 cents per hundred pounds.

Each producer, to receive a Sugar Act payment, must fulfill the following conditions:

(a) Market within his proportionate share.

(b) Pay fair prices for any cane or beets purchased.

(c) Pay fair wages as determined by the Secretary.

(d) Employ no child labor.

PHILIPPINES

Quantity: Under the proposed bill the Philippines will continue to receive a fixed quota of 977,000 tons.

Benefits: The Philippine producers now receive the same quota premium and tariff benefit as domestic producers, but receive no Sugar Act payments. Under the trade agreement, the Philippines will begin to pay 5 percent of the tariff next January but will not pay the full tariff until 1974.

CUBA

Quantity: Under the Sugar Act of 1948, Cuba received 96 percent of all increases in domestic requirements.

Under H. R. 7030 Cuba will receive small increases which will bring its estimated quota from 2,900,000 tons in 1956 to 2,982,000 tons in 1960.

Benefits: Cuba receives the benefit of the quota premium of $1.90 per hundred pounds. It receives no Sugar Act payments.

Under the agreement of 1902 the duty on Cuban products imported into the United States is 80 percent of full duty which results in the present tariff on Cuban sugar of 50 cents per hundred pounds compared with 62.5 cents per 100 pounds of sugar from full-duty countries. Since the bulk of our imports come from Cuba, the Cuban rate is considered the effective one.

FULL-DUTY COUNTRIES

Quantity: Under the original Sugar Act of 1948, full-duty countries supplied only 1.36 percent of the increase in domestic requirements and under the amended act now in effect they supply 4 percent of such increases.

Under H. R. 7030 they will have fixed increases. The bill will increase the quotas of these countries from an estimated 120,000 tons in 1956 to 175,000 tons in 1957 from which point they will be increased from 45,000 tons per year to 310,000 tons in 1960.

Benefits: The full-duty countries receive the quota premium of $1.90 per hundred pounds. They pay the full tariff rate of 62.5 cents per 100 pounds.

SUGAR PRICES

Sugar prices are supported under the Sugar Act at levels which will maintain and protect the prosperity of the domestic industry without unduly burdening consumers.

Domestic prices are supported primarily through adjustments in the total supplies made available under quotas.

The total quotas or requirements are determined in light of:

(a) Past sugar distribution.

(b) Size of inventories.

(c) Population increase.

(d) Demand conditions.

(e) Trend and level of consumer-purchasing power.

(f) Comparative trends in sugar prices and the consumer-price index since the period of price controls in 1947.

Actual prices recently have been approximately as follows:

Raw sugar, 6 cents per pound compared with 6.32 under price control in 1947.

Refined cane sugar, New York, 8.55 cents per pound compared with 8.40 in 1947.

Beet sugar, Chicago, 8.10 cents per pound compared with 8.30 in 1947.

Amendment: The Consumers' Price Index has risen since 1947 while sugar prices have held about stationary. If sugar prices had risen with other commodities, refined sugar would now sell at 10 cents per pound.

To allay fears of consumers, H. R. 7030 provides that the base period 1947–49 shall be used rather than the first 10 months of 1947 while prices were under price control for comparisons with the Consumers' Price Index. The amendment will have the effect of reducing the formula price to just over 9 cents per pound.

COMPUTATION OF SUGAR ACT PAYMENTS

Basic payments: Sugar Act payments are computed on the amount of sugar commercially recoverable—(actual or average amount recovered)—from sugar beets or sugarcane marketed from farms in the domestic sugar-producing areas for the extraction of sugar. The basic rate of 80 cents per 100 pounds of sugar, raw value, is paid on the first 350 short tons of sugar produced on a farm. This rate is reduced progressively to a minimum of 30 cents on all sugar produced in excess of 30,000 tons per farm. The average rate of payment for all domestic areas on recent crops has averaged approximately 69 cents per 100 pounds of sugar.

Crop insurance type payments: In addition to the payments on sugar beets or sugarcane marketed, the act affords protection to producers with respect to bona fide abandonment of planted acreage and crop deficiencies of harvested acreage resulting directly from drought, flood, storm, freeze, disease, or insects. In case of acreage abandoned and approved for payment, the payment is computed on the number of acres within the farm's proportionate share at one-third of the normal yield of sugar per acre established for the farm. With respect to crop deficiency on harvested acreage which is approved for payment, the payment is computed upon the deficiency of actual production below 80 percent of normal production.

Payments in recent years: Sugar act payments per ton of sugar beets or sugarcane during the most recent crop for which information is available have averaged:

Sugar beets	$2.33
Mainland sugarcane	1.19
Hawaii	1.05
Puerto Rico	1.54
Virgin Islands	1.25

Total payments for recent years are shown below:

Area	Years				
	1949	1950	1951	1952	1953
Domestic beet sugar	$26,587,114	$33,750,327	$25,894,874	$24,735,389	$28,978,787
Mainland cane sugar	7,100,263	7,826,148	6,467,540	7,976,607	8,608,333
Hawaii	8,437,594	8,471,073	9,143,041	9,398,138	10,155,590
Puerto Rico	17,509,831	17,148,123	18,922,493	16,965,951	16,710,000
Virgin Islands	65,586	138,509	97,776	145,089	170,844
Total	59,700,388	67,324,180	60,525,724	59,221,174	65,623,614
Portion of above total representing payment for abandonment or deficiency	898,500	1,192,900	1,764,800	639,700	1,025,800

Tax collections in recent years

1950	$75,087,101
1951	83,660,289
1952	82,077,127
1953	82,996,776
1954	80,197,761

ACREAGE RESERVES FOR NEW GROWERS

The proportionate share determinations issued for the producing areas wherein restrictions are in effect provide the following reserves for new growers:

Sugar beet area: A minimum of 1 percent of each State acreage allocation is set aside for new growers.

Mainland cane sugar area: Any new grower may market sugarcane from 5 acres.

Puerto Rico: Any new grower may market sugarcane to produce 5 tons of sugar.

WAGE RATES UNDER THE SUGAR ACTS

General: Fair and reasonable wage determinations by the Secretary of rates which producers of sugar beets and sugarcane must pay field workers, as one of the requirements for payments under the Sugar Acts, have been issued annually in most of the domestic sugar-producing areas since 1937. One sugar beet wage determination was issued in 1935, and determinations in the Virgin Islands were not instituted until 1942. From 1934, the average earnings of workers for all the areas as a group have increased slightly more than 4½ times, or from about 17 cents per hour in 1934 to approximately 80 cents in 1954.

By areas: The amount of increase has varied somewhat in accordance with conditions among and affecting the various areas. Foremost among these conditions is the extent to which productivity gains have occurred during the 20-year period in each area. Estimated average hourly cash earnings of all workers not including payments in kind or perquisites for 1954 and the percentage relationship to 1934 are shown below:

Area	Estimated average earnings per hour		1954 average earnings as a percent of 1934
	1934	1954	
Sugar beet	$0.30	$0.85	283
Louisiana	.12	.53	442
Florida	.15	.82	547
Hawaii	.12	1.42	1,183
Puerto Rico	.10	.41	410
Virgin Islands	.06	.55	917

The controversial sections: First, the provision for nonrecourse loans; second, the section directed at the Philippines; third, the provision directed at Peru, may all be deleted without doing real violence to the bill we are submitting. I repeat, however, that I am still in favor of a nonrecourse loan provision, but I am convinced that the other two sections I have referred to should be removed from the bill. If, however, the Philippines continue to discriminate against American tobacco, when Congress convenes in January, the Sugar Act which we are now considering may be again amended. I am not willing to tolerate longer this rank discrimination against a product upon the production of which my people depend for a livelihood. The Philippines have been treated fairly in the bill we are presenting, and in recognition of this fair treatment, the discriminatory provisions of the Philippine law should be forthright and immediately repealed.

Mr. Chairman, I have made some interesting calculations which indicate just how fairly Cuba has been treated. Certainly I am interested in Cuba and in the welfare of the people of Cuba, and I value the friendship existing between the people of Cuba and the people of our own country, but I maintain that Cuba should be delighted with the treatment which has been accorded her in this bill. Here are arguments, facts, and figures which I do not believe can be successfully controverted or denied:

First. The theory of the administration proposal was to provide a substantial participation in the growth factor to the domestic producers and to supply some increased participation in the growth factor to the full duty countries. At the same time the administration proposal took into account the importance of maintaining for the Cubans a reasonable and fair participation in the growth factor.

Second. The committee, in amending the proposed administration proposal, followed the philosophy of the administration proposal. However, the committee determined that it would be better to give to the Cubans a larger quota in the early years under the new bill so as to permit the Cubans better to adjust their planning to the future quotas. In other words, the committee has strengthened the position of the Cubans by giving to them a larger quota in the years 1956, 1957, and 1958 than is provided under the administration's proposal and reducing their quota slightly from the administration proposal for the years 1959 and 1960. In this way the committee believed that the Cubans would have a better opportunity to adjust to the new situation, the equity of which the Cubans themselves recognize, wherein the domestic producers and other foreign producers would have a greater participation in the growth factor.

Third. The end result, insofar as total tonnage of sugar to be supplied to the United States by Cuba during the years 1956 through 1960, is almost identical under the administration proposal and the bill as reported out by the House Committee on Agriculture. Thus, during this period under the administration proposal, Cuba would have exported to the United States 17,563,260 tons of sugar. During the same period, under the bill as reported out by the committee, the Cubans will export 17,551,480 tons of sugar, or a reduction of 11,780 tons in the entire period from that provided under the administration proposal. This reduction amounts to three-fourths of one-tenth of 1 percent.

Fourth. The following table reveals how the bill as reported out by the committee is a better bill for the Cubans than the bill as proposed by the administration:

Cuba's exports of sugar to the United States

Year	Administration proposal	Committee bill	Tonnage by which committee bill exceeds administration proposal
1956	2,891,760	2,900,640	+8,880
1957	2,898,240	2,914,000	+15,760
1958	2,934,600	2,936,500	+1,810
1959	2,971,140	2,959,000	−12,140
1960	3,007,500	2,981,500	−26,030
Total			[1] −11,780

[1] Net loss over life of bill.

In working out the participation in the growth factor, the committee has recognized:

(a) The importance of the domestic producers obtaining a substantial participation in the growth factor which never before had been provided to them.

(b) Giving a small increase in participation in the growth factor to the full duty countries whose participation up to now under the existing law had been limited to 4 percent.

(c) Adjusting the smaller participation that Cuba would have in the growth factor so that the cut would be a more gradual one than that provided by the administration bill and would permit Cuba to plan better its future sugar economy.

The ability of the committee to achieve this result for Cuba and at the same time maintain the philosophy that Cuba should receive a substantial part of the growth factor, is revealed by the following table:

Percent of Cuba in growth factor

Year	Administration proposal	Committee bill
1955–56	23.6	30.2
1956–57	4.8	9.9
1957–58	27.0	16.67
1958–59	27.0	16.67
1959–60	27.0	16.67
Average	21.9	18.02

Under the sugar legislation as it now exists, Cuba supplies 34.04 percent of the entire sugar consumption of the United States.

The administration, the committee, and the Cubans have all recognized that this participation must be reduced to some extent in order to permit greater participation to the domestic producers and some small increased participation to the full duty countries.

The administration recognized this factor since its bill, as of 1960, would have given to the Cubans the privilege of supplying 33.14 percent of the entire sugar consumption of the United States.

The committee bill has followed the principle recognized by the Cubans and as advocated by the proposed administration bill by granting to the Cubans in 1960 the privilege of supplying 32.85 percent of the entire sugar consumption of the United States. In other words, the committee bill reduces Cuba's share in the total United States market in 1960 by less than 1 percent, by 0.29 of 1 percent from the administration proposal.

Under the proposed administration bill, in 1960 the Cubans would have accounted for 71.06 percent of all the sugar exported to the United States.

The committee has followed this principle of recognizing that the Cubans should receive the larger share of the United States market insofar as all foreign countries are concerned. Under the committee bill, the Cubans in 1960 will supply 69.85 percent of all the sugar exported to the United States from abroad. The difference, therefore, between the proposed administration bill and the committee bill involves only a reduction of 1.13 percent insofar as Cuba's relative position as among all foreign suppliers is concerned.

The annual average of Cuban deliveries to the United States under existing legislation for the period 1948–52 is 3,061,000 tons as compared to the average of the full duty countries of 56,000.

Under existing legislation, for the period 1953–56, the annual average of the Cuban deliveries to the United States would be 2,812,000 as compared to the annual average of the full duty countries of 117,000.

Under the committee bill, the annual average of Cuban deliveries to the United States for the period 1957–60 is 2,939,000 as compared to the annual average of the full duty countries of 242,500.

Thus the Cuban position is bettered from what has been the case under the existing legislation.

Moreover, it is to be noted that the annual average of Cuban deliveries to the United States for the period 1948–60 under existing legislation and the committee bill is 2,947,000, as compared to the average of the full duty countries of 132,000.

In his testimony in 1951 Mr. Myers stated:

> The Sugar Act of 1948 was designed particularly to assist Cuba. It was feared in 1947 when the Sugar Act of 1948 was being drafted that a period of declining demand and retrenchment might lie ahead. Therefore, it was felt that the United States had a moral obligation to give the Cuban sugar industry every reasonable assistance during the period of anticipated retrenchment.

Thus Cuba was given substantial benefits under the 1948 act, which Cuba accepted, on the theory that these benefits would permit it to prepare for the necessary retrenchment.

The fact is that Cuba failed to retrench. Thus, in 1947, her annual production was 6,448,000 tons. The annual average production of Cuba for the years 1948–51 was 6,228,000 tons. Its annual production in 1952 was 7,964,000 tons. This production was equal to 99.98 percent of the total United States consumption.

The fact is, therefore, that while Cuba accepted the benefits of the 1948 act, it failed to undertake the obligation imposed by the theory of the act, which was for Cuba to restrict its production and prepare for the inevitable retrenchment.

It is important to note how much more the United States Treasury will obtain under the provisions of the committee bill as against the existing legislation as a result of additional tonnage being granted to the full-duty countries.

The additional tonnage granted to the full-duty countries is 474,740 tons.

This additional amount means that the United States Treasury gets $2.50 per ton more than would be obtained if Cuba were to ship this extra amount.

The total additional amount obtained, therefore, by the United States Treasury is $1,186,850.

It is important to study the history of Cuban sugar entries to the United States, both in terms of tonnages and dollars.

In 1948 Cuban sugar entries totaled 2,927,000 tons.

In 1954, Cuban sugar entries totaled 2,729,000 tons, or a reduction of 200,000 tons from her 1948 sugar entries.

The value of the Cuban sugar sales to the United States in 1948 totaled $271.6 million, as compared to $283.3 million in 1954.

Thus, although in 1954 Cuban sugar entries were 200,000 less tons than in 1948, she earned on her 1954 sugar entries $11.7 million more than in 1948.

In respect of total Cuban exports to the United States, Cuba exported, in 1954, $26 million more, including sugar, than she did in 1948, although her imports from the United States had decreased in 1954 by $12.8 million from her imports from the United States in 1948.

In changing the recommendation of the executive branch from 55 to 45, that is, 55 percent of our total consumption to domestic producers and 45 percent to foreign producers, to a division of 50 percent to domestic producers and 50 percent to foreign producers, we took away from our own domestic producers and gave to foreign producers far more than we have taken away from Cuba during the life of the bill we have presented. Fortunately, Cuba does not complain about the 100,000 tons which were given to our domestic producers, but some of the people interested in Cuba seem to be very unhappy and somewhat dissatisfied with the provisions of the bill we are presenting. Actually, Mr. Chairman, Cuba should be delighted. It should be realized that in 1955 and 1956 and all through the life of the program Cuba has been well cared for, and in 1962, if the present arrangement continues, Cuba will have a quota in excess of 3 million tons, while all of the full-duty countries put together will only have 400,000 tons.

I frankly believe, Mr. Chairman, that all countries and areas participating in this program should be pleased with the provisions of this bill.

It is not possible for me to tell you how much work has been done in connection with the bill and the problems involved. I have made just about every possible calculation that could be made, based upon different percentages and under different formulas and with different tonnages. Most of these calculations have of necessity been made without the aid or assistance of the statisticians and mathematicians and calculating machines of the Department of Agriculture. The Department of Agriculture closes at about 5:30 in the afternoon, and only by laborious effort and by working into late hours of the night and the early hours of the morning was I able to present the various charts and calculations to the members of our committee for their consideration. I know, Mr. Chairman, better than anyone else how hard and how faithfully the members of our committee have worked on these problems. In making these calculations and in preparing these charts, if one figure is changed, then all the rest of the figures must be changed. I hope, therefore, that no effort will be made to change these figures and calculations and tonnages here on the floor of the House.

Many of the ares and countries participating in this program, and I might say most of the countries and areas participating in this program, have been well and ably represented by distinguished lawyers, economists, and lobbyists, but unfortunately some of the participating full-duty countries have had no lawyers, economists, or lobbyists representing them except the members of our committee who were determined to accord fair treatment to all areas. Some people seem to be dissatisfied because our committee decided to increase the quotas for our good neighbors south of the border. Mexico has not even been able to sell enough sugar in our market to earn enough dollars to buy enough machinery to operate the sugar industry of Mexico. The Dominican Republic has filled the quotas she has been given and has kept faith with our country. Panama was entitled to better treatment than had been accorded, and so our committee increased the quota to Panama. We did not forget Haiti, Costa Rica, Formosa, and the other countries who have participated, even in a small way, in this very important sugar program—even Hong Kong was given 3 tons and British Guiana 85 tons.

In conclusion, Mr. Chairman, I want to say again that our committee has done a good job. This bill is important. It should be passed as presented. It should be accepted by all countries and areas involved, and certainly it should be accepted by the Senate and signed by the President.

If this bill is forced into a conference we will adjourn without a sugar bill and relief will be denied to our domestic producers who are now temporarily in distress. Our labor will be lost and the sugar program may expire next year and we may face the chaotic condition that existed before the House Committee on Agriculture prepared and presented the first sugar bill more than 20 years ago.

This bill contains everything that the present Secretary of Agriculture has denounced, ridiculed, and repudiated. It is saturated with subsidies, it is permeated with controls and regimentations. Every phase of the industry is strictly controlled. Even the wages of the laborers in the fields are fixed. In this program we have acreage allotments and marketing quotas, and marketing quotas are fixed in tonnages. The refining of sugar is regulated. The price of sugar is fixed. Price supports are provided and prices are now being supported in the beet producing areas at 93.5 percent of parity. Import quotas are fixed. Refining quotas are fixed. Every possible thing affecting the production, harvesting, marketing, and distribution of sugar is firmly fixed by this law, and yet the Secretary of Agriculture, and even the President of the United States in a special message to Congress officially approves of the sugar program.

Yes, both the Secretary and the President recommended and approved the wool program, under which the production of wool is now supported at 105 percent of parity. But those of us who are primarily interested in the producers of basic commodities are told that 90 percent of parity for our farmers involves something that is evil, unholy, and un-American.

Consistency—oh, what a jewel. It probably depends upon whose ox is gored. Seventy-six percent of parity for wheat farmers, 93½ percent for sugar farmers, 105 percent for sheep farmers, and flexible supports for everyone else seems to be the price support program of the present administration. Why cannot we be fair with all farmers? Why cannot we be fair with each other? This thing we call 90-percent price support for basic commodities is obviously obnoxious to the present administration. The present administration talks eloquently about 100 percent of parity—in the market place—but the present administration has not been able to find the market place. The present administration is frightened by the abundance which the farmers of our Nation have produced, and the present administration does not seem to know how to deal with the problem of abundance. The fact remains that when this administration came into office, the overall price support program on basic agricultural commodities showed a net profit of more than $13 million, but under this present administration that net profit has disappeared, and now the program shows substantial losses. Mr. Chairman, I could go on and on talking about the weaknesses of the present administration, but let us come back to the matter before us. This bill must be enacted before this Congress adjourns.

Mr. Chairman, I cannot conclude in good conscience until I have paid at least a brief tribute to the one man who has been responsible for the proper administration of the sugar program, Lawrence Meyers, the director and administrator of the sugar program. Larry Meyers knows more about this bill and all other sugar bills and programs than any man in America. He has done and is doing a magnificent job. He has not and he will not yield to pressure from any quarter. He has well and faithfully discharged all of the great and grave responsibilities of the office he holds. He is held in high esteem by all men every-

where who have known him well. He is an upright, a forthright, trustworthy, and courageous "bureaucrat." He has devoted his life to public service, and he deserves a commendation of Congress. Because of Larry Meyers this sugar program has been an outstanding success and has operated so well and so successfully that it has not been criticized by men of either party. Larry Meyers is a public servant, and he has rendered service far beyond the call of duty. If he had rendered such valuable service in England instead of here at home, I am sure that we would now today be addressing him as Sir Lawrence.

Mr. Chairman, I want to publicly congratulate and commend Lawrence Meyers and publicly thank him for his constant interest in the problems here involved and for the great assistance that he has been to me and to the members of our committee in the preparation of the bill now under consideration. I do not know whether he approves of everything we have done or not, but I do know that he knows that we have a right to do everything we have done. If this bill is enacted, I am certain that he will, to the very best of his ability, carry out the true intent and meaning of every provision of this bill. Larry Meyers knows that legislation is the result of compromise, and while this bill might not reflect his views entirely, he appreciates the importance of the program, which must, of necessity, be continued. During our deliberations and the consideration of the problems involved, I have felt perfectly free to call upon him during all of the hours of the day and even at his home late into the night. I know that he has worked many long hours after he has finished his labors in the Department of Agriculture. Not only does he know the problems which here perplex us, but he understands the problems of the producers of sugar throughout the world. He is our representative at all international conferences, at which such problems are considered, and is recognized as a world authority. May the Lord bless and keep him as he continues his labors.

The Future of the President's Emergency Fund for International Affairs Assured

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, the conception held abroad in almost every country that the United States is undoubtedly a fabulously wealthy nation but that it lacks any of the cultural aspects of a great nation is rapidly disappearing. That this misconception has lasted so long has been our own fault, for until recently we have done little or nothing to put an end to it. The Russian Government has spent $2 billion on international theater exchange alone since the end of World War II, an amount 700 times greater than the less than $3 million which the United States has spent on putting our own best foot forward.

The New York Times reports today that the State Department is preparing special facilities for handling the anticipated two-way expansion of cultural, scientific and social contacts with Russia and her satellites, the full extent of which will become known only when the Foreign Ministers meet in October. The Times goes on to say that plans are already in full swing in the State Department to handle the expected heavy traffic in persons and nonpolitical information. Groundwork for this was laid by President Eisenhower at Geneva.

Another important step was taken by the Congress last week when it appropriated $5 million for the cultural interchange program which is being carried on by the President's Emergency Fund for International Affairs. So important did the Senate Appropriations Committee consider this fund that it recommended that hereafter this item be presented in the regular budget estimate.

Hearings have been held in the House on a number of bills, particularly H. R. 6874, which has just been introduced in the Senate by Senator JAMES E. MURRAY, of Montana, as S. 2613, which would make this strategically important fund a permanent part of the armament of our country in this cold war period.

The New York Times discusses some of the things that are handicapping the cultural interchange program. It points out that—

Another minor handicap, long most irritating to scholars and scientists in the United States and to persons specializing in Soviet affairs, has been the bureaucratic procedures of the New York customs officials. The New York custom house frequently holds up Soviet periodicals for months and months on end, regardless of the nature of these periodicals.

The President at his press conference on March 23, 1955, decried such bureaucratic censorship, and Representative FRANCIS E. WALTER on March 17 roundly condemned the Government for the censorship also. The censorship continues despite this criticism. I include here articles from the New York Times and the Washington Post dealing with various aspects of the problem I am discussing.

[From the New York Times, of Monday, August 1, 1955]

UNITED STATES TO SET UP UNIT ON CULTURAL TIES WITH SOVIET UNION—STATE DEPARTMENT IS DELUGED WITH IDEAS—TWO-WAY RISE IN CONTACTS EXPECTED

(By Harrison E. Salisbury)

WASHINGTON, July 31—The State Department is preparing special facilities for handling the anticipated two-way expansion of cultural, scientific and social contacts with Russia and her satellites.

The full extent of the lifting of the Iron Curtain on such contacts between the United States and the Soviet Union will become known only when the Foreign Ministers meet in October.

However, plans already are in full swing in the State Department to handle the expected heavy traffic in persons and nonpolitical information. Groundwork for this was laid by President Eisenhower at Geneva.

The President, it is understood, is personally interested in this program and most desirous that it be given every possibility of success.

Even before the Geneva conference the State Department was accumulating more proposals for contacts between Russians and Americans than could efficiently be screened and handled by existing machinery.

MANY PROJECTS OUTLINED

In the last 6 months several hundred such projects have been put up to the State Department by individual Americans and organizations.

Many of these have been sound, well-conceived ideas—plans for exchanging visits of musicians, orchestras, theatrical groups, scientific personnel. Others have been the product of cranks and crackpots. One citizen had an elaborate scheme for sending a mission to Russia to teach the Communists how to make raspberry jam just like grandmother used to make—said this certainly would relieve the tensions of the cold war.

The task of studying and handling these proposals thus far has been borne by the regular personnel of the East European office of the State Department.

But the burden has become so heavy that it is interefering with the regular work of the section, which is entrusted with important and heavy responsibilities in the analysis of Soviet affairs. The State Department, therefore, has decided that special facilities and personnel will be necessary to handle the job efficiently.

It was expected that a special section in the Department would be organized for this purpose.

The section will be the counterpart in function if not structure of a Soviet organization, which long has been in existence, called VOKS. These are the initials of the All-Soviet Society for Foreign Cultural Relations.

It is allied with the Soviet Foreign Office and has the task of taking foreign visitors invited groups rather than ordinary tourists around the country, arranging for their visits to Soviet institutions, interviews with Soviet officials and scientists, etc.

The State Department section presumably would have more limited functions, serving in an advisory and screening capacity. It would work in close liaison with the existing East European section.

The expansion of visits between the United States and the Soviet is expected to come about in more or less orderly fashion. Much depends, of course, on the October discussions of foreign ministers. But the big increase is expected next year.

A number of excellent proposals are understood already to be under consideration. One of them concerns the possibility of sending to Moscow the American company of George Gershwin's Porgy and Bess. This group has had an enormous success in Europe.

The Porgy and Bess visit might be a prospect for next spring if all goes well. This is the type of project, it is understood, which the State Department might finance, at least in part, with foreign cultural funds.

A number of projects developed by medical and scientific groups are understood to be viewed favorably by the State Department. They have not yet developed to the point of public announcement. In a similar category is a project for inviting a group of Soviet housing experts to this country to inspect the products of the American housing industry. This has been advocated by a private group.

In general proposals made by private groups that have a solid and worthwhile basis are getting priority.

There are many details to be worked out in the coming months. One of them is the bothersome requirement of the visa law, which requires fingerprinting of all visitors to the United States—including Soviet visitors. The Russians have objected to fingerprinting as a demeaning procedure.

One way around the fingerprinting procedure is to give the visting Soviet groups official status—as in the case of the Russian agricultural delegation now touring the United States.

It was believed possible, however, that if the Foreign Ministers in the fall succeed in agreeing on the general principles of a broadened exchange that some effort might be made at the next session of Congress to ease this provision of the law.

Another minor handicap, long most irritating to scholars and scientists in the United States and to persons specializing in Soviet affairs, has been the bureaucratic procedures of the New York customs officials. The New York Customhouse frequently holds up Soviet periodicals for months and months on end, regardless of the nature of these periodicals.

One aspect of the program that it is hoped to develop will be a wider exchange of technical and scientific periodicals between Russia and the United States.

Russian scientists long have had difficulty in getting United States periodicals because of the restrictions of their government and are not normally permitted to subscribe to United States publications without special permission.

It is hoped that in the course of discussions with the Russians that the restrictions on receipt and distribution of United States scientific and cultural publications may be lifted, at least in part. At the same time it is hoped that a more efficient and reasoned procedure may be worked out by the customs officials so far as the United States is concerned.

The following is an excerpt from the stenographic transcript of President Eisenhower's news conference of March 23, 1955:

[From the New York Times of March 24, 1955]

HE DECRIES CENSORSHIP

Edward P. Morgan, of the American Broadcasting Co.: Sir, last week, Representative WALTER, of Pennsylvania, severely criticized the Post Office Department for seizing copies of Izvestia and Pravda in the United States mail.

Mr. WALTER said that, if he had his way about it, he would, on the contrary, have these papers translated into English and distributed to everybody so, as he put it, they could see how nauseating communism could be.

Colleges, too, have protested that this ban has complicated their research.

Answer. Yes.

Question. And it is reported that the CIA has had some difficulty in its own research thereby. Does this restriction have your approval, sir?

Answer. Well, let's make clear this: I am not going to disapprove it with no more than I know about it in detail at this moment. But I will say this: Ever since I found that war records, that is, military records, were hidden away and, apparently we were going to keep them from the American people forever, I have been against censorship.

I don't like censorship, and I don't know the reason for this one. It hasn't been brought yet to my attention, except through the newspapers. And, unfortunately, I haven't had a chance to look into it. I don't know what it is about, really.

[From the Washington Post and Times Herald of March 18, 1955]

MAILING URGED—WALTER FLAYS UNITED STATES BAN ON RED PAPERS

(By Robert E. Thompson)

Representative FRANCIS E. WALTER, Democrat, of Pennsylvania, blasted the Government yesterday for banning the distribution of two Communist newspapers and urged the publications be made available to all Americans.

WALTER, who heads the Un-American Activities Committee and a House Judiciary Committee, considering legislation to ban the distribution of obscene books, charged that no one could be converted to communism by the two newspapers, Izvestia and Pravda.

He told Post Office Solicitor Abe Goff that the department had made a serious mistake in banning the publications from the mails. Goff appeared before the Walter subcommittee to advocate passage of the legislation against obscene literature.

WALTER branded the two Red newspapers, both official organs of the Moscow regime, as "simply nauseating," and said they represent "the best remedy to make people despise and abhor the totalitarian way of thinking."

The Pennsylvanian declared: "If I had the power to do it, I would have every copy of Izvestia and Pravda translated into English and distributed through the United States mail."

Goff maintained that the ruling has been in effect since 1951, and that newspapers incorrectly reported recently that it is a newly instituted order. He explained that a law used during World War II to bar the distribution of Nazi literature was reinstated in 1951 to halt the dissemination of Communist propaganda.

(In reporting last Saturday on the effects of the ban, The Washington Post and Times Herald pointed out that the Post Office order had been in effect for some years. Recent efforts to implement it, specifically against Pravda and Izvestia, brought it new public attention.)

WALTER, whose Un-American Activities Committee has been investigating Red infiltration of American youth, said "Izvestia" and "Pravda" should be used by the United States Government to expose communism.

He advocated distribution of the Red publications "to everyone of those misguided youngsters attending some of our colleges and universities who are run by deans and professors who—I believe—might also be advised to read some of the vile, moronic stuff printed in Izvestia and Pravda."

He declared: "The reading of these two sheets convinces every thinking person of the abysmal fraud which is perpetrated upon the Russian readers, the Russian people, by their Communist masters."

Meanwhile, discussing the legislation before the subcommittee, Goff testified that obscene literature has become such a financial bonanza in the United States that 73 percent more obscene books were sent through the mails last year than in 1953.

He said there is big money in the sale of magazines containing lewd photographs, and the persons who compile collections of such photos get publishers to print them on a profit-sharing basis.

Goff said there is a need for legislation to halt all distribution of such lewd publications—whether by mail or by private carrier.

[From the New York Times of Monday, August 1, 1955]

SOVIET-AMERICAN EXCHANGE

Supreme Court Justice William O. Douglas was the target of a Pravda complaint this weekend, immediately prior to his scheduled visit to the Soviet Union. The justice, Pravda complained, had characterized some areas of the Soviet Union as "colonies." In doing so, the Communist newspaper says, he "retreats from the rule of personal observation" and bases himself instead on "false information from questionable thirdhand sources." Pravda seems to be sure that when Justice Douglas visits the Caucasus and central Asia he will find the non-Russian people there happy as larks and "equal members of the big family of Soviet peoples."

Pravda's praise for firsthand observation and its disdain for "thirdhand sources" conjures up some interesting thoughts. Pravda and other Soviet newspapers employ large numbers of experts on the United States who are constantly assuring their readers that this country is Fascist, that our economic system is about to collapse, and that poverty is widespread throughout our land. So far as we know, all, or most of these experts, have never been to the United States and are questionable thirdhand sources." Why not send them over here and let them check on their conclusions themselves? Conversely, if Pravda is unhappy about what Americans write about the Soviet Union, why does it not prevail upon the Soviet Government to issue visas freely to the American journalists, scholars, and others who wish to visit that country and benefit from personal observation"?

The hard fact is, of course, that the chief obstacle to "person observation" of the Soviet Union by Americans these last 10 years has been, and is, the Soviet Government. Refusal to grant visas has been, and is, one of the chief aspects of the Iron Curtain.

Fortunately, the situation has improved somewhat recently. More Americans have been permitted into the Soviet Union, and more Soviet citizens have been coming here. But the movement in both directions is still infinitesimal compared to that needed if the Soviet and American peoples are to know and understand each other. By their reception to the Soviet farm delegation now here, the American people have shown their enthusiasm for the widest possible exchange of persons and ideas with the Soviet Union. Is it not time for the Soviet Government to show a similar enthusiasm by issuing visas freely and promptly, by ceasing to jam American radio broadcasts, and by similar measures to improve communications between these two great peoples of the earth?

First Session Report

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 28, 1955

Mr. QUIGLEY. Mr. Speaker, now that we are reaching the end of the 1st session of the 84th Congress, the time has come to look at the record and total up the results.

It has been a good session. We have not been noisy or spectacular, but in retrospect, it has been a hard working session, in which we have overcome many obstacles to accomplish a great deal.

One of the principal accomplishments has been to prove that bipartisan control of our Government can work. Thanks to the very able and wise leadership here in the House as well as in the other body, we have shown that control of the legislature by a party other than the party in control of the executive branch does not mean that the national in-

terest must be sacrificed on the altar of partisan politics.

The Democratic Congress has cooperated with the Republican President and that cooperation has been especially excellent in the all-important area of foreign affairs. In this vital field this Democratic Congress has given the President more and better support than he had in the 83d Congress when his own party was in control.

I am highly pleased that much of this support came from the freshmen Democrats, who, in the numerical sense at least, represent the balance of power in this Congress. You could say that our presence here is what made the difference between the 83d and the 84th Congresses. I trust that the fact that the people saw fit to send us here has helped make this a better Congress. In any event it seems clear that we have not lived up to the advanced bad billing the Republican spokesmen gave us in 1954. You will recall that well before we were elected the prediction was made that a Democratic congressional victory would result in a political "cold war." Time and the record shows that this has not happened.

The record shows, Mr. Speaker, that the new Democratic Members of this Congress have given Mr. Eisenhower better than 75 percent support on key foreign policy issues. This is a better record than that given him by the Republican minority, and a better record than that given him by the then Republican majority of the 83d Congress.

Moreover, I believe the record will also show that the new Democrats were somewhat instrumental in strengthening the President's hands at Geneva. The support he received from the Congress in advance of his going to Geneva was sufficiently great to merit his favorable comment when he reported to the Nation on his return. Members will recall that a group of new Democratic House Members took the floor early in February, urging the President to shake off the shackles of domestic appeasement and to embark upon a bold, positive program for peace. Under normal circumstances this action on the part of new Members would constitute the brashest kind of tradition breaking. In our case, because we represented the numerical difference upon which control of the House hinges, it was not only desirable but necessary in the light of the cold war prediction.

I have the privilege of representing in Congress the district in which Mr. Eisenhower now resides. As I look back over the record, I find that I have given his views the same careful consideration as I have tried to give the views of any other constituent. In considering the merits of any measure, the question I have asked myself is not whether Ike wants it but whether the country needs it. It turns out that my philosophy of supporting the President when I think he is right and opposing him when I think he is wrong has built a record of being with him somewhat more than 50 percent of the time on all issues which have so far come before this Congress.

Mr. Speaker, it would require the entire space normally devoted to the Appendix of the RECORD to list and describe all the accomplishments of the "do something" 84th Congress. A mere summary of the highlights is in itself a formidable document.

AGRICULTURE

Congress completed action on a number of bills of interest to the farmers in Adams, Cumberland, and York Counties. We also had our disappointments. One keen disappointment came when President Eisenhower saw fit to veto a bill which would have prohibited the Department of Agriculture from predicting apple prices. This bill passed the House without a single dissenting vote. The Nation's apple growers, and especially those in the 19th District, were for it.

There has also been some disappointment that we have not yet enacted legislation to relieve from the penalty provisions of the acreage-allotment program those farmers who grow wheat solely for use on their own farms. I introduced legislation to accomplish this. However, the Committee on Agriculture gave very sympathetic consideration to this problem at hearings, and I have every reason to believe that a solution will be found during further studies during the recess. I am hopeful we shall be ready to enact legislation soon after the second session begins.

The repeal of the tie-in provision of the 1954 farm law, which made eligibility to participate in the agricultural conservation program contingent upon compliance with the acreage allotment program was a very meritorious piece of legislation. I was among those who sponsored the repealer bill.

Other acomplishment of interest to farmers include placing a ceiling on disaster loan interest rates of 3 percent, instead of the 5 percent rate established by Secretary of Agriculture Ezra Taft Benson; extending for 2 years the emergency loan program to farmers and stockmen suffering from "adverse economic conditions;" and extending for 2 years the disaster loans in drought areas.

HEALTH AND WELFARE

Despite the sad lack of interest on the part of the administration in matters where the health and welfare of the people are concerned, we were able to make some progress.

Perhaps the most important advance in this field was the bill expanding social-security benefits by lowering the retirement age for women from 65 to 62, bringing disability benefits to workers aged 50 or more, and extending coverage to certain professional groups. This bill has passed the House and is ready for action in the other body when the Congress reconvenes. In one of her final acts before returning to her private pursuits, Secretary of Health, Education, and Welfare Oveta Culp Hobby told a committee of the Senate that the time has not yet arrived for making these improvements. Here in the House we have found the improvements are needed, and I trust the other body will place little reliance in Mrs. Hobby's recommendation.

In the field of housing we ran into a great deal of opposition. Although we failed to enact a bill to construct 565,000 units of housing, we were able to reach a compromise in a field where any number of units, even the minimum of 35,000 recommended by the President, is of some value.

In the field of education, for the first time a bill authorizing Federal grants for school construction has been approved by a congressional committee. This measure is ready for debate, and I hope action, when we reconvene.

Meanwhile the Congress has completed action on amendments to the 2 Federal impact area laws, making them more workable and changing some of the language by which, through technical interpretations 27 school districts, including the Carlisle Area School System, were denied construction funds to which they were entitled. I introduced legislation to correct this situation, and I was pleased when the committee went on to include these amendments in its omnibus bill.

Other health and welfare bills passed authorize a 5-year program of research into the causes of air pollution; authorize research in the field of mental health; improve the administration of the surplus property program so as to make equipment available to educational and public health institutions; and to study possibility of preventing hurricane damage.

VETERANS AND GI'S

Legislation enacted of interest to veterans permit those in service as of January 31, 1955, to continue to build up GI schooling benefits until discharged from service; extends VA direct loan programs for 2 years, and broadens the program to include home improvements; extends to GI farm home buyers the same help—mainly mortgage guarantees—as city home buyers now have; and gives disabled veterans until October 1956, to apply for auto purchases while extending the privilege to Korean veterans.

For servicemen we passed the career incentive pay increases, providing raises in pay and benefits as incentives toward career military service and we provided legislation to give credits toward social security for military service before 1956.

GOVERNMENT EMPLOYEES

Federal classified and postal employees, after a long wait, and following two Presidential vetoes, finally were granted deserved pay increases. Classified employees received a raise of about 7.5 percent, while postal workers were given raises that average about 8 percent. The daily travel allowances for Federal employees were increased from $10 to $12 and mileage was raised from 7 to 10 cents a mile. We corrected the inequities under Executive Order 10577 in the career conditional and career appointment program.

ECONOMIC

Much remains to be accomplished to shore up the national economy. Here, as in the case of human welfare, we met considerable opposition from the administration, where complacency and satisfaction with things as they are seem to be the rule.

The administration points to the 64 million people employed in June as compared with 63.6 2 years ago, and proudly proclaims we need do nothing to improve the economy. What is overlooked is the fact that in the 2 years intervening 1,400,000 have been added to the labor force, but jobs have been provided for only 400,000. Thus the administration is approving a "creeping unemployment" policy which, unless action is taken, could result in almost 5 million more unemployed by 1960.

The administration's complacency also overlooks the continued decline in farm prices in the face of increases in the cost of things the farmer must buy.

This philosophy of the administration has made it difficult to work out a program of full employment for labor, and full prosperity for agriculture and industry. Despite this we accomplished several things which should help.

The most forward step we took was to increase the minimum wage from 75 cents to $1 per hour, despite Presidential insistence that we should increase it to only 90 cents. Few workers in the 19th District of Pennsylvania will benefit directly from this, since most earn more than even the new minimum. It will, however, be a retarding factor in combating the run-a-way industry problem and will enable our industries, particularly the soft-fiber industry, to compete on a more even basis with their rivals. Moreover, it will mean the spending of about $150 million additional dollars for farm products.

When the Congress extended the reciprocal-trade agreement authority, we strengthened the built-in protections against loss of jobs in those industries where the impact of foreign competition is most severely felt. This should contribute something to job and profit security in Adams, Cumberland, and York Counties.

Congress moved ahead toward a realistic highway program, but of course the failure to complete action was a disappointment. Legislatiton of this nature, where we attempt to establish a pay-as-you-go theory for financing needed public works, is comparatively new, and an excellent idea. It was to be expected we would have difficulties in working it out. I am confident the bugs will be worked out during the recess, and look forward to a highway bill in the next session.

The House completed action on a 4-year, $63-million airport construction program, which, when placed in operation will help stimulate our economic life.

MISCELLANEOUS

Other measures enacted, and worthy of special notice, include the following bills:

Increases the penalties under the Sherman Antitrust Act from $5,000 to $50,000.

Permit the Government to recover damages in antitrust cases.

Created a nonpartisan 12-man commission to study Government personnel-security programs, a sorely needed commission as the shenanigans in the Small Business Administration prove.

Recommended action by States to facilitate absentee voting by servicemen and their families, and Government workers.

All in all, Mr. Speaker, this session has been one that has worked hard and may be proud of its accomplishments. In many respects it has made history. As a new Member, it has been thrilling and exciting to have been a part of history in the making.

The Status of Forces Agreements

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. BOW. Mr. Speaker, under leave to extend my remarks, I would like to call to the attention of my colleagues this letter stating the official position of the Republican Party of Wisconsin on the Status of Forces Agreements, the revision of which would be provided for under the terms of my House Joint Resolution 309:

MARSHFIELD, WIS., *July 22, 1955.*
The Honorable FRANK T. BOW,
House of Representatives,
Washington, D. C.

DEAR MR. BOW: You are to be congratulated for the part you have played in forcing reconsideration and hearings on the provisions of the status-of-forces agreements which surrender our servicemen to the criminal jurisdiction of foreign courts.

I am proud to state that Wisconsin Republicans were quick to recognize that these agreements deprive our boys of rights guaranteed by the Constitution. Last year, the State convention of the Republican Party of Wisconsin passed a resolution protesting the surrender of our servicemen to foreign courts and, interestingly enough, this was the only resolution which drew applause from the convention.

The resolution passed by the Republican State Convention was very similar in wording to the one passed at Appleton, Wis., May 19, 1955, by the Wisconsin Federation of Republican Women:

"Whereas the NATO Status of Forces Agreement, to which the Senate of the United States gave its advice and consent to ratification on July 15, 1953, deprives American servicemen and their dependents of the rights guaranteed them by the Constitution and the laws of the United States; and

"Whereas on July 15, 1953, the Senate of the United States advised and consented to ratification of two treaties granting sweeping immunities to diplomatic personnel and experts assigned to the North Atlantic Treaty Organization and to its military headquarters; and

"Whereas criminal procedures, punishment for crimes meted out by foreign courts, and penal conditions in foreign courts, and penal conditions in foreign countries are radically different from those provided by the Congress in the Uniform Code of Military Justice: Be it therefore

"*Resolved*, That the Wisconsin Federation of Republican Women assembled petition Senators JOSEPH R. MCCARTHY and ALEXANDER WILEY for a prompt review of the NATO Status of Forces Agreement for the purpose of securing as soon as practicable the denunciation, mutual rescission, or repeal of the criminal jurisdiction of said agreements."

Yours truly,

MRS. SALLY JONES.

Dr. Seaman A. Knapp, Agriculture's Great Leader, Proposed for Hall of Fame

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. COOLEY. Mr. Speaker, I want to call to the attention of the American people, and especially to the electors for the Hall of Fame, the name of Dr. Seaman A. Knapp, the greatest name in American agriculture of this century.

The late Dr. Knapp, whose devoted life spanned the years 1833–1911, is being proposed as agriculture's first member among the great Americans who are honored in the Hall of Fame.

I think that I speak for the total population of our farm people in urging this honor for a great American. I am sure the 100 leading Americans who are the electors for Hall of Fame will want to recognize agriculture's great contribution to the well-being of all our people, to the American way of life, to the strength of our institutions, and in their quinquennial election this year they will confirm Dr. Seaman A. Knapp, when his name and his works are forcefully presented.

Mr. Speaker, another greatly respected and much loved man of agriculture is leading in the sponsorship of this recognition of Dr. Knapp. He is Dr. Clarence Poe, editor and board chairman of the Progressive Farmer, a leader among the Nation's farm publications. Dr. Poe has written an article relating to Dr. Knapp and the sponsorship of his name for the Hall of Fame.

Under unanimous consent, I insert Dr. Poe's article in the CONGRESSIONAL RECORD, and I commend to the electors of the Hall of Fame that they recognize American agriculture by honoring its outstanding leader of our time:

DR. SEAMAN KNAPP FOR HALL OF FAME HONORS

(By Clarence Poe, editor and board chairman, the Progressive Farmer)

One of the most distinguished and inspiring memorials in the United States is the Hall of Fame for Great Americans overlooking the Hudson River in northern New York City. Every 5 years a group of distinguished American men and women choose three or more additional names of great Americans to be honored with tablets and distinguished sculpture in this beautiful building. Many celebrated scientists, educators, physicians, inventors, explorers, jurists, artists, philanthropists, and military leaders have been recognized—but never yet has any outstanding representative of American agriculture been recognized. Now for the first time, indeed a man whom agricul-

tural leaders all over America should delight to honor is expected to win widespread support. We refer to Dr. Seaman A. Knapp (1833–1911).

I

Every nation and almost every important group of people has been inspired by the life, work, and ideals of some distinguished hero. In the North it has been Abraham Lincoln. In the South, Robert E. Lee. In the Democratic Party, Thomas Jefferson and Andrew Jackson. In the Republican Party, Lincoln again.

Our farm people also need to recognize and honor their great heroes. In the years since 1900, there can be no question about what man should be called the outstanding hero of our American farm people. That man was Dr. Seaman A. Knapp.

At a time when the coming of the boll weevil had suddenly destroyed a great part of the income of farmers in Texas and adjoining States, Dr. Knapp, then 70 years old, was summoned to help distressed farmers make a living and get on a better footing for the future. Two things he decided must be done:

1. He must get the foremost farmers, the agricultural colleges, and the United States Department of Agriculture to agree on a few basic methods that would enable farmers to make a living in spite of the boll weevil and other hazards. (See his famous 10 commandments of farming.)

2. He must next get the greatest possible number of farmers to try these methods on at least a part of their crops, thereby demonstrating the soundness of the recommendations and encouraging other farmers to follow the same policies on a larger scale.

All over America, men and women in our cities, as well as on our farms, know of the revolutionary changes in the lives of farmers, farm women, and farm young people that were brought about first by this farm-demonstration work and out of it grew the continental program of agricultural extension now carried on by the present army of county farm agents, county home agents, and 4–H Clubs from the Atlantic to the Pacific.

II

Very few people now living knew Dr. Knapp personally as I did. Hence it is a pleasure to me to remind younger men of some of the outstanding qualities of this great leader.

What were the secrets of Dr. Knapp's success? Along with a practical, thorough, down-to-earth understanding of the farmer's problems, I believe, his success was primarily due to a genuine heartfelt love for people. As Tolstoy wrote long ago: "We think there are circumstances when we may deal with human beings without love, and there are no such circumstances: you may make bricks, cut down trees, or hammer iron without love, but you cannot deal with men without it." Without love, as the great Apostle said, we are but sounding brass and tinkling cymbal.

First of all then, Dr. Knapp loved folks. He had the gift of sympathy, which as Lord Bryce wrote, "is a key to unlock men's hearts." Dr. Knapp had the exceptional sort of sympathy which perhaps is never fully developed except through suffering (in his case a crippling accident which kept him on crutches several years). He did all his greatest work after he was 70. Although he was born in the North and became a great agricultural leader there and president of Iowa Agricultural College before ever coming South, he won the love of the southern people as few of the South's own sons had ever done.

III

Next to his love for people and sympathy for them, Dr. Knapp's next great quality was the ability to inspire men and States and regions with new faith in themselves. He did not waste time rebuking the mistakes of the past; he pointed to an inspiring vision of the future. Furthermore, he declared our farm people not only capable but teachable: "Some declare farmers a hard class to reach and impress. This is not my experience. They are the most tractable of people if you have anything substantial to offer—but they all want proof." So he stressed his demonstration work to teach farmers and farm women. "Seeing is believing."

Where other people talked the poverty of our farm people Dr. Knapp talked the possibilities of our farm people. While pessimists discouraged us with census figures about evidences of Southern backwardness, Dr. Knapp encouraged us with figures of his own about the rewards of southern progressiveness. Listen to him:

"EIGHT HUNDRED PERCENT GREATER FARM INCOME

"I estimate that there is a possible 800 percent increase in the productive power of the farm laborer in the average Southern State, and I distribute the gain as follows: 300 percent to the use of more and better mules and farm machinery; 200 percent to the production of more and better livestock; 150 percent to a rotation of crops and better tillage; 50 percent to better drainage; 50 percent to seed of higher vitality, purebred and carefully selected; and 50 percent to the abundant use of legumes and more economical feed crops."

IV

At a time when agricultural-college graduates were comparatively few, Dr. Knapp showed an almost uncanny gift for picking out the most susseccessful and most trusted practical farmers as his county farm agents. These he sent out into the highways and hedges of each county, thus getting farmers to agree to conduct farm-demonstration projects in line with the most progressive teachings of the USDA and our agricultural colleges. And Dr. Knapp urged every county agent to inspire the farmers: "Your value lies not in what you can do, but what you can get other people to do." Always, too, Dr. Knapp stressed the importance of simplicity. "When I talk to a Negro citizen," he said, "I never talk about the better civilization, but about a better chicken, a better pig, and a whitewashed house. * * * Get down to where people can understand, touch the bottom, and lift." The methods he sought to promote were also condensed into his famous 10 Commandments of Agriculture, which we reproduce, with slight rearrangement, as follows:

1. Produce all the food and feed required for family and animals on the farm.

2. Increase the livestock to the extent of utilizing all the waste products and idle lands of the farm.

3. Accomplish more work in a day by using more horsepower and better implements.

4. Carry out a systematic crop rotation with a winter cover crop.

5. Secure high content of humus in the soil by use of legumes, barnyard manure, farm refuse, and commercial fertilizers.

6. Use seed of the best variety, intelligently selected, and carefully stored.

7. Prepare a deep, well drained, and thoroughly pulverized seedbed.

8. In cultivated crops, give the rows and the plants in the rows a space suited to the plant, the soil, and the climate.

9. Use intensive tillage during the growing period of the crops.

10. Keep an account of each farm product, in order to know from which the gain or loss arises.

As we have already mentioned, Dr. Knapp was the pioneer promoter of what are now called our 4–H Clubs—clubs in which he hoped that self-reliance and all the finer virtues would be encouraged. To parents he said: "We don't let our boys and girls learn how to manage. Let the boy do, even if he makes mistakes. * * * Teach the boys how to regulate their forces, how to meet shocks, and have supreme courage to face the world."

V

In all these quotations from this greatest of American farm leaders in this century, there throbs a constant note of sympathy for all struggling people fighting against poverty and other handicaps. "I do not glory in the wealth of a few," Dr. Knapp said, "but rejoice in the general distribution of wealth and prosperity for the common people." Put in a single sentence, Dr. Knapp's one great aim, his dominant ideal, was to make rural America a vast democracy of thrifty, home-owning small farmers, every man sitting under his own vine and fig tree—and thus develop the ideal conditions for a mighty race of high-minded, stalwart, courageous people.

If the agricultural principles he taught were not new, it was new to think of going to the unlettered farmer and demonstrating their practicability and potency before his very eyes. And so it is the glory of Dr. Knapp not that he added another dry agricultural principle to human knowledge, but that for a great body of people, under the power of his organization, all formerly dry agricultural principles became live and potent as did the dry bones in Ezekiel's Valley when the spirit of the Lord brought bone to bone and clothed them with miraculous flesh and sinew. Such has been the miracle of "agricultural extension" in America these last 50 years.

To recognize and honor at this time the real founder of this vast program is a privilege all friends of American agriculture should delight to have a part in. Dr. Seaman Knapp's name would add honor not only to agriculture, but to the hall of fame itself.

But Keep Your Powder Dry

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. CANNON. Mr. Speaker, there is heartiest approval both at home and abroad of the efforts of the President to secure collaboration of all nations in the establishment of a permanent and lasting peace.

But experience is a great teacher and in this moment of relaxed tension it may not be amiss to recall, in addition to proclamations first by Lenin and then by Stalin, the statement by Dimitry Z. Manuilsky, at that time a spokesman for the Politburo:

War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years. To win, we shall need the element of surprise. The bourgeoisie will have to be put to sleep.

So we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard-of concessions. The capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fist.

Revision of the Sugar Act

EXTENSION OF REMARKS
OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 30, 1955

Mr. HILL. Mr. Speaker, I wish to include as part of my remarks on H. R. 7030 the testimony of Frank A. Kemp, executive committee chairman, American Sugar Beet Industry Policy Committee, in behalf of the domestic sugar beet area, the mainland cane sugar area, the Hawaiian sugar planters, the Puerto Rican sugar producers, before the House Committee on Agriculture on revision of the Sugar Act of 1948, as amended, June 23, 1955:

Chairman COOLEY, members of the committee, my name is Frank A. Kemp. I live in Denver, Colo. I have been an employee of the beet sugar industry since 1923, and am now president and general manager of the Great Western Sugar Co., and executive committee chairman of the American Sugar Beet Industry Policy Committee—the industrywide organization of the sugar beet people.

I appear here at the request and on behalf of all four American producing groups: (1) The sugarcane growers and processors of Louisiana and Florida, (2) the planters and mills of the Hawaiian sugar industry, (3) the growers and processors of the entire production of cane sugar in Puerto Rico, and (4) the sugar beet growers and processors of the 21 States from Michigan and Ohio to California and Washington in which beets are grown.

There is attached to this statement a list showing in detail the organizations and the interests for which I appear.

These four great sugar-producing areas have consolidated their views on sugar legislation and have entrusted statement of their case to a single witness, proving that there is wide agreement in the American industry and that all of its producing groups are in full accord. Chairman COOLEY, that is a very considerable responsibility, and I hope the committee will bear with my effort to fulfill it.

Any witness here should recognize the long experience and the great contributions of members of the committee to the solution of problems of the industry. Chairman COOLEY, Congressmen HOPE and POLK were Members of the Congress when the first sugar act came before it in 1934. Congressmen POAGE, ANDRESEN, and GRANT have participated in the development of every sugar act since 1937. Other members of the committee participated in consideration of the act of 1948 and its revision in 1951. I express the indebtedness and gratitude of every domestic interest.

We can be certain of one fact—this is a changing world. There have been great and fundamental changes both in this country and in the world, and there have been continuing changes in our agriculture and in our farm economy.

On both of our appearances before you since the war, witnesses for the domestic-sugar industry said that their position at the time was based upon facts of the time and that they reserved the right, and recognized their duty, to come before you at any future time at which changed conditions in their judgment prompted reconsideration of sugar legislation.

I quote from the testimony on this point. During the hearings to amend and extend the act in 1951, the president of the Western Beet Growers Association, who is again in attendance today, formally entered the following reservation:

"If, prior to the expiration of the Sugar Act of 1948, as amended, it develops that the established quota of 1,800,000 tons of domestic beet sugar is acting as an effective deterrent either to the expansion of sugar-beet growing, or the construction of additional processing facilities, the Western Beet Growers Association reserves the right to seek and press for amendment of the established quota for domestic beet sugar."

Following this, the secretary-manager of the National Reclamation Association filed a prepared statement with this committee in which he said:

"We recognize that there are many benefits contained in this act and, in view of the fact that all parties known to us who are representative of the sugar-beet industry have agreed to this program, we are also giving it our support. However, we would like to make the same reservation, which we understand is being made by the representatives of the Western Beet Sugar Association, i. e., that if it should develop prior to the expiration of the new law, the proposed quota should prove to be acting as a deterrent, either as to expansion of sugar-beet growing or to the construction of additional processing facilities, then we would like to reserve the right to come before the Congress and this committee urging an amendment with respect to the stipulated quota for sugar beets."

The unexpected changes that have recently confronted the domestic people, taken together with the fact that there has been a disposition in some quarters to read intent and effect into prior statements that were not intended, prompts me on behalf of all the domestic areas that I represent to make clear that if events or developments occur in the future which in our judgment prompt or make necessary or advisable change or revision of any sugar legislation, we shall bring such matters to the attention of the Congress and ask for consideration of them and any revision which they require.

This committee has twice made it clear in its reports on the 1948 and 1951 Sugar Acts that the basic structure of those laws was tailored to the conditions of the times and was not to be regarded as establishment of long time national sugar policy.

In its report on the 1947 act, this committee said:

"The committee believes that it should be made abundantly clear that the distribution of the American sugar market among the producers of the United States and foreign countries and the provision for the establishment of quotas for the ensuing 5 years on the basis provided for in this bill is not intended to establish, and should not be construed as establishing, a permanent production and distribution pattern, nor as waiving American producers' rights to such portions of the American market as they can supply at the conclusion of the 5-year period covered by the bill."

In its report on the 1951 Sugar Act, this committee said:

"This committee emphasized in its report that the Sugar Act of 1948 was designed to meet problems of the temporary postwar transition period and was not to be regarded as the establishment of long time national sugar policy."

In spite of the record, discussion in recent months with respect to needed changes in existing sugar law has produced some contention that the extension of the act by the Congress in 1951 was a contract, a commitment, or in the nature of a treaty, with Cuba, which carried a legal obligation, or, if not, a moral obligation, that it would not be changed.

Any such contention is based on a complete misunderstanding of the power and frequent actions of the Congress of the United States.

The State Department itself has publicly made clear that there is no substance to the contention. Under Secretary Herbert Hoover, Jr., so stated to representatives of the whole domestic industry whom he addressed some 2 weeks ago. On the first day of this hearing, Assistant Secretary Holland said that the law was not an international agreement, that it was not an agreement, and this was made still further clear by the State Department's proposal for change in quota provisions to take effect on January 1, 1956.

If necessary, further confirmation can be found in statements from Cuba. On January 29 of this year, the well-known Cuban sugar firm, Messrs. Luis Mendoza & Co., wrote as follows:

"The truth is that the Sugar Act is not a permanent treaty between the United States, Cuba, and all the other countries that participate in the American market, neither is it an act of mercy of the United States Government. The act is an example of conscientious legislation dating back to 1934 and modified in 1937, 1948, and 1951, and subject to further modifications."

The Mendoza family has a wide reputation for good humor. In any event, Mr. Mendoza went on to say that in all probability the present law would be changed, and concluded:

"No doubt, we would like to have it all for ourselves, but having to share it with someone else should not make us grumble too bitterly. This, of course, refers to future increases."

Secretary Holland said, however, that, while the Department of State recognized the predicament of the domestic industry and the need for its relief, the Department could not justify any improvement in the domestic share of this market in 1955. Secretary Holland said he based this position on two views which he advanced. First, that such a change would be retroactive; second, that Cuba in an expectancy of continuity of its rights under the law, had planned and programed its production in advance.

If the Congress takes action on sugar legislation this year there will still be a substantial part of the year lying ahead. The need of the domestic industries was brought to the attention of the State Department, the Cubans, and a great many others in the summer of 1954. Earnest attempts to discuss the problem with the State Department and full exposition of the facts and views of the domestic industries commenced again in November of 1954. In any discussion of alleged retroactivity, it cannot be overlooked that it was not until the second week of June that the administration's view was made known.

It would take but a look at the record of Cuba's cane plantings and sugar production over recent years to make clear to anyone that any claim that her sugar activity and operations are planned and programed on the increase in sugar consumption in this country is far-fetched. As was pointed out yesterday in questions asked of Secretary Holland, Cuba's production went up to the enormous total of 8 million tons in 1952, almost twice that of the prewar average. She has reduced her output since that year because she produced more sugar than there was market. Within recent months Cuba sold between 500 and 600 thousand tons of sugar to Russia. If, as has been intimated, Cuba expected some sales volume out of the 1955 increase of consumption in this country, the benefits to her from the Russian transaction clearly went beyond her plans. Actually, Cuba would like to have all of the 1955 increase of consumption in this country or as much of it as she can obtain, because she would not only get it for this year but under the State Department's proposal the

quantity would be permanently written into Cuba's future privilege for all time.

There have been great changes in the sugar world since 1951 which necessitate revision of existing sugar legislation. They include these important developments:

1. The United States has an ever-expanding population growing at the rate of approximately 2½ million people a year, as a consequence of which the market for sugar in this country increases annually in a substantial amount. It is also clear that increases in population and consequent increase in sugar consumption will continue well into the future.

2. Led and encouraged by technical and research findings of the great body of agricultural scientists, the domestic sugar industry, both cane and beet, through adaptation of improved farming methods, breeding of better seed, wider and more intelligent use of fertilizer, and other technological advances, has substantially increased its yields from the same acreage.

3. Restrictions upon production of other crops have led farmers to search for substitute land and farm machinery use, as a consequence of which there has been a material demand in recent years to shift to sugar beets and some to sugarcane, land formerly planted to restricted crops. For example, land once planted to cotton in southern California has been diverted to beets. Some wheat and small-grain acreage in the Red River Valley has been diverted to beets.

4. Fertile lands in a number of Western States recently have been supplied with irrigation water and this has made for the setting of these lands in family-sized farms and the building of new homes. Farmers making their livelihoods on these lands, if they are to succeed, must grow the crops best suited to the climate, the altitudes, and the seasons. In many of these areas the sugar beet is essential to sound crop rotation. These new farmers, many of them veterans from World War II and Korea, have demanded the right to grow beets. And that demand has been added to the needs of the thousands of farmers who have been in the beet-growing business for many years.

Let me show you the effect of these four major changes.

Experts tell us that the expanding population of the country now increases sugar consumption by approximately 135,000 tons every year. But the existing law was written just after the close of the war, before anyone know how fast our population would increase or how fast our sugar consumption would grow. This law set the share of the domestic sugar areas in this market at fixed, unchangeable figures which, except for the adjustments in 1953 in Puerto Rico and Virgin Islands quotas, have remained the same since 1948 in spite of the tremendous increase in our consumption. The effect of this has been to deny the beet and mainland cane areas and Hawaii any share in the growth of the country since 1947 and to condemn all of the domestic areas to a life without prospect of growth. Deprived of the chance for any upward adjustment, they face the certainty of inevitable decline and deterioration. The domestic people believe they have the right as American citizens to share in the growth of their country and in its increased sugar demand. The increase should not, as is now the case, be handed over completely as a windfall to foreign suppliers.

The same acre of either cane or beets is producing more sugar than was formerly possible. Take the yields of cane sugar in Louisiana and Florida. In the 3-year period ending in 1950 an average yield of 1.54 tons of raw sugar per acre was produced. In the 3-year period ending with the crop of 1954, the average yield of raw sugar per acre in those States was 1.86 tons. That is an increase of 21 percent within the span of just 7 years. The beet industry has also achieved substantial increases in output per acre. The average yield of beet sugar, raw value, per planted acre for the 3-year period ending in 1950 was 1.92 tons. In the 3-year period ending in 1954, that yield had increased to 2.2 tons, a gain of 15 percent.

Traditionally in this country progress is rewarded. In our case, it will bring down upon our heads a stiff penalty—we must reduce the number of acres grown as we improve our yields. That is an impossible situation, because in the last analysis it will either halt adaptation of improved practices, which would be a terrible penalty, or will compel a further reduction in sugar acreage, which will add acres to the mounting totals of other crop production.

I would like the committee to know something of what has actually happened to the mainland cane and beet industries in acreage restriction in the last 2 years. First, take the Lousiana-Florida industry. For a number of years after 1948 the harvested acreage of the industry was relatively stable. In 1954 an acreage cut of 11 percent from 1953 was enforced. The industry was cut again the next year to a total reduction of 18 percent. With the exception of the freeze-damage year of 1951, the industry made more sugar than its 500,000-ton quota for each of the last 6 years and during each of the last 3 crops produced more than 600,000 tons.

In thinking of the effect upon farmers of sugarcane-acreage restriction, it should be borne in mind that cane is a 3- to 5-year crop in the United States and when a fixed reduction is ordered not only the right to grow is reduced but a capital investment may be destroyed. That is an additional reason why the mainland cane people regard so apprehensively the threat of further acreage restriction.

On January 1, 1955, the mainland cane area had an effective inventory of sugar equal to 80 percent of its annual quota. That meant that the industry as a whole could sell only 100,000 tons of 1955-crop sugar in that year, less than one-sixth of its annual production in each of the last 3 years.

Sugar-beet acreage in 1955 was cut 10 percent from the acreage of 1954 with some States suffering an enforced reduction of as much as 15 and 16 percent. Both areas are now faced with further enforced acreage restriction.

Actual facts show the predicament of individual domestic producers caused by production which they are forbidden to market. The Okeelanta Sugar Co., of Florida, has nearly 6,000 tons of sugar produced in the early weeks of this year that it will not be able to market until 1956. Its entire 1955 crop production will have to be carried, some of it to 1957.

The Burton-Sutton Co., of Louisiana, had stocks on hand January 1, 1955, equal to over 97 percent of its expected marketing quota for the entire year. It anticipates that when its 1955 crop production commences there will be no quota available after the second day of operation.

The Union Sugar Co., of California, had an effective inventory of 74,400 tons of sugar on January 1, 1955, but will be allowed to market in 1955 only 100 tons of sugar which it will produce this year.

I do not need to tell you that these congested stocks are burdens—expensive to store and care for, expensive to carry and finance.

A modest immediate increase of 20,000 tons in the quota of Puerto Rico is provided in the bill. Puerto Rico is being restricted in its sugar production for the fourth straight year, and since 1952 has had inventory problems. She likewise asks for some relief, some right to look forward to increased employment and greater productivity, which are points of great concern to that island.

Puerto Rican spokesmen listening to the figures given at the hearing yesterday to indicate a large buying power in Cuba growing out of her sugar sales to this country, have pointed out that, on from only about one-third as much sugar sold, Puerto Rico buys annually from the mainland $50 million more than Cuba's purchases in this country.

On one point introduced before the committee yesterday by a representative of the Bureau of Insular Affairs of the Interior Department, touching on the production of direct consumption sugar, the Puerto Rican position is outside of the agreement of the four producing areas and will be briefly covered by a separate spokesman for that industry.

With the aid of one of the greatest agricultural research organizations on earth, the Hawaiians, already the world's top producers of sugar per acre, have made new records which a few years ago would have been regarded as completely unattainable. Surrounded by water, with much of the land on mountain slopes, Hawaii has almost no opportunity for acreage expansion. Actually, the needs of the nation in enlarging its military establishments in this strategic area resulted in the conversion of agricultural land to national uses. Even with her high yields per acre, Hawaii does not have an immediate inventory problem. Therefore, with great generosity she has said to the other domestic producing areas that she would join with them in support of the bills introduced with the understanding, and it is so provided, that, once the pressing needs of the other domestic areas are met, Hawaii will fully share the domestic part of our increased sugar market. Her past record in increasing yields shows that she will need this share of the increase as her industry moves into the future.

In my review of important changes and conditions affecting the domestic producers, I mentioned that restriction of acreage in surplus crops has created an insistent demand for greater acreage to produce sugar—a food of which we import nearly half our national needs. This demand for more beet and cane acreage was not stimulated by the industry itself, but was a natural consequence of the desire of the farmer gainfully to employ his land, his labor, and his farm machinery.

In 1954, 934,000 acres of beets planted in this country produced 1,978,000 tons of sugar, raw value, 178,000 tons more than the industry's quota. The 1953-crop beet sugar output exceeded the quota by 76,000 tons. Yet the planted beet acreage of the 1953 crop, as well as that of 1954, was less than that planted in 1933—more than 20 years earlier.

Beet plantings of the 1953 crop totaled 802,000 acres compared with 1,034,000 acres in 1933 a decline of 23 percent. Plantings in 1953 were 18 percent below the 984,000 acres planted in 1947, the year in which the Sugar Act of 1948 was passed.

You can readily see, gentlemen, how difficult it is for beet farmers to understand—no expansion, in fact a reduction in acreage having occurred—why it is necessary to take a further cut in their plantings.

I would like to compare the situation I have just mentioned with the situation in Cuba. The records show that 2,315,000 acres of cane were grown in 1939 in Cuba. The records also show that in 1953, the last year for which I have figures, the acreage of cane grown in Cuba was 3,890,000. In other words, in the 14 years from 1939 to 1953 the Cuban sugar industry took into its embrace over 1,500,000 acres, a gain of 68 percent, while the sugar beet acreage between 1939 and 1954 actually decreased 6 percent. These figures may help you to understand why American farmers are indignant that the more fortunate industry of Cuba should be preferred over any increase in domestic production.

In Washington, in Idaho, in Wyoming, in Montana, and in other Western States, new farms and new homesteads are taking form on the lands opened up to settlement on the Columbia Basin reclamation project, on the Hart Mountain and Big Horn-Hanover Irrigation Districts in Wyoming, on the Minidoka project in the Snake River Valley of Idaho, and in other Western developments. The men who are building these homes, many of them veterans who drew their farms by lot, simply do not understand why they cannot be given the right to grow an acreage of sugar beets adaptable to their enterprise and their rotation. These men are American citizens. The land is American. Their purchasing power is expended in the American market.

The Sugar Act in its broad terms has been sound and successful legislation. It was drafted with full recognition of the rights and interests of consumers which have been fostered and protected throughout the history of sugar laws and should be fostered and protected in any revision of them. The consumer has benefited through the stabilization of supply at modest prices. Measured in terms of consumer purchasing power, in the time that it takes an average workman to earn enough money to buy a pound of sugar, and in the relatively small increase that has taken place in the price of sugar compared to the increase in the price of other foods, the level of sugar prices in this country has been modest. In terms of consumer purchasing power, the American sugar price is lower than in any other major country in the world. A sound and healthy domestic sugar-producing industry has been an important factor in both the stabilization of supply and in the reasonable price level that has prevailed. During the war, beet and Hawaiian sugars were shipped to fill empty shelves in stores in Brooklyn. The modest changes in the present quota provisions of the law that have been proposed by the domestic industry fully protect the interest of consumers.

In the spring of 1954 the domestic sugar-producing groups commenced a long series of discussions with each other and with Members of the Congress and the executive departments in respect to a timely and sensible revision of the Sugar Act. Good friends in the Congress counseled postponement until 1955 of any suggested changes in the law, but at the same time strongly recommended that the situation be analyzed and proposals submitted for consideration by the Congress this year.

The 28 identical bills introduced in the House propose necessary changes in the law which should be considered in terms of related background and fact.

When the present law became effective in 1948, the total annual sugar requirement of this country amounted to 7,200,000 tons. The initial estimate of requirements for 1955 has been set by the Secretary of Agriculture at 8,200,000 tons, up 1 million tons since 1948—resulting largely from the steady increase in our population. Foreign suppliers, principally Cuba, got the entire benefit of this increase, except for the addition of 170,000 tons to the quota of Puerto Rico and 6,000 tons to the quota of the Virgin Islands decreed by the Congress to be effective in 1953. The absolute net gain in annual basic quota by foreign suppliers out of the sugar market increase between 1948 and 1954 was nearly 875,000 tons. The cumulative total gain over the 11 years was 4,800,000 tons.

The bills you are considering approach quota revisions on the premise that, since foreign countries have had all the increase in the American market for 7 years in the aggregate amount of 4,800,000 tons, it is entirely proper and just, in view of the plight of the domestic industry, that for a short time American producers receive the increase.

Present foreign quotas have been established for this year on the basis of the initial requirement estimate of 8,200,000 tons, which is approximately the amount of sugar that actually moved into the channels of consumption last year. Forecasts have been prevalent in the sugar trade for some time that the final requirement figure for 1955 will reach at least 8,400,000 tons, or 200,000 tons more than the initial estimate, and the Department of Agriculture has forecast a higher figure. The modest increases in domestic quotas proposed in this bill total only 188,000 tons and therefore would be absorbed by the anticipated growth in our market this year.

The bill proposes that the quota of the mainland cane area be increased 80,000 tons, the quota of the beet area 85,000 tons, the quota of Puerto Rico 20,000 tons, and the quota of the Virgin Islands 3,000 tons.

In other words, time and the increase having run for 7 years, all for the benefit of Cuba and other foreign suppliers—and having resulted in an 875,000-ton increase in the basic annual quota of foreign nations, we ask that the hands of the clock be stopped momentarily, until the domestic industry realizes from the market increase 188,000 tons—21 percent of the annual increase that has been conferred upon and is perpetually owned by foreign industry. That 188,000 tons is an increase of only 4 percent in domestic quota. It is slightly less than 4 percent of Cuba's volume of sugar sales to the United States and other countries last year.

And, since the anticipated increase in our requirements for this year exceeds the 188,000-ton increase proposed for the domestic areas, the bill will not reduce by one ounce Cuba's present quota, and will preserve for Cuba the full position she now enjoys in the American market.

After consumption reaches 8,388,000 tons, the bill directs that all further increases be divided between domestic and foreign suppliers on the basis of 55 percent for domestic and 45 percent for foreign. This restores approximately the same percentage sharing provided in sugar legislation prior to the Sugar Act of 1948.

We believe that this guaranteeing to foreign suppliers through American legislation, of a 45-percent share in the increase in our sugar market, is not only generous, but has few precedents in world trade. We are thus enabling foreign countries to continue to participate in the future expansion of the United States sugar market after a short interval required for the domestic areas to work out of their present difficulties.

The only effect the bills will have on Cuba's share in the American market is to give momentary pause to her increasing share and retard the rate of her future increase from the lion's share of 96 percent.

There are claims that the pending bill will disastrously reduce Cuba's present purchasing power in this country. A thing cannot be reduced unless it is cut in size. Cuba's current contribution to this sugar market is continued—from which it necessarily follows that her current purchasing power will not be reduced by the bill. It is true that her current purchasing power will not increase quite as fast, but the State Department proposal itself takes the position that this is in the overall interest of the country.

There has been presented to the committee by Secretary Holland the position of the executive departments on sugar legislation. This position recognized and endorsed all four basic principles the domestic industry has asserted and which are embodied in the legislation you are considering:

1. That there should be sugar legislation passed in 1955 to extend until 1962;

2. That the relationship between domestic and foreign producers should return to a percentage quota in order that the domestic producers could share in the added volume produced by our population growth;

3. That this relationship should return to a basis of 55 percent for the domestic producers and 45 percent for the foreign producers, which is approximately the relationship existing between 1934 and 1948; and

4. That any domestic deficits in the market increase be filled by other domestic areas ahead of foreign suppliers.

The recommendations of the executive department and the bills do part company in dealing with the precise time when the growth in our market is to be measured and at what level or benchmark, as Secretary Holland described it.

The executive departments in effect propose that the domestic areas be held back through the buildup of another 150,000 tons of growth to the Cuban industry and make no provision for any immediate quota relief to any domestic area.

We submit most earnestly that in the consideration of time and circumstances the proposal of the executive departments fall short of what is right. For months we have been talking about acreage cutbacks—past and prospective. Whatever relief by way of sugar purchase may have been intended, it holds no answer to that problem.

The provisions of the bills were arrived at after weeks of patient discussion within the industry, after repeated consultations between the industry and Members of the Congress. They represent a modest and moderate division of the growth of our market in which the domestic areas have in fact written down their just claims to what they regard as below the minimum to which they are fairly entitled.

The domestic industry and the sponsors of the legislation before you present the bills as a fair, honest compromise between the claims of our own industry and our wish to benefit foreign suppliers. By any test, they are in the best interests of the United States.

DOMESTIC SUGAR ORGANIZATIONS AND INTERESTS FOR WHOM THE WITNESS APPEARED

United States sugar beet industry: The Amalgamated Sugar Co.; American Crystal Sugar Co.; the Big Horn Basin Beet Growers Association; Black Hills Beet Growers Cooperative Association, Inc.; Buckeye Sugars, Inc.; California Beet Growers Association, Ltd.; Central Nebraska Beet Growers Association; Eastern Washington Cooperative Beet Growers Association; Farmers and Manufacturers Beet Sugar Association (representing grower associations and processors of Michigan and Ohio); Franklin County Sugar Co.; the Garden City Co.; Goshen County Cooperative Beet Growers Association; the Great Western Sugar Co.; Gunnison Sugar, Inc.; Holly Sugar Corp.; Idaho Sugar Beet Growers Association; Layton Sugar Co.; Lower Snake River Sugar Beet Growers Association; Mason City District Beet Growers Association; Montana-Wyoming Beet Growers Association; the Mountain States Beet Growers Marketing Association; the Mountain States Beet Growers Marketing Association of Montana; the National Sugar Manufacturing Co.; the Nebraska Non-Stock Cooperative Beet Growers Association; Northern Montana Beet Growers Association; Nyssa-Nampa District Beet Growers Association; Red River Valley Beet Growers Association; Southern Colorado Beet Growers Association; Southern Minnesota Beet Growers Association; Spreckels Sugar Co.; Tongue and Yellowstone Beet Growers Association; Union Sugar Division, Consolidated Foods Corp.; Utah-Idaho Sugar Co.; Utah Sugar Beet Growers Association; Western Beet Growers Association; the Western Colorado Beet

Growers Marketing Association; Western Montana Beet Growers Association.

Mainland sugarcane industry: American Sugar Cane League; Florida Sugar Producers.

Hawaiian sugarcane industry: Hawaiian Sugar Planters Association.

Puerto Rican sugarcane industry: Association of Sugar Producers of Puerto Rico; Puerto Rican Farm Bureau.

Justice for the GI's

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 30, 1955

Mr. BOW. Mr. Speaker, one of the several daily newspapers in my district, the Alliance (Ohio) Review, has spoken out on the effort to revise the Status of Forces Agreements to provide greater protection to our men stationed abroad, under my House Joint Resolution 309. It is an unemotional and objective analysis of this important problem by one of the outstanding editors of Ohio, Mr. Clarence D. Steffy, managing editor of the Alliance Review. Under unanimous consent to extend my remarks, I would like to call this editorial of July 27, 1955, to the attention of my colleagues:

JUSTICE FOR THE GI'S

It may take time, but we believe that eventually, Congress will adopt at least the theory espoused by Congressman FRANK T. Bow in his vigorous fight to obtain a revision in what is known as the Status of Forces Agreement.

This agreement gives foreign countries, which are a part of the agreement, criminal jurisdiction over American Armed Forces stationed within their boundaries.

In simple words, Bow is against the trial of American soldiers under the laws of the country in which they are stationed. If our men get into trouble, they should be tried under American justice, says Bow, and we agree.

Bow's contention is embodied in what is before the House as Joint Resolution 309. The administration has been fighting the resolution tooth and toenail, contending that the alleged injustices are exaggerated, and that any change in the agreement would menace our relations with the affected countries.

A hearing on the Bow complaints has been opened by the House Foreign Affairs Committee. It is not concluded; in fact, top Pentagon officials are due to testify soon.

Both sides are sincere. Bow has been termed in some circles as unrealistic and reactionary; not internationalist enough. He contends, simply, that every American parent would want his son, guilty or innocent of the crime of which he is accused abroad, to be entitled to the same kind of law that the parent himself would be tried under, if the circumstances occurred in the homeland. He wants the American law to follow the American soldier. Is that being unrealistic, reactionary? We believe not. We believe it's a case of simple American justice, the kind that's been proved the most equitable in the world, the kind our Founding Fathers intended.

We also believe that either in this session or the next, Congress will adopt the principle. We believe that such an eventuality is merely the application of justice.

Congressman Bow deserves the support of his constituents in the matter.

Geneva

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank R. Kent appearing in the Washington Star of July 31, 1955, entitled "Helpful Echoes From Geneva":

HELPFUL ECHOES FROM GENEVA

(By Frank R. Kent)

Probably the most significant tribute to the success of the Geneva Conference and that of President Eisenhower in the dominant role which he played there came not from his friends at home but from his enemies. Particularly was this notable among the editorial and columnar critics who, from the start, had disparaged the notion that any good could come out of the meeting of the Big Four heads of state and discourage the idea that talking with the Russians was a sound suggestion.

For many weeks these critics, for some curious reason, had joined with the Democratic National Committee publicity performers, aided and abetted by the propagandists of the ADA, the CIO and Senators such as MORSE, of Oregon; HUMPHREY, of Minnesota; and KEFAUVER, of Tennessee, in a campaign of sneering and jeering at the President. They pictured him as a weakling who did not know what it is all about. They insisted that Mr. Dulles does all his foreign-policy thinking for him and that his mind was principally occupied with his golf game. Of course, none of this was true, but it was strictly along the Democratic committee line the intent of which was to lay a foundation for an antiadministration attack upon Mr. Eisenhower as a Presidential failure who should not be renominated.

In the course of 6 working days at Geneva, Mr. Eisenhower changed all this. He at once became the outstanding personality at the conference and in the world. He did this not by asserting himself; not by throwing his weight around; not by ostentation or showmanship; not by propaganda. He achieved it simply by being himself. Beyond question he is the most completely honest, completely truthful, completely sincere man who has spoken for this country either at home or abroad in the last 23 years. He impressed these qualitites not only upon his colleagues about the conference table but also upon countless millions who heard and read what he said; also upon the several thousand correspondents, editors, reporters, and publicists who were at the Geneva Conference and some of whom were hostile to him.

It is interesting to note that only one of these thousands thought it worth while cabling his paper that the President had sent for General Gruenther of the NATO to come to Geneva because he wanted to play bridge with him at night. Well, what of it? And why not? The overwhelming point of view of the journalists on the job at Geneva was that General Eisenhower had put on a performance of which all Americans had a right to feel proud; that largely due to his earnestness and sincerity, the conference had had a measurable degree of success; that the prospect for a continuation of this period of peace is brighter than it was.

There will, of course, now that the President is back, be dissenters both in his own party and in the opposition in Congress. And there will be trouble of various sorts in various fields. That is inevitable. But there will be few to deny that Mr. Eisenhower has added to his personal prestige and popularity by his conduct at Geneva and by his speech last Monday in Washington. No one worth heeding, so much as suggests that there was any touch of politics about the Eisenhower performance at Geneva or since. No one can accuse him of a lack of leadership. No one thinks now he should not have gone or should have taken a different line. He has not, of course, settled the most difficult problems which disturb the world and threaten peace. But he has at least taken steps in that direction which the great masses of men and women everywhere approve.

In addition, he has so firmly and clearly placed the position of this Nation before the world that no one either in Russia or anywhere else can again accuse us of wanting war—or him of being a "warmonger." The day of that anti-American propaganda has gone. The President shot it to pieces with his inspection proposal, his two speeches, and his personality. He comes home to find his critics still howling about the Dixon-Yates contract and he finds his Secretary for Air, Harold Talbott, facing some ugly and embarrassing charges. But the Dixon-Yates business has been so blown up as to have become a bore and the Talbott affair, while certainly unpleasant, not to say malodorous, is not as politically damaging as it seems. In a year's time it probably will be forgotten. Certainly, there is not in it the kind of issue which the Democrats have been looking for in 1956. The President's work in Geneva much more than outweighs all the little stuff the opposition publicity organs and agents have dug up in a year of hard digging.

Aggression by Nehru

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. MARTIN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the Standard-Times, New Bedford, Mass., under date of July 28, 1955:

AGGRESSION BY NEHRU

Prime Minister Nehru, who preaches coexistence between Communist and free-world nations, has adopted a policy of nonexistence for Portuguese territory on the Indian subcontinent.

The Indian leader's long campaign of intimidation against the Portuguese state of Goa, on India's west coast, was climaxed this week with a demand that Portugal close its legation at New Delhi no later than August 8. India closed its legation in Lisbon 2 years ago, and Nehru's latest order amounts to a virtual severance of diplomatic relations with Portugal. The only surviving diplomatic links between the two countries will be a Portuguese consulate at Bombay and an Indian consulate in Goa.

Simultaneously, it was announced that the Government-owned Indian railways has suspended all freight and passenger service to Goa.

Last July a group of Indian nationalists seized the small Portuguese town of Dadra north of Bombay and held it for more than a week. In August of last year, nationalists from India threatened to march into the city of Goa, south of Bombay, but the scheduled demonstration did not materialize as few marchers appeared.

In each of these incidents Nehru refused to allow Indian police or troops to quell the demonstrators.

Nehru said last month he will not resort to violence to oust the Portuguese, but whatever method is used—violence or intimidation—the objective is wholly unjustified aggression. Nehru's plan to seize the Portuguese holdings by means other than armed force does not alter in the slightest the fact that India has no reasonable claim to the territory.

Portugal has occupied its small holdings in the Bombay area continuously since 1510—110 years before the Pilgrims landed at Plymouth. Nehru's attempt to seize the Portuguese territory is comparable to the American Indian tribes who once roamed Massachusetts now claiming title to the Commonwealth.

Goa and neighboring Portuguese cities were built by people of Portugal upon territory that was a wilderness when they arrived. There was no country of India then, the Indian subcontinent being divided into scores of independent states, much as the American continent of the same period was occupied by many Indian tribes with diverse languages and customs.

About 250 miles south of Bombay, Portugal holds 1,301 square miles, slightly larger than Rhode Island. Some 100 miles north of Bombay, Portugal controls 216 square miles. Both territories border on the Arabian Sea and thus can be entered without passing through India.

For administrative purposes, Portugal's holdings both north and south of Bombay, plus a tiny Portuguese island 140 miles off the coast, are incorporated into one Portuguese state called Goa. It is not a Portuguese colony but is part of Portugal. Goans and European Portuguese have the same citizenship rights and are governed by the same national laws.

Nehru's design against Goa is an attempt by him to extend the authority of his government over more than 1,500 square miles of Portuguese territory and 600,000 Portuguese citizens against their will. Portugal's steadfast refusal to yield to the intimidations of the Indian leader merits support of all nations that recognize the right of self-determination of peoples.

The Cost of Polio Shots

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. BEAMER. Mr. Speaker, under unanimous consent, I enclose an editorial dated July 25 from the St. Louis Post-Dispatch. Following the debate on H. R. 7126, and the unfortunate injection of politics into the issue, it seems important for everyone to look into the future.

No one surely would want to deny the benefits of this new and proven vaccine to needy children and existing agencies could handle this problem. The greatest danger is the fact that people of means will be most apt to avail themselves of these vaccine shots and the large percentage of the needy people will continue to be without it.

No precedent should be established and every caution should be exercised to avoid socialized medicine by this approach.

The editorial follows:

THE COST OF POLIO SHOTS

Is $30 million enough to pay for free antipolio shots among children whose parents cannot pay for them? The administration says yes, the Senate Democrats say no, and the debate has strong political overtones.

At a time of peak prosperity, we cannot believe that for most families the major question about antipolio shots is how to pay for them. The great majority of parents, once convinced that the Salk vaccine is safe and effective, could meet the cost. And so the administration's $30 million proposal seems reasonable to us. If the fund actually proved inadequate, there is no reason why it could not be later increased.

Instead of making a grandstand play to increase the fund, the Senate Democrats could make a much more useful contribution if they would undertake to make sure that the Government in spending the $30 million gets full value for its money.

According to the Reporter magazine, Canada's free innoculation program costs the Canadian Government only $1.50 per child, whereas privately purchased and administered vaccine in this country costs the individual from $4.50 to $7.50 or more. If our Government is going to buy vaccine it certainly is entitled to the lowest possible price, and there is no visible reason why it should not get a price at least as low as that available to Canada.

At $1.50 per child, a $30 million fund would take care of 20 million children, which is plenty. Why not write into the law a requirement for controlling the cost of free inoculations?

The McCook Family Papers

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. FULTON. Mr. Speaker, I take pleasure in calling to the attention of my colleagues in Congress and to the country a significant recent addition to the Library of Congress. Through the generosity of Mrs. Katherine McCook Knox, of Washington, D. C., former daughter-in-law of the late Senator Philander C. Knox, of Pittsburgh, Pa., the Library of Congress has obtained the first installment of the McCook family papers. The active role in American history played by the descendants of George McCook, an early settler of Pittsburgh, is interestingly documented in this collection of letters, photographs, and clippings.

Many of the letters received by the Library of Congress relate to Gen. Anson G. McCook, father of the donor. General McCook, famous as one of the 15 "fighting McCooks" of the Civil War, was elected to Congress for three terms from 1877 to 1883. General McCook subsequently served for 10 years as Secretary to the United States Senate, having been chosen by both Democrats and Republicans.

The papers reflect General McCook's active life and include official and private correspondence with Presidents Grant, Hayes, Garfield, Cleveland, Benjamin Harrison, McKinley, and Theodore Roosevelt. President Harrison writes interestingly of his early reaction to Presidential campaigning; President Hayes discusses the woes of the ex-President, and President Cleveland gives his personal hunting plans and preferences. Other friends prominent in United States public affairs are among the correspondents—Levi P. Morton, Thomas Nelson Page, William T. Sherman, Mark Hanna, and Admiral Robley D.—Fighting Bob—Evans.

The McCook family has been known for generations for its contribution to the legal profession and the ministry. Attorney George W. McCook was a law partner of Edwin M. Stanton, Secretary of War in President Lincoln's Cabinet; Attorney Daniel McCook, Jr., was a law partner of Gen. William T. Sherman and Gen. Thomas Ewing. The Reverend Henry C. McCook became a leading Presbyterian minister in Philadelphia. By his outside hobby in the field of zoology and biology, he has contributed substantially to the early research on the ant and spider species. Two other members of the McCook family have been commemorated as pioneers in the naming of McCook, Nebr., and McCook County, S. Dak.

The McCook family papers will be of interest to military and political historians as well as to students of American cultural history. The papers already in the Library's custody are available for study by permission of the donor, which may be requested through the Chief of the Manuscripts Division of the Library of Congress.

It is hoped the outstanding contribution of Mrs. Knox will encourage other prominent families to make such valuable and interesting papers available to the Library of Congress and the general public.

Friedrich von Schiller

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. BOSCH. Mr. Speaker, May 9, 1955, marked the 150th anniversary of the death of a great playwright, poet, and philosopher, Friedrich von Schiller. His was a short life in the number of years on this earth, only 46, but his death did not mark his end. He lives with us today in his works and is truly immortal.

Under leave to extend my remarks, I include what is, in my opinion, a very keen analysis of the life and work of Friedrich von Schiller, prepared by Mr. Hermann Wolf, of Cleveland, Ohio, and Baltimore, Md., a member of the Steuben Society of America:

IN COMMEMORATION OF THE 150TH ANNIVERSARY OF THE DEATH OF FRIEDRICH VON SCHILLER, GREAT PLAYWRIGHT, POET, AND PHILOSOPHER

When we Steubenites, good Americans of German origin, pronounce the name "Fried-

rich von Schiller," we think not only of the greatest playwright in the two-and-a-half-thousand-year-old history of western civilization; rather, we identify him as part of the indescribably bubbling, intellectually sparkling stream of artistic expression of his time.

After the powerful, revolutionary intellectual stream ceased to flow, which, owing to the urge for enlightenment, had produced, through Reformation and Renaissance, the enormous contract between the philosophy of experience and that of pure reason, we find Schiller, together with Goethe, Herder, Kant, and Beethoven, viewing this contrast from a higher plane so as to overcome it with the aid of drama, poetry, and music.

The philosophers of their day received from Schiller and Goethe, the poets, their deepest aesthetic impulses.

The incomparable greatness of Kant is impressed on us Germans particularly keenly when we sense the impact of his teaching [discipline] of the categorical imperative on his contemporaries and weave their clearly cut, perceptive criticism into a web of profound thinking of our own. As compared with the philosophy of hedonism and the morality of utility of the past eras [generations?] it meant revolution of things traditional; it signified human destiny emanating from a higher power whose rigidly severe demands placed in man a responsibility for his deeds such as had never been known in the history of mankind. And it was precisely this severity which pulled out all the stops in Schiller's thinking and feeling, to shape, through artistic [artful?] criticism, his faculty of judging the value of poetry and drama.

In the winter of 1782, Schiller the playwright, wringing his hands, rushed through the dressing rooms of the performers in the Mannheim Opera House, crying out in a loud tone of voice: "The rigidity of Kant's discipline of duty is scaring all the graces out of my mind." He was searching for an equilibrium [a catalyst] between the demand for morality and the sensual lure of beauty.

This in itself manifests the enormous stature of Friedrich von Schiller; he found the eternally valid solution in moral graciousness, in the grace of the intellect; by weaving together science and poetry Schiller educated and uplifted the spirit of the human individual; it was beauty in which Schiller's sensual as well as supersensual [spiritual?] nature found its deepest satisfaction.

Schiller expressed in terms of sensual beauty, for the world of emotion, that which was actually the basis of Kant's philosophy, for example, the domination of practical over theoretical reason.

Beethoven's unique criticism, rejecting almost all standard literature within his reach, was due to his dissatisfaction with the motives of ethics [morality]. Schiller's high clerical concept of art and artistry caused Beethoven unhesitatingly to set his words to music. We sense Beethoven, Kant, and Schiller walk[ing] hand in hand through the music of the Ninth Symphony.

In the history of German literature, the man of intellect is kept in a state of breathless suspense by Beethoven and Schiller. Even if bountiful Mother Nature had not endowed one with the gift of music and the other with that of poetry, their pure humanity in itself would force us to bow our heads in deep reverence. He who is contemplating [listening to?] Beethoven places the musician above the man is ignorant of Beethoven's true self; he who in reading his works prefers Schiller the poet and [to the?] playwright can never hope for complete understanding [of Schiller the man?]. While totally submerging ourselves in both there is no possibility of establishing a proper relationship to their works unless we have previously acquired complete clarity as to the [earth] man in them. Every single one of their works represents a deep confession of a most personal nature; hence, it cannot be separated from the outside conditions which have produced it.

Two poets found in their innermost soul the fountain of truly artistic re-formation after the urge-ahead period toward the end of the 18th century—Schiller and Goethe.

Goethe and Schiller—those two cannot be separated here—represented the climax of the era of most abundant flowering of German literature, of the classic era, in a narrower sense. They brought about the harmonious flowing together of all those trends and contrasts which the philosophers had been trying to achieve in vain.

When Hegel effected a change in Schelling's teaching [discipline] of identity, i. e., when he led it to its ultimate consequences in that he joined together the unit [respective units?] of "being" and of "thinking" into the [ensemble?] "absolute," making it the guiding star for the last philosophical rays on our intellectual horizon, the scholars were shaking their heads because it was hard for them to accept this philosophy; when Schiller, however, almost simultaneously, through poetry, [i. e.,] through artistic expression, did likewise, those same scholars were jubilant and bowed their heads in deep reverence before the genius of the poet and playwright.

In order to make it easier for mankind to understand throughout the ages, Schiller had a particular predilection for presenting powerful individuals fighting for the achievement of worthwhile objectives. This sort of presentation corresponded to his very own, innermost nature. Primarily he was dominated by the idea [concept] of freedom. We sense this concept in all his works, and as Schiller progressed in his poetic and dramatic development, his concept of freedom assumed different facets. In his youth it was the longing for physical freedom of which he had been deprived by the world around him and which transferred into his poetry; in his later life it was the ideal [freedom], the spiritual freedom, whose scope in the world of ideas has extended much farther than Goethe's concept, and which, within this farflung scope pointed to the fighting and struggling of the nations, to things historical. That is why Schiller was considered the real creator [originator] of historical tragedy [drama].

Persons who break the barrier of comprehension in the history and in the intellectual life of the nations are fully appreciated only by the people coming after them. Only succeeding generations are able to recognize the full impact of their creative masterpieces on overall cultural development and to view it as a finished picture. This applies to Schiller, in particular.

Based on a thorough knowledge of his life and works, our time [our present generation] is capable of embracing the wholeness of the individual, Schiller, and his expansive world of ideas on whose significance our present way of life is based. All his works, conceived from his innermost experience, are a lasting testimony of his humanity and of his clerical concept of art and artistry. The inexhaustible richness of his spirit, his aspiration for ultimate perfection, for total development of his gifts, the struggling and fighting for spiritual freedom, truth, and proximity to mother nature [earthiness] which pervade his poetry, dramas, and ballads, show our present generation the way to peace.

Schiller did recognize the moral majesty and power of Christianity; yet, nevertheless, he cannot be measured according to the standards of narrow-minded, religio-dogmatic thinking. For him, the most important thing of all was to be aware of the revelation of the transcendental [supernatural] in the human individual and in morality, for whose earthly manifestation he was striving.

During his lifetime—a period of political defenselessness and conflict—he created a position of power for Germany and, simultaneously made it an entity in the realm of the spirit—these are the laurels which he shared with Goethe.

A son of Lieutenant Schiller and his wife Elisabeth, nee Kodweiss, Johann Christoph Friedrich Schiller saw the light of day at Marbach in Wurttemberg on November 10, 1759. Owing to a kind fate, which bestowed on his mother the gift of poetry, Schiller was born out of the same harmonic blood strain [blood composition?] as was Goethe.

Two years later the family moved to Lorch where Schiller's father was active as a recruiting officer. At age 10, Schiller attended the Latin school [ancient Latin] at Ludwigsburg. The ruler [of the principality] at the time, who was highly arbitrary in guiding the destiny of his subjects, brutally interfered in the life of the artistic boy, who had matured before his time, by ordering him to enter the institution established for sons of army officers on the "Solitude" near Stuttgart, which, later moved into town, was converted into a college and since 1781 has been known as Hohe Karlsschule. Under the influence of his ruler, Schiller chose the study of medicine.

Despite military discipline and strict isolation, many of the works of the poets, philosophers, and writers, who had lived before him, found their way into his hands and were read by him with enthusiasm in the dark of the night. Schiller commenced to work on The Robbers in 1777; in 1780 he graduated from college and was licensed to practice his medical profession. Ordered to Stuttgart to serve his duke as regimental physician, he completed his first youthful drama, The Robbers, which in 1782 was performed on the Mannheim stage with great success. Schiller attended the performance without previously asking his duke for leave. Enraged, the noble prince forbade him the writing of comedy.

The urge for personal freedom was undoubtedly the primary impulse for conceiving the honest and romantic plot hatched between Schiller nad his childhood friend, Andreas Streicher, the musician (who were later joined by Schiller's sister, Nanette, who became Streicher's wife), in order to effect their flight to Mannheim where he worked as playwright for 2 years and then proceeded to Leipzig, Dresden, and Rudolstadt where he met Charlotte von Lengefeld, whom he married in February 1790. Theirs was an unusually happy marriage.

In 1802, after a full and rewardingly active life, Schiller was made a nobleman.

Repeated illness at the beginning of 1805 and recurring attacks of fever prepared him for the end which occurred on May 9, 1805.

While his mortal remains rest in the Weimar Fuerstengruft, his works have become immortal.

HERMANN WOLF.

Beginning of May 1955.

The Small Business Administration

SPEECH

OF

HON. HORACE SEELY-BROWN, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. SEELY-BROWN. Mr. Speaker, I should like to take this opportunity to urge that the Small Business Admin-

istration be continued for another 2 years. At the end of this period I believe Congress will decide that a permanent independent agency with increased authority is both necessary and desirable to assure the continued welfare of small business concerns in our economy. There is no doubt that many benefits have been derived from the financial, procurement, and technical assistance programs established under the Small Business Administration. Certainly there is no agency in Government which can approach the centralized function of assistance to small business that is presently performed by this agency.

All of us are aware of the increased economic power occasioned by the merger movement, the difficulty smaller manufacturers have in securing a fair share of the procurement dollar, the trials all types of small business have in acquiring long-term credit and of the continued need for managerial and technical assistance and advice. The Small Business Administration has made a good beginning in its efforts to correct and solve some of these difficulties perennially encountered by small business.

I am sure that my colleagues are familiar with what has been done by the Small Business Administration in its several programs.

It may be that some of you feel as I do that the results to date are not as completely satisfactory as we want them. Based on my close observations of the work of the Small Business Administration as a member of the House Small Business Committee, I can see certain areas in which improvement is necessary.

Although not a member of Subcommittee No. 2, I sat through the long hearings held by this committee because of my great interest in the problems presented and my desire to provide constructive solutions for them.

If there is one conclusion which may be reached as a result of those hearings—a conclusion of unanimous agreement—it is the absolute necessity of guarding the independence of the Small Business Administration.

The various duties and responsibilities, and the efficiency of the administration of the agency, can from time to time be examined and remedial action taken if necessary. As an adjunct to a regular department, the officials of a small-business office would listen politely to the Congress and then, as they should do, follow the direction of the department head.

Experience has taught us that an administrator of an independent small-business agency not only listens intently and with great interest to the findings and conclusions of the committees of the Congress but in addition acts upon congressional recommendations as well as the intent of the Congress as provided in the law.

Therefore, I should like to devote my remarks to certain aspects of small business and government which are not generally discussed. I want to emphasize why an independent agency devoted exclusively to service to small firms is both necessary and desirable.

It is true that virtually every large governmental agency has provided certain types of services to business concerns, including small business. The Department of Commerce, for example, has been interested primarily in the general problems of business as a whole. Collaterally, small-business problems are considered incidentally and as one part of the overall business picture. They are not the type of problems which are of the most immediate concern to the small firm, particularly in a period of economic expansion and rapid changes in products and processes. Small firms must be able to adjust quickly to new or improved methods or they fall by the wayside.

The type of assistance needed is not what an old-line agency, concerned always in the past with long-range help, is equipped to give. The entrenched procedures, fixed channels, and tier upon tier of reviewing authorities of the old-line agency frustrate efforts to give quick help in solving urgent problems.

The Department of Commerce itself seemingly recognized these facts when it transferred its own small-business unit from the Department proper to the National Production Authority soon after creation of that emergency agency and later to the successor agency, the Business and Defense Services Administration.

The experiences of World War II, as well as those of the present period, have shown clearly that small business does not receive effective help when responsibility for assisting it is assigned to one unit of a large agency that has many offices and many functions. When this is done, the small-business function of the agency is swallowed up among its many other duties.

It has often been stated that incorporation of a small-business program within a large agency would permit for effective representation. It is not true, however, that greater representation would result from such a move. Obviously, the Secretary of a Department would not personally guide the Department's small-business program. He would delegate this responsibility to another official, possibly an Assistant Secretary or an Under Secretary, but more likely to an office or division chief, as was the case in the past. Instead of having the head of an independent agency serving as its representative, small business then would be represented by an official of lesser rank who could not act on important matters without prior approval of superiors who could not approach the heads of other agencies on an equal footing and who could not report on small-business problems directly to the President and the Congress.

What small business needs is a separate, independent agency that can serve as a focal point of assistance to it, and that can act quickly and authoritatively in its behalf when the need arises. During the first years of World War II, for example, most military contracts were going to large producers. Small firms were being denied the opportunity to participate fully in the production of war materials. In response to the protests of small-business men, the Smaller War Plants Corporation was set up, as a part of the War Production Board, to help small firms obtain contracts. This Corporation was successful in getting a larger percentage of contracts for small business.

As in World War II, during the early months of the Korean war, small firms were being treated unfairly in the awarding of defense orders and in other phases of the defense program. Again, their protests led to the creation of an independent agency—Small Defense Plants Administration—which had no other function than to help small firms to overcome mobilization problems. Once again, a separate, independent agency proved to be what small business needed.

On the basis of past experience, it seems very unlikely that centralization of Government assistance to small business in the Department of Commerce would be to the advantage of small firms. In January 1946, for example, many of the functions of Smaller War Plants Corporation—functions which had proved of great help to small business—were transferred to the Department of Commerce and located there in a new and well-staffed unit, the Office of Small Business. A little over 2 years later, the small-business function had largely disappeared among the many other functitons of the Department. The Office of Small Business had been reduced to a minor unit of a large bureau and was staffed by only a handful of employees.

Further, the Department, in its previous opportunity to perform small-business functions, did not achieve success with them. In fact, its failure to perform the functions successfully, as attested to by hundreds of small-business men appearing before congressional committees, was a major reason for the creation of the Small Business Administration and the assignment to it of broad small-business responsibilities.

Virtually the same analysis may be made of the military services and the role of small business within those services. The Army, the Navy, and the Air Force all have small-business specialists, who are supposed to look after the interests of small business in awards of contracts. The fact is that the small-business specialists in the armed services are not as effective in behalf of small firms as an independent agency like the Small Business Administration.

One basic reason that small-business specialists in the armed services cannot do a fully effective job in behalf of small firms is that, after all, they are employed by the military branches and they must accept the policies and practices of the armed services. They are not in a position to exercise independence of action. They cannot formulate policies or even exert an appreciable influence on their formulation.

The Small Business Administration, on the other hand, is completely independent of other agencies and is devoted solely to the purpose of assisting small business with the special problems it encounters. It represents the interest of small business on various policymaking interagency committees, advises other agencies on questions affecting small firms, and serves as a "watchdog" in their behalf with respect to policies and activities of other Federal agencies.

Another basic reason why small-business specialists in the armed services cannot serve the interests of small firms effectively is the ingrained psychology in contracting offices which precludes adequate consideration for the small would-be Government contractors. Because so much of military purchasing is on a large scale, and so many items bought are products of such size that they can be made only by very large concerns—planes, tanks, trucks, big guns, et cetera—there is an inevitable tendency toward turning to the larger businessess for almost every kind of item. More accustomed to dealing with such concerns, contracting officers have too often adopted the attitude that it is easier to buy nearly everything from large firms. It is extremely difficult for small business specialists in the armed services to overcome such habits of thinking on the part of contracting officers and higher officials.

Small Business Administration representatives in the procurement centers, on the other hand, are not prevented by the circumstances of their employment from making all possible efforts to obtain contracts for small firms. Their allegiance is to the Small Business Administration and the interests of small business, not to officials of the armed services. It is their job to see to it that small firms have an opportunity to obtain contracts for any kind of purchase which they are capable of supplying. The difference in point of view matters a great deal.

Small-business men bring a great variety of problems to the Small Business Administration for help, usually involving dealings with other agencies. In numerous instances they have stated that they have tried repeatedly to get assistance from other agencies involved without success, and only by coming to the Small Business Administration could they get the help they needed.

Without an independent champion in the Government, small business would have no central agency to look to for assistance. Efforts in behalf of small firms would be widely diffused throughout a number of Federal agencies. The inevitable consequences, as in times past, would be confusion, loss of time, piecemeal efforts to assist small business, and inadequate and belated help.

This has been incontrovertibly demonstrated by experience. Efforts to deal with the problems of small firms through offices of small business or small business specialists in the regular departments of Government have been tried, and have failed.

The testimony of small-business men who have looked to the Small Business Administration for help and who have obtained it, truly indicates that an independent agency can cut through the confusion of scattered, piecemeal, inadequate efforts to assist small firms and make it possible for them to obtain quick and effective help.

Instead of an inefficient diffusion of efforts—always too little and usually too late—the Small Business Administration can provide a direct, central means of giving efficient assistance and representation to small business. Only through an independent agency can small business ever achieve proper recognition of its problems, with appropriate programs leading to a solution of these problems.

Disgraceful Performance

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. SCUDDER. Mr. Speaker, the defeat of an adequate highway bill last week has brought on a great protest from our American citizenry as well as, strong editorials criticizing the failure of this Congress to pass legislation that would not only improve the internal conditions of our country, but would be a great factor in reducing the wanton slaughter on our streets and highways. When you realize that 100 people every day are being killed, 3,000 per month or 36,000 per year, it is enough to arouse the entire populace of our country.

More people are maimed each year through accidents and more than $4 billion in losses is sustained each year, mainly attributable to unsafe and hazardous highways.

I wish to extend my remarks and include the following editorial from the San Francisco Examiner of Saturday, July 30, 1955:

DISGRACEFUL PERFORMANCE

The performance of the House of Representatives in voting down any form of Federal highway legislation was sickening.

In 12 hours of action in 2 days on the House floor, Congressman after Congressman expressed his great concern at the slaughter on our highways and the great economic loss the American people were suffering.

The need for a Federal highway bill, they kept saying to each other, is not in question.

Then, when their names were called, they voted down any form of Federal aid at all.

Some of them, when the final vote was announced, laughed aloud, as though they had done something amusing.

Up in the galleries, enjoying this display, were the lobbyists who today are being held responsible for the defeats of the various bills.

Many of them represented industries and associations that have fought for good roads for many years but who found that they didn't really want them if they were going to cost any money.

The lobbyists won a battle, but they lost the war, because they represent industries that cannot survive unless the highways of America are made adequate within the next few years.

Down on the floor the Congressmen were running the lobbyists' errands and deserting their own party leadership.

Today many of them have the decency at least to be somewhat ashamed of themselves.

And the lobbyists are telling everybody that they really were for a road bill and that they didn't expect that Congress would become so panicked under lobby pressure that nothing would result at all.

If these gentlemen are to be accepted at their word—and that is a gigantic "if"—then we agree with Republican House Leader MARTIN that President Eisenhower should call a special session of the Congress and make it sit in Washington until it does its duty.

There is nothing funny or politically smart about sabotaging a Federal highway bill.

About 200 Americans died in our chaotic traffic while these representatives of the people were issuing pious statements and finding a way to save their own political hides.

Now let them act like the statesmen they pretended to be.

Let them forget their miserable and petty differences.

Let them sit down together with their eyes off the galleries and do the job the American people are demanding of them.

And let them sit there until they do.

Reduction in Budget Estimates

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. TABER. Mr. Speaker, the appropriations bills are now through, with the exception of the legislative bill. As that is a comparatively small total of the whole, I have included what might be the result if the bill is passed. If it is not passed, and we have a continuing resolution, the total figure of budget estimates will undoubtedly be reduced by the continuing resolution by at least $10 million—just how much it is impossible to say.

I have prepared a table indicating the processes of the bills from the budget through the House and the Senate, which I submit herewith.

The table shows a reduction in the budget estimates of $2,003,361,014. In a great many ways, there have been things that have happened in connection with the appropriation bills that tend to wipe out the figures that appear on the surface. For instance, in the public-works bill, projects were initiated, many of them without any budget estimate, with an ultimate aggregate cost of upward of $3 billion.

In addition to that, in the agricultural bill, there were items above the budget aggregating $120 million that do not show. In the mutual security bill, there were items of reappropriation that were not known about beforehand that were reappropriated and took the place of direct appropriations out of the Treasury, involving approximately $300 million.

The concealed appropriations for the Agriculture Department and mutual-security items of reappropriation should really be deducted from the overall reduction in the saving that has been made, thus reducing the saving to about $1,500,000,000.

It looks to me as though, if we were careful, that the budget could be balanced in the fiscal year 1956, beginning July 1 next. The current picture for the month of July indicates that the income taxes, excise taxes, and customs duties have all begun to go up, and the overall

receipts of July were up nearly $150 million. On the other hand, the expenditures have gone up. The big increase in items is in the foreign-relief expenditures and the Veterans' Administration expenditures, but those figures should not carry through in that way all through the year, and the deficit should be much less than it has been.

Title	Budget estimates considered by Congress	Reported to House	Passed House	Reported to Senate	Passed Senate	Public law
Regular annual:						
Treasury-Post Office	$3,360,385,000	$3,282,553,000	$3,282,553,000	$3,358,622,000	$3,358,622,000	$3,322,488,500

A Tribute to Congress

EXTENSION OF REMARKS
OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. HOPE. Mr. Speaker, under leave to extend my remarks, I am including herewith an article by Mr. John C. Davis published as a part of his Washington column in the July issue of the Co-op Digest. Mr. Davis is a newspaperman of wide experience and one who has had an opportunity to observe congressional and governmental affairs for many years. During the past 3 years he has been here in Washington and in close touch with legislative activities.

In these times when one hears much ill-considered and unreasonable criticism of Government, and particularly of Congress, it is refreshing to read an article such as Mr. Davis has written.

I am happy that Mr. Davis made special reference to THOMAS A. JENKINS, our distinguished colleague of many years service, and a man who is respected and loved by every Member of the House.

The article follows:

The heart attack that struck down Senate majority leader, LYNDON JOHNSON, of Texas, gives this column a chance to say some things that it has long wanted to say regarding the men and women who man our Houses of Congress.

This observation is based upon more than 25 years as a working newspaperman, almost a year in a subcabinet position, and more than a year in the public relations field.

What I wish to do here is pay tribute to the men and women who handle our affairs in Congress. As a newspaperman I had contact with legislators for many years. Largely in this phase of the association they were humble men and women seeking to explain to a very cocky newswriter just why they had taken the stand they had on pending legislation, mostly agricultural since that was my special field.

As a newsman in the field I knew all the answers. I was very brusque with Congressmen, even Cabinet members, in criticizing their actions. I wondered, as I think you have, how the business of government ever got done with so many well-meaning but stupid people having a finger in the pie.

Then I came to Washington as an administrative assistant to the Secretary of Agriculture. In that position I learned intimately the problems facing officials in high administrative posts. I learned the real story in back of the hundreds, yes thousands, of dedicated men and women who carry on the every day affairs of our Government from very minor positions, unknown, unwept, and unsung, but nevertheless dedicated.

I learned about the men and women who represent us in Congress and it is to them that I would pay a tribute inspired by the unfortunate blow that has struck down LYNDON JOHNSON.

To begin with, you who know your Congressman or Senator only as a nice guy, or lady, whom you meet every 2 or 6 years when they come around seeking your vote, and accept them merely as such, realize but little of the real background of these people. You are apt to think of them as just someone who wants to hold public office, to drink at the public tap, with the blessing of the local political organization or boss, the latter able to tell them how to vote on critical measures or how to gain favor.

Nothing could be further from the truth as respects the great majority. There may be some who fit the picture of political hacks, but if there are I do not know them after 3 years here in Washington and an intimate contact with the men and women who "man" the Hill.

My observation leads me to say, without qualification, that the men and women in Congress are the hardest working single

group in the United States of America. They and their staffs put in more hours in their offices, more hours of work, than do any comparable group in the Nation, whether it be in private industry, labor, housework, farming, or any of the occupations that engage our citizens.

It is nothing for a Congressman or Senator and his staff to be at work at 8 o'clock in the morning, every morning, and to be still going strongly at 9 o'clock at night; not just 1 day but every day.

From a career that began on a farm, and included a couple of years as a laborer on an open-hearth gang in a steel mill, I know something about work. I want to say here and now that the Members of Congress work harder, physically and mentally, than any segment of our population.

What makes them do it?

At a recent meeting of the Ohio Society, at which I was a member of the reception committee, and TOM JENKINS, Ohio's ranking Republican Congressman, was the honored guest, I asked the Congressman why he stuck to his job. TOM, who represents Ohio's 10th district, and is in his 16th consecutive term which makes him the 6th ranking Member in the House, answered: "Jack, I am here because I like the service. Not a day passes but that I am able to do at least 50 nice things for at least 50 nice and deserving people. Where else could I perform so much service for good?"

The Congressman went on to say that he has never taken a campaign contribution from anyone, but he owes no man or interest, and that he casts his vote with a clear conscience for the public good.

By and large, TOM JENKINS is typical of the men and women who serve you in the Houses of Congress. They are deserving of our respect, admiration, and support. And when one of them has been stricken with illness, as has LYNDON JOHNSON, it behooves us to offer what prayers we may to whatever God we worship for his speedy recovery.

A Magnificent Legacy

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to bring to my colleagues' attention the magnificent gift to be received by the Morristown National Historical Park under the will of Lloyd Waddell Smith. This park, incidentally, is located in my congressional district, and includes Washington's famous revolutionary headquarters in Morristown, and also the site of the Continental Army's encampment in nearby Jockey Hollow. The Jockey Hollow area, totaling some 1,000 acres, was given to the Government by Mr. Smith in 1933, thus laying the groundwork for the establishment of the Morristown National Historical Park.

The late Lloyd Waddell Smith, one of New Jersey's most distinguished citizens, has left to the Morristown National Historical Park his unique collection of Americana. Included in this collection are hundreds of letters written by George Washington, his sword, and estate records. As an avid and discriminating collector, Mr. Smith amassed also a magnificent collection of Indian relics, largely found in New Jersey. Many manuscripts, books, and documents of the Civil War period also have been left to the national park.

In the light of this immensely valuable legacy, it is especially pleasing to me to know that these articles will be housed in a new wing to the national museum, located on the grounds of Washington's headquarters in Morristown. Sufficient funds for this purpose just recently have been made available to build this wing, which it is expected will be finished in 1956. At that time, therefore, one of our most interesting national parks will be able to display adequately the priceless and irreplacable collection just left to the Nation by the late Lloyd Smith.

There Is Still Ample Time

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. ZABLOCKI. Mr. Speaker, there is still ample time for Congress to enact a sound and equitable highway program before the adjournment.

It is my conviction that we can still rise up to the situation and take favorable action on highway legislation. The pros and cons of the various proposals on this subject have been debated for many months. They are familiar to most if not all of the Members. It would not require any longer than 1 day to reconsider this legislation, and to reach some satisfactory decision.

I wish to urge my colleagues on the Public Works Committee, and the distinguished leadership of this House, to bring the highway legislation to the floor without delay. I am confident that the House will be able to complete action on this vital measure before adjournment.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Milwaukee Sentinel. This editorial, in my estimation, reflects the feelings of many people who are deeply disturbed by the recent action of the House, and who are very interested in seeing an adequate and sound highway program enacted without further delay.

The editorial follows:

DISGRACEFUL PERFORMANCE

The performance of the House of Representatives in voting down any form of Federal highway legislation was sickening.

In 12 hours of action in 2 days on the House floor, Congressman after Congressman expressed his great concern at the slaughter on our highways and the great economic loss the American people were suffering.

The need for a Federal highway bill, they kept saying to each other, is not in question.

Then, when their names were called, they voted down any form of Federal aid at all.

Some of them, when the final vote was announced, laughed aloud, as though they had done something amusing.

Up in the galleries, enjoying this display, were the lobbyists who today are being held responsible for the defeats of the various bills.

Many of them represented industries and associations that have fought for good roads for many years, but who found that they didn't really want them if they were going to cost any money.

The lobbyists won a battle, but they lost the war because they represent industries that cannot survive unless the highways of America are made adequate within the next few years.

Down on the floor the Congressmen were running the lobbyists' errands and deserting their own party leadership.

Today many of them have the decency at least to be somewhat ashamed of themselves.

And the lobbyists are telling everybody that they really were for a road bill and that they didn't expect that Congress would become so panicked under lobby pressure that nothing would result at all.

If these gentlemen are to be accepted at their word—and that is a gigantic "if"—then we agree with Republican House Leader MARTIN that President Eisenhower should call a special session of the Congress and make it sit in Washington until it does its duty.

There is nothing funny or politically smart about sabotaging a Federal highway bill.

About 200 Americans died in our chaotic traffic while these representatives of the people were issuing pious statements and finding a way to save their own political hides.

Now let them act like the statesmen they pretended to be.

Let them forget their miserable and petty differences.

Let them sit down together with their eyes off the galleries and do the job the American people are demanding of them.

And let them sit there until they do.

Where Does the United States Stand With Respect to Soviet Russia in the Race for Aerial Supremacy?

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. BOGGS. Mr. Speaker, I want to call to your attention, and to the attention of the Congress, a matter which has lately given me increasing concern. It is a matter which ties very directly to the question asked so many times this past month—where do we in the United States stand with respect to Soviet Russia in the race for aerial supremacy?

I refer, Mr. Speaker, to the vast disproportion that has developed between the large expenditures for building new aircraft and the relatively much smaller expenditures for obtaining the basic research knowledge which, in the last analysis, determines their quality and their utility. The lumping together of research expenditures with the many times larger sums for the construction of the first models of new engines, airplanes, and guided missiles serves to conceal the relatively small effort the United States is concentrating upon research.

What we need is a better balance between our research effort and our development and production of new models of aircraft and missiles. Restoration of a realistic balance between the two—research on the one hand and development and production on the other—need not be expensive. In fact, I am convinced that such action can result in the saving for the American taxpayers of untold millions of dollars. It can save many lives among our test pilots and our youth who fly the planes in service.

More important still, achievement of balance between research and production of new aircraft and missiles can assure that the United States maintains its position of leadership in the world of aeronautics.

Let me give you a single illustration of the tragic consequences of the lack of knowledge, the lack of sufficient information coming from research. On a warm, sunny day in California last fall, one of our newest—and most promising—fighter aircraft prototypes took off on a test flight. This particular flight was the last of a series being made to demonstrate that the new airplane was able to perform satisfactorily the severe maneuvers which would be required of it in service use.

The pilot, one of the best in the business, climbed to a preselected altitude at which he began to perform the specified maneuver. Something went wrong: The airplane disintegrated in midair; the pilot was killed.

At first, no one knew what had caused this tragedy. But the most intensive studies of the wreckage and other available evidence finally revealed the cause. In the words of the chief engineer of the company which had designed and built the plane, the pilot "encountered some hitherto unsuspected mysteries of supersonic flight—and unexplainable phenomenon—a maneuver never before experienced under those conditions."

This strange maneuver, I am told, was a sudden and uncontrollable turn to the right. Instead of keeping its sleek nose pointed into the supersonic wind of a 100 times hurricane strength, the airplane suddenly turned and went into a violent skid. The result was that the terrific wind forces existing at supersonic speed battered the sturdy aircraft structure until it broke into pieces.

I have been relieved to learn that, in this case, a remedy was soon found. But I am disturbed when I reflect that, in cases like this, months of precious time, and hundreds of millions of dollars worth of engineering and production effort are being committed to projects where the line between success and failure is so narrow.

Even when the trouble can be soon corrected, the disorganization of the production line, and the great amount of additional engineering effort required, cost many millions of dollars. What is far more important, if the trouble cannot be corrected, the many years of effort that have gone into the development of the airplane or the missile are the same as thrown away.

We cannot win a technical race with Russia that way. And, whether we like it or not, the Soviet Russians have engaged in a race with us—to become first in the air. Assuming that we are still ahead in that race, I can find no reason to believe that we will long maintain the lead we now have, if we adopt an attitude of complacency or fail to make full use of our technical talents.

The instance of trouble with a new type aircraft that I mentioned is not an isolated case. During these past few critical years there have been other instances of airplanes which had to be grounded as a result of unknown faults that caused them to break apart in the air.

Why does this sort of thing happen? I am not an engineer or a scientist, and I do not pretend to know all the answers. But I will say this: I have looked into these accidents sufficiently to know that what is happening is that in our haste to bring about great improvement in the performance capabilities of our airplanes, we are forcing our aircraft companies to design for production on the basis of insufficient basic aeronautical knowledge.

In the decades before World War II, the United States was the acknowledged world leader in aeronautics. This was due to the research effort carried on during those years. At the beginning of that war, we had a backlog of basic aeronautical information which could be exploited readily by use in the design of new and improved aircraft.

But since the war, due to the supersonic possibilities implicit in the turbojet and rocket engine, our designers have had to accelerate their work to the point where the lead time between our aircraft research and our aircaft design and prototype production has been cut virtually to zero.

I am informed that our aircraft research people were just beginning to understand the nature of some of the problems that caused the tragic accident last fall at the very time the accident occurred. What I am saying is that, somehow, we must assure that our research people define these new mysterious problems and come up with the solutions, before new designs get to the flight stage, not after the airplanes begin breaking up in midair. And they should be able to do this in ample time for the designers to study and digest the research data before the design starts.

Our research effort has not kept pace. It is too thin today to provide the required lead time before design, and it is becoming increasingly apparent that this is a situation which has been worsening during the past few years.

In the postwar period between 1946 and 1953 appropriations for all military aircraft procurement—including airplanes and missiles—increased from $415 million to $15 billion—an increase of 3,500 percent.

During this same period, the appropriations for salaries and expenses of the National Advisory Committee for Aeronautics, our principal aeronautical research agency, went up from $24 million to $48.6 million—an increase of 100 percent.

In 1946, we were spending about 6 percent of the procurement appropriation to insure the technical quality of our aircraft, compared to only three-tenths of 1 percent for such insurance in 1953. Today the picture remains much the same as in 1953.

Mr. Speaker, I believe we are all agreed as to the necessity of spending the many billions of dollars required to construct and operate for peace great fleets of airplanes and missiles. But when we spend those billions, we must insist that they provide superiority in the air, in quality as well as in in quantity.

Our airplanes and our missiles must be able not only to meet their performance guarantees in the skilled hands of the expert company pilots. They must be able to operate, at performance guarantee levels, under the rigorous demands of military service.

The basic research required to provide the answers which will enable us to build supersonic aircraft that will be controllable, reliable and structurally sound—as well as sleek and fast—is an essential element in our airpower picture. We cannot afford to neglect it.

A Voluntary Health Plan for Older People

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. WOLVERTON. Mr. Speaker, during the 83d Congress, the Committee on Interstate and Foreign Commerce, of which I had the privilege of being chairman, initiated a health inquiry to study what can and should be done to provide additional protection for the American people against the heavy burden—and all too frequent financial hardship—arising from sickness and accidents resulting in hospitalization and accompanying medical expenses.

This inquiry disclosed that although there had been a very rapid growth of the voluntary health-insurance movement, the committee was equally impressed that there was a need for extension of coverage to provide for broader ranges of benefits and to additional groups of people. One of these groups that needed coverage were the older people, who either found difficulty in obtaining health insurance or were unable to obtain it at all.

In both the 83d and 84th Congresses, I introduced several bills designed to help the American people to bear the burden of hospital and medical expenses, built on our existing system of voluntary insurance.

I have been informed that the health inquiry conducted by the Committee on Interstate and Foreign Commerce dur-

ing the 83d Congress stimulated many in the insurance industry in their efforts to provide broader ranges of benefits and to cover additional groups of people.

I am particularly gratified to have learned that the Prudential Insurance Company of America, the largest insurance company in my State of New Jersey, and the second largest in the country, following the hearings last session of our committee, undertook a study of the possibility and feasibility of providing individual hospital-expense coverage at a reasonable rate for our older people and is now prepared to offer some time in September a special hospital-expense policy to both men and women between the ages of 60 and 70 which will help them pay their hospital, surgical, and medical expenses while in the hospital, with guaranteed lifetime coverage subject to the limits set forth in the policy.

For the information of the Members and my colleagues on the committee, I am including as part of my remarks the following letter received by me from Mr. Carrol M. Shanks, the president of the Prudential, relative to this new policy, the stimulus for which was provided by the work of the committee:

AUGUST 1, 1955.

Hon. CHARLES A. WOLVERTON,
House of Representatives, House Office Building, Washington, D. C.

MY DEAR MR. CONGRESSMAN: It is a great personal pleasure to advise you that our company will provide a comprehensive program, based on private enterprise, for hospital and medical care for older members of our population. This new program which we call our senior hospital-expense plan, is designed to provide guaranteed lifetime coverage for persons between 60 and 70 years old on an individual basis through special hospitalization and medical-expense policies. They will be offered to the public by our sales forces in September.

There are probably some 21 million persons age 60 and over, but only a small number of them are employed by concerns which provide hospitalization benefits through group insurance. Generally, this coverage does not continue when the employee is retired. However, the number of employers who are providing hospitalization coverage after retirement is increasing. While individual, as well as family, policies are available in addition to group coverage, many companies limit their issue to applicants under age 60. A few companies have policies available to applicants at the older ages but, in most instances, the benefits at the older ages are on a limited basis and almost without exception the insurer reserves the right to terminate the coverage after age 65.

Since only a small number of persons 60 years or over are covered by hospitalization insurance, there is a great need for this type of protection. The frequency of hospitalization at age 60 and up is twice that below age 45. Moreover, the average duration of hospital confinement is twice as long at age 60 and over as it is for ages below 45. Taking into account these 2 factors, the cost of hospitalization at age 60 and over is almost 4 times greater than for persons under 45 years of age.

In my opinion, you and your associates on the Committee on Interstate and Foreign Commerce of the House of Representatives, as a result of your hearings and exhaustive studies last year, deserve great credit in bringing to public attention the need for private enterprise to provide adequate assistance for our older population.

Following the hearings of the committee, the Prudential started the development of the program that is being announced. After an extensive study and great research concerning this problem of providing adequate coverage for the older persons, the company developed individual policies that will substantially meet their needs at reasonable costs. Most important of all, it seems to me, is that these policies are guaranteed renewable for life and the company cannot cancel them. The company reserves the right to change premiums because of the experimental nature of the coverages. However, any rate change may be made only on a class basis and not because of physical impairments or claims of any individual insured. I am enclosing a description of the major details of these new policies, which I think you will find interesting.

There are few, if any, more important social and economic responsibilities confronting our industry today. I am gratified to say that the Prudential, as an important member of the industry, is trying to meet this challenge.

With every good wish.

Sincerely,

CARROL M. SHANKS,
President.

SENIOR HOSPITAL EXPENSE POLICIES

The following is a brief summary of Prudential's hospital-expense individual policies for older people. The policy should be referred to for complete details.

Available to eligible males and females aged 60 to 70, inclusive. No further premiums are due after the policy anniversary following attainment of age 80, but benefits are provided during the lifetime of the insured.

Company cannot cancel policy, but may change the table of premium rates. The right to change premiums has been reserved by the company because the experimental nature of the coverage makes the proper level of premiums uncertain and the coverage is one for which the cost trend is uncertain. Any rate change will be for the class of policyholders and not applied to any individual insured.

The coverages are available on two plans:

A. Daily hospital benefit $8 with maximum surgical benefit $200.

B. Daily hospital benefit $12 with maximum surgical benefit $300.

Coverage is offered either on:

A. Ordinary basis where premiums are payable quarterly, semiannually, or annually; or

B. Debit basis where premiums are collected monthly by the agent at the home.

Important features of the debit and ordinary plans are as follows:

A. Hospital-expense benefits:

1. Daily hospital confinement benefits: For room, board, and routine hospital services while confined as a resident inpatient in a hospital, with a maximum duration for all hospital confinement due to any one accident or during any one period of sickness of 35 days on the ordinary basis, and 28 days on the debit basis.

2. Additional hospital-expense benefits: For expenses actually incurred, while confined as a resident inpatient in a hospital, for items such as operating room, laboratory, X-ray and fluoroscope, medicines, drugs, surgical dressings, oxygen. The maximum payment for confinement due to any one accident or during any one period of sickness is 8 times the daily hospital benefit on the ordinary basis; and 5 times the daily hospital benefit on the debit basis.

3. Aggregate hospital-expense-benefits limit: Hospital-expense benefits for all hospital confinements, regardless of cause, may not collectively exceed during the life of the policy:

On the ordinary-basis policy, $1,600 when the daily hospital benefit is $8; $2,400 when the daily hospital benefit is $12.

On the debit-basis policy, $1,200 when the daily hospital benefit is $8; $1,800 when the daily hospital benefit is $12.

In each case, when the aggregate hospital-expense-benefit limit has been reached, no further premiums are required and the policy is continued in force for life for surgical-expense benefits only.

B. Surgical-expense benefits: Payment of actual charges up to the amount provided under the schedule of operations as shown in the policy.

PREMIUM EXAMPLES

For lives becoming insured at age 65, the premiums at the present table of rates are:

Ordinary plan (quarterly premiums): $8 daily hospital benefit with maximum surgical benefit, $200: Males, $19.18; females, $20.40. Twelve-dollar daily hospital benefit with maximum surgical benefit $300: Males, $28.77; females, $30.60.

Debit plan (monthly premiums): $8 daily hospital benefit with maximum surgical benefit $200: Males, $5.60; females, $6.02. Twelve-dollar daily hospital benefit with maximum surgical benefit $300: Males, $8.40; females, $9.03.

The Timeless Philosophy of a Great Commoner

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. CANNON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a remarkable address delivered at the Hotel Jefferson, Richmond, February 27, 1955, by Hon. Robert Crosser, one of the most influential Members of this House for more than a third of a century:

ADDRESS DELIVERED AT THE CONVENTION OF DISTRICT XVI OF THE KAPPA ALPHA THETA SORORITY, HELD AT HOTEL JEFFERSON, RICHMOND, VA., ON SATURDAY, FEBRUARY 27, 1955, BY ROBERT CROSSER, WHO, EXCEPTING THE PERIOD FROM MARCH 4, 1919, TO MARCH 4, 1923, WAS A MEMBER OF CONGRESS CONTINUOUSLY FROM MARCH 4, 1913, TO JANUARY 3, 1955

Madam Toastmistress and members of the Kappa Alpha Theta Sorority, when the very estimable member of your organization invited me to address this convention, she suggested that I stress the importance of achievement by members of your sorority. I called attention, however, to the fact that achievement is often not unmixed good.

It occurred to me that a group like this, the most important service I might render would be first to call attention to the fact that many of the conventional notions in regard to the right purpose in life are fallacious. It seemed, therefore, that the best service which I might be able to render is to state what, from the standpoint of the absolute, is the true purpose or goal of mankind.

Let me say, then, without quibbling, that man's aim, purpose, or goal should be the realization of absolute harmony. I appreciate the fact, of course, that from the human standpoint, relative harmony only may be reasonably expected.

I am sure, however, that we can all agree that earnest devotion to and continuous support of one's best understanding of right, or truth, is the individual's most sublime expression of life.

Right means to be in accord with the Supreme Power of the universe. The terms "right," "truth," and "reality" all have the same meaning. Such constant support of the right by the individual, therefore, indicates also his recognition of the existence of infinite good and its action which he desires to manifest by his conduct.

When the individual becomes regularly conscious of his identity, he then experiences a continual eagerness to know the right, the truth, in order to be able to determine what is his proper course of conduct. In addition to his eargerness to know the right, the individual becomes vividly aware of the fact that the urge to do right, the truth, felt by him, is the activity of the cause, the power, which gave him existence, and is the only real cause or creator.

If the individual's thinking and activity manifest at-one-ment with, accordance with, the Supreme Power, then that thinking and action are right. Right or truth being the essence and law of action of the Supreme Power, the infinite mind is, therefore, all that is real. The real is that which is right or true. The philosopher Herbert Spencer said also: "That which is real is permanent; that which is not permanent is not real."

Now, my friends, to both you who have been, as well as you who are now, college students, it must be evident that the true purpose in striving for an education should be the improvement of our understanding of the right; to increase our knowledge of the law of life, of the way of action of infinite mind, and that means the truth which will make mankind really free. In brief, the purpose in seeking an education should be to acquire the knowledge of the law of life, and thus become conscious of our "at-one-ment" with infinite mind and so be better able to fulfill the Creator's purpose of our existence. William Thompson Seaton well said: "Manhood, not scholarship is the first aim of education."

The words "mind" and "spirit" are synonyms of each other. The terms "infinite mind" and "infinite spirit" are appropriate names for the universally present, all-knowing, omnipotent and only Power that exists. Others may designate the Power by such names as Creator of God, but there should be no quibbling about names or titles. That which is all-important is knowledge of the Power and its action.

Whether we are considering the conduct of the individual in what is usually regarded as private affairs, or, on the other hand, we are discussing his conduct as a member of the collectivity known as society, in the exercise of his rights, or in the discharge of duties, the true law of life is the law of action of the infinite mind.

Now, my friends, you will have concluded no doubt from what I have already said that I regard what is called matter as a nonreality, and in that conclusion you are entirely correct, although I prefer to say: "Matter is a misinterpretation of reality."

Today, no truly outstanding physicist contends that so-called matter and material objects have existence as independent entities. The nonreality of matter has been demonstrated from different viewpoints. John Fiske, late professor of philosophy at Harvard University, said: "Take away the cognizing mind and (then) the color, form, position, and hardness of the table before you * * * all the attributes, in short, that characterize it as matter, at once disappear. Apart from consciousness, there are no such things as color, form, position, or hardness, and there is no such thing as matter."

In 1934, when he became president of the British Association for the Advancement of Science, Sir James Jeans was reported as saying in his inaugural address, that the physical world has no objective reality apart from the mental concepts of it which man contrives with his mind. When asked to comment on the statement of Sir James Jeans, Sir Arthur Eddington, famous physicist, astronomer and professor at Cambridge University, England, promptly said that he agreed entirely with the statement of Sir James Jeans.

The two men whom I have just quoted were regarded in their time as certainly the outstanding authorities in the subjects of physics and astronomy.

Professor Oswald of Leipsig University, said many years ago: "Matter is only a thing imagined." Professor Max Muller has said: "To speak of matter as something existing by itself and presented to the senses, is mere mythology. And yet," he said, "we are asked by materialists to believe that the perceiving subject, or mind, is really the result of long-continued development of the object, or of matter. This is a logical somersault."

Many years ago, Prof. Osborne Reynolds, F. R. S., LL. D., M. Inst. C. L., a great mathematician and professor of engineering at Owens College, Manchester, England, published a carefully prepared mathematical treatise in which he proved mathematically the nonreality of matter.

If there are any who are inclined to scoff at those whose statements have just been quoted, let them note what has been said by two other very eminent men of science. Dr. Le Bon of the Royal Institute of Belgium in his notable work entitled "The Evolution of Forces" referring to what he called the fixed belief in the reality of matter, said: "Scientific ideas which rule the minds of scholars at various epochs have all the solidity of religious dogmas. Too often do we forget that the scientific idols of the present day have no more right to invulnerability than those of the past."

Dr. J. W. Heysinger, author of "Spirit and Matter Before the Bar of Modern Science," referring to so-called material science, writes as follows: "The dogmatism of theology finds a full counterpart and coworker in her newer sister, dogmatic science."

When I was a student in college, the world's physicists in general declared the atom to be the smallest particle of matter, although it had not been a great many years prior to that time when the molecule had been declared to be the smallest particle of matter. Emphasis was placed also on propositions as to the "indestructibility of matter and the continuity of energy." In less than 10 years after my graduation from college, however, every scientific publication in the world announced in big headlines that the electron had been proved to be the smallest particle of matter. It was soon thereafter demonstrated also that the electron consists of lines of force at right angles to each other. It was then proved that the ether, which had long been designated as the elemental form of matter, really consists of the total of the electrons in the universe.

What in all fairness, it may be asked, what had become of the so-called matter stuff? The answer is that it never really did exist. Matter is a misinterpretation of reality.

The age-long general belief in materialism was, of course, accompanied by a practically universal belief in the existence of innumerable, separate, and distinct beings, even insulated from each other. This very common belief led people in general to believe mistakenly in the inevitability, indeed, in the unavoidability of conflict because of a being's eagerness for personal advantage over others.

To believe in the existence of innumerable, distinct, separate entities is, of course, to believe in materialism. The usual definition of matter given by materialists themselves is: "Matter is that which is outlined." Since, as has been shown, there is no matter, it must follow logically that there is no outline, and of course, if there is no outline, then there can be no division, and if there is no division then it is clear that all that exists is a unit—one—and that one, as has been said, "is all in all."

It is logically certain also that the one power is mental. It must be mental, must be infinite mind, in order to know how to control the universe, created by itself, the one power. The only thinking that is possible is the thinking or consciousness of that which is true or real. All of reality is, however, inherent in the one mind. All thinking of consciousness, therefore, must be the consciousness or thinking about that which is real, or in other words, must be the truth existing in the Supreme Power, that is, the infinite mind.

The consciousness or awareness of infinite mind, of God, is necessarily the contemplation of himself, that is, His self-contemplation, His expression, His exact likeness, which is man.

As already stated, mind creates and controls by consciousness or thinking. The one mind must be eternally conscious of all reality and truth, must be constantly conscious of all true ideas and their action. If this were not so there would cease to be harmony. Absolute harmony is the perfect adjustment of all reality, all truth, of all real ideas. If harmony should cease to be, the result would be instantaneous and universal destruction.

Now, my friends, I am sure you will agree that our somewhat extensive discussion of what is basically true and what is false is not without justification. I am sure indeed, that a moment's consideration will convince earnest students that in the discussion of serious problems, the conclusions reached and advocated as the desirable course of action for the promotion of the welfare of mankind should be, and in fact such conclusions must be derived from fundamental principles, the soundness of which will have been established beyond doubt.

We have shown that infinite mind or spirit and its consciousness are one and all in all. The whole of reality, that is, all that is true or right, being inherent in infinite spirit, mind, has eternal existence. Creation is, therefore, complete, perfect and eternal.

It is evident, then, that no person really creates anything. He discovers creation. Man does not make truth but becomes conscious of, that is to say, becomes aware of truth. The discovery of the truth, that is, becoming conscious of the real, the right must be the constant, unchanging goal of man, the true aim of education.

The great importance of knowing the truth is recognized almost universally, and yet comparatively little rational, systematic effort has been devoted to the task of explaining and demonstrating the proper approach to the solution of the problem: "How to succeed in knowing the truth."

If, therefore, at the conclusion of my remarks to this group, I shall have done something worthwhile to indicate the logical approach to the solution of the problem: "How to succeed in knowing the truth," I shall be more than pleased.

I am sure that some of you have observed that, even when they are engaged in mental fields of activity requiring deliberation and reflection, many persons become almost frantic in their eagerness to evidence the fact that they are strenuous in their efforts. This is another illustration of the fallacy of the belief that the intense constant exertion of and reliance upon the human will can assure real progress. In fact, at the beginning of the present century, it became almost a fad to be strenuous from hardly any motive except the desire to be known as being constantly strenuous for strenuosity's sake. In other words, it was a fair illustration of the old saying: "Much ado about nothing."

It is clear that the consciousness or knowing of the truth, that is, of reality, is not the result of personal, finite contriving,

planning, designing, or the result of any other kind of mechanical effort. On the contrary, truth is the right, eternal action or expression of the One and Only Power, which may be properly designated also, as either Infinite Mind or Infinite Spirit, because the words "mind" and "spirit" are synonymous. The Master Christian said: "God is Spirit."

Many persons, notwithstanding earnest, even intense efforts to know the truth, fail in their sincere purpose because of their wrong approach to the problem. They assume wrongly that it is necessary for them to contrive, construct, yes, even to originate truth. The Supreme Power, Infinite Mind, and its action constitute all of reality and hence all that is right. The cooperation and mutual attraction of all the ideas in Infinite Mind are controlled by the constant and eternal action of the Supreme Power.

No person can ignore or disregard, with impunity, that which is absolute right or truth and its eternal law of action. Whether he be a person confronted with a task in the work-a-day world or a student concerned with his studies, if he depends upon materialistic notions which he has outlined as objectives, and upon his so-called personal will to accomplish such objectives, he will find himself ultimately to be distressed because of failure to make true progress.

If in accordance with what he may have decided to be advantageous from a material standpoint, a person endeavors to control the course of his life, there could be only one certain result. That result would be his failure to increase his awareness of the eternal verities of being, his failure to recognize progress toward the realization of his complete identification with all that is true, right, and good.

If, however, men will listen to and obey "the still, small voice," will "be obedient to the promptings of their own soul," as urged by William Ellery Channing, or as others have said, "be true to their best inspirations," if they will give heed to these wise pleas, then they will know the truth which will make them free.

When, however, in his quest for the truth, the individual will have acquired the constant attitude of being the receiver and not the creator of the good he enjoys, he will then no longer be hampered and harassed by the belief that he must struggle to contrive, design, and construct that which is required for his pleasurable existence.

The discovery of the truth, that is to say, the becoming conscious of the real, the right, must be the constant unchanging goal of man, the true aim of education.

No greater pronouncement was ever uttered than that which is expressed in the words, "Ye shall know the truth and the truth shall make you free."

Let me repeat that the right, the truth is not, however, the result of human contrivance. The fact is that the trials and tribulations of mankind are due to the erroneous notion that members of the human family can devise their conduct, can calculate their actions in such fashion as to present the appearance of right, notwithstanding the fact that their planning is for personal advantage. Regardless, however, of the plausibility of such action, those who regularly pursue such a course of conduct will be doomed to disappointment. They will finally realize that disregard of the promptings of their better consciousness cannot assure them harmony.

The experience of those who pursue such a course is well illustrated by a few lines of verse which came to my attention some years ago, from which I quote as follows:

"When you get what you want in your struggle for self
And the world makes you king for a day,
Just go to a mirror and look at yourself
And hear what that man has to say.

"For it is not your father or mother or wife
Whose judgment upon you must pass;
The fellow whose verdict counts most in your life,
Is the man staring out of the glass.

"You may be like Jack Horner and chisel a plum
And think you're a wonderful guy;
But the man in the glass says you're only a bum
If you can't look him straight in the eye.

"He's the one to please; never mind all the rest
For he's with you clear down to the end;
And you've passed your most dangerous, difficult test
If the man in the glass is your friend.

"You may fool all the world down the pathway of years
And get pats on the back as you pass;
But your final reward will be heartaches and tears
If you've cheated the man in the glass."

Individual or collective conduct may be discussed at length from the standpoint of ethics, political science, political economy, religion, metaphysics, or according to other formal treatises concerning mankind's conduct, but always and inevitably, the real desire of the individual is to know and to do what is right.

My friends, in order to manifest the harmony with which man has been endowed, we must realize, must live the truth otherwise called the right or reality. One of America's early and able writers concerning fundamental principles, urged the importance of obedience to the promptings of one's own soul. That was equivalent to saying be obedient to the direction or guidance of the Supreme Power, the One Infinite Mind. The promptings of the soul is the activity of the Infinite Mind as wisdom. The activity of the One Infallible Mind constitutes the true law of life. The relationship of the true ideas is controlled by the laws, or we may say, the ways of action of Infinite Mind.

Whatever aspect of the perfect government we may consider, the fact is that the consciousness or way of action of the One Unerring Mind is eternal. The action and control by Infinite Mind in creation is absolutely right, unchanging, and needs no statute books to prove its existence and authority.

The law or ways of action of Infinite Mind must be recognized by the individual as the true law of his life, if he is to live aright. It is therefore absolutely necessary also, if the conduct of human government is to be just, that it must constantly improve its interpretation of the perfect government, it must reflect the right as it prevails in the One Perfect Government.

In the light of what has been said, it must be clear that everyone has an unavoidable responsibility which requires him not only to live the right, the truth, but also that he must earnestly and constantly endeavor to disseminate the truth, and by so doing to hasten the universal realization of the reign of justice.

I realize the fact, of course, that some people seem puzzled and even disappointed when told that all truth, all reality has existed eternally. The vanity of some is offended by even the inference that the individual can create nothing. The disappointment of such persons is due in part to the misunderstanding of the word "indivdual" which has often been defined inaccurately. Instead of meaning a being which is apart and distinct from all else, the word is derived from the Latin prefix "in" meaning "not," and the Latin verb "dividuus" meaning divided. The word etymologically therefore means "not divided from." The individual is not divided from the one all-inclusive life. He individualizes the one life, becomes conscious of, or discovers creation, but does not make it.

Consider, then, the possible glorious experience of those whose attitude is in accord with the truth, with the real creation, as they realize the joy and bliss which unfold to them as a result of their constant and unending discoveries of truth.

This discovery, the awakening to the understanding and realization of truth is, or should be, the true aim of education as distinguished from schooling or training. The word "education" is derived from the Latin prefix "e" meaning "out of," and joined with the Latin verb "ducere" meaning 'to draw" or lead. The word education, therefore, means to draw out. Obviously, whatever may be drawn out must have been within. Education is, therefore, a spiritual process, as distinguished from training or schooling, which is largely mechanical in nature. People were formerly schooled to believe that the earth was flat, and as a matter of fact, during the Middle Ages in Europe, many people were executed, burned to death, because they disputed the statement that the earth was flat.

I have already mentioned the fact that many materialists scoff at the expression, "Ye shall know the truth and the truth shall make you free," and when the statement is voiced approvingly, they almost instantly bark the question, "What is truth?" When Pontius Pilate asked the question, "What is truth?" the Master Metaphysician answered, "He that doeth the will of the Father shall know of the doctrine" (the truth). He spoke of the Supreme Power as Father.

Let me quote also what a very distinguished scientist has to say about the truth, that is, the right. Dr. Warren Weaver is chairman of the Board of the American Association for the Advancement of Science, and vice president of the Rockefeller Foundation. For 20 years he has been responsible for a world-wide program in the natural sciences. Dr. Weaver said: "When I am trying to work out a problem of right and wrong, then God is a clear unambiguous voice, an unfailing source of moral guidance. I do not understand how these things happen; but I do know perfectly well, if I listen to this voice, what is the right thing to do. I have many times been uncertain as to what course of action would best serve a certain practical purpose; but I cannot think of a single instance in my life when I asked what was the really right thing to do and the answer was not forthcoming."

Alexis de Tocqueville, a distinguished French writer on the subject of political science, and author of a notable treatise on the subject "Democracy in America," came to America 120 years ago to travel and study. He was a great champion of democracy and once said: "The cure for the ills of democracy is more democracy."

During 1835, while speaking of America de Tocqueville said: "I sought for the greatness and genius of America in her commodious harbors and her ample rivers, and it was not there; in her rich mines and her vast commerce, and it was not there. Not until I went into the churches of America and heard her pulpits aflame with righteousness did I understand the secret of her genius and power. America is great because she is good, and if America ceases to be good America will cease to be great."

Webster defines righteousness as the state or quality of being rightful or just. De Tocqueville uses the words right and good interchangeably. There is no doubt that the French writer understood the word "right" exactly as I have emphasized it during these remarks. He undoubtedly meant: "America is great because she is righteous, and if America ceases to be righteous, America will cease to be great."

Earlier in my remarks I called attention to the fact that William Ellery Channing had said, "Be obedient to the promptings of your

own soul." The Master Christian said, "Be obedient to the still, small voice." Others have said, "Be obedient to your best inspirations." The all-important implication in all of these statements is, however, the recognition of Infinite Mind's guidance, its proper direction of the individual. Some persons nevertheless argue that the still, small voice is not reliable. In answer to such statements we might emphasize the fact that the voice is always clear and readily understood, and that the difficulty, if any, consists of the person's failure to listen intently and earnestly; his failure to exercise regularly what we might facetiously designate as his listener.

Do not doubt for a moment that the earnest effort to know the truth assures the individual of true pleasure. Certainly, a receptive and expectant attitude will assure him of incalculable joy and bliss, which will cause him to become a veritable crusader for that which is right.

Enthusiasm for the right will fire the individual with an earnest desire to give proper account for the talents with which he has been entrusted, and make him eager to arouse the consciousness of truth in others.

Horatio Bonar expresses the idea well in the lines which I quote as follows:

"Thy soul must overflow, if thou
Another's soul wouldst reach;
It needs the overflow of heart
To give the lips full speech.
Think truly, and thy thoughts
Shall the world's famine feed;
Speak truly, and each word of thine
Shall be a fruitful seed;
Live truly, and thy life shall be
A great and noble creed."

Because of its transcendent importance, I feel that I may be excused for again emphasizing the fact that truth, reality or right is already complete, perfect, and has eternal existence. The real, the right is not the result or effect of any finite being's contriving or designing. Nevertheless, everyone is anxious to become aware of, that is, to know the truth, otherwise called the right.

For the assurance and acceleration of the awareness or knowledge of the truth, the most important requirement is the clear recognition of the existence of the one supreme and all-inclusive power which is spirit or mind and also properly designated as principle. The consciousness of that mind is not only right, but is also eternal.

All aspects of truth are expressions of the one mind. The consciousness of that mind constitutes the eternal, the unchangeable laws or ways of the perfect government which human governments profess to imitate.

When he is certain of the existence of the all-knowing mind and its consciousness, then the individual sincerely manifests not only the receptive attitude toward the truth but also becomes confidently expectant as to the realization of what is truly good, helpful, and gratifying.

Certainly it must now be clear that the practice of devising courses of action in order to secure self-advantage is wholly unscientific and results in disappointment and distress. In view of the fact that the cause of all creation and the law or way of its action are eternal, it follows logically that the duty of mankind is constant compliance with the direction of infiinte mind. The way of actoin of that mind is what constitutes right, the truth or the real, and disregard of that truth, reality or right by the person makes his punishment more certain than if he were to disregard the effect of gravitation with harm to himself.

The perfect government consists of the all-knowing, omnipotent mind and its action.

As college women you are eager, I know, to be as helpful as possible in the promotion of true mental development of humanity, in the clarification of the understanding. It is, therefore, of first importance to realize clearly the unity of creation, the allness of the one mind or spirit. When we realize clearly the oneness of infinite mind or spirit and its action, we then understand the necessity of determining our conduct according to what is right as determined by the eternal thoughts or ideas and their cooperative action in infinite mind. In other words, we shall then be knowing the truth.

We shall then cease to puzzle about the relative good or bad of so-called altruism on the one hand, of so-called egoism on the other. We shall clearly understand then that there are, strictly speaking, no others, as assumed by altruism, and actually no selves. All is inherent in the infinite and indivisible one mind. The Greek philosopher Pythagoras said: "Friend is another I." How wrong then, and how ridiculous even to consider injuring one's other "I," a so-called "self."

Serving the unity of creation, is the only concern of the really enlightened person. The ideal of universal brotherhood awakens in mankind not only the desire for the manifestation of that glorious order, but also the eagerness to experience the reign of justice prevailing therein. More important still, it awakens in him the willingness and the eagerness to obey the mandates and guidance of the supreme power of that realm of harmony.

As time goes on we shall be more and more impressed by the great truth as to the unity of creation, and by the ideal stated by the poet Burns when he said: "Man to man the world o'er shall brothers be for a' that." As men acquire increased understanding of the truth, their conduct becomes more and more like that exemplified by the Bridge Builder, described in the lines which in conclusion I quote as follows:

"An old man, going a lone highway,
Came, at the evening, cold and gray,
To a chasm vast, and deep, and wide,
Through which there flowed a sullen tide.
The old man crossed in the twilight dim;
The sullen stream held no fears for him;
But he turned, when safe on the other side,
And built a bridge to span the tide.
'Old man,' said a fellow pilgrim, near,
'You are wasting your strength with building here:
Your journey will end with the ending day;
You never again must pass this way;
You have crossed the chasm, deep and wide—
Why build you the bridge at the eventide?'
The builder lifted his old gray head;
'Good friend, in the path I have come,' he said,
'There followeth after me today
A youth, whose feet must pass this way;
This chasm that has been as naught to me,
To that fair-haired youth may a pitfall be.
He, too, must cross in the twilight dim;
Good friend, I am building the bridge for him.'"

Report on NATO Parliamentary Conference in Paris

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

(Mr. HAYS of Ohio asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include a report.)

Mr. HAYS of Ohio. Mr. Speaker, I had the honor to be the chairman of the delegation to represent the House of Representatives at the NATO Parliamentary Conference in Paris last week. Also in that committee were the gentleman from New York [Mr. ANFUSO], the gentleman from Arizona [Mr. UDALL], the gentleman from California [Mr. WILSON], the gentleman from Indiana [Mr. CRUMPACKER], and the gentleman from New York [Mr. BECKER]. We have prepared a report on that meeting.

The report follows:

The NATO parliamentary delegation of the House of Representatives submits the following report:

The delegates arrived at Paris on Sunday, July 17, and immediately upon arrival, the chairman went to a meeting of the steering committee where rules and procedure were drawn up.

The Conference opened on Monday the 18th and each nation was called upon alphabetically to lay before the Conference any matter that it might consider pertinent. The meeting on the 18th at 10 was spent actually on organizing the Conference and electing officers. After which at 11, the briefing was given by Lord Ismay on the general organization of the Atlantic alliance, followed by a question period. After Lord Ismay's appearance, he was followed by General de Chassey on the military organization of NATO. This was followed by questions. At 12:30 a film was shown of previous NATO meetings. After lunch the delegates heard from Mr. Lowell Weicker, Assistant Secretary General for Production and Logistics. This was followed by a question period and then the delegates were briefed by Sir John Hodsoll, senior civil-defense adviser on the subject, Civil Defense—the Role of Parliaments and the Role of NATO. This was followed by a question period, after which the delegates heard from Ambassador Wilgress, Chairman of the Committee on Information and Cultural Relations. The morning session of the second day was taken up by a trip to SHAPE headquarters and a briefing by General Gruenther, Field Marshal Montgomery, General Brisac, and Air Marshal Dawson. The remainder of the time up to and including Friday afternoon was given over to general sessions and committee meetings. Many subjects of interest to the nations of NATO organization were discussed and a resolution was adopted unanimously on the subject of future meetings of members of Parliament from NATO countries. That resolution read as follows:

"RESOLUTION ON FUTURE MEETINGS OF MEMBERS OF PARLIAMENT FROM NATO COUNTRIES

"This meeting of members of parliament from NATO countries:

"Recalling that the aim of the North Atlantic Treaty is both to encourage the defense of member countries and to contribute to the economic, social, and cultural development of the people united within the framework of the Atlantic community;

"Considering that achievement of the latter aim would be facilitated by closer relations between the members of the representative assemblies of the different countries and considering that this is particularly desirable in the case of the legislative branches of the member states who have by solemn treaty pledged themselves to the mutual defense and welfare of their respective peoples through the far-reaching initiative in international relations that is NATO;

"Believing that these discussions between members and the NATO authorities and between members themselves have already been of great value;

"Invites the speakers of the various parliaments concerned, according to the procedure

which they think appropriate, to send delegations to a similar meeting each year;

"Expresses the wish that the governments of the countries here represented facilitate through NATO Council further meetings;

"Considers further that before we separate, a continuing committee should be selected, composed of the present officers and other members of the steering committee, 15 in number, to include one from each NATO nation and with the right of substitution to make arrangements for the next meeting;

"This meeting further considers that such a continuing committee would require some secretarial assistance of its own. This should be, for the time being, on a part-time basis. The necessary finance, which should be quite small, should be provided by the participating governments or parliaments concerned on a basis to be mutually agreed."

The delegation from the House of Representatives unanimously felt that the interchange of ideas and problems among the members of the parliamentary bodies of the 15 NATO countries was indeed very beneficial. The committee believes the United States should participate in the future meetings and should not only participate but should also encourage and do everything it can to make these meetings worthwhile. Your committee believes that such future meetings will be mutually advantageous to the nations allied in NATO and will be productive of great good in the interchange of ideas. It was very obvious during the sessions that the airing of common problems and the effort made by the delegations from various countries to understand the problems of the associated nations would be valuable in the conduct of future consideration of the many questions faced by an organization such as NATO. It was pointed out by not only the committee from the United States, but by others that it is the belief of many that NATO has been largely responsible in deterring armed aggression and an outbreak of the third world war and that NATO can be as useful in the cold war as it has been in preventing a hot war.

The chairman of the United States delegation appointed the ranking minority member, Mr. LEROY JOHNSON, of California, as a member of the committee, consisting of one member from each country, to consider the resolution which has already been set forth in this report. Decisions and actions of the United States delegation were bipartisan in character and unanimous in all aspects. The final paragraphs are from a speech made to the Conference by the chairman of the United States delegation, Mr. HAYS of Ohio; which generally represents the sentiments of your committee:

"I also think that the United States Congress and the people of the United States are becoming more and more aware of the time that it is impossible for a nation to exist in isolation. I was interested indiscussing this matter just before I left for this meeting with some of our people. The point was made, and I think it is a cogent one at this time, that Democracies stand together very firmly in times of military danger, but in times of economic stress, and I would like to say parenthetically that I am not predicting economic stress in the immediate future in the United States or anywhere else, the point was made that in times of economic stress the democracies have a tendency not only to not stand together, not only to fall apart, but also to blame each other for their plight, and it seemed to some of us that were discussing this, that the economic aspect of this exploratory convention might be very worthwhile. It has occurred to me, and I am expressing only my own personal opinion, not that of the Congress or even of my own delegation, that perhaps an approach can be made to the problems, some of them at least, through this meeting, and other meetings of this type which we hope and believe will follow.

"It seems to me that it is most important that NATO not only continue, but that it be strengthened, and that it function more efficiently. We feel that a lessening of tension, which we think is very desirable, might have as one of its designs the collapse of this organization, and we certainly feel that that would be, and when I say this organization I am thinking of NATO, not this particular body meeting here, we think that would be a tragedy. We are prepared, I believe, to support NATO as we have in the past, to strengthen it and to show the world that democracies do have common interests, that they can sit down around a table and work out their problems, although there may be differences which at the moment of presentation might seem almost insurmountable. I was interested in what the gentleman from the United Kingdom just said about the evacuation of Soviet Forces from Eastern Europe. Many of us feel that a concession of that type from the Soviet Union would be a concession in name and not in fact, because if America—and Canada and the others—were to evacuate their forces from Europe it would be a terrific task to replace them on short notice, whereas, if the Soviet Union were to evacuate her forces it is a matter of almost hours, at least days, to get them back into position again. So, we think that that would be a concession that would mean very little.

"I was also interested in the remarks of the gentleman from Denmark about Spain, and while we from the United States delegation do not wish to indulge in a full-dress debate on that subject, I would merely point out that the resolution was unanimously adopted by the House of Representatives under a device known as "unanimous consent," whereby, one person by standing up and saying "I object" could have killed it, and that the resolution itself calls for the President to explore the possibilities of bringing Spain into NATO. I am sure that the gentleman from Denmark was not aware of it, and it is a peculiar coincidence, and I assure you it is a coincidence only, but it so happened that I was the author of the resolution which passed the House of Representatives. And it was my thought, and the thought of the sponsors, and there were 30 odd who sponsored a similar resolution, that NATO should not be an exclusive organization, but that it should work to bring its ideas to other nations and that it should hope, not immediately perhaps, not tomorrow, perhaps not next week, but that it should hope eventually to extend its benefits, and I think there are many, to all nations in the Atlantic community. Thank you Mr. President."

It is the unanimous belief of your committee from the House of Representatives, which attended the first NATO parliamentary meeting, that the United States should participate in the future meetings.

Don't Let Road Building Program Die

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. MACK of Washington. Mr. Speaker, newspaper editors the Nation over are expressing deep disappointment over the rejection by Congress of legislation that would have given the Nation an expanded highway program.

Some blame the truckers and some blame the Democrats. The issue now, however, is not who was to blame but rather that of what can we do to get the highway legislation back on the road again.

Since it is obvious we will not get any action on a highway bill before adjournment, we ought to have a special session to get a highway bill passed prior to next year. Next year is an election year and any highway legislation brought forth then will become more involved in politics than highway legislation was this year.

Typical of many editorials appearing in the Nation's newspapers deploring the failure of Congress to pass highway legislation is the following one from the Philadelphia Inquirer:

DON'T LET ROADBUILDING PROGRAM DIE

Rejection by the House of both bills before it for massive new roadbuilding programs comes as a sharp disappointment. The action may mean that highway legislation is dead for this year and if that proves true hopes for speedy Federal appropriation for many needed road projects, including the Delaware Expressway in Philadelphia, will be considerably dimmed.

Declaring that differences over financing methods should not be permitted to "deny our people these critically needed roads," President Eisenhower has promptly urged Congress to reconsider the matter before the end of the present session. Republican House Leader MARTIN has said that he believes a compromise measure could still be worked out, "if we really want it."

There are obvious difficulties in the way. One is the short time left in the session now winding to a close. Another is the fact that the highway bills were defeated outright and not merely sent back to committee. Any compromise bill would have to be introduced and given a committee hearing, a time-consuming process.

Main obstacle is the evident disinclination of so many of the Democratic Members at this time to agree to any kind of a financing plan for an extensive highway-building program.

On straight party lines, the Democrats defeated the bill originally sponsored by the administration. But deserting their leadership, a majority of the Democrats also have voted against the alternative plan pushed by their own party.

The Republican bill was based on recommendations of President Eisenhower submitted several months ago. It would have set up a 10-year Federal-State program providing about $38 billion, including $25 billion for interstate superhighways. Costs would be met by 30-year Government bonds which would technically not be part of the Federal debt.

This financing feature of the Republican plan encountered opposition from the Democrats who presented their own pay-as-you-build plan. Under this, $50 billion in Federal-State funds would be granted for roadbuilding in 13 years. Costs would be met mainly from highway-use taxes, including additional levies on gasoline, diesel oil, tires, and tubes.

While administration heads naturally favored the Republican bill there were indications that they would not take any adamant position on it. If their own measure went down to defeat, chances appeared good of a compromise plan that would keep the highway program alive.

It came as rather a shock when 128 Democrats refused to go along on their party's bill and only 94 Democrats voted for it.

Representative JOHN W. MCCORMACK, the Democratic floor leader, said that the voting had demonstrated that "everybody wants a road bill but nobody wants to pay for it."

It also demonstrated the power of the truck lobby and its allied interests, which did not like the added taxes on truck-size tires and tubes and other levies hitting truck operators and which have been flooding the Congressmen with protesting letters and telegrams. The lobby may check up for itself an impressive victory.

There is still time for passage of a highway bill if, as Representative MARTIN says, the Congressmen "really want it." A compromise should be possible, perhaps cutting the taxes proposed in the one bill and making up the difference from the proceeds of a bond issue somewhat smaller than that proposed in the other bill. If the Congressmen listen to the people who want new roads, instead of to the trucking lobby, they will get together on a worthwhile highway plan.

Let's Look at the Record—A Report to the People of the Fourth District of Wisconsin on the 1st Session of the 84th Congress

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. ZABLOCKI. Mr. Speaker, at the conclusion of each session of Congress, I report to the people of my district on my votes and actions as their Representative in our National Legislature.

The report which follows contains a summary of the major issues which confronted the Congress during the present session, and indicates how these issues were resolved. It also reviews my position and votes on key legislation bills.

I have been submitting these annual reports because I believe that the voters have a right to know what their representatives did, and how they stood on important questions. Such information is necessary to enable the people to properly evaluate the work of their elected officials.

In the words of Al Smith, "Let's look at the record"—the record of the 84th Congress, and the record of the Representative from the Fourth District of Wisconsin.

THE 84TH CONGRESS

The legislative record of the 1st session of the 84th Congress was characterized by three general features. We should bear them in mind as we proceed to analyze the actions of our representatives in Washington.

In the first place, the Democrat-controlled 84th Congress showed more concern for the interests of the people as a whole than did the preceeding one. The farmer, the worker, the small-business man—the Mr. Average Taxpayer—will generally benefit from the bills considered during the 1st session. This was in sharp contrast with the attention shown to select groups by the 83d Congress.

Secondly, the Democratic majorities in both Houses of Congress gave the President full cooperation on issues affecting national security and the overall national interest. In fact, those features of the President's program which were intended to benefit the common good, received more support from the Democrats than from the President's own party.

Finally, legislative progress achieved during the first session was moderate, when measured in terms of bills approved by both Houses and enacted into law. Nevertheless, considerable amount of work was exerted in laying the groundwork for the second session which will begin next January. Final action will be taken during the next session on a number of bills which were drafted, studied, and approved either by the House or by the Senate this year.

NATIONAL DEFENSE AND INTERNAL SECURITY

In this realm, the 84th Congress approved an extension of the Selective Service System, continued the draft of doctors for 2 years, reorganized the military reserve system, provided for emergency appointments to fill congressional vacancies caused by disaster, and sharply increased the funds for the Air Force.

Considerable controversy raged on this last issue. Two years ago, over the strong opposition of the Democrats who were then in the minority, President Eisenhower cut Air Force funds by $5 billion, thereby delaying the build-up of our air power. When the Soviets demonstrated earlier this year that their air strength may exceed ours, Congress decided to take matters into its own hands.

Key administration leaders and military authorities were promptly summoned to a secret meeting on Capitol Hill. After the meeting was over, Democratic congressional leaders took immediate steps to speed up our jet production by 35 percent. Even with this development, we are two years behind, having lost that precious time because of the 1953 cuts.

On the question of the Reserve reorganization bill, the President wanted a law which would compel all veterans, discharged since the Korean war, to participate in active Reserve training. The Congress, however, decided to exempt present and former servicemen from compulsory training. Under the new law, Reserve training will be mandatory only for those boys who will enter on active duty in the future. Unfortunately, this provision is expected to delay the attainment of the administration's goal of an active Reserve of 2.9 million men.

INTERNATIONAL AFFAIRS

In the field of Foreign affairs, Congress extended our Trade Agreements Program for 3 years, and took steps to simplify our obsolete and burdensome customs procedures which act as a deterrent to international trade. Further, the President was given authority to aid in the defense of Formosa against a direct Communist attack, and received adequate funds to continue our Mutual Security Program of military and economic cooperation with our allies. Congress also reiterated its opposition to the admission of Red China into the United Nations, and repeated its pledge that the United States will not support any colonial or imperialistic policies of other nations.

In general, cognizant of its role under our Constitution, Congress did not attempt to make foreign policy decisions for the President. There was evidence, however, of a growing measure of concern about recent developments in the field of foreign relations While everyone welcomed the apparent relaxation of world tensions, some people wondered if the Communists were not just stalling for time.

The anxiety to attain peace has already resulted in concessions to the Communists in Korea, in Indochina, and in the Formosa straits. More recently, the administration began to proclaim the virtues of "coexistence"—that very concept which the GOP condemned so heartily only a couple of years ago. It further appeared that the administration may be willing—in fact if not in word—to accept the status quo with respect to Soviet control of the once-free nations, and to make further concessions to the Reds. While we all realize that the road to world peace is not easy, the question still remains, will that goal be achieved by walking backward.

GOVERNMENT REORGANIZATION

While the 84th Congress did little to streamline the cumbersome machinery of the executive branch, it did initiate some important improvements within its own organization. In an effort to correct the abuses perpetrated during recent years, Congress took steps to establish a code of fair practices for congressional investigating committees. Further, much work went into the preparation of bills which will strengthen our laws governing Federal elections, and which are intended to curtail corrupt practices.

As far as the executive branch was concerned, the work of the second Hoover Commission continued without interruption. The many volumes of recommendations made by the Commission were assigned to different congressional committees for study, and steps will probably be taken to implement them during the next session.

The first session witnessed a comprehensive revision of Federal salaries, beginning with post office workers, classified employees, and reaching into the levels of higher administration officials, Members of Congress, and Federal judges. Steps were also taken to bring the retirement benefits of Government workers to a more realistic level by increasing them between 8 and 12 percent.

NATIONAL ECONOMY

In the realm of national economy, the record of the first session is rather substantial. Congress plugged up the loopholes in the 1954 GOP tax law, through which which the Government was losing over $1 billion in revenues to corporations; increased the minimum wage to $1 per hour; approved an expanded program of Federal aid to airport construction; extended the Renegotiation Act to eliminate excess profits on Government contracts; and increased the

penalties for violations of the antimonopoly laws.

There were two major instances, however, in which Congress failed to reach a decision. The first dealt with taxes; the second, with the highway program.

At the beginning of the session, the Democratic leadership in the House proposed a moderate income-tax reduction for the average taxpayer, to equalize tax relief granted to select groups under the 1954 GOP law. The bill passed the House, but failed in the Senate. There is every indication, however, that this legislation will be brought up again when the second session begins, probably with better results.

The controversial highway program legislation met similar fate. While everyone agreed that our highway system is in need of extensive improvements, a controversy arose on the question of financing the program. The administration wanted to pay for the improvements by bond issues, and thereby increasing the national debt. The Democrats proposed a pay-as-you-go program, financed out of increased taxes on highway users. Both proposals were defeated in the House during the closing days of the session.

VETERANS AND SERVICEMEN

Veterans and servicemen will benefit from a number of bills approved by the 84th Congress to date. Military salaries were increased, and the House approved a comprehensive revision of survivors' benefits. Further, those in the service as of January 31, 1955, were permitted to go on building up GI schooling benefits, and VA farm and direct loan programs were extended for 2 years.

In addition, Congress approved a law giving disabled veterans until October 1956 to apply for the purchase of special automobiles, and extended this privilege to the veterans of the Korean conflict.

Of particular interest to the veterans in Milwaukee is a bill which I introduced in the 83d and the 84th Congresses providing for the construction of a new VA hospital at Wood, Wis. I am pleased to report that considerable progress has been made during the past year on this project. Our present hospital at Wood has been scheduled for early replacement by a new structure.

AGRICULTURE

The American farmer has not been faring well under the present administration, as the farm income continued to drop for the third year in a row. In the meantime, the profits of food processors—and the cost of farm products to city consumers—have been steadily rising.

In an effort to help the farmers, the 84th Congress approved bills modernizing the REA loan allocation system, extending emergency loans to farmers suffering from declining prices, lowering the interest rate on disaster loans, and providing special assistance to low-income farmers. In addition, steps were taken to curb commodity speculation, and to curtail market manipulations in certain agricultural products.

The central issue of rigid farm price supports versus flexible supports continued unresolved, even though efforts were made in the House to replace the sliding-scale system put into operation by the administration.

SOCIAL SECURITY, EDUCATION, AND WELFARE

Social welfare legislation received considerable amount of attention from the 84th Congress, but relatively few bills in this field managed to clear both Houses before the end of the first session. Final action will be taken on these measures when Congress reconvenes in January.

The Social Security Act amendments of 1955 were in this category. The House voted to extend social-security coverage to dentists, lawyers, and other self-employed professional groups; to provide a system of disability insurance; to reduce the retirement age for women to 62; and to continue monthly benefits to disabled children after they reach age 18. I have advocated the major improvements approved by the House for the past 3 years, and included them in my bills H. R. 1635 and H. R. 5057. Hearings on this legislation were held in the Senate, but final action was delayed until next session.

Congress further provided funds for the FHA program of insuring home loans, made Government surplus materials available to educational and civil-defense institutions, tightened the prohibition on the use of mails to transport obscene literature, and enacted a moderate housing program. However, legislation providing Federal aid to schools was bottled up throughout the session, and may be revived when the Congress reconvenes.

Voting record, 84th Cong., 1st sess.

Stand	Issue	Status
	NATIONAL DEFENSE AND INTERNAL SECURITY	
Voted for	Extension of the selective service system	Became law.
Voted for	Reorganization and strengthening of our military Reserves	Became law.
Voted for	Registration of persons connected with foreign espionage	
Voted for	Stepped up production of jet bombers and fighter planes	Became law.
Voted for	Special funds to prevent 22,000-man cut in United States Marine Corps	Became law.
	INTERNATIONAL AFFAIRS	
Voted for	The mutual security program to strengthen free world defenses	Became law.
Voted for	Resolution calling for United States aid to defense of Formosa	Became law.
Voted for	Resolution opposing admission of Red China into the U. N.	Became law.
Voted for	3-year extension of reciprocal trade agreements program	Became law.
Voted for	Simplification of our customs regulations and procedures	Passed House.
Favored	Aid to firms and workers harmed by foreign competition	Pending.
Favored	Revision of the Refugee Relief Act	Pending.
	GOVERNMENT REORGANIZATION	
Voted for	Government Reorganization Act of 1955	Became law.
Voted for	Salary revisions for Federal employees, judges, and officials	Became law
Voted for	Statehood for Hawaii and Alaska	Pending.
Voted for	Code of fair practices for congressional committees	Approved.
Favored	Increased penalties for corrupt practices in Federal elections	
Favored	Improvements in the Federal employees retirement system	
Voted for	Foreign Service reorganization and improvements	Became law.
Voted for	Aids to absentee voting for GI's and Government workers	Became law.
Favored	Home rule for the District of Columbia	Passed Senate.
	NATIONAL ECONOMY	
Voted for	Income tax reduction for the average taxpayer	Passed House.
Voted for	Plugging up of loopholes in the 1954 GOP tax law	Became law.
Voted for	Increase in minimum wage from 75 cents to $1 per hour	Became law.
Voted for	Increased penalties for violation of antimonopoly laws	Became law.
Voted for	The highway program legislation	Pending.
Voted against	Exemption of natural-gas producers from Federal regulation	Passed House.
Voted for	Continued renegotiation of Government contracts to eliminate excess profits on Government procurement.	Became law.
Voted for	Bill to provide United States currency with inscription "In God We Trust."	
	VETERANS AND SERVICEMEN	
Voted for	Continued accumulation of GI school benefits by servicemen	Became law.
Voted for	Incentive pay increases and allowances for the Armed Forces	Became law.
Voted for	Revision and improvement of survivors' benefits	Passed House.
Voted for	Extension of VA farm and direct loan programs	Became law.
Proposed	New VA hospital for Wood, Wis	Pending.
	AGRICULTURE	
Voted for	Modernized REA loan allocation system	Became law.
Voted for	Relief for farmers for losses from economic disasters	Became law.
Voted for	Greater control over commodity speculation and manipulations	Became law.
Opposed	Multibillion upper Colorado River project with Echo Park Dam	Passed Senate.
	SOCIAL SECURITY, HEALTH AND WELFARE	
Voted for	1955 Amendments to the Social Security Act	Passed House.
Favored	Federal aid to States for construction of needed new schools	Pending.
Favored	Assistance to States for the Salk polio vaccine program	Passed Senate.
Voted for	Increased authority for the FHA to insure home mortgages	Became law.
	1955 Housing Act	
Voted for	Surplus Government materiel for school and civil defense	Became law.
Voted for	Restoration of penalties for narcotics violations omitted from the 1954 GOP tax law.	Became law.
Voted for	Prohibition on use of mails to transport obscene literature	Became law.
Voted against	The Chicago "water steal" from Lake Michigan	Passed House.
Voted for	Aid for mental health research	Passed House.
Voted for	Aid to States for airport construction	Passed House.

United States Circuit Court of Appeals Decision Nullifies the Legislative Intent of the Housing Act of 1954

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. HOLIFIELD. Mr. Speaker, I have had occasion to participate in congressional investigations and observe the administration of various of the laws enacted by Congress to stabilize our economy, and promote the public welfare.

Some shocking circumstances and abuses have developed through practices adopted purportedly by authority of congressional acts.

One flagrant example is in the Home Loan Bank System. More than 9 years ago, the then Home Loan Bank Commissioner seized a member institution, the Long Beach Federal Savings Association, and to this day the Government agency has failed to fully account for the seized assets. A meritorious trial of the issues has been denied on jurisdictional technicalities, a complete failure of due process.

Congress never intended to set up a bureaucratic sanctuary for arbitrary and capricious confiscation of peoples' savings, without trial, notice, hearing, or right of recovery.

The United States circuit court of appeals at San Francisco held the simplest amendment would correct this evil. Congress adopted in the Housing Act of 1954, far-reaching provisions, giving the courts jurisdiction to hear the complaints of aggrieved citizens.

The Senate 1954 housing bill, as originally adopted prior to conference, contained the restrictive language, as follows:

> Nothing in this subsection relating to jurisdiction, venue, service of process or suability of the Board shall be applicable to any pending court action, or suit, or to any action or suit involving the subject matter, or part thereof, of such pending action or suit.

The House considered and rejected restrictive language. The Senate and House conferees considered and rejected restrictive language, and both Houses reenacted the 1954 Housing Act without such restriction, and granted to the courts jurisdiction of the subject matter of new and old controversies alike.

In fact, the written documents considered by both Houses referred to the specific Long Beach Federal controversy—the subject of the United States circuit court opinion.

In spite of the legislative history and plain language of the 1954 Husing Act, the United States circuit court of appeals has just held, in July 1955, that such Housing Act does not apply to pending controversies, and, further, that the subject matter of new and old controversies is not submitted to the courts.

Thus, there has developed a conflict between the enactments of Congress and the enactments of the United States circuit court of appeals. The United States circuit court of appeals has usurped the functions of Congress; instead of interpreting the intent of Congress, its interpretation has in effect passed laws Congress rejected and rejected laws Congress passed.

Such United States circuit courts are a creation of Congress—an experiment to relieve the burden on the United States Supreme Court, the only constitutional appellate court.

Congress has heretofore found it necessary to withdraw from the United States circuit court of appeals the power to hold acts of Congress unconstitutional by injunction.

I submit that in the light of the circumstances related here, our congressional experiment in creating United States circuit courts of appeal has demonstrated a grave weakness.

The decision of the Ninth Circuit Court of Appeals in this case is an example of complete disregard of the congressional intent based on the legislative history of the Housing Act of 1954, as well as the letter of the law.

Should not Congress correct this abuse by further restricting the power of United States circuit courts of appeal from nullifying or rendering ineffectual congressional enactments?

Ready for a Deal

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial which appeared in the Boston Sunday Post, July 31, 1955:

READY FOR A DEAL

Secretary of State John Foster Dulles is ready to sit down with Chou En-lai, the Communist Chinese Premier, and talk turkey about the matter of a cease-fire in Formosa Strait, so he says, if only the Chinese Reds show goodwill at the Geneva ambassadorial level meeting.

This is a fair sample of the effect of Soviet jollity at Geneva upon the thinking of our foreign policy spokesman. Secretary Dulles seems to strive to forget that Communist China has been officially branded in United Nations as an aggressor. This is only the least of the Red Chinese transgressions.

Red Chinese troops are still in North Korea, ready to pounce upon South Korea the instant the American vigilance is relaxed. Red Chinese troops and arms oppress Indochina. Red Chinese troops and arms threaten National Chinese Formosa with which we have a mutual defense pact.

Red Chinese jailers hold American prisoners in complete disregard of international conventions, and Chou En-lai has openly admitted that they are held as hostages.

Yet our Secretary of State says that if the Chinese show goodwill at Geneva he will sit down with the bloodstained monster and make a deal. It isn't the matter of bargaining with the Red Chinese that is objectionable, but the soft and supine way we offer to deal with them.

Nowhere in the discussion of the possibility of a cease-fire in Formosa Strait is any intention expressed of consulting the Nationalist Chinese. One must assume that whatever bargain Secretary Dulles may make with Chou En-lai will have to be good enough for the Chinese Nationalists. The somewhat sinuous reasoning of the administration is that this is acceptable to the Nationalist Chinese because they are already observing a cease-fire and are only firing back at the Communists to protect themselves. Heaven knows where the Minute Men of Lexington would have ended up under this kind of reasoning.

A few Russian smiles at Geneva can do great damage to this country. We seem to be so starved for love and affection that we are willing to buy it at the price of our honor.

Atomic Electric Powerplant for Northeastern Pennsylvania

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilkes-Barre Record, Friday, July 29, 1955, which discloses that the Pennsylvania Power & Light Co. is planning to build an atomic electric powerplant in northeastern Pennsylvania:

ATOMIC PLANT WILL BE BUILT BY P. P. & L. FIRM—SITE NOT DETERMINED; WESTINGHOUSE TO AID IN DESIGNING REACTOR

Pennsylvania Power & Light Co. will build an atomic electric powerplant of at least 150,000 kilowatts at a site not disclosed.

Charles E. Oakes, president of the utility, said the powerplant naturally will be located in our service area.

Nuclear generating plants generally are located along rivers and the north branch of the Susquehanna probably is being considered. P. P. & L. built plants at Sunbury along the Susquehanna and at Martins Creek along the Delaware River. Nearest generating plant is the former Scranton Electric Co.'s remodeled plant at Harding.

According to plans, the new plant will be pushing power into the distribution system about 1962.

Mr. Oakes informed Adm. Lewis L. Strauss, chairman, and Gen. K. E. Fields, general manager, of the Atomic Energy Commission of P. P. & L.'s decision to build a privately financed atomic electric powerplant using the homogeneous-type reactor on the basis that such a plant will be commercially competitive with generating stations using competitive fuels.

Mr. Oakes said a contract had been entered into with Westinghouse Electric Corp. as codeveloper with P. P. & L. in the design and as supplier for the pioneering reactor and its related electric generating equipment. The plant program will be known as the Pennsylvania advance reactor project (PAR project).

Mr. Oakes said "P. P. & L. for some time has been hard at work studying the AEC study agreement of generation of atomic energy as a heat source for electric power generation and more recently has been making studies of the various type of nuclear reactors. Our research leads us to the conclusion that the homogeneous type of reactor is economically a promising bet.

"It is one of the several types on which AEC has been working aggressively as part of its 5-year program. The present problem with each type is to convert the knowledge gained about this new heat source through research and experimentation into designs useful for full-scale commercial electric power generation.

"With disappointment recently expressed that no private utility had yet announced plans for building a homogeneous type atomic electric plant, we believe our plan for moving ahead in this field will become highly significant and a real contribution to technological progress."

P. P. & L.'s decision to proceed with this type of reactor, Mr. Oakes said, means "private initiative in the United States has now accepted challenge to make atomic electric power a reality and a substantial factor in the Nation's economic progress.

"In the homogeneous-type reactor the fuel is in liquid form. This liquid in addition to containing the radioactive fuel, also includes a coolant. The liquid circulates freely throughout the nuclear powerplant's system and supplies heat for the steam generators. Steam from the generators spins turbines which produce the electricity. The use of the liquid fuel system will permit the reactor and atomic furnace to operate continuously as new liquid nuclear fuel can be added while the reactor is running."

Mr. Oakes did not disclose the powerplant site but stated that "naturally it will be located in our service area" and added, "we look to this pioneering atomic electric plant as an effective addition to the P. P. & L. system in meeting some of the future requirements of our customers"

East Texas Institution Cares for Negro Waifs

EXTENSION OF REMARKS

OF

HON. JOHN DOWDY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. DOWDY. Mr. Speaker, several days ago there was an article in the Dallas Morning News in regard to the St. Paul Training School, near Malakoff, in Henderson County, Tex. It clearly shows the wonderful results that can come from the work of a dedicated man and wife to give a full life to otherwise hopeless children, and helps them grow into useful citizens of our great Nation. Under unanimous consent I include the article in the RECORD:

ST. PAUL TRAINING SCHOOL—EAST TEXAS INSTITUTION CARES FOR NEGRO WAIFS

(By Eric G. Schroeder)

Let's suppose you're a dog, say a puppy. You have no pride of ancestry.

Nobody wants you because nobody ever really owned you. Neighborhood kids shy rocks when they see you and the iceman gives you the toe of his boot. You live on table scraps and pretty much sleep in the weeds.

Then one day a kind, gentle-eyed woman kneels in the dustry road and begins stroking your head and patting your gaunt, hungry ribs. At first you're a little afraid. Then you're palpitating from the first genuine show of affection that anyone ever showed you. A big, solid man standing beside her picks you up in his giant palm and asks, "How'd you like to come and live with us?" Now say, wouldn't heaven be pressing its warm ear pretty close to you?

Transpose this allegory into human terms and you have this substance of what's going on constantly at a little Negro institution near Malakoff, Tex., known as St. Paul Industrial Training School. The 120 children ranging in ages from 4 to 18 are in the main waifs picked up by probation courts and welfare agencies from all over the State and sent to Prof. and Mrs. J. W. Smothers for raising and schooling. The Smothers' hands are outstretched as long as there are inches of space in which to pack just one more little wanderer.

J. W. and Alice came to this school from Alabama as bride and groom in 1926. J. W. is a Hampton graduate with a B. S. in agriculture. Alice attended Tuskegee and Prairie View. The present site had a little two-teacher public school with one tiny building. The newcomers, with the aid of Rosenwald funds, built a campus home the next year and set up grades 1 to 6. Attendance was free to any colored child; in the fall of 1927 they took five little girl boarders.

Canning demonstrations furnished both money and publicity for the struggling school. J. W. and Alice cut wood, carried water 2 miles, bathed the children in the creek, and went to Payne Springs in an old wagon three times a week to wash clothes. That, in fact, was standard procedure up to 8 years ago when Mr. and Mrs. R. W. Fair, of Tyler, gave them a water system.

Word about the school spread. The Smothers have always believed in teaching the boys and girls how to use their hands. That meant constructing a vocational building, and the newlyweds put half their combined salaries into the project.

A curious thing happened the day after Christmas 1942. After a hot and humid afternoon the wind suddenly rose to cyclone force, picked up the four little campus buildings and rolled them around like tumbleweeds. The work of some 16 years was represented in disconsolate piles of tattered boards and bricks.

That cyclone blew St. Paul off the map but its shrieking winds ushered in a new era, too. J. W. and Alice surveyed the wreckage. Something drummed its way into both their minds. It has become the school watchword: "A quitter never wins; a winner never quits."

Alice could ring doorbells and get help—and she did. J. W. could make this land produce a complete living for the school—and he started in to do it. Within another year he thinks it will. Their greatest tragedy became their greatest triumph. "The Lord made the way," says Alice and she devoutly means it.

There are 1,000 acres in the school plant, 250 belonging to the institution, the rest rented. Every foot that can be spared is raising something. Professor Smothers' green thumb is making deep whorls on the countryside.

With 400 pounds of fertilizer and a normal year he can make this dry land produce 80 bushels of corn to an acre. With double this additive, he gets 100 bushels. When corn is waist high it receives a side dressing of from 100 to 150 pounds of ammonium nitrate and again just before it silks.

This year J. W. rented 4 acres of land for $150 and put it in cucumbers.

Of course, J. W. has a built-in labor supply. Everyone works, from the tiniest up to the oldest boy or girl. Even the tots learn to wash their clothing, do mending, and give themselves proper care. Buildings are bare of all except the direst necessities, but there is a shine and a polish to each that bespeaks cleanliness and discipline.

Boys and girls work in the fields, in the kitchen, build the brooders, milk the cows. In turn they receive money in proportion to the service they render. One 15-year-old girl can pick 800 pounds of cotton in 1 day and she profits accordingly. All earnings go into private savings accounts or trickle into the school commissary for sweets and goodies.

When produce is high J. W. sends as much as he can to market; when it is low the school's bill of fare expands accordingly. With 11 teachers and accredited grades running through high school the Smothers face a constant responsibility of making slender income cover expanding needs. Rooms are badly overcrowded with 6 children and 3 double-decker beds in many—no chairs, tables or any of the fanciful deckings of youthful whimsy.

J. W. and Alice can handle most students with "love and understanding." There is little illness, the school has never had a communicable disease. "Everyone keeps busy," says J. W. "Sleeping during the day leads to rambling around at night. This way when bedtime comes we are all ready for it. We make a game of our work, one groups tries to outdo the other."

Thoughts about desegregation have no place on the St. Paul campus. Asked whether she would welcome integration of the student body with white boys and girls, Alice answers simply, "we are happy with the way we have it here!" The Smothers are content to see the Negro earn his place in society. "We may be 50 to 75 years too soon in trying to force the issue," says J. W.

They believe they owe most of their progress thus far to the pockets of white benefactors. These are in Dallas, Houston, Tyler, Malakoff and other scattered points in the State. Once when Alice bought chairs for the schoolroom and didn't know where the money was coming from, she prayed to the Lord and wrote a Dallas benefactor. The next mail brought a check. There is an ever-present, almost desperate need for funds.

The only reward the Smothers want is to perpetuate the fruits of their labors. "We cannot live forever," says J. W., "but we would hate for the school to die when we go. If these children can make names for themselves and we never do, it has all been worthwhile!"

The Smothers have 5 children of their own, 3 boys and 2 girls. Two are in school at Prairie View, 2 in military service and 1 is a teacher of music at Pittsburg, Tex. Their own? Well, those are the ones they brought into the world.

There are hundreds more—farmers, teachers, cooks, seamstresses and housewives. They have scattered but always with the thought of home as a humble, almost stark

little school set in the midst of an East Texas clearing. There is one boy, not of their own flesh and blood, in the infantry in California. He wrote a long letter to Alice last Thanksgiving.

"Dear Mom," it started out, "I thank God for many things but first of all it is for a mother like you."

It ended, "I love you. May God bless you. I hope to be home for Christmas."

That, in J. W. and Alice Smothers' way of thinking, is pretty near reward enough in itself.

The Reclamation Program for 1955–56

EXTENSION OF REMARKS
OF

HON. E. KEITH THOMSON

OF WYOMING
IN THE HOUSE OF REPRESENTATIVES

Monday, August 1, 1955

Mr. THOMSON of Wyoming. Mr. Speaker, we have in my State an earnest, hard-working man who is the Wyoming director of the National Reclamation Association. He is well acquainted with our western problems and an effective spokesman in our behalf. Under leave to extend my remarks, I am inserting Mr. Earl Bower's address before the 42d annual convention of the National Rivers and Harbors Congress in June included as part of the CONGRESSIONAL RECORD. Mr. Bower is certainly well qualified to outline the reclamation program for 1955–56, and his remarks will be of nationwide interest.

His remarks follow:

THE RECLAMATION PROGRAM FOR 1955–56

(By Earl T. Bower, Wyoming director, National Reclamation Association, before the 42d annual convention of the National Rivers and Harbors Congress, June 1, 1955)

Mr. Chairman, ladies and gentlemen, a few days ago I was asked, as director of the National Reclamation Association from Wyoming, to talk to you about the reclamation program for 1955 and 1956. I have been an operator of irrigation farms and a livestock feeder in the Big Horn Basin in Wyoming for many years. I have been a director of the National Reclamation Association for 8 years. Our association has an active membership in each of the 17 Western States. Its objectives fundamentally are: To promote the development and preservation of water resources in the reclamation States, which are approved by the States and localities affected and to preserve the rights and interests of said States in their water resources.

The reclamation program for 1955–56 was outlined by NRA resolutions adopted at Portland, Oreg., last fall. The NRA is vigorously supporting this program. It includes among other things: land limitation legislation, extension of the sugar act, small projects legislation, loans for local districts to construct their own irrigation distribution systems, requiring Federal agencies to comply with State water laws, soil and water research, cost studies, and many others which we believe to be in the interests of settlers.

BUDGET CIRCULAR A–47

We have been especially concerned about budget circular A–47. We are advised that no new reclamation projects can be built if the Bureau of Reclamation is required to comply with A–47. In response to our request, the House Interior Committee held hearings on A–47 for which we are grateful. Secretary of the Interior Douglas McKay, at these hearings, made two very timely suggestions:

(a) "Since the usefulness of most irrigation projects extends far beyond the first 50 years we recommend that a longer repayment period be permitted for irrigation when justification is presented."

(b) "For irrigation projects we have found it desirable to include an evaluation of the secondary benefits because for the areas concerned these are often just as real as the primary effects of the project."

We consider these the two most constructive suggestions yet made regarding A–47.

STATE OF THE UNION AND BUDGET MESSAGES

President Eisenhower, in his state of the Union and budget messages, made several noteworthy recommendations, among which are: 6 new starts for reclamation, 30 new starts for the Corps of Engineers.

His budget for fiscal year 1956 recommends more than $1,500,000 increase for general investigations in reclamation. President Eisenhower also recommended the upper Colorado River storage project and later the administration endorsed the Fryingpan-Arkansas and the Trinity projects.

Our National Reclamation Association is very happy with these endorsements by President Eisenhower.

We do not in any way consider the land and water resource development of the West now or in the future to be solely the responsibility of the Federal Government. We believe that the States as well as local governments and local interests should actively participate in the planning and development of our water resource projects.

The President and directors of NRA have been urging small-project legislation which will aid the States and local divisions of government in the construction of projects of a size that can be financed by the States, municipalities and other division of State governments, with provisions in the law providing for a loan of Federal funds, if necessary. We also believe that projects constructed by States and local interests should be credited with the national benefits that accrue from these projects.

Reclamation has always been required to show financial feasibility, that is—there must be revenues produced from the project sufficient to repay the costs to the Federal Treasury. We have always approved that plan but we also have endorsed the time-honored plan of utilizing all revenues produced from the project, including power, to assist in repaying the costs. The irrigator should not be asked or expected to repay the cost of national benefits that accrue as a result of a project.

The national benefits not only exceed the costs of interest-free money but in a very few years actually exceed the cost of the entire project. Reclamation repays its costs many times over, directly and indirectly. The water users on reclamation projects continue each year to repay a substantial amount. In addition to that, the power users make a very substantial contribution to the repayment costs of the project. The total amount paid by water users to date is $114 million, while the total power repayments are $265 million. Most of the power repayments have been made during the last 10 years. In fiscal year 1954, power repaid a gross of $50 million and a net of more than $30 million into the Federal Treasury. By far the largest return to the Federal Government, however, is in the form of income taxes and other taxes paid by the people who are living on Reclamation projects and in communities and areas which are supported and maintained by these projects. It has been estimated that the total income taxes paid into the Federal Treasury in this manner will repay the total cost of reclamation to the Federal Government about every 5 or 6 years.

Secretary of Interior Douglas McKay, in his first published annual report stated, regarding a study which had been made on 15 reclamation projects, "Thus far Federal taxes collected have exceeded the Federal investment in irrigation features in these projects by four and a half times. These revenues are in addition to the obligations voluntarily assumed by direct users of water."

The value of crops grown on Federal reclamation projects to date is about three times the cost of reclamation to the Government.

The following figures are based upon statistical information from the Department of the Interior and the Bureau of Reclamation. The total cost of reclamation to the Federal Government, up to and including fiscal year 1954, is $3,094,000,000. The amount returned to the Federal Government including the year 1954 by the water users was $114 million; by power users, $265 million; by Federal taxes, as a result of reclamation development, $4 billion; making a total return on the above investment of $4,379,000,000. The cumulative crop values produced by lands in reclamation projects, not including the year 1954, was $9,705,149,000. I ask, now, is there any doubt from these figures that reclamation pays its way and is a good investment for the Nation as a whole?

That the country needs reclamation to meet the needs of our growing population, to provide a balanced economy in the West and to maintain our present high standard of living, can hardly be questioned. However, I will present some authorities to substantiate this statement.

POPULATION GROWTH

The latest census report shows our population to be 165 million people. It is increasing at the rate of 2,800,000 per year or 235,250 every month. That means 7,700 more mouths to feed every day. We have plenty of food today, but our agricultural surpluses, although a menacing problem now, are only temporary.

AGRICULTURAL SURPLUSES

Dr. B. T. Shaw, Administrator, Agricultural Research Service, Department of Agriculture, in testifying before the House Subcommittee on Agricultural Appropriations on February 1 of this year, pointed out that by 1962, and possibly by 1959 or 1960, we will have reached a balance between production and consumption. He further stated that "the excess of farm output over population requirements was probably on the order of about 6 percent overall in 1953. It was less than 6 percent in 1954 and will probably be even less in 1955."

LOSS OF FARM LANDS

The annual loss of farmland is another problem which should be considered along with that of meeting the needs of our growing population and agricultural surpluses. In the report on land facts by the Soil Conservation Service for November 1953, it is shown that the annual loss of soil originally suitable for crop production is 400,000 acres per year. The annual loss of additional acreage to cultivation as a result of other causes such as water logging, salting, sediment deposition, etc., amounts to 100,000 acres per year. But officials in the Department pointed out, however, that losses of good farm land through other causes amounts to several times the loss of soil erosion. These causes include land being taken over for suburban development, airports, military establishments, industrial developments and especially new highway construction. The Soil Conservation Service is making a survey of the soil losses through these causes. It is estimated that the total losses will amount to at least 2 million acres annually.

Some Western States are increasing in population at a tremendous rate and also making rapid gains in industry while some

other Western States which are dependent primarily upon an agricultural economy cannot go ahead without further reclamation. Further conservation of water is extremely important to the interior and and mountainous States for municipal as well as agricultural growth. A number of cities in the area are already concerned about a future water supply, including Albuquerque, N. Mex., Pueblo and Denver, Colo., Cheyenne, Wyo., and others.

SUMMARY

The reclamation program for 1955–56 which I have presented to you is of the utmost importance to the entire West and we believe equally important to the Nation as a whole. I appreciate very much the opportunity of presenting this program to you for your consideration.

The position of leadership and responsibility which has come to our Nation as a leader in world affairs makes it mandatory that we as a Nation remain strong. There is nothing that will do more to strengthen the economy of our Nation that the development of our land and water resources. We believe our reclamation program and the program of river and harbor development sponsored by your association will aid materially in maintaining that strength. The united support of kindred organizations such as your National Rivers and Harbors Congress and our National Reclamation Association is important to national security.

Mr. and Mrs. Robert Coar

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. HALE. Mr. Speaker, I regret very much that I was not on the floor the other day when Members were extending their congratulations to Mr. and Mrs. Robert Coar on the completion of their 20th year of service to Members of the House and Senate.

As soon as I came here in 1943 I started using the radio facilities of the joint Senate and House recording facility and, of course, I immediately got to know Mr. and Mrs. Coar. They are the kind of people who so identify themselves with an institution that they virtually become the institution.

I take particular pride in the fact that Mr. Coar had his origins in my own State. That, of course, adds to the very warm feeling that I have for him. But I am very grateful to both Mr. and Mrs. Coar for all the kindness and courtesy which they have shown to me and it is a great pleasure and satisfaction for me to be able to spread these sentiments on the RECORD.

I can testify that as far as I am concerned the recording facility is indispensable. At least every fortnight of every session since January 1943, I have projected myself onto its disks and, more recently, tapes. In all that period I have never known of a mistake or slip-up on their part. I wish Mr. and Mrs. Coar another score of years. And then another. I would not wish to be here without them.

Give a Green Light to Highway Legislation

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. MACK of Washington. Mr. Speaker, during the past year 36,000 Americans, many of them children, were killed in traffic accidents. The death toll in traffic accidents average 100 a day, or 3,000 a month. In addition, about a million Americans were injured in traffic mishaps, some of them being crippled for life. Ten to twenty percent of these accidents never would have happened, according to traffic experts, had the Nation possessed adequate highways—the kind of better, wider, and safer highways proposed by President Eisenhower in his expanded highway program.

Much of the credit for alerting the Nation to the need for better and safer highways belongs to the Hearst press. The Hearst press, with its many newspapers and millions of readers, several years ago embarked on an editorial crusade to awaken the country to the enormous waste of life, limb, and money that our deficient highway system is costing the Nation. Day after day, week after week, and month after month the Hearst press hammered away editorially at the need for more and better roads. The Hearst press, in so doing, rendered a great service to the Nation.

Despite the public's demand for more and better highways, Congress has failed to enact a highway bill during the present session of Congress. This failure was due to politics.

President Eisenhower had proposed financing the greatly expanded highway program by a bond issue to be paid off from present and anticipated future receipts from the 2-cent-a-gallon Federal gasoline tax.

The Democrats, as a counterproposal to President Eisenhower's bonding plan, proposed a pay-as-you-go highway financing plan with the imposition of heavy new taxes on gasoline, diesel fuel, truck tires, and camelback.

The issue involving the two plans, the Eisenhower one of bond financing and the Democrats' plan of increasing taxes on highway users to pay for highways as these were built came to a vote in the House of Representatives last Wednesday.

When the Eisenhower bonding plan was voted upon, of 221 Democrats present only 5 voted for the President's bonding plan and 216 voted against it. The Democrats by a margin of 23 to 1 rejected President Eisenhower's bonding plan.

Then the Democrats' own taxing plan came to a vote. Of 223 Democrats present, only 98 voted for their own plan. The Democrats voted down their own taxing plan after having rejected the Eisenhower bonding plan.

This made it obvious that a majority of the Democrats wanted no highway bill at all. Apparently they preferred no highway program to one for which President Eisenhower would get credit.

If the people want a highway bill, and I feel sure most people do, they must contact their Congressmen and let their Congressmen know their wishes.

In my opinion, the only way to assure obtaining a highway bill within the next 2 years is to insist on a special session of Congress to enact a highway bill. If this week's rejection of a highway program by Congress is allowed to stand, it will be next January before the first steps can be taken toward launching anew procedures to get a highway program started. Congress, then, as usual, will dilly-dally and procrastinate. It will be April or May before any bills for a highway program reach the House or Senate floors. By that time the 1956 presidential and congressional election campaigns will be in full swing. Because of this the proposed highway legislation will become more deeply involved in politics than it now is and constructive action will be unlikely.

The following editorial has appeared in Hearst newspapers from coast to coast, pointing up the urgent need for better and safer roads and rightly, I think, demands that Congress stay in session until it gets a highway bill. If Congress does not stay in session now to get a highway bill then the next demand from the people should be that Congress come back in a special session and enact the highway bill it should have enacted before it went home on vacation.

The editorial, which appeared in Hearst newspapers from coast to coast, follows:

WHY IS A CONGRESSMAN?

If you don't want to think about the traffic jams you'll be in today as you and your family try to take a ride in the country, you might think about Congressmen.

As you notice the ambulances and wreckers and State police cars heading toward the latest highway disaster, notice also what went on last week in Washington.

Congressmen of both parties, stampeded by lobbyists representing industries that make good money from the use of the highways, voted down any attempt to get you out of the traffic chaos or to make the ambulance trips unnecessary.

The lobbyists and our representatives all piously agreed that better roads are absolutely vital.

They also agreed that it was absolutely vital that somebody else pay for constructing them and that it was absolutely vital that everybody get re-elected.

Realizing what they had done, after they had made sure they had done it, the Congressmen pointed at the trucking industry lobby as the villain.

And the truckers, after the bills were well sunk, issued statements that Congress should never have acted like that; that President Eisenhower was right when he criticized Congress and demanded reconsideration of its failure to pass a bill.

The same people who caused 100,000 telegrams to flood into Washington demanding the defeat of highway legislation, issued press releases that said the recipients of the telegrams must have misunderstood.

The 100,000 telegrams came from a tiny minority of the American business community.

We wonder what might happen if the American people sent in telegrams themselves, preferably after a frustrating, dan-

gerous day on the roads the Congressmen refused to improve.

In fact, why don't you do it right now?

We don't know whether you mean as much as a lobbyist does to your Congressman, but we're pretty sure a lot of you acting together mean more, much more.

Why not let your Congressman know what you think about the House action last week and tell him to start all over again, right now, and pass a bill?

And tell him to stay in Washington until he does.

Report of Projects Committee to Rivers and Harbors Congress

EXTENSION OF REMARKS
OF

HON. SID SIMPSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the report of the projects committee, which was unanimously adopted by the recent 42d national convention of the National Rivers and Harbors Congress held in Washington on May 30–June 1, 1955.

The permanent projects committee of the congress consists of an outstanding expert on water-resource problems from each of the major drainage basins of the United States. They serve without compensation of any kind whatsoever and bear all of their own expenses when coming to Washington and while here serving on this committee.

The committee's purpose is to assist the sponsors of projects in preparing and presenting their data, so that they may be placed in time for approval. The projects recommended by the committee and endorsed by the congress are vigorously pressed for inclusion in the Government's public-works program, and appropriations or allocation of funds sought therefor.

We are grateful to the members of this committee for their public-spirited service in an effort to assist the Congress of the United States and the governmental agencies charged with the responsibility for these public works, as well as the people in the areas to be served thereby.

The members of the committee who served at its recent session, follow:

NATIONAL RIVERS AND HARBORS CONGRESS
PROJECTS COMMITTEE

Representative SID SIMPSON of Illinois, chairman.

New England Division: Member, Larry M. Hess, executive secretary, Taunton Association of Commerce, Taunton, Mass.

North Atlantic Division: Member, Brig. Gen. James H. Stratton, United States Army (retired), consulting engineer, New York, N. Y.

South Atlantic Division: Member, H. H. Buckman, consulting engineer, Jacksonville, Fla., vice chairman.

Southwestern Division: Member, Dale Miller, executive vice president, Intracoastal Canal Association of Louisiana and Texas, Houston, Tex.

Lower Mississippi Valley Division: Member, Hu B. Myers, chief engineer, department of public works, State of Louisiana, Baton Rouge, La.

North Central Division: Member, Al Hansen, comptroller, city of Minneapolis, Minneapolis, Minn.

Missouri River Division: Member, Alva C. Sconce, Missouri River division, Mississippi Valley Association, Omaha, Nebr.

Ohio River Division: Member, J. I. Perrey, chief engineer, Indiana Flood Control and Water Resources Commission, Indianapolis, Ind.

North Pacific Division: Member, George E. Thomas, assistant general manager, Seattle Chamber of Commerce, Seattle, Wash.

South Pacific Division: Member, Timothy V. A. Dillon, Washington counsel, Sacramento-Yolo Port District, Sacramento, Calif.

Western Inter-Mountain Region: Member, E. W. Rising, Washington representative, State Water Conservation Board of Montana, Helena, Mont.

The report follows:

REPORT OF THE PROJECTS COMMITTEE TO THE 42D NATIONAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS

JUNE 1, 1955.

Hon. OVERTON BROOKS,
President, National Rivers and Harbors Congress, Washington, D. C.

DEAR MR. PRESIDENT: In pursuance of the call of the President, your projects committee met on May 30, 1955, to consider the projects submitted since the last session of the National Rivers and Harbors Congress. Hearings were afforded all who made appearance.

The committee at this session has examined 130 proposals embracing all resource improvements with which this congress is concerned, including navigable waterways, harbors, flood control, soil conservation, reclamation, and water conservation.

Of the proposals examined, this committee is convinced that 39 constitute projects sound in conception, needful, and sufficiently advanced in status to warrant endorsement, involving a total estimated cost of $602,563,000. Nineteen proposals appear to be without sufficiently advanced development to warrant project endorsement at this time, but are believed to be meritorious and entitled to further consideration by this committee, if and when additional information may be adequate to warrant an endorsed status. We find that on 22 proposals, surveys have been authorized but the reports on such surveys have not been completed and we therefore recommend in these cases that the congress request the appropriate authority to complete reports of its investigations and surveys as soon as practicable in order that action may be taken toward classification by this congress. We find 21 proposals, which on preliminary examination appear to be desirable and needful, and we accordingly recommend that engineering and economic investigations of survey scope be made in these cases with a view to developing projects for subsequent authorization. Of the proposals investigated, we find 29 are without necessary data or sponsorship to enable the committee to reach a reasonable conclusion on their worth. However, we desire to give the applications sympathetic consideration, and, if possible, offer to the proponents the services of this congress in reaching a solution to their problems. We have, therefore, not classified these but have suggested that the Secretary communicate with the applicants concerned and request additional data upon the receipt of which further consideration will be given to their proposals.

Appendix A of this report sets forth in detail a list of all proposals and projects examined and the action taken thereon.

At the time of our national convention last year, the Congress of the United States was considering an omnibus rivers and harbors and flood-control bill. As you know, this highly important legislation became the River and Harbor and Flood Control Act of September 3, 1954, providing a valuable supplement to the existing Federal civil works program. The act authorized 165 projects having estimated Federal costs in excess of $1 billion. All of these projects have been found to be economically justified and the anticipated benefits will materially exceed the costs.

Since passage of the 1954 act, additional river and harbor and flood control surveys have been completed by the Corps of Engineers, some of which recommend construction of additional needed improvements for navigation, flood control and other allied water uses. Some of the pending recommendations are of high importance to the Nation's expanding economy, and should be provided as soon as possible. Your projects committee, therefore, recommends that the Congress of the United States be requested to give consideration to the early authorization of these projects, and to the appropriation of funds for construction.

Of vital concern to the members of this convention are the water resources surveys and investigations authorized to be prosecuted by the various Federal agencies. Your committee is concerned over the large backlog of authorized surveys that have not been initiated due to insufficient survey funds. It is considered imperative, not only that a reserve of projects be kept on the shelf to be activated at such time as the economy of the Nation demands, but also that this reserve be maintained in a thoroughly healthy and up-to-date condition, in view of changing economic and defense requirements. This can be done only by an adequate and continuing program of surveys to permit prosecution of worthy investigations at a rate of speed sufficient to insure early completion. Your projects committee, therefore, considers it highly important that sufficient funds be made available by the Congress to carry on these survey programs, and it is recommended that the Bureau of the Budget and the Appropriation Committees be informed of our opinions in this matter, which constitutes the heart of a sound public works program.

We have watched with great interest and considerable trepidation the gradual retardation of the navigation and flood-control program of the Corps of Engineers, not only for new work but also for maintenance and investigations. The appropriations made for fiscal year 1955 are buying only about half the same amount of project that those funds could have bought in 1946. The need for full-scale development now is greater rather than less. We would therefore suggest that this Congress consider the present and immediately prospective rate of appropriations merely in the sense of a pause, because of budgetary conditions, until an adequate rate of progress on all phases of the program can be resumed.

We wish to commend the various Federal agencies involved in the investigation and provision of water resource projects on their improvements in development of sound procedures of project analysis and formulation, and the increased cooperation among agencies and with the States and local interests. We believe that true partnership between the Federal Government and its citizens lies not only in a sharing of costs, but also from the common sharing of problems and their development and solution. An eminent example is the pending comprehensive survey of the water resources of the New England-New York region, soon to be submitted to the President and the Congress of the United States. Prepared under the chairmanship of the Department of the Army and the Corps

of Engineers, it reflects credit not only on them but on all participating Federal and State agencies, and demonstrates democracy in action at its best.

The committee believe that neither they nor the authorizing and appropriating committees of Congress can obtain an entirely clear view of any proposed project unless they are furnished with information as to any importance the project may have as an element in the national defense. Over a period of years we have fallen into the habit of accepting as the full measure of the strategic value of a project its usefulness in directly servicing some one or more military installations. As to other and often far more important aspects of a project in defense, we have been content to remain uninformed.

The committee regrets the continued absence of official data and opinion with respect to the strategic value (if any) of projects examined and reported by the administrative agencies. It is well understood that this results from the absence of any recognized criteria for measuring such values and the very real difficulty of establishing such. It may also be ascribed to the absence of adequate and appropriate legislation and administrative policy. The committee does not consider that the Corps of Engineers nor the Bureau of Reclamation, nor any other examining agency is to be blamed for this omission. It is due rather to the persistence of an obsolete point of view. The presently existing pivotal importance of the noncombatant elements in warfare makes it imperative that we examine and appraise all projects with due regard to whatever defense values they may have.

As a contribution toward the solution of this problem, the committee offers the following definition of strategic value:

"The term 'strategic value' shall mean all important reasonably predictable contributions by the project to the defense potential, and shall include, but shall not be limited to, foreseeable contributions of consequential importance in time of war to the transportation, power, or water use or conservation upon which are likely to depend any considerable segment of wartime civilian economy, war industry, or the movement or supply of the Armed Forces."

The committee further suggests that while strategic values must always elude precise measurement and must always be based largely on informed opinion, the degree of accuracy with which they may be gaged by such opinion is to no small degree comparable with that applying to estimates of peacetime economic benefits. As a working rule of thumb, and until some more acceptable method may be developed, it is proposed that all projects to be officially surveyed be examined for strategic values as herein defined, and that where any such are found, they be credited to the project as an annual benefit as war insurance in terms of a fraction or multiple of its total determined dollars and cents annual economic benefits.

The committee hopes to see taken such legislative and administrative steps as may be necessary to effectuate this policy. These should include the removal of all impediments to expressions by any department with respect to the strategic value of any project to such department in particular or to the defense potential as a whole. It should be possible for a department to make such expressions without prejudice to its budgetary requirements, unless such project is proposed principally for the benefit of such department.

The committee again calls attention to the imprudence of a policy which denies to the governmental agencies responsible for the maintenance of water use and conservation works representing Federal investment adequate funds for their continual maintenance at authorized capacity. The economic health of existing agriculture and industry wholly or partly dependent upon inadequately maintained public facilities, as well as the growth and development of their tributary areas, requires that sufficient maintenance funds be, and continue to be, available.

Respectfully submitted.

SID SIMPSON,
Chairman.

NOTE A.—A project which has been placed in class II, III, IV, or V by the committee may be reexamined from time to time upon due application and the submission of material supplementary information, with a view to advancing its classification; but no project will be reported upon by the committee more than once in each year.

NOTE B.—Attention is called to the fact that when a project is once put in class I—endorsed, such status continues and it is unnecessary to follow up at subsequent sessions with new applications. All projects endorsed by the Congress, upon the recommendation of the committee, retain their status until finally constructed, unless such action is rescinded by the Congress, and the Congress stands pledged to do everything possible to assist in reaching that goal.

APPLICATIONS FOR APPROVAL OF PROJECTS RECEIVED BY THE PROJECTS COMMITTEE

APPENDIX A

(Letter R following the project number indicates revision of a previous application.)

Class I—Projects endorsed

Endorsed: This means that the committee is convinced that the project is sound, needful, and sufficiently advanced in status, and should be promptly constructed in the public interest.

Project No.	Name of project	State	Division
632-R-4	New Haven Harbor-Quinnipiac River	Connecticut	Northeast.
794-R	Bayou La Batre	Alabama	South Atlantic.
795-R	Bayou Coden	do	Do.
852-A-R-2	Norfolk Harbor	Virginia	North Atlantic.
852-B-R-2	Thimble Shoal Channel, Norfolk	do	Do.
854-R	Central and southern Florida flood-control project (authorization of the entire project).	Florida	South Atlantic.
855-R	Savannah Harbor	Georgia	Do.
865-R	Portsmouth Harbor and Piscataqua River	New Hampshire and Maine	Northeast.
870-R-2	Delaware River, (1) Philadelphia to the sea, (2) Philadelphia to Trenton	Pennsylvania, New Jersey, and Delaware	North Atlantic.
880-R	Nawiliwili Harbor improvements	Territory of Hawaii	South Pacific.
883-R (963)	Barre Falls flood-control project	Massachusetts	Northeast.
927	Port St. Joe Harbor (St. Joseph Bay)	Florida	South Atlantic.
950-R	Victory flood control, Connecticut River Basin	Vermont	Northeast.
953-R	North Hartland flood control, Connecticut River Basin	do	Do.
958	The island flood control, Connecticut River Basin	do	Do.
959-R	Ball Mountain flood control, Connecticut River Basin	do	Do.
960-R	Townshend flood control, Connecticut River Basin	do	Do.
963 (883-R)	Barre Falls flood control, Connecticut River Basin	Massachusetts	Do.
968	Gold Beach, Rogue River Harbor	Oregon	North Pacific.
971	Mississippi River, Guttenberg, Iowa, to Hamburg Bay, Ill., flood protection	Iowa, Illinois, and Missouri	North Central.
972	Wilmington Harbor	North Carolina	South Atlantic.
973	Wrangell Harbor	Alaska	North Pacific.
974	Petersburg Harbor, north end Wrangell Narrows in southeast Alaska	do	Do.
975	Morro Bay Harbor	California	South Pacific.
980	Cross-Florida barge canal	Florida	South Atlantic.
984	Cheboygan inland route (Crooked and Indian Rivers)	Michigan	North Central.
985	Black River (Gogebic County), harbor of refuge	do	Do.
986	Port Austin harbor of refuge	do	Do.
987	Bullock Cove, harbor improvement	Rhode Island	Northeast.
995	East Barre, flood control reservoir	Vermont	North Atlantic.
996	Tampa Harbor	Florida	South Atlantic.
997	South Shore beach erosion control study	Rhode Island	Northeast.
1002	Bethlehem Junction	New Hampshire	Do.
1003	Otter Brook	do	Do.
1005	Hampton beach erosion	do	Do.
1009	Bayou Segnette Waterway	Louisiana	Lower Mississippi Valley.
1023	Chattahoochee River, Fort Gaines lock and dam	Georgia and Alabama	South Atlantic.
1024	Boggy Creek flood-control project, Enid	Oklahoma	Southwest.
1025	Owl Creek unit, Missouri River Basin project	Wyoming	Missouri River.

Class II—Projects classified as meritorious

Meritorious: This means that the committee believes that although the project is not sufficiently advanced in status to warrant its present endorsement, it is meritorious and open for further consideration by the committee.

Project No.	Name of project	State	Division
617-R	Purgatoire River Dam	Colorado	Southwest.
728-R-5	Morehead City Harbor	North Carolina	South Atlantic.
781-R-4	Juniata River and tributaries, Mifflin County, flood control	Pennsylvania	North Atlantic.
843-R-2	Levees east of Chandlerville (Sangamon River)	Illinois	North Central.
888-R	Long Beach, Plymouth Harbor	Massachusetts	Northeast.
924	Carrabelle Harbor, interior channel	Florida	South Atlantic.
925	East Point channels, Apalachicola Bay	do	Do.
926	Hillsboro River, Tampa Harbor (modification of existing project)	do	Do.
928	Rice Creek	do	Do.
929	St. George Island Cut, Apalachicola Bay	do	Do.
930	Scipio Creek Channel and Basin, Apalachicola Bay	do	Do.
931	City of St. Louis and vicinity (flood control)	Missouri	Lower Mississippi Valley.
932	Pepperell Cove, Kittery Point	Maine	Northeast.
981	Huntington Reservoir	Indiana	Ohio River.
1012	Posten Bayou	Louisiana and Arkansas	Lower Mississippi Valley.
1013	Bayou Chevreuil	Louisiana	Do.
1026	Peoria Reservoir, Mississinewa River	Indiana	Ohio River.
1027	Dora Reservoir, Salamonie River	do	Do.
1030	Seldovia Harbor improvements	Alaska	North Pacific.

Class III—Expeditious report on authorized survey requested

Expeditious report on authorized survey requested: This means that the committee believes the Congress should request the engineering authority to expedite the report of its investigation and survey of the project to the end that appropriate further action may be had thereon in regard to classification by the Congress.

Project No.	Name of project	State	Division
98-C-R-2	French Creek Basin (resurvey)	Pennsylvania	Ohio River.
788-R	Waccamaw River	North Carolina and South Carolina	South Atlantic.
797-R	Perdido Pass	Alabama	Do.
798-R	Fowl River	do	Do.
810-R-2	Holden Beach (Lockwoods Folly Inlet)	North Carolina	Do.
883-R	San Juan Harbor, improvements to channel and turning basin	Puerto Rico	Do.
890-R	Kahului Harbor improvements	Territory of Hawaii	South Pacific.
970	Norfolk Harbor, Elizabeth River, Southern Branch, preliminary examination.	Virginia	North Atlantic.
982	Rio Grande River, channel storage control dams	Texas	Southwest.
983-R	Calcasieu River, low-water dam	Louisiana	Lower Mississippi Valley.
991	Apalachicola, Chattahoochee, Flint Rivers, Flint River development	Georgia and Florida	South Atlantic.
1010	Barataria Waterway	Louisiana	Lower Mississippi Valley.
1011	Bank stabilization, Red River, Fulton, Ark., to Boyce, La.	Louisiana and Arkansas	Do.
1014	East point levee	Louisiana	Do.
1015	Freshwater bayou navigation canal	do	Do.
1016	Red River and tributaries—Kisatchie Bayou and Cane River	do	Do.
1017	Eastern Rapides and south central Avoyelles Parishes	do	Do.
1018	Amite River and tributaries	do	Do.
1021	Gilbert Dam and Reservoir and Lone Rock Dam and Reservoir	Arkansas	Southwest.
1022	Black and White River irrigation	do	Do.
1028	Shallotte Inlet	North Carolina	South Atlantic.
1031	Turtle Creek Valley flood-control survey	Pennsylvania	North Atlantic.

Class IV—Projects recommended for survey

Recommended for survey: This means that the committee believes that sufficient showing on behalf of the project has been made to warrant further examination in the form of an adequate survey by an appropriate agency of the Federal Government.

Project No.	Name of project	State	Division
891-R	New Haven Harbor (review and restudy)	Connecticut	Northeast.
967	Port of Cleveland breakwall	Ohio	North Central.
969	Sachem's Head Harbor	Connecticut	Northeast.
976	New Bedford Harbor, flood control	Massachusetts	Do.
977	Ossipee Lake project	New Hampshire	Do.
978	Winnepesaukee Lake and Winnipesaukee River, flood protection, study of	do	Do.
979-R	Ocracoke Inlet	North Carolina	South Atlantic.
983	Southport waterfront retaining bulkhead	do	Do.
989	Point Judith and Point Judith Pond, harbor of refuge	Rhode Island	Northeast.
990	Wickford Harbor	do	Do.
991	Narragansett Bay area, hurricane damage and preventative work, examination and survey of.	do	Do.
992	New England hurricane protection	Maine, New Hampshire, Massachusetts, Rhode Island, and Connecticut.	Do.
993	Narragansett Bay, hurricane tidal flood-control project for area	Rhode Island	Do.
998	Groton Pond	Vermont	Do.
999	Bloomfield	do	Do.
1000	Franconia	New Hampshire	Do.
1001	Cold River	do	Do.
1004	Rye Harbor	do	Do.
1005	Little Harbor	do	Do.
1007	Swiftwater	do	Do.
1029	West Two Bayou	Arkansas	Lower Mississippi Valley.

Waiting for the President To Decide

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mr. JONES of Missouri. Mr. Speaker, the American people have been waiting patiently for a week since President Eisenhower's return from Geneva, and are beginning to wonder how much longer it will take the President to decide whether or not he is in agreement with the great American tradition that "A Public Office Is a Public Trust."

Even since the publication of the following editorial in the St. Louis Post-Dispatch in its issue of Thursday, July 28, 1955, there have been further revealing if not startling disclosures that at least one Cabinet officer may know more about this case than was brought out in the public hearing.

Under leave to extend I am including the above-mentioned editorial from the Post-Dispatch:

WHAT THE RECORD SHOWS

The McClellan committee has now completed its hearings on Air Secretary Harold E. Talbott, and President Eisenhower says he will read the record of those hearings before deciding whether Mr. Talbott should stay in the Cabinet.

We do not see how the President can fail to be deeply impressed by three salient aspects of that record.

1. Secretary Talbott indubitably did use his official influence to aid a private firm for his private gain.

There is no question whatever about this. Letters went out on his stationery as Secretary of the Air Force, plugging for Mulligan & Co. Mr. Talbott personally telephoned officials of the Radio Corporation of America, who had questioned the propriety of dealing with Mulligan, and bawled them out for being high and mighty. He even rattled off a list of other corporations with defense contracts which had hired Mulligan to prove that RCA was acting unreasonably.

He now admits these activities were mistakes. They were worse. They were ethically reprehensible. If a courthouse hack sold insurance the way Mr. Talbott tried to sell efficiency expertism, he would be plainly denounced for low-grade political sandbagging.

2. In addition to misusing his own position, Mr. Talbott misused that of the Air Force chief counsel.

When he was pressuring RCA for being high and mighty, Mr. Talbott had the counsel, John A. Johnson, render an option that RCA could legally sign up with Mulligan. He even had Mr. Johnson (whose role was no more admirable than his chief's) try to get a concurring opinion from Attorney General Brownell. Neither the Air Force counsel nor the Attorney General has any business giving legal opinions designed to serve the personal interest of Mr. Talbott.

3. The Secretary's behavior since the investigation began has been less than forthright.

His first reaction was outraged innocence. Then he offered to quit Mulligan if the Senators told him to. Then he announced that he would quit Mulligan though claiming he had done nothing illegal or unethical. Even now, in the face of the record, he has the nerve to testify, "I never used my position to influence a living soul." Throughout, he has suffered lapses of memory on crucial points and has shown a consistent insensitivity to elementary concepts of what is and is not proper in Government-business relationships.

These are the main points that emerge from the record. In our judgment they permit only one conclusion—that a Cabinet officer who has so patently abused his official position and shown such a remarkable insensitivity to ethical principles cannot possibly be retained by an administration which claims to have established a high order of rectitude in Washington.

In Fairness to Howard Young

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. CURTIS of Missouri. Mr. Speaker, I wish to place in the CONGRESSIONAL RECORD an editorial which appeared in the St. Louis Post-Dispatch of Sunday, July 31, 1955, entitled "In Fairness to Howard Young":

IN FAIRNESS TO HOWARD YOUNG

Members of the Senate-House Committee on Defense Production say they cannot now make an evaluation of the record of Howard I. Young, of St. Louis, as a dollar-a-year man in Washington.

Their indecision threatens to leave the case in limbo until Congress meets next year. Such procrastination would be unfair to Mr. Young and unworthy of the committee.

Mr. Young is president of American Zinc, Lead & Smelting Co., and during the Korean war was Deputy Administrator of the Defense Materials Procurement Agency. Recently Comptroller General Joseph Campbell reported to Congress that an apparent "conflict of interest" was involved. A General Accounting Office report strongly implied that Young in his official capacity had served his company as well as his country.

The case was splashed on national attention when Senator WILLIAMS, of Delaware, placed the GAO report in the CONGRESSIONAL RECORD before the joint committee had a chance to hear Young's side of the story. When heard, Young denied every charge.

Since then the GAO has backed down on two of its major complaints: (1) That Young's own firm sold $60,000 worth of machinery to a company for which Young had promoted a Federal loan; and (2) that his firm sold 1,167 tons of zinc to the Government at a contract price above the market price at time of delivery. The GAO says the latter charge has only been reworded, not withdrawn, but does not make clear what offense is alleged.

Comptroller General Campbell also has told the committee that he would not accuse Young of acting in bad faith, but questioned whether "sound principles of public administration were exercised." This is a thorough retreat from implications of impropriety.

If the GAO is now so uncertain of some of its facts and its phraseology, why did it issue the report against Young in the first place? The public can only conclude that the report was a sloppy and reckless piece of work.

Nevertheless, the charges against Mr. Young have left their mark. And when a citizen's reputation is at stake, a congressional committee has no business allowing months to pass before justice catches up with the accusations. There has been too much carelessness of this sort for the rights and reputations of individuals.

If Mr. Young was wrong—and the GAO certainly has not proved it—the investigating committee should say so. But if Mr. Young was not wrong, then the GAO was totally wrong in bringing accusations which it could not support against a citizen who served his Nation without compensation.

Truth should not be permitted to trail far behind the charges. The congressional committee has heard both sides and should reach a prompt and fair conclusion.

Sale of A-Power Bears Watching

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, August 1, 1955

Mr. EVINS. Mr. Speaker, a recent column in a Washington newspaper is most deserving of the attention of the Congress. I refer to the column entitled "Sale of A-Power Bears Watching," by Mr. Thomas L. Stokes, brilliant syndicated writer, which appeared in the July 30 edition of the Washington Evening Star.

I ask unanimous consent that this excellent article be reproduced in the RECORD.

The article follows:

SALE OF A-POWER BEARS WATCHING—LAW ASSURING NON-PROFIT GROUPS OF PRIORITY IS BYPASSED BY AEC

(By Thomas L. Stokes)

About this time a year ago, when Congress was rushing pell-mell to adjourn and go home as it is now, a significant battle was fought in the Senate of which we now are having an echo.

A band of Senators resorted finally then to a filibuster against the administration bill for private development of atomic energy until they were able to write into it certain provisions to protect the public and consumer interest. In the case of this new source of energy they were determined to prevent the exploitation that was revealed by Government investigations a quarter of a century ago in the case of electric energy.

Among the protective clauses was a guarantee of preference for nonprofit groups—municipalities and other public agencies as well as rural electric cooperatives—in the sale of atomic energy from publicly owned projects, such as is already required by law in the case of electric power from public hydroelectric projects.

We thought that was all fixed and settled. But not necessarily, evidently.

Now for the echo. For that we take you to the town of West Milton, N. Y. You probably saw photographs in your newspapers of an event there. Chairman Lewis L. Strauss, of the Atomic Energy Commission, throwing a switch which started the flow of 12,500 kilowatts of electricity from an AEC installation into a private utility system, the Niagara Mohawk Power Corp.

This was an epochal event. For it was the first peacetime use of electrical energy from an atomic installation. To give a human touch that the usually stern-visaged Chairman Strauss is not sure of providing, there was an added stunt for the news photographers. This was a shot of a housewife at nearby Ballston Spa, a Niagara Mohawk customer, cooking a hamburger on her electric stove with the atomic power.

What was wrong with these pictures was spotted immediately by a group several hundred miles away in Chicago—the board of directors of the Cooperative League which happened to be meeting there. And lucky it is for us that such groups are on guard.

Members of the board are thoroughly familiar with the law passed a year ago by Congress and they knew also that two cities which have municipal electric plants, Illion, N. Y., and Holyoke, Mass., as well as the Delaware County Rural Electric Cooperative, at Delhi, N. Y., had applied for power from this first AEC reactor months ago, way back in January.

Under the law they are entitled to preference. They didn't get it. Niagara Mohawk is getting the power at 3 mills a kilowatt hour. The reactor, which is a model of one installed in the United States submarine *Sea Wolf*, produces enough power to supply a city of 20,000 people.

The cities and the co-op would need some way to get the power to them. Rather than build transmission lines to West Milton, they had decided upon the alternative of having it "wheeled" to them over lines of Niagara Mohawk. They offered a reasonable fee to the private utility for this service. But they were turned down—and it's easy to see why, with the company getting the power for itself so cheaply.

In a resolution it drafted, approved and sent to Chairman Strauss here in Washington, the Cooperative League's board of directors said that, under the law, the AEC itself should have hired Niagara Mohawk to wheel the power to the nonprofit groups which had applied for it under the preference guaranty. The co-ops and the cities then would have been charged for the service when they were billed by the AEC for the power. The board bluntly accused the AEC of violating the law.

What the Cooperative League is chiefly concerned about is the danger of a precedent being established which, it said in its resolution, "far outweighs the economic importance of the electric energy involved."

This might seem to be an exaggerated concern unless you know the eagerness of powerful private utilities to get their hands on this new source of energy, and how great now is their influence here in Washington.

You may recall that the AEC, under Chairman Strauss' direction, was the "broker" in the Dixon-Yates deal involving TVA which finally exploded in the face of the administration with the contract being canceled when it was shown to be the first step in a planned campaign to liquidate the great public multipurpose water resources program.

Because of AEC authority over atomic energy, that agency will bear constant watching to protect the public interest in private development of this new energy source.

The Merger Movement in Textiles—New Giant Corporations Have Changed Character of Industry

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. DODD. Mr. Speaker, I wish to make available to Members of Congress a genuinely important and most impressive research survey on the radical alterations that have taken place in the far-flung textile industry in the United States which has just been made by Solomon Barkin, director of research, Textile Workers Union of America, CIO. Mr. Barkin's survey and analysis has been made to assist Members of Congress now concerned with the dangers of monopoly in several areas of present-day industry.

Possibly because it is spread through so many States and such widely separated regions in this country, few of us are aware of the profound changes that are taking place in this oldest of our mass-production industries. I quote from Mr. Barkin's statement of June 29, 1955:

THE MERGER MOVEMENT IN THE TEXTILE INDUSTRY

Industrial giants created since the end of the war by business mergers now dominate the textile yarn, woven fabric, and finishing and converting industry, previously considered typically competitive. These new colossal corporations or interest aggregates are engaged in the production of a variety of fabrics, sell their goods, finance their sales, and control the output of many independents. They have radically changed the nature of the industry. Not only do they dominate price and production practices within the industry, but through their method of growth by consolidations they have substantially reduced competition. The large-scale movement of mill liquidation has enhanced their power. Through the skilful exploitation of our Federal tax laws the leaders of these enterprises have avoided Federal taxes and enjoyed large tax windfalls with which to build their industrial colossus. With the new centralized control over vast textile operations they are able to moderate the rigors of competition and control general industrial policy and practice. Their influence extends into the communities and Government and dominates the evolving industrial attitudes to labor and unions, which tend to be repressive in spirit and unprogressive in fact.

The merger movement is still in process. Newspapers report several impending at the present time, assuring the continuance of economic concentration in the industry. The appearance of the giant textile organization is significant not only as an indication of the change in structure of this industry, but as further evidence of the continued operation of the forces generating industrial bigness in our industrial society. Having begun at the start of the century in the high-capital requirement industries, the consolidation and big business trends have been extended to the very last bulwalks of small business. We cannot shrug off these developments as merely the continuation of an older trend, or remain complacent because the new textile corporations, like most big business, dominate without necessarily monopolizing their particular business areas. We should consider most carefully the economic and nonmarket uses of this corporate power and the conduct of the managements of these organizations to assure the proper discharge of this trusteeship in the public interest.

Prices and production policies of textile mills are now controlled by central organizations cognizant of the powers of their competitors. "Stabilized competition" and mergers have enhanced or maintained the competitive and financial position of the large units and reduced the number of independent units, particularly in the individual fabric divisions. Through their selling offices, factoring houses and personal contacts, their control is very extensive. Their competitive strength does not stem from any special competence, but from an ability to average out favorable and unfavorable market developments, to hold the larger buyers and maintain extensive outlets.

Their appearance has accelerated the process of mill closings and discouraged many from seeking to rehabilitate their properties and organizations after the letdown following the period of standardized production prevailing during the war and early postwar years. The alluring opportunities for profits through merger captivated many managements who feared the competitive path.

These organizations have given the industry little new leadership. They have provided little real support for fundamental research to promote the textile industry. The textile spinner and weaver continue to rely primarily on textile machine manufacturers, synthetic yarn producers, raw material interests and chemical concerns for innovations and inventions. Few new persons have been added to the top management ranks to provide vigorous leadership although the merger movement has made for high turnover of management personnel within individual organizations. Instead of reducing the ravages of poor management and inappropriate product merchandise approaches, they have magnified the harm they can do.

They have yet to prove their value in changing the tide in the use of textile products. Despite their growth and power and a growing economy and population, the industry continues to lose important domestic markets. Significant new uses have not been developed. The new textile giants have furrowed old fields at a time when invention is imperative. They have not duplicated the records of other industrial giants who have promoted growth and expansions.

The textile chains have remained fundamentally complacent. They have been satisfied to see their industrial finances strengthened irrespective of the cost to the Federal Treasury, the workers, the community and the industry. They have proceeded from the merger of one unit to another, bringing ruin in their wake, but indifferent to their responsibilities as trustees of American wealth and enterprise.

The new concentrated power has frequently been exercised quite ruthlessly to repress workers, to control industrial wage and personnel policy, to discourage unionism, and to relocate plants without concern for the destructive effects. With their new resources they have become dominant industrial factors and key factors in the political, educational, and social life of the areas in which they operate, to the end of assuring the continued predominance of their political outlooks.

The following course of action should be considered by your committee:

1. Remedial action to inhibit mergers primarily designed to exploit the tax advantages made possible by the tax-free position of pension funds and foundations, and by the special tax advantages provided under the capitals-gains and carry-back and carry-forward provisions of the corporation tax law. The 1950 revisions of the Internal Revenue Code affecting the use of foundations as a funnel for the operation of corporate enterprise must be reviewed to determine if it has eliminated the abuses. The tax-exempt position of the pension funds again must be carefully reviewed for their effects on industrial concentration and to assure fair competition. The changes in the 1954 corporation income tax law on the use of carry-back and carry-forward provisions must be reexamined to evaluate their sufficiency in the light of their continued stimulation of mergers.

2. Federal incorporation of giant corporations is imperative to accomplish more

uniform regulation and to develop a more appropriate code of managerial responsibility in this era in which so much economic power is concentrated in the hands of industrial management.

3. A Federal supervisory agency of such corporations should be empowered to review the conduct and policies of such organizations to permit public appraisal of their effects on competition, industrial progress, and worker and community interests.

4. A specific tax must be imposed upon the profits and financial gains of large organizations which abandon plants, the revenue from which should be used for the reconstruction and development of local communities.

5. Unorganized workers in giant industrial organizations, particularly in the textile industry, need specific protection in their efforts to form unions since their rights under the existing law have been flouted.

The Merger Movement in Textiles—New Giants Now Dominate Certain Sections of Industry

---

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. DODD. Mr. Speaker, in the second section of the important study on Mergers in the Textile Industry by Solomon Barkin, which I present today, the significant point is made that new giants that have grown up in this field have arisen largely as a result of loopholes in our tax laws which encourage mergers and acquisitions even though such combinations can make no contribution in the sense of offering better or cheaper products. I quote from the Barkin study of June 29, 1955:

TEXTILE GIANTS HAVE GROWN THROUGH MERGERS

Unlike corporations in other industries, which have grown large through internal expansion arising from economic growth, many giant organizations in the textile industry have arisen primarily through acquisitions and mergers engineered to take advantage of tax loopholes. With a handful of outstanding exceptions, these organizations have not built completely new plant structures. They have merely regrouped existing facilities under one ownership.

The merger movement is not completely new in the industry. It witnessed the formation of trusts during the first decade of the century and enduring mergers during the twenties and thirties. The latter sought to liberate individual mills from the financial stranglehold of the commission selling house, which frequently bled the textile organizations into financial bankruptcy. Studies of 1933 and 1937 data show that the concentration had significantly affected particular product branches without penetrating the industry as a whole.

While the prewar mergers were essentially defensive in character, designed to remove the economic dependence upon the commission house, the mergers during the war and postwar periods were basically expansionist in character. They were stimulated by the abnormal postwar circumstances which promised vast opportunities for automatic profits and the visions they fired among some for power and dominance within the industry. Large profits, fixed markups, and fabric shortages gave the mills great bargaining power to extend their controls forward. Textile buyers and converters had incentives for backward integration into weaving and finishing operations. Mills and selling houses were brought into a single organization. Skilled use of the capital gains provisions in our tax laws and charitable and personal trusts gave additional impetus to this movement. Operators or estates unwilling to continue in the competitive struggle found sales of mills an easy out. (For detailed description, see The Regional Significance of the Integration Movement in the Southern Textile Industry, Southern Economic Journal, vol. XV, No. 4, April 1949, by Solomon Barkin.)

The war and postwar movement began in 1943 and was in full bloom in the years 1945–48. It diminished toward the end of this period and lost much of its momentum in the years from 1949 through 1952 though scattered acquisitions occurred. A study of southern mill mergers indicates that at a minimum the total changes in ownership during the period from 1943 through 1948 represented almost 5 million spindles and 90,000 looms, affecting about 22 percent of the existing capacity. In North Carolina, 26 percent of the equipment, and in South Carolina, 33 percent changed hands, usually being acquired by a new interest in the process of building a new giant organization.

BASIC CHARACTER OF INDUSTRY CHANGING

The extent to which the traditional view of this industry, as consisting of isolated individual mill owners, had been dissipated by 1948 is shown by a study of the South Carolina textile industry. Fifteen interests then employed 88,733 persons out of the 133,408 in the industry. They controlled 67 percent of the employees, 65 percent of the spindles, 68 percent of the looms, 106 of the 227 mills in the State, and 12 of the separate finishing plants. The largest employers in the State were J. P. Stevens & Co., Inc., with some 13,700 employees, Deering-Milliken & Co., and Springs Cotton Mills, with 13,407 and 12,000, respectively. These three represented 30 percent of the industry in the States. (See Textile Worekrs Union of America, Research Department, South Carolina Textiles: Southern Workers, Northern Bosses, 1949.)

TEXTILE COMPANIES ABSORBING NONTEXTILE CONCERNS

While sharing some of the characteristics of the war and postwar merger movement, the current one, which started at the end of 1952, has features of its own. First, its major emphasis is upon the further consolidation of giant units. Major corporations, the product of previous mergers, are now being joined into new mammoth structures. Burlington Industries, Inc., has acquired Pacific Mills, Interstate Hosiery, Goodall-Sanford, Hafner Associates, Mooresville Mills, and Peerless Woolen Mills. Similarly, Textron American, Inc., combined the American Woolen Co., Robbins Mills, and Textron, which itself had previously absorbed Gossett Mills in earlier years and then such corporations as Burkart & Newmarket Manufacturing Co. It is now reaching out into many other nontextile companies, three of which it has already acquired. J. P. Stevens has recently bought Cheney Bros., a 117-year-old textile organization. Mount Vernon-Woodberry Mills, the outgrowth of the original Duck Trust, now includes Arcade Mills and is reported negotiating for other potential additions. The Lester Martin interests, which center about the Consolidated Textile Mills and include several additional unconsolidated enterprises, have gained control of the giant Bates Manufacturing Co. United Merchants & Manufacturers, Inc., has brought into its fold, through a stock exchange, the sizable and diversified mill structure of the A. D. Juilliard Co. M. Lowenstein & Sons, Inc., giant converting and mill chain, now includes Wamsutta Mills, which had previously bought up Somerset Mills. The dominant New England fine-goods manufacturer, Berkshire Fine Spinning Associates, which was formed in the early thirties through an amalgamation of New England fine-goods mills, has now combined with the Hathaway Manufacturing Co. and had previously acquired the Lincoln Bleachery. It now dominates the fine-yarn section of the combed-goods industry. Botany Mills, Inc., has recently taken over control of the Gurney chain of mills in North Carolina and Alabama. Princeton Rayon Corp. has bought out the Century Ribbon Mills with mills in Pennsylvania and Virginia and a factoring organization. Gera Corp., associated with the Albert List interests which liquidated the William Whitman & Co. and other cotton, woolen, and finishing plants, has acquired the United States Finishing Co., which had previously absorbed the Aspinook Corp.

AT THE EXPENSE OF UNITED STATES TREASURY

The second distinguishing feature of the merger movement has been the exploitation of the tax advantages accruing from the absorption of mills in financial difficulties or sustaining continued losses. Such mills are being acquired not for expansionist motives but to capitalize financial gains at the expense of the Federal Treasury, for the purpose of gaining financial windfall advantages to the buying corporation. In the usual case, the purchasing interests have not followed such acquisitions with large-scale investments to modernize or revitalize the acquired properties and organization. Rather, the pattern has been to close several mills, consolidating the holdings and shrinking the operations. The immediate financial benefit has been the predominant interest. The present merger movement has to an extraordinary degree fed on the difficulties of textile mills in the rayon weaving industry which has been losing markets, the woolen and worsted industry which has been shrinking in size, and the divisions of the cotton industry which have been losing out to competitive products such as plastics, paper, and synthetics.

In this category there are such acquisitions as the following: The merger of Goodall-Sanford, Hafner Associates, and Mooresville Mills with Burlington; the acquisitions of American Woolen, Robbins and Newmarket Manufacturing Co. by Textron; the purchase of Cheney Bros. by J. P. Stevens; the absorption of the A. D. Juilliard & Co. by the United Merchants & Manufacturers; Gera Mills by the Albert List interests; the Susquehanna Mills by H & B American Machine Co.

EXTENDING CONTROLS OVER SALES AND BUYERS OF FABRICS

Diversification of fiber utilization and product has also been joined with new ventures into the factoring of sales. A number of the large corporations now have acquired factoring units, thereby extending both the areas of control and influence over sales and buyers of fabric. Thus, Textron American has Amwool Financial Corp.; J. P. Stevens, after forming their own factoring subsidiary, acquired the J. P. McGuire Co., Inc.; United Merchants & Manufacturers has the United Factors Corp.; the Tannenbaum interests have the Century Factors; the Iselin-Jefferson Co. has William Iselin & Co. These financial affiliates help entrench the position of the giant corporations or interest aggregates.

The present merger movement has accelerated the degree of industrial concentration in the basic textile industry. Several big textile organizations have grown larger through thhe acquisition of chains or individual mills. In addition, several new giant aggregations have been formed. The pattern of embracing mills processing all fibers and all processes from yarn production through weaving and through finishing has been strengthened. The new textile organization

now has its own sales staff and, in an increasing number of cases, its own factoring facilities.

BYPRODUCT OPPORTUNITIES FOR FINANCIAL MANIPULATION

Outstanding is the third feature, largely a byproduct of the opportunities for financial manipulation and tax avoidance or gains. A considerable proportion of the mergers involve northern and particularly, New England, textile properties. To a greater extent than in other areas the purchasing interests utilized the economic distress in which these mills found themselves for their own advantage. However, other purposes are also propelling this movement. Some larger mergers involved such New England properties as the Berkshire Fine Spinning Associates and Lincoln Bleachery and Hathaway Manufacturing Co.; the purchase of Goodall-Sanford by Burlington; the conversion of the United States Finishing Co. and Aspinook Corporation into the Gera Corp.; the purchase of the Newmarket Manufacturing Co. and American Woolen Co. by Textron, Inc., and the absorption of Cheney Bros. into the J. P. Stevens organization. More New England mills are now owned by companies with southern textile properties.

A number of large southern organizations also lost their individual identity by being consolidated into already existing giant units. Among these we would include the Erwin Mills, now controlled by the Abney interests; the Pacific Mills and Mooresvile Mills having been taken into the Burlington orbit; Arcade Cotton Mills, now part of the Mount Vernon-Woodberry chain; Dunson Mills having been engulfed by the Pepperell organization and Robbins Mills, now part of Textron American, Inc.

To a greater extent than in the previous era, the companies are extending their operations into additional fibers. Burlington Industries, which originally was predominantly engaged in the processing of rayon fibers, acquired cotton mills after the war and now has significantly broadened into the woolen and blended wool fields. Textron has similarly moved into the rayon suiting and woolen and worsted divisions. The United Merchants & Manufacturers have also entered into the woolen and worsted division and into corduroy production.

TREND TOWARD VERTICAL INTEGRATION

Another strong trend has been the completion of the vertical integration process through the acquisition of finishing plants: Berkshire Fine Spinning Co. (through Lincoln Bleachery); Burlington Industries (through Pacific Mills); Textron (through Robbins); United Merchants & Manufacturers (through A. D. Juilliard & Co.). Another example is the likelihood that the Bates Manufacturing Co. will make greater use of the printing and finishing plant owned by the Consolidated Textile Co., which owns a controlling interest in Bates.

The Merger Movement in Textiles—Close Examination Shows New Giants Have Monopoly on Certain Products

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. DODD. Mr. Speaker, in the third installament of Mr. Solomon Barkin's impressive and authoritative survey on monopolistic trends in the textile industry, which I present for the benefit of Members of Congress, the point is carefully and vividly made that although the textile industry has no monster units such as dominate automobiles, certain sections of this industry, recently thought of as highly individualistic, are now controlled by very few firms. I quote from Mr. Barkin's statement of June 29, 1955:

DOMINATION BY TEXTILE GIANTS

The current merger movement, beginning in 1953 and continuing into the present, has engulfed a considerable sector of the wealth and equipment of the industry. Embracing 70 companies and 171 mills, employing over 76,000 persons, they have impressively reduced the significance of existing independent units within the industry. The woolen and worsted division has been most markedly affected though the other divisions, particularly cotton, have also seen huge amalgamations.

The consummate effect of the past and present merger movements has been to create a total of 43 major textile interests, defined as companies employing 3,000 or more employees. The greater number of these aggregates, some 28 out of the 43, were not involved in the present movement. They had attained their preeminent position primarily during the war and post-war periods and have not yet been impelled to move further. Some of the latter were associated with specific consumer interests such as rubber companies, thread distributors, and merchants whose needs for vertical integration have, for the time being, been satisfied. But 15 of the large interests were involved in the mergers of the last 2½ years. Negotiations involving other large units such as Dan River Mills were not consummated.

It would appear that the total employment of this group of 43 interests in the basic textile industry with which we are concerned is 353,450 persons out of a total of 680,000 production workers, or 52 percent. The spindles operated are 14.45 million out of a total of 23 million and the looms available to these mills total 304,149 out of a potential of 510,000. These companies had 521 plants, including finishing mills.

The size of these operations is suggested by another tabulation indicating, from such information as we have been able to assemble, their net assets and net sales. From the point of view of assets, the largest unit appears to be Burlington Industries, Inc., with a total of some $430 million, followed by J. P. Stevens & Co., Inc., with assets of $295 million; and United Merchants & Manufacturers, Inc., with $190 million. Textron American follows with $151 million.

The lineup for the organizations in terms of sales is slightly different: Burlington leads with net sales of $548 million, followed by United Merchants & Manufacturers, with $300 million, and then by Stevens, with $298 million. Textron American, Inc., had pro-forma sales of some $205 million, followed by M. Lowenstein & Sons, with $186 million, and then by Cannon Mills Co., with $180 million.

COMPETITIVE FACTOR DISAPPEARING

This record of concentration in the textile industry may not be as impressive as the singular domination by a small handful of companies prevailing in some industries. There are no corporations in this industry which compare with the size of the big automobile companies. But it is highly significant that these consolidations have pervaded an industry in which the giant organization was practically absent in the prewar years. They have taken hold of an industry which has been characteristically thought of as a competitive one and in which the trade associations still trumpet these same characteristics. The big corporation with its powers for control has invaded one of the last citadels of smaller independent industrial units. The process has not yet been completed. We know that further mergers are in the making. The nature of the competitive process and organizational structure have been substantially changed.

THREE CONCERNS CONTROL THREAD BUSINESS

The importance of size in the industry cannot be fully appreciated by comparing the equipment or sales of an individual organization with the industry total. More and more of the companies are entering the varied markets served by the industry. More of them are processing goods containing all fibers. Their equipment enables them to shift from one to another as style and market trends dictate. But there is a high degree of specialization which careful research and governmental data would disclose. For example, two of the major interests, American Thread Co. and Coast & Clark, Inc., together with another minor interest, Standard-Coosa-Thatcher, have almost exclusive control of the thread business.

The appearance of giants in this industry offers a serious challenge. It is transforming the industry and subjecting it to the heavy pressure of standardization which necessarily follows from the existence of gargantuan operations. Many doubt the economic appropriateness of this form of structure for the successful promotion of the industry. Financial and speculative gains, and the search for bureaucratic and personal power, have created an industrial structure ill-adapted to this industry.

The Merger Movement in Textiles—Concentration Accelerates While Industry Shrinks

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. DODD. Mr. Speaker, the merger movement now changing the entire character of the textile industry in this country is taking place while the industry in shrinking alarmingly. This is the principal point documented by Mr. Solomon Barkin, director of research, Textile Workers Union of America-CIO in the fourth installment of this study of June 1955 on the developments in the textile industry, which I am making available to Members of Congress. I quote from Mr. Barkin:

CONCENTRATION INCREASES WHILE INDUSTRY SHRINKS

The current merger movement in the textile industry has taken place at a time when many plants were being closed; specific segments have been significantly shrunk; and equipment has been scrapped as marked redundancies have become evident with the rise in the industry's productivity. New plant structures have been few in number. The consolidation of the existing establishments into fewer hands in face of the shrinkage in the industry's capacity, has definitely magnified the influence of the gigantic industrial corporations.

Total production has remained relatively stable during the postwar years, but employment and mill equipment in place and the number of mills have continued to decline. Except for the year 1949, total broadwoven fabric production has varied between 12 and 13 billion yards a year since 1947, with cotton goods production being maintained at the most stable level, varying between 9.5

billion in 1952 and 10.1 billion in 1951, except for 1949. Silk and synthetic yarn fabric production ranged from 2 billion to a maximum of 2.6 billion in 1950. But the woolen and worsted output has continued to shrink from 516 million linear yards in 1947 to a low of 281 million in 1954. In the first quarter of 1955 production rose seasonally to new high levels, but cutbacks in the second quarter erased the unusual advance and restored activity to within previous ranges.

This stability in the volume of production is being experienced in face of a rising population which increased from 144 million in 1947 to 165 million at the present time. Part of the production amounting to 925 million square yards, the difference between the volume exported in 1947 and 1954 (1,730 million and 805 million, respectively), was diverted from export to domestic markets. But fundamentally, domestic textiles consumption has not grown. Actually per capita textile fiber consumption for the years 1951–54 was 34 pounds as compared with 35.8 pounds for the years 1947–50. Per capita fiber consumption dropped slightly despite a per capita rise of real disposable income of 11 percent from 1947 to 1954.

RISE IN MAN-HOUR PRODUCTIVITY

While total production has therefore remained relatively stable, there have been vast shifts within the industry. Of even greater importance has been the sharp rise in man-hour productivity. New investment in equipment and rebuilding of existing structures with the minor additions of new structures, has amounted to some $4 billion in the entire textile industry and some $3 billion in the divisions under consideration. As a result, well over 70 percent of the machines operating in the industry are of postwar construction and are therefore more productive and automatic.

New management techniques in administration of work assignment, scheduling, quality controls, material handling, and layout have reduced labor requirements. New fibers requiring less labor for processing have been substituted for old ones. Whereas a worsted mill might require one-third of a man-hour to produce a yard of serge, a cotton mill would only need less than one-tenth of a man-hour to produce a yard of cloth.

All evidence points to an increase in man-hour productivity of about 5 percent per annum. An approximate measure is provided in table IV, where it is indicated that the yardage output per man-hour has risen steadily from 7.8 in 1947 to 8.8 in 1950, to 10.8 in 1954, and 11.2 in the first quarter of 1955.

With relatively stable total output, and sharply rising man-hour productivity, employment has shrunk markedly. From a total of 785,000 in 1948 in the broadwoven fabric industry, we have seen employment decline to 568,000 in 1954, rising slightly in the first quarter of 1955 to 572,000 but declining below 1954 levels in April and May. The contraction in employment has been approximately 200,000 or 25 percent at a time when total output has remained relatively stable.

SHRINKAGE IN EMPLOYMENT

The shrinkage in employment has been accompanied by widespread closings of mills and scrapping of equipment, with few new structures being erected. Figures on mill closings have not been assembled or published by any Goverment agency so that we have had to make such a tabulation. We have defined a mill liquidation as one in which the textile equipment has been completely removed, whether or not it was subsequently operated by a different business organization.

The mill closings have been of quite substantial numbers. In the divisions we have been studying, a total of at least 541 mills, providing normal employment for 147,000 persons, have been liquidated in the postwar years, distributed as follows among the various divisions: 248 mills employing 65,800 persons in the cotton-rayon division, 218 mills employing 70,000 in the woolen and worsted industry, and 75 mills employing 11,350 in the dyeing and finishing industry.

Equally indicative of the importance of the concentration has been the degree to which operating equipment has been reduced in the industry. Active cotton-spinning spindles dropped by half a million between 1947 and 1950 and an additional 600,000 by April 1955. Over the 8-year period, some 16,000 looms were scrapped in the basic cotton and synthetic division and 13,000 in the woolen and worsted industry. The latter represents a reduction of one-third of the 1947 capacity in the industry.

VERY FEW MILLS CONSTRUCTED

Very few new mills have been constructed during this period. Again, precise overall data on such new mills are not available. The Bureau of the Census reports that for the entire textile industry, expenditures on new plant and equipment for the years 1951–53 was $1,008,000,000. Of this sum only $23.7 million, or slightly more than 2 percent, was for completely new establishments. The cost of new structures was $12.6 million and the new machinery in these structures $11.1 million.

Since the close of the war 5 new integrated cotton and 1 cotton-yarn mills have been built and 2 are now under construction. The completed new mills have some 235,000 spindles and 3,500 looms. Several new rayon and synthetic yarn throwing and weaving plants were built. Our count shows 6 new integrated plants with 87,000 spindles and 2,200 looms, and 14 new weaving plants with 7,300 looms. In contrast to the tremendous contraction in the woolen and worsted industry, there are only 2 new combing plants (both under construction) and 18 new yarn and weaving mills with approximately 79,000 spindles and 1,400 looms.

The reduction in the number of textile mills and the scrapping of equipment and physical structures have coincided with the movement for concentration through mergers. The result is that each merger of existing mill organizations increases the degree of dominance and influence exercised by the remaining giant organizations within the industry.

The Merger Movement in Textiles—Tax Incentives Have Been Direct Cause of Many Mill Closings

---

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. DODD. Mr. Speaker, in this 5th installment of the searching and scholarly study of current trends in the textile industry by Mr. Solomon Barkin, which I am today making available to Members of Congress, the point is made that a whole host of mill closings are directly traceable to loopholes in our tax laws. I quote, as follows:

The leaders of the textile industry have chosen the road of mergers rather than internal expansion to maximize short-run profits. They have enriched themselves and their organizations not by creating new capacity but through the use of existing organizations, co-opting established competences, or through the manipulation of tax advantages and speculative profit opportunities. They are gambling on the success of big, diversified textile enterprises, which has not yet been established as the sound solution, while they break up existing organizations.

SPECIAL TAX INCENTIVES

Concerns which extend their operations to supply the greater needs which they have developed are performing a constructive function in our economy. They are contributing to the Nation's economic expansion. Some of the textile mergers or acquisitions are of this type. But fundamentally the cases which we have reviewed are not justified by this rationale. The drive for diversification is merely a search for security through bigness. It is a hope to overcome the risks of enterprise through the accumulation of multifarious activities under one financial umbrella. Past history does not confirm the soundness of this approach in the textile industry, which is essentially a service industry trying to feed the demands of the widest range of customers. The absence of a single, standardized, homogeneous market makes the soundness of such approaches through bigness highly doubtful. The advantages of such big concerns must therefore be found in the opportunities for financial manipulation and the satisfaction of power drives.

Whatever business motives there may have been for considering a merger as the solution of business and management problems, there is no doubt that in the textile industry the tax incentives and the facilities provided by institutions which are untaxed or advantageously situated from the point of view of taxes have accelerated the consolidation movement. Many operators have found this course an easy way to follow to meet personal and competitive problems. They were offered an attractive choice to the challenging one of meeting the problems of modernization and the recasting of merchandising and selling organizations and operations. The alternative of merging has been sufficiently financially attractive so that it has been seized upon with zest and profit both to the seller and the buyer though many communities have suffered.

CAPITAL GAINS

The capital gains provision of the income tax laws has been particularly attractive. Skillful lawyers, accountants, and financiers have recognized in it a means for converting ordinary business income and inflated business values into "capital gains" through sales of businesses thereby reducing the individual income tax of the sellers and permitting the purchasers to acquire significant tax advantages. During the current merger period, capital gains were taxed at a maximum effective rate of 25 percent, except for the period from 1951 through 1953 when it was 26 percent.

The capital gains provision has been a particularly active stimulant to consolidations during the war and early post-war periods, but continues even to date to exercise a considerable influence.

Mills have been sold to other textile operators or financial manipulators as a means of avoiding heavy tax liabilities. Since most textile mills have been capitalized at low prices inherited from the low-profit rates prevailing during the thirties the excess-profits tax fell heavily upon many. Older owners or trustees found it attractive to escape the heavy burden of taxes by selling out the mills. The owners were paid high prices, the proceeds of which could be classi-

fied as capital gains and taxed at a maximum rate of 25 percent. The purchasers could often pay off the sellers with liquid funds already available in the treasury of the acquired firm or from subsequent profits. While the excess-profits tax was operating they had high capitalizations which reduced their own tax liabilities. Increasingly, the capital-gains device is being used through long-term purchase programs which require little funds on the part of the buying organization and permit the old management to retain control of the concern and share in the profits.

It is difficult without careful evaluation and intimate knowledge of the specific cases to identify the mergers in this category, particularly as public information about many of them is scanty. In the unfolding of the operations of Albert A. List and his associates, there are a number of transactions which have clearly built on the capital-gains provisions. The acquisition of the Gurney mills by Botany Mills, Inc., was no doubt based on the capital-gains provision. Many other sellers such as the Dunson Mills of La Grange, Ga., which was acquired by the Pepperell Manufacturing Co., also had this advantage in mind. The sale by the Hutcheson family of Peerless Woolen Mills to Burlington Mills, Inc., was a means of reducing their tax obligations through conversion of stock.

CARRYOVER PROVISIONS

A second important tax provision which has accelerated the merger movement beyond any reasonable economic need, enabling many managements to throw in the sponge before they faced up to their own problems, has been the carryback and carry-forward provisions of the Federal corporation income tax. Originally designed to enable profitable concerns which entered into a period of business reverses to utilize their past taxes on profits to rehabilitate and reorganize, these provisions have been seized upon by speculators to enrich themselves without enhancing the position of the operations which had suffered. The merger process has been the convenient channel for gaining the privilege without discharging the appropriate responsibilities to the enterprise. Instead of conceiving, as the original provision visualized, the purpose as an aid to a business concern, the carryover provision has been converted through the consolidation process, into a mechanism for salvaging or enhancing the claims of the present owners and granting tax privileges to the buyers.

EFFECT OF 1954 AMENDMENTS

The 1954 amendments liberalized the existing provisions as well as freeing the corporations of many restraints previously placed upon them by the courts. For example, courts had held that "the surviving corporation in a merger is generally entitled only to the tax attributes from its own premerger experience and not from the experience of the other corporations merged," but in practice the House Ways and Means Committee declares that "this separate entity rule appears not to have been followed." The new rules provided by the 1954 act "enable the successor corporation to step into the 'tax shoes' of its predecessor corporation." (Report on H. R. 8300 in the 83d Cong., 3d sess. (House Rept. No. 1337, Internal Revenue Code of 1954, p. 41).)

There are many illustrations of the use of the carryover tax provisions in the textile industry. There is no doubt that the acquisition of this tax advantage has been the underlying motive for many consolidations and has accelerated the demise of important textile corporations. The most dramatic illustration of the impetus which this consideration has provided is the merger of the American Woolen Co., Robbins Mills, and Textron, Inc., into Textron American, Inc. The statement of January 6, 1955, issued in connection with the special meeting of stockholders to approve this merger contains the following:

"As at the end of October 1954, the portions of the consolidated net operating losses attributable to each constituent corporation which may be succeeded to and taken into account by the merged corporation are estimated at approximately $18,750,000 for American Woolen, $10,000,000 for Robbins, and $1,300,000 for Textron, or an aggregate of approximately $30,050,000. Such amounts will, subject to the applicable provisions of the Internal Revenue Code, be available as loss carryovers to be offset against future earnings for Federal income tax purposes. Such loss carryovers, to the extent not utilized, will expire at the end of 1956 to the extent of $200,000, at the end of 1957 to the extent of $14,250,000, and at the end of 1958 to the extent of $15,600,000."

MERGERS HAVE RESULTED IN MILL CLOSINGS

The merger of these corporations into a single unit has resulted in the closing of a whole host of mills. Some of these closings had been announced during the negotiations leading to the merger and others affected subsequently. The existence of this alternative diverted attention of the respective managements to the consolidation process. Of course, the American Woolen Co., according to one of its most ardent defenders and ultimately a member of the board of directors, had become a mass of wreckage, drifting toward its end, being scuttled by its management who had given up as a management. (*America's Textile Reporter*, v. *LXIX, No. 21*, May 26, 1955, p. 35.) But the solution of the problems within this corporation which had employed 25,000 production workers in 1948 could have been found by bringing in vigorous and imaginative management, as the union urged on several occasions. But, instead, Mr. Royal Little succeeded in scuttling the plans for bringing in Harold J. Walter, president of Bachmann Uxbridge Worsted Corp., and plunged into the successful fight to gain complete control, being driven by the abundance of cash in the till of the American Woolen Co., partly as Fortune magazine explains, "for working capital and partly to finance further diversification." But the investments he seeks for the funds accumulated in the treasury of the American Woolen Co. are largely outside of the textile industry. The fundamental result of the entire operation was to make funds ordinarily available for tax purposes accessible to Mr. Little for the enhancement of his own financial and management position. This was a new episode in the long history of financial manipulation characterizing Mr. Little's operation during and since the war.

ALBERT A. LIST'S OPERATIONS

In the same manner other acquisitions have been conceived to gain tax advantages. Albert A. List's operations particularly illustrate the financial operations of both the capital gains and the carryover provisions. In this connection we can quote the following from the letter to stockholders of the United States Finishing Co. (controlled by Mr. List) of January 28, 1955: "Your management has considered that if * * * a plan could be worked out on a basis which would provide for the stockholders cash and securities with an anticipated combined market value higher than the current market price of their stocks, such a sale would be preferable to continued operation by the company of its business, with its earnings subject to large income-tax payments and major requirements for capital expenditures."

The plan which was submitted was described as follows:

"Sale of the entire business and assets of your company for cash and 6 percent subordinated sinking fund debentures of Gera Corp. and the assumption of all of your company's liabilities. The aggregate cash and principal amount of 6 percent debentures is approximately $6 million more than the net amount at which the company is carrying its assets on its books. The acquiring corporation will consequently have substantially larger tax-free depreciation provisions available for capital expenditures. Furthermore, Gera Corp. had losses arising from other operations, which it is believed can be offset for Federal income-tax purposes against earnings from the business to be acquired from the company, and from its own electronics and other divisions, which otherwise would be subject to tax."

Mr. List, who was chairman of the board and president of the Gera Corp., was also chairman of the board of the United States Finishing Co.

TAX SAVINGS ACHIEVED

Another illustration of this same practice is provided by the United Merchants & Manufacturers, Inc., which declares in its financial report for the year ending June 30, 1954, that as a result of the acquisition of A. D. Juilliard & Co., Inc., and other interests:

"The Corporation estimates that the deductions of such liquidating losses (to the extent realized) and the use of carrybacks and carryovers of operating losses of subsidiary companies for purposes of computing Federal taxes on income resulted in a provision for Federal taxes for the year ended June 30, 1954, which was approximately $1,300,000 less than would have been required had such factors not entered into the tax computation. As of June 30, 1954, the unused loss carryovers of subsidiary companies for Federal and Canadian tax purposes approximated $14 million."

A spinoff concern of Textron, Inc., had apparently learned of the benefits of the tax provisions for the Indian Head Mills, Inc., which is substantially owned by the stockholders of Textron, negotiated the absorption of the Naumkeag Steam Cotton Co., an important bulwark of the bed-sheeting industry. In his letter to the stockholders of January 12, 1955, President J. E. Robison urged approval of the consolidation as follows:

"It should be pointed out in this connection, however, that in view of Naumkeag's losses, the combined company will have a so-called 'tax loss carry-forward' credit of approximately $2,700,000, of which $2,200,000 will expire by November 30, 1958; and the balance the following year, so that the profits of the new Indian Head Mills, Inc., will not be subject to Federal income taxes until this credit is used up."

The recent purchase of the Century Ribbon Mills, Inc., and its wholly owned subsidiary, Century Factors, Inc., had similar motives. The report for the last fiscal year indicates that the losses of 1953 and 1954 "may be applied as a reduction of Federal income taxes for future years under the carry-forward provisions of the Internal Revenue Code."

It can similarly be surmised that other acquisitions and consolidations have these fundamental tax considerations as the motivating force. Presumably, the J. P. Stevens Co. looked to the tax offsets of Cheney Bros. as an important advantage in this acquisition. M. Lowenstein & Sons, Inc., similarly saw important tax advantages in the purchase of Wamsutta Mills; as did Burlington Industries, Inc., in the acquisition of Goodall Sanford and Morresville Mills. Tax considerations were basic to the merger of the Crown Manufacturing Co. and the Arms Textile Manufacturing Co. More intimate examination of the finances of other mergers would disclose additional illustrations.

The Merger Movement in Textiles—Hundreds of Thousands of Workers Lose Jobs Through Financial Manipulations

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. DODD. Mr. Speaker, in this sixth installment of the startling and often shocking analysis of current developments in the textile industry by Mr. Solomon Barkin, of the Texile Workers Union of America, which I am earnestly requesting Members of Congress to study, the point is carefully documented that the fate of hundreds of thousand of workers has been utterly ignored while textile corporations have been mercilessly closed down or contracted by financial manipulations. I quote from Mr. Barkin:

The Senate of the United States investigated in 1948 the use of charitable trusts "as a means of tax avoidance and unfair competition with orthodox manufacturers." The inquiry conducted by the late Senater Tobey concentrated on the operations and "interrelations between certain so-called charitable trusts and Textron, Inc." However, the report properly underscores that "such use of trusts is not confined to this concern, but on the contrary, is a practice which is being indulged in to a large extent through the country by many concerns." The report concludes that "one of our largest textile manufacturing corporations and its subsidiaries has made wide use of so-called charitable trusts as a means of providing risk capital for itself." The result of these operations was to permit the corporation to purchase many textile mills and construct the giant manufacturing corporation of Textron, Inc., which as we have already shown, has subsequently acquired two other large corporations to create the immense Textron American, Inc. Through the fanciful use of these untaxed funds in the charitable trusts a dominant corporation was founded. (U. S. Senate, 81st Cong., 1st sess., Committee on Interstate and Foreign Commerce, investigation of closing of Nashua, N. H., mills and operations of Textron, Inc., report No. 101).

While the tax laws have moderated the worst liberties taken with these funds, the control which individuals continue to exercise over these funds for the promotion of their own private purposes serves further to accelerate the merger and consolidation movement. These are truly public funds privately administered in questionable directions.

In the case of the Albert A. List operations, we shall illustrate further the use made of these charitable funds for financial manipulative purposes. A pension trust and the List charitable organizations owned two textile finishing plants at Jewett City, Conn., and Adams, Mass., of the United States Finishing Co., which have been acquired by the Gera Corp. This practice of selling physical assets to these charitable and educational trusts is becoming ever more common. Similarly, we learn that the Cannon Foundation developed by the Cannon family, which controls the Cannon Mills, has bought the Hoover Hosiery Mill. The list of textile compaies substantially dominated by such charitable foundations is quite impressive. Control is continued within the family group and new acquisitions of independent textile mills is facilitated by the large funds accumulated in these organizations. Serious problems of public importance are raised by these practices.

It is the responsibility of the Treasury Department to present all of these issues to the Congress and the people and not await congressional inquiries to gain enough courage to deal forthrightly on such issues. The Treasury Department required the Tobey hearings to bestir it, in the past. Another set of similar hearings should not be necessary to search out the uses of these funds for manipulative and tax avoidance purposes.

PENSION TRUSTS

What has been said of the charitable trusts is also applicable to the pension trusts. The funds available in pension trusts are growing to tremendous proportions. They are being controlled largely by industrialists and financiers. In some cases they are enabled to sell their own financial interests to the pension fund and maintain long-term management contracts and other advantages. These pension funds provide the funds and channels for mergers motivated by the desire for tax avoidance through the capital gains provisions of the tax laws. Mr. Royal Little controls several corporations acquired through the use of the pension funds maintained for Textron executives. Mr. Albert List has also made substantial use of these funds.

FINANCIAL OPERATORS

In addition to the above specific techniques, a number of individuals have developed a variety of manipulative devices for their enrichment at the expense of the workers and the community. They have acted as brokers of destruction. They have handled textile mills simply as treasuries of wealth to be mined for their own personal enrichment without concern for the ultimate effects upon the people who had been employed in them for generations. The traffic in mills has been continued with no concern for the welfare of the community. They were bought to be run, if at all, only until all the profit had been extracted and then abandoned. The financial manipulators have made a mockery of the trusteeship bestowed upon capital by society. They have exploited the tax loopholes to advance themselves at the expense of the United States Treasury, the workers, and the communities involved.

These men have bought mills to consolidate and destroy rather than to operate them. We hope that their operations will be closely investigated so that the appropriate laws will be passed and tax loopholes will be closed.

WHOLESALE TAX AVOIDANCE

Wholesale tax avoidance has been achieved by a variety of financical maneuvers including the use of collapsible corporations, split-ups and spin-offs. A chronological account of the transactions which have been publicly reported over the past 12 years is attached.

The results of these maneuvers may be summarized as follows:

(a) On an investment of $7 million in 1943, to which $2 million was added in 1953, List and associates have received nearly $53 million in cash and securities as a result of dividends and liqudations ($35 million in cash).

(b) The capital gains enjoyed by the group amount to approximately $35 million. Such income is taxable at markedly lower rates than ordinary income.

(c) The stockholders of National Refining Co. (the name of the enterprise in which List et al, invested $7 million in 1943) and successor companies, still retain securities with a book value of $3,670,000 and thereby control a corporation with assets of $29 million. This is in addition to securities which List and associates may have received from personal holdings of stock in liquidated corporations.

(d) In the process of pyramiding their investment, List et al. rode roughshod over the workers and communities involved in the plants whose securities they manipulated for their selfish interests. Nonquitt Mills, a textile plant employing 1,000 workers in New Bedford, Mass., was liquidated in 1949 by William Whitman Co., Inc., Massachusetts—a List enterprise—which owned the bulk of the Nonquitt capital stock. Nonquitt Mills had operated profitably since 1906, reporting earnings of $395,000 in the year before its liquidation, but the List group found it more lucrative to liquidate the plant and throw its workers out of jobs than to permit it to operate.

EIGHT THOUSAND TWO HUNDRED WORKERS THROWN OUT OF JOBS

(e) The William Whitman Co., Inc. (Mass.) had an excellent profit record, earning a total of more than $20 million, before taxes, in the 6 years ending November 30, 1952. Earnings before taxes during the 6-year period aggregated 128 percent of the net worth at the beginning of the period. And yet the List interests closed all 3 company mills in 1952, throwing 8,200 workers in Lawrence and New Bedford out of their jobs.

(f) Since late in 1952, when William Whitman Co., Inc., became the Carolet Corp. in order to take a tax loss on its change in name, List engaged in a series of transactions which transferred three additional corporations to his control: First the Aspinook Corp., with 2 textile plants; then the United States Finishing Co., with 3 textile plants, and finally, the Gera Corp., which had 1 large textile mill. Seven months after List acquired control over the United States Finishing Co., he closed 1 of its plants, displacing 250 workers in Sterling, Conn. Five months after gaining control over Gera Corp., he liquidated its mill with 2,000 workers in Passaic, N. J. Altogether, List has closed 6 textile plants in the past 6 years, throwing 11,450 workers out of their jobs. (Exhibit I, pt. A.)

(g) All of the List textile holdings have been consolidated in the Gera Corp. in order to take advantage of the loss-carryforward tax position which that firm had acquired previous to List's purchase and to which previous reference has been made.

But the above history of financial manipulation, subsequent consolidations, and frequent mill abandonments does not stand alone in the industry. Others have had a similar record. We have not prepared a detailed outline of their operations, but their manipulations have been extensive.

FATE OF MANY THOUSANDS HINGES ON FINANCIAL MANIPULATIONS

H. & B. Machine Co. sucked dry all the financial vitality of the Susquehanna Mills and then sold the physical assets. The United Industrial Syndicate, Inc. bought John H. Fead & Sons of Port Huron, Mich., and a few months later, closed the mills. The Overseas Discount Corp., engaged primarily in international trade, bought the Boott Mills and then closed it. The Horvath group has bought, operated and closed more than eight plants. Recently, they acquired the West Textile Mills in West, Tex., but announcement of its further sale has appeared in the newspapers. It acquired the Massachusetts Mohair Plush Co. of Lowell, Mass., the Dana Warp Corp. and the Profile Cotton Mills in Jacksonville, Ala. Detailed study of the latter's operations can further disclose how the abuse of the tax laws and financial manipulation have accelerated mill consolidations and concentration.

Big business is being advanced in the textile industry by persons seeking to exploit the immediate financial advantages gained primarily through the diversion of funds ordinarily destined for the Federal Treasury to the coffers of individual promoters or corporations. The result is an industrial structure with questionable economic justification. Even where ostensible economic

motives are present, the basic premise on which they are built; namely, the soundness of big business based upon product diversity and the averaging of risks, has not yet been proven in the textile industry. There is abundant evidence of the failings of bigness, as witness the collapse of several giant concerns in the past. The ability of big concerns to direct such diverse operations has not been established. We must be particularly careful, therefore, to remove special leverages, such as tax gains, which accelerate the trend toward the destruction of older organizations.

If these acts were only a matter of private concern relating to modest funds and affecting the lives of small groups of people, these ventures might be written off. But the fact is that there are hundreds of thousands of people involved in addition to huge tax funds and the very fate of many communities. The use of the tax system for promoting these ventures must be thoroughly investigated.

The Merger Movement in Textiles—Has Led To Destruction of Significant Know-How and Organizational Skill

EXTENSION OF REMARKS
OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. DODD. Mr. Speaker, in this seventh installment of Solomon Barkin's searching report on what is currently happening in the textile industry, one of the principal points that is made is that much significant manufacturing know-how has been destroyed or lost by consolidations motivated purely by financial consideration. This is of vital importance in an industry which is confronted with a shrinkage of demand and a rapidly changing shift in the type of product demanded by the public. Creativeness, a vital factor in stimulating textile sales, has been markedly lacking in most of big textile giants created by mergers, and so forth. I quote from Mr. Barkin's document:

The full impact of these mergers upon the industry cannot now be appreciated. The consolidations were motivated by opportunities for immediate profits, and only in some cases, for long-term goals. Personal drives for bigness must have been equally important in many cases. The soundness of the business judgment would be questioned in others. The effects upon the people, the communities, and the industry can be immediately appraised since the abandonment of mills and organizations has brought tremendous personal and social problems in their wake.

ACCELERATED MILL CLOSINGS

The merger movement has accelerated the early demise of many companies. A number of the managements, knowing the opportunities for sales and the tax advantages to the seller, did not face up to the possibilities for reconstruction. They conspired with the purchaser for the elimination of the mill organizations. The opportunities for rehabilitation are suggested by the few instances where public knowledge is available of merger negotiations which were not consummated and where the individual mills have subsequently worked out their own problems and continued their operations. But the many mills involved in mergers did not face up to this alternative.

The trail of mill desertions which have followed some of the financial manipulations is a most depressing one. We are attaching also a table showing the names of the 24 mills normally employing 21,300 workers, with 825,000 spindles and 15,800 looms, which the Textron interests have shut. Incidentally, we have been most conservative in the accrediting of such responsibility to this group. Also listed in this table are the liquidations by the Burlington Industries, which number 15, employing 6,400 persons, and representing 69,000 spindles and 2,000 looms.

These closing, of course, are not peculiar to these particular concerns. We have already referred to the liquidations which have followed the absorption of the A. D. Juilliard Co. by the United Merchants & Manufacturers; the closing of the Boott Mills by the Overseas Discount Corp.; the closing of the John L. Fead & Sons by the United Industrial Syndicate; the shutdown of the Goodall-Sanford operations in Sanford, Maine.

COMMUNITIES HARD HIT

The mill closings are not only disturbing because many shutdowns have no doubt been accelerated by the merger process, but also because they have been associated with considerable personal and community distress. In many instances the closed mills have been the mainstay of these communities for many generations. In some cases they have been the sole source of employment. The mill closing has meant that the communities have had to start to reorganize their economies and their employment pattern. This process is an extremely difficult one, particularly when such problems are numerous and duplicated in many communities in the same area. A number of the towns have tried to induce others to take up the mills and operate them again with community subsidies or finances. But the finances required to modernize a mill for active competition are most often beyond their resources. The despondency which these mill closings have created among the older population unable to move or to secure jobs within commutable distances has been described in a number of studies, e. g., William H. Miernyk, Inter-Industry Labor Mobility, Northeastern University, Bureau of Business and Economic Research, Boston, Mass., 1955.

The distress following these closings has generally not been alleviated either by separation pay or pensions or other serious financial tokens of appreciation for long service. People have been released by these mills to fend for themselves with only limited unemployment insurance and old-age pensions if they were of advanced age, or as a last resort, on community and family resources. Union contracts have in a few instances assured a modest termination pay. There are few pension programs in the textile industry and fewer which grant vested rights in pensions.

In contrast to the cold bloodedness associated with the abandonment of the workers and the community, the participants in the mergers have enjoyed attractive financial settlements either through stock exchanges or outright sale.

Tax avoidance has accelerated mergers and the Federal Treasury has, therefore, created a financial benefit out of the distress brought by mill liquidation. These private gains have never been shared with the workers.

BIGNESS HAS STIMULATED MILL MIGRATION

These mergers have also placed such areas as New England and other northern areas at a technical disadvantage. The new mill organizations, though not the finances, are now under the supervision of southern-oriented executives. Moreover, with so many of the mills of these giants located in the South, there is an additional impetus to consolidate holdings in the same region. The movement for northern mill closings has, therefore, been given additional strength. The new executives can rationalize the process as being required to effect better supervision and coordination. Bigness has in this instance advanced mill migration.

The transfer of mill properties through mergers has often led to the creation of interests not steeped in the textile industry or whose interests are primarily financial in character. They have looked upon the operation as primarily financial in character and, therefore, have not considered themselves responsible for new investment or modernization of the mill or other phases of the business. They have continued the operations while it suited their purposes to do so, and then abandoned them without any sense of responsibility to those who had worked in them or the communities which had depended upon them. Their own association has been too short to develop a true sense of obligation.

DESTRUCTION OF SIGNIFICANT KNOW-HOW AND ORGANIZATIONS

Some mergers raise serious questions concerning their economic justification. For example, the absorption of the Goodall-Sanford Corp. by Burlington has puzzled many. The organization had a special know-how in cloth production of mohair and mohair blends, a competence not widely possessed in this country, and was allied with a cutting organization which could supervise and be responsible for the cloth. All indications are that this know-how is being lost in the dispersion of orders through the former Pacific and Burlington Mills. Or, again, the Pacific Mills were known for their competent management, which had reorganized their properties into an effective and leading mill institution. Burlington Industries, Inc., apparently was not prepared with management to substitute for the existing operation and had to go outside to find new executives, both for this unit and for the entire venture. Unlike so many of the mergers in other industries, where the consolidation rests on a tried executive force, this company apparently had to collect one after the merger was consummated. Burlington's past history of executive turnover raises serious questions of its preparedness for this task.

Similar experiences have been observed in other instances. The financial motives have been dominant and when the new interests have taken over, the older staffs, particularly in merchandising and distribution have been destroyed. The dispersal of personnel has necessitated reorganization and rebuilding. The direct personal contacts were disrupted. While in some instances converter and sales organizations were bought to bring in established sales, they have been in the minority. With the low birth rate of new concerns in the industry, the older sensitivities to consumers have been submerged in the giant corporation. Perhaps this condition may be partially responsible for the loss of markets by the textile industry.

APPRAISAL OF THE NEW GIANT CONCERNS

The large, new concerns have not, by and large, made any outstanding contributions. An industry in need of outstanding leadership and invention to save it from its inertia and conservatism and to open new products and markets for it, cannot confidently speak of any special values offered by these big concerns. In fact, during the era of their existence the industry has failed to expand. Moreover, many striking records of manage-

ment failures are found among such giants as the American Woolen Co., the Robbins Mills, the old Botany Mills, the old Gera Mills, and A. D. Juilliard & Co. Large size brings with it the need for management especially competent for this challenge. Where it is unequal to this task, as in the above instances, the failures are more colossal and damaging.

PRICE POLICY

The effects on the market are difficult to appraise. Examination of the price structure would seem to suggest that there has been relatively less fluctuation in prices during recent years than before in earlier periods. A current study of price fluctuations in recent and previous decades indicates that this tendency is notable. This stability has been induced in part by the reduction in the range of fluctuations in the prices of the raw materials. But it must be also said that with the concentration of power in the hands of a smaller number of sellers, that there is a tendency for prices to become more stable.

PRODUCTION POLICY

The same control over production is also obvious. In prior decades reductions in production could only be effected through deliberate understandings. Such efforts failed in the period from 1930 through 1933. A concerted program was undertaken in 1938 and was successful when "97.5 percent of the (print cloth) mills which had operated a third shift within recent years * * * made declarations that they would eliminate the third shift by July 1, 1938." In 1939 similar efforts were again undertaken. The Government charged the print-cloth manufacturers with violating the Sherman Antitrust Act. After a 1-day hearing, they pleaded nolo contendre and were fined $100 each (Barkin, op. cit., p. 401).

No such open violations of the antitrust law are required now. In 1948–49 a successful reduction of production took place without obvious concert. The Journal of Commerce, in reviewing the curtailment in 1948–49, declared that "one of the very vital new factors in the textile industry is the demonstrated ability of cotton mills to make production adhere closely to actual demand." (Journal of Commerce, November 21, 1949.) In reviewing this experience the textile editor of this newspaper declared that "large production curtailments or cutbacks * * * provided a successful policy in 1949. * * * Most major producers curbed their output somewhat. In some cases, they resorted to complete shutdowns because of lack of visible business." (Journal of Commerce, January 31, 1950.)

Similar but less drastic curtailment was witnessed in subsequent years as demand declined.

EFFECT ON PRODUCTS

The effect of the present big business organizations upon styling of products is graphically described by the editor of the Journal of Commerce in an article entitled "Textile Industry Lags in Styling," March 18, 1955, as follows:

"Despite a rich background of materials to work with, and a wealth of engineering skills to back up the development of new ideas in styling, a great many of the fabrics produced today are not unlike the old constructions and colors our parents were familiar with. Frequently the only difference is that the modern versions have been 'watered down.'

"CREATIVENESS LACKING

"Especially in the United States, the cloth industry has been saddled with the system of mass production, which permits small latitude in specialization. The result has been that for many years the consuming public has been blessed with a plentitude of cheap fabrics which has made the American the most completely, if not the most stylish, clothed individual in the world.

"On the other hand, the failure of the textile industry to come up with enough new fabrics and fashions has a lot to do with its present condition."

FEW CONTRIBUTIONS TO RESEARCH AND INNOVATION

The large firms have not, except in few instances, made strikingly new products or innovations or contributions to research. The industry is still largely dependent upon the yarn producers for new ideas on fibers and raw materials; machinery manufactures for new equipment and chemical and finishing plants for new finishes. With rare exceptions, the mill organizations have been purveyors of other men's goods. The degree of innovation has been small. This situation is confirmed by the fact tht many fabrics have been introduced which have been disappointing to the consumer and the cutter because the mills have pushed new fibers, fabrics, and finishes without the requisite degree of responsibility. The industry has lost substantial markets, but has gained few new ones. It has seen substitutes displace it from areas it previously served without applying itself to regain them. Concerted research to hold these markets has been kept to a minimum. Textile giants have furrowed traditional grounds without breaking into new areas as has been true in other industries.

With the presence of so many large textile operations the industry is still awaiting the leadership and ingenuity from them which would open up a new area of expansion. Their continued unwillingness to ackowledge that the industry has been suffering while they have been entrenching themselves has been one major obstacle to the creation of an expanding industry.

The Merger Movement in Textiles—Anti-Labor Attitudes Intensified With Growth of Economic Power

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. DODD. Mr. Speaker, in the final section of his noteworthy and painstaking analysis of the startling shifts in economic power in the textile industry, Mr. Solomon Barkin charges that anti-labor attitudes have been intensified as these giant corporations absorb larger and larger sections of productive capacity. I quote from Mr. Barkin:

In this era we must also become more conscious of the nonmarket uses of power. Management is employing this power to entrench itself. This financial power is, moreover, fortified by the provisions granting tax exemptions for educational and philanthropic grants. These they have increasingly employed to dominate communities and to influence the schools and colleges. We can declare quite categorically that many of the textile schools, particularly in the South, have been prevented by the large concerns from inviting labor speakers to the student body.

The use of the tax-exempt funds by the giant corporations to control and dominate our social, civic, and educational institutions is one which requires detailed study and appraisal. (See A Critique of Big Business, by Solomon Barkin, the Commercial and Financial Chronicle, Dec. 30, 1954.)

ANTIUNION POLICIES

Another significant aspect of the implications of industrial concentration is the labor policies and practices of these large concerns. First, may I call your attention to the recent strike against Berkshire-Hathaway, Inc. and the Pepperell Manufacturing Co. We have peaceful and commendable relations with these concerns for more than a decade before the former was constructed as a merger. As soon as the merger was consummated, the attitude of the management toward the union changed and the new organization became the giant seemingly armed with a club to try to force wage reductions upon workers who were already receiving intolerably low wages (averaging $1.30 per hour).

Another illustration of the abuses of economic power to crush organized labor is provided by Mr. J. Spencer Love of Burlington Industries, Inc. He has an aversion for unions which is deep-seated and he enforces this attitude as he acquires new properties. He seems deliberately bent on preventing unions from arising at any of his plants and destroying them where they exist. We have won collective-bargaining elections in 18 of the mills but we have been unable to obtain any collective-bargaining contracts. He has fought this effort with four mill closings, with defiance of the War Labor Board, with prolonged negotiating sessions, with avoidance of legal responsibilities and with legal and economic pressures. When his workers move to form a union, every type of duress is applied to discourage their joining. Workers have been fired and intimidated. While the company has been willing to reinstate these employees when required by orders of the National Labor Relations Board, the prolonged battle has served the company's purpose of dampening the worker's ardor and discouraging the adhesion to the unions. Where plants were acquired with unions in them, they have been closed or decertification proceedings instituted. The entire economic power of this industrial giant is concentrated upon the destruction of independent collective action by its employees.

Burlington Industries, Inc. has recently acquired two plants with established union relations when it absorbed the Pacific Mills, one in Columbia, S. C., and the other in Lawrence, Mass. It is to be hoped that these long-established local unions will not have to fight the struggles of survival to satisfy Mr. Love's obsessive determination to have no truck with labor organizations in his own domain.

His rejection of unionism is so strong that he makes no effort to hide it. While he has had little contact with them, he is quite ready to declaim against unions as he did in a speech before the Spartanburg (S. C.) Chamber of Commerce in March of this year. He revealed his fear in this speech that the unions may ask his company, which presumably is one which he declares is "paying the best wages and giving the highest benefits," to pay higher wages and benefits. Despite his relatively more favorable competitive position and high profit rate he does not want to "pay much higher wages or give much greater benefits than the competition." To escape this possibility he launches a diatribe against unions. The request for higher wages he identifies as the "stirring up (of) strife within selected companies in the industry." Overlooking the overwhelming vote by workers in favor of union shops and the general acceptance of such provision through the length and breadth of the country, he condemns this provision as "compulsory unionism" and endorses the "right to work" laws. Instead of trying to work out a system of collective bargaining, he has preferred to wield the power to destroy unions so that he can completely dominate his employees and

assure himself the unchallenged power to hand out benefits and orders as he sees fit, denying the employees the established legal rights to union organization and collective bargaining.

The above anti-union attitudes are unfortunate since they inhibit the development of true collective bargaining. They preserve employer domination and archaic systems of industrial relations.

WORKERS DEPRIVED OF BENEFITS OF HIGH PRODUCTIVITY

The result of this system has been to keep wages and fringe benefits in the textile industry at low levels and to deprive workers of the fruits of higher productivity and advancing technology. Since 1950, the textile workers have not received any improvement in their wage standards or economic benefits. In 1951 the southern textile giants, acting in collusion, defeated the union in a strike, and thereafter, have used their powers to prevent any further economic advances by their employees. Now we find Mr. Love declaring for a 90-cent Federal minimum wage while he is paying higher wages, and asserting that the only way in which wages and improvements should come is through legislation. This is a strange position indeed for an apostle of "free enterprise" in a Nation where the law of the land and the spirit of our economic systems is to provide the right of self-organization to workers and to advance collective bargaining with a minimum of Government interference.

CONCLUSION

Big business has been stimulated by opportunities for great profit in the textile industry through the exploitation of fabric shortages during and immediately after the war and the utilization of tax loopholes throughout the entire postwar period. The industrial giants have grown primarily through mergers and acquisitions rather than internal growth. They have not stimulated the expansion of the industry or found new outlets for its products. Some large organizations have shown ineptitude and incompetence and have brought ruin in their wake. Others have established only mediocre records. While few have made outstanding economic contributions to the industry or proven their real worth, they have been able to grow because of the bargaining power within the market which has enabled them to preempt significant outlets and push out the independent mills. They have had advanages in price and new raw materials and finishes which have enabled them to keep ahead. But they have not measured up to the most important tests of helping the industry expand and prosper. The result has been that they have increasingly controlled the remaining textile market.

The major impetus to these mergers has been tax loopholes of various types. These must be closed so that mergers, if they occur, shall truly respond to economic advantage rather than the private gain of financial manilpulators at the expense of the public treasury.

The management of big companies is a public trust. These vast accumulations control much of the wealth of this country. They must not be permitted to despoil it solely for private benefit, particularly when in so doing they dissipate American know-how, creative organizations and accumulated experience and bring misery to dependent communities and thousands of American worksrs. They must account for their acts. It is therefore urged that the Federal Government provide for the incorporation of all large corporations and establish a supervisory agency which regularly reviews their conduct either on its own initiative or on the petition of the citizenry.

Need for Adequate Veteran Hospitalization Facilities

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include a letter from David L. Brigham, vice commander, the American Legion, Department of Maryland, Inc., calling attention to the vital need for additional hospitalization facilities for our veterans. The letter follows:

THE AMERICAN LEGION,
DEPARTMENT OF MARYLAND, INC.,
July 29, 1955.

Mr. RICHARD E. LANKFORD,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN LANKFORD: We of the American Legion, and in particular those of the southern Maryland district, whom I represent, are deeply concerned with the vital need for adequate veteran hospitalization facilities in the Washington metropolitan area.

Of particular interest is the fact there are an estimated 285,000 to 300,000 veterans of World War I, World War II and Korea living in an area which includes the District of Columbia, Fairfax and Arlington counties in Virginia, the city of Alexandria and the Maryland counties of Montgomery and Prince George. Of this number, 30,000 have service incurred disabilities, many of which will require future hospitalization.

This area is now served by Mount Alto hospital which has only 300 beds available and is an extremely inadequate and obsolete facility. This was formerly a girls' school and was taken over in 1921 by the United States Veterans Bureau to provide badly needed hospitalization for a much smaller number of veterans than now populate our area. It is my understanding that even the Veterans' Administration feels Mount Alto is obsolete and any expenditure for repairs or remodeling would involve a gross waste of Federal funds.

I would also mention that many of the veterans in the area will require hospital service in the future to which they are legally entitled because their personal funds will be inadequate. While I am primarily concerned with the immediate problem of the Washington metropolitan area, I would also point out that from the standpoint of Maryland veterans, relief is needed for the Fort Howard and Perry Point hospitals. Additional facilities in this area would relieve the pressure at these other points and would further assure many veterans who now need hospitalization, an opportunity to receive the attention which would once again make them useful assets to the community and to our country.

We of the American Legion will be most happy to work with you in every possible way to bring to a full realization, an adequate structure, properly located, to serve the men who did not hesitate to serve the Nation.

With sincere appreciation I am,
Cordially,

DAVID L. BRIGHAM,
Vice Commander, Department of Maryland.

A Report to the People

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 2, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, I take this opportunity to report to my constituents, the people of Berks County, the 14th District of Pennsylvania.

PURPOSE OF THE REPORT

This report deals with the work and the record of the 84th Congress and summarizes my activities, the position which I have taken on important national issues. I realize that my legislative record will not please every one of my constituents in every respect. That is to be expected in a democracy, where each of us has the right to his own opinion—a right that we must always respect and safeguard.

I sincerely believe that the voters have the right to know how their Representatives stand on issues of importance to all Americans. For that reason, I have made a weekly radio report on the activities of Congress and submit this summary report. I have conscientiously tried to keep the people of Berks County informed and to represent them honestly and well. In all of my actions I have tried to do what I thought was in the public interest and what would promote the greatest good for the greatest number of our people.

COMMITTEE ASSIGNMENTS

During the 84th Congress I have served on two committees. One is the Post Office and Civil Service Committee on which I have served ever since coming to Congress. My other committee assignment has been the House Administration Committee, which has jurisdiction over legislation affecting the management of the House of Representatives and the House side of the Capitol. This committee also has jurisdiction over the expenditures of funds for House investigating committees.

ATTENDANCE

During this session my 98-percent-attendance record was again one of the highest in the Congress. A perfect attendance was marred by my absence one afternoon due to conflicting duties.

CASEWORK

Many individual cases and problems are handled by my office in behalf of my constituents. They include veterans' problems, hardship cases among servicemen, immigration cases, social-security and postal-service complaints, railroad retirement problems, and many other miscellaneous types of problems which arise between a citizen and his Government. It is a service which my office renders as promptly as possible with fairness and courtesy to all. I have endeavored to give every possible assistance to those seeking my aid and counsel. It is a distinct privilege to be of service to all

of my constituents whom I have the honor of representing in Congress.

WASHINGTON VISITS

It has been my pleasure to welcome many individual citizens and groups from Berks County on their visits to Washington. With the assistance of Mrs. Rhodes, I have tried to make their visits interesting, educational, and enjoyable. A visit to Washington to see our Government in action is one of the best ways for people to truly understand the priceless heritages of freedom and democracy which we enjoy. Numerous student groups, boy and girl scouts, women's and religious groups came to Washington from Berks County this past year.

COMMITTEE TESTIMONY

As part of my congressional duties during the session, I have appeared before various House Committees to offer testimony on various legislation. They have included such subjects as problems in the procurement of defense contracts for small businesses in Berks County, problems of retail gasoline dealers, investigation of economic difficulties of the textile industry, and minimum wage legislation.

CONGRESSIONAL DEBATE

I have taken part in important degates on the floor of the House and discussed such questions as foreign trade policy, postal-pay legislation, foreign policy, student exchange program, Salk vaccine, farm-price-support legislation, Statehood for Hawaii and Alaska, social-security amendments, public housing, and minimum-wage legislation.

SURPLUS FOOD PROGRAM

Along with other members of the Pennsylvania congressional delegation, I sought a reversal of the Agriculture Department's order to curtail the scope of the surplus food disposal program among the needy people of Berks County and the State of Pennsylvania. We were successful in convincing Agriculture Department officials that the humanitarian operation of the program should be continued.

DEMOCRATIC COOPERATION WITH ADMINISTRATION

Democrats in Congress have maintained a responsible, constructive opposition to the Eisenhower administration, supporting and strengthening Administration proposals which we believed in the public interest and opposing those measures which benefit the privileged few at the expense of the welfare of all. I did not approve of resorting to blind and irresponsible opposition simply for political reasons. I voted with or against the administration solely on the merit of the question under consideration.

A summary of the administration's legislative record through June 1955 shows that Democrats supplied the margin of victory for the President on all 18 House rollcalls where his program was successful. Democrats in both House and Senate supported the President's foreign policy to a greater extent than did members of his own party. House Democrats supported his foreign policy on 69 percent of the votes cast while Republicans compiled only a 49 percent record of support.

My own voting record through June 1955 shows that I supported the President on 52 percent of all rollcall votes and opposed his position on 48 percent. On foreign policy votes I supported his position 70 percent of the time.

LEGISLATIVE RECORD OF THE 84TH CONGRESS

The 84th Congress took some important strides forward but the progress was not what should have been made to successfully meet the challenge of automation, abundance and surpluses.

The average citizen did not properly share in the prosperity created by increased production, scientific and technical advances.

Those of us who wanted to channel some of this prosperity to aged, retired, disabled and handicapped citizens were in a minority. We wanted to aid these people through the enactment of legislation to expand and improve social security and retirement programs. We urged improved service in Federal regulatory and inspection activities to protect the consumers and the public. In part we were successful. But in numerous cases monopoly restrictions were weakened or removed and had the effect of aiding monopoly interests at the expense of the average citizen. Small business also suffered because of the advantages won by monopoly interests. I joined with other liberal members in an effort to aid wage earners, small farmers and white collar folks but we were in a minority because a number of southern Democrats joined with administration leaders to defeat our proposals.

This conservative coalition controlled the 84th Congress and watered down or blocked numerous progressive measures which liberal Members considered essential for the well-being and prosperity of the average citizen and his family. Listed below are some of the important proposals acted upon by the 84th Congress:

Taxes: I favored the proposal for an increase in income-tax exemption. As a compromise the House voted a $20 per person tax reduction. While passed by the House, administration opposition in the Senate killed the effort for tax relief for low-income groups.

Social security: I voted for improvements in the social-security law to reduce the retirement age for women from 65 to 62 years of age and to permit disabled workers to draw benefits at age 50 instead of age 65. Coverage was also extended to most professions. I introduced legislation calling for even more liberal social-security amendments. The bill which passed the House is stalled until next session due to administration opposition in the Senate.

Housing: I supported legislation to provide a program of slum clearance and urban redevelopment and decent public housing and housing assistance for aged persons. The House rejected the public and aged housing provisions and an inadequate program was finally approved in the final version of the bill. It authorized 45,000 public housing units in the next year, eliminating the aged housing provisions.

Trade program: The President proposed an extension of the trade program to help expand our foreign trade, create new markets for our manufactured goods, and stimulate employment opportunities. The bill was enacted by the Congress and had overwhelming Democratic support.

Farm price supports: The House passed a bill to restore high, rigid price supports for basic farm commodities. I voted against the bill because I was convinced that a majority of Berks County farmers were in favor of the flexible support system. The Senate did not act on the measure during this session. In my opinion the real solution to declining farm income lies in an expanding, full-employment economy which will benefit all Americans.

Railroad retirement: A bill to liberalize the benefits to railmen's wives and widows was enacted. It will also place staff positions on the Railroad Retirement Board under civil service. I voted for the bill. I made a number of proposals to improve the law, some of which were adopted.

Antitrust law penalties: A bill was passed increasing penalties under the Sherman antitrust law from $5,000 to $50,000. I gave it my support in the hope that this will help small business and discourage the monopoly trend in this country.

Debt limit: The administration's request to increase the limit of the national debt was approved. In protest against deceptive promises to balance the budget and decrease the national debt, I joined the minority in voting against lifting the debt ceiling. Furthermore, I objected to some of the fiscal policies which put an added burden on the average citizen and which increased the national debt.

Highways: The administration's bond financing proposal was defeated because it would have cost over $11 billion in interest rates alone. No agreement could be reached on a highway bill this session. Everyone seems to want better roads but no one wants to pay for them. The pay-as-you-go bill seemed to be a practical approach, but many Members thought the financial end of the program should be handled by experts on the House Ways and Means Committee. A highway program is most essential and Congress will most likely pass some legislation to meet the problem in the next session.

School construction: Action on much-needed Federal aid for school construction was delayed until next year. A good bill was reported by the committee after the administration's bond-financing bill was rejected. Action will be taken on this important issue next session.

Natural gas: The bill to exempt producers of natural gas from Federal regulation, despite a decision of the Supreme Court to the contrary, was passed by the House by a narrow margin. If enacted into law, this bill will cost the American consuming public an estimated $800 million a year in higher gas rates, about $41 million of which would come out of the

pockets of Pennsylvanians. I thought this was another example of how this Congress was neglecting the interest of the average citizen and I opposed the bill.

GIVEAWAY PROGRAMS

Administration opponents opposed what they called a wholesale giveawey program which started in the 83d Congress. The watchful eyes of Congress have now been turned to flagrant abuses of the public trust in various departments and agencies of our Government.

House and Senate investigating committees have focused public attention on a number of examples of activities in behalf of the special interests at the expense of the public welfare. Administration opponents in this Congress have succeeded in blocking the so-called "giveaway" trend started in the 83d Congress with tidelands oil, atomic energy, public power, and priceless natural resources rightfully belonging to the people.

DIXON-YATES

The infamous Dixon-Yates deal, still under investigation by a congressional committee, was canceled after nationwide public protests and congressional revelations. Cancellation was made only after disclosures in the case implicated the President's own White House assistant.

Had the Dixon-Yates deal succeeded, it would have struck a death blow at the Tennessee Valley Authority which played such an important role in providing the power necessary to forge the tools of victory in World War II. Senator ESTES KEFAUVER led the successful fight against the administration's Dixon-Yates deal. He charged that power monopolies make no secret of their desire to eliminate TVA, thus abolishing the yardstick of power rates which have kept rates reasonable.

HOOVER COMMISSION

Under the guise of promoting efficiency in Government the Commission headed by former President Herbert Hoover has recommended sweeping cutbacks in programs and services provided in New and Fair Deals reform legislation. The Commission has urged crippling reductions in the Veterans' Administration program for needy and disabled veterans, and has recommended proposals to weaken the civil-service merit system. It has proposed cutbacks in Government lending activities for small business, in home loans and farm loans and has urged elimination of public power projects.

I have opposed waste and inefficiency in Government but I have also opposed efforts of Mr. Hoover to destroy essential legislation under the guise of economy.

REGULATORY COMMISSIONS

Presidential appointments to the various regulatory Commissions have shown a shocking disregard of the public interest. These Commissions have the duty to protect the American people against exorbitant utility rates, fraudulent stocks, false advertising, monopolistic practices, and render other similar important services.

A disturbing pattern of appointments has developed. Individuals who have come out of the ranks of the businesses regulated under the law have been named to regulatory commissions. One lawyer who spent his life arguing cases before a commission in behalf of large companies was named as chairman of the very same commission. Officials with long records of devoted service in safeguarding the public interest have been quietly shown the door.

CONFLICTS OF INTEREST

Many of us in Congress have expressed great concern over the appointment of so many men to key positions in executive departments where they could exercise policymaking authority affecting companies and businesses with which they had formerly been associated. Use of official position for private gain cannot be condoned, whatever the particular circumstances.

Examples of a conflict of interest have revealed the cases of so-called dollar-a-year men from private industry on loan to the Government actually negotiating defense contracts with their own companies.

Still another case has revealed that a Pentagon official making important oil policy decisions has been receiving two salaries—one from the Government and one from an oil company where he is a vice president.

SALK VACCINE

I have been deeply concerned about the manner and attitude of department heads in the handling of the Salk polio vaccine program. Millions of Americans hailed the discovery of the Salk vaccine as the long-awaited preventative to the crippling polio disease. The confusion, delay, and lack of proper vaccine-testing procedures was most unfortunate. Secretary Hobby had to face the responsibility because her opposition to Government-sponsored wholesale vaccination of all children. Those of us who favored a strong Department of Health, Education, and Welfare were concerned because of Secretary Hobby's general attitude toward health, education, and welfare programs. Her last act before resigning her Cabinet post was to ask a Senate committee to delay action in improving the social security law. Although she was highly praised by the President, she was most influential in preventing favorable action this year on a social security bill which many of us consider most essential.

MILITARY MEN IN CIVILIAN POSTS

I have become increasingly alarmed at the great number of retired generals and admirals who have been appointed to key positions in the Eisenhower administration, positions which have historically been occupied by civilians. Many other top military men have recently been named to top executive posts in companies having extensive defense contract business with the Government. This is a dangerous trend. Ours is a Government of civilian authority; the military must always remain in a strictly subordinate position if our historic concepts of government are to be maintained.

SMALL BUSINESS

The administration has been conspicuous in ignoring the needs and problems of small businesses, while removing restrictions on big monopolies. Consistently underbid in defense contracts, small businesses have felt the pinch of monopolistic competition, aggravated by high taxes and reduced purchasing power among great segments of our population.

NEWS CENSORSHIP

Members of Congress as well as newspaper editors and writers have become alarmed over the recent trend in the administration to suppress legitimate news stories concerning vital subjects of interest to the American people. While conceding that security reasons are not involved, administration leaders have repeatedly withheld information which they felt might prove embarrassing if made known to the public. A congressional investigating subcommittee will soon begin hearings on this police-state method of news censorship which is so alien to our system of Government.

THE CHALLENGE AHEAD

Much yet remains to be done in the 2d session of the 84th Congress. Such issues as social security and retirement legislation, aid and opportunity for handicapped persons, public housing, school construction, highway legislation and other important legislation requires further action.

The real challenge of the future is the challenge of abundance. A way must be found to channel our productive genius in the fields of manufactured goods and farm commodities into the hands of the millions of Americans now existing on meager pensions, substandard diets, in dilapidated slum housing, the children attending inadequate schools, growing up amid poverty and disease on a standard of living which is shameful in this great land of abundance.

We must initiate policies to establish a full employment, expanding economy to provide more jobs at decent wages. We must have increased purchasing power in the hands of our neglected, low-income families and our old folks so that they can afford to buy the manufactured goods and farm surpluses which bulge from our warehouses and storage bins.

Despite the fact that production and profits are at an all time high, many millions of our citizens are in want for the basic necessities of life. Unemployment in many areas continues at unnecessarily high levels. The cost of living remains high and continues to be a hardship on unemployed workers, their families, and the millions of our retired senior citizens who struggle to exist on inadequate pensions or social-security benefits.

We must break the grip of monopoly which feeds on scarcity. We must drive the fear of abundance from our land. Abundance for all citizens need not mean lower profits for our industries. On the contrary it could mean even greater expansion and greater prosperity in which all would share.

There were other important issues before the Congress. Statehood for Hawaii and Alaska, which I supported, was rejected. I opposed the sale of Government-owned rubber plants for a small fraction of their real worth.

In a brief report it is not possible to completely tell the full story of this session of Congress. I will therefore make myself available, without expense, to any group in Berks County which desires me to speak, answer questions or debate on issues of national importance.

Contact my Reading or Washington office with any such requests or on any matter in which you may be interested.

The Bricker Amendment

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an address by the Honorable Robert H. Montgomery at Faneuil Hall, Boston, on June 13, 1955.

Mr. Speaker, this address by Mr. Montgomery is an outstanding contribution to the many arguments that have been made in support of the Bricker amendment, now pending in this Congress.

THE BRICKER AMENDMENT

(An address by Robert H. Montgomery, Faneuil Hall, Boston, June 13, 1955)

The subject for our discussion tonight is the Bricker amendment.

This is an appropriate place for that discussion. Long ago Wendell Phillips, speaking from this platform, said: "When liberty is in danger Faneuil Hall has the right, it is her duty, to strike the keynote for these United States."

I do not claim that I am the most appropriate person to strike that keynote. One qualification I do have. I am old enough to remember when in this country liberty and the rights of men were not in danger. The America I knew in 1910, when I came of age, was still the America described by Carl Schurz, a refugee from European tyranny, who wrote in 1853:

"Here in America you can see daily how little a people needs to be governed. There are governments, but no masters; there are governors, but they are only commissioners, agents. What there is here of great institutions of learning of, churches, of great commercial institutions, lines of communication, etc., almost always owes it existence, not to official authority, but to the spontaneous cooperation of private citizens. Here you witness the productiveness of freedom. * * * We learn here how superfluous is the action of governments concerning a multitude of things in which in Europe it is deemed absolutely indispensable, and how the freedom to do something awakens the desire to do it."

That was the America I and many of you knew—a land of individual opportunity and individual responsibility, where God-fearing men and women lived and worked and worshiped in freedom—a land to live in, a land to live for, a land to die for—an America that is now in deadly peril.

Our subject has to do with the Constitution of the United States. You will have to listen to some lawyer talk, but it is not a dry, legalistic subject. The argument that I make is not a dry, legalistic one. It is a logical argument; it is a sound argument, but it is no less sound because for you and for me it is touched with deep human emotions, with love of country, with love of liberty, with devotion to religion.

This is the only place on earth where an individual can force his government to respect his rights.

This is the only place on earth where the powers of government are limited by a constitution that means something.

Other countries have what are called constitutions. Everyone has heard of the British Constitution, which is not a constitution at all, but the negation of one—a jumble of traditions, maxims, slogans, and a "thick husk of legal fictions" that are supposed to restrain Parliament in its legislation. They do not impose an enforceable limitation on its power. Parliament is supreme. Parliament need not respect the rights of an individual. It may do so in reliance on the unwritten constitution, but there is nothing the individual can do about it if it fails to do so.

The Joyce case is an example. During World War II, Joyce broadcast from Germany utterances that in the mouth of a British citizen were treason. The British called him Lord Haw Haw. After the war they brought him to trial for treason. At the time of his alleged crime it was the law that he could not be convicted except by the testimony of at least two witnesses to an overt act of treason. One witness would not do. It developed that the broadcast upon which the case depended was heard by only one witness who could identify the voice. Parliament then acted. It abolished the rule about the necessity of two witnesses and made one witness enough. British lawyers, regardless of their feeling about his guilt, were shocked by this violation of the British Constitution, but the court had to accept the act as the law, and Joyce was convicted and hanged. This happened under the British Constitution. It could not have happened under ours, because our Congress cannot validly enact what is known as an ex post facto law. That means that Congress could not have changed the rules of evidence in this case after the alleged crime had been committed. If Congress had attempted to make the change, the court would have declared the attempt void because unconstitutional, and Joyce would not have been convicted. He as an individual would have been able to force his government to respect his rights.

I say that this could not happen here. What I mean is that it could not happen here by an act of Congress or at all as we understood the Constitution until lately. It could happen here under the treaty power as now interpreted by the Supreme Court. The President, by an interchange of letters with another country, could have changed this rule and deprived the defendant of a constitutional right which would have saved his life, or any other constitutional right that he had.

That is why we need the Bricker amendment.

Our Constitution was drafted by men who had lived under absolute governments. They had experienced the tyranny of an absolute government. They had fought a revolution to overthrow tyranny and establish liberty—they had risked their lives and their fortunes and pledged their sacred honor in the cause of that revolution. They saw to it that the philosophy, the wisdom, the commonsense, and the religious faith of the Revolution became incarnate in the Constitution. The French Revolution was soon to slip into atheism, despotism, and despair. Our Revolution put its ideals down on paper and built a scheme of government that could preserve them—a government free from impractical utopianism on the one hand and mass robbery and murder on the other—formed with political good sense and in the fear of God.

There are men who scoff at the Founding Fathers and find them faintly amusing. These men are also tender of traitors and contemptuous of patriotism. They are ashamed of America. They do not put America's interests first as point I instead of point V. For them it is considered a devastating appraisal of Senator Taft to say that he had the best mind of the 18th century. Of course, that was a tremendous compliment. In the fields of government and statecraft the 18th century mind was the greatest mind of all the centuries and our Founding Fathers who met to draft the Constitution had the greatest minds of that century. Benjamin Franklin was one of them. The 250th anniversary of his birth will be celebrated January 17 next. He was only one of the great men who assembled to draft our Constitution, but he understood it as well as any of them. When the drafting was completed, someone asked him, "What have you given us?" He answered, "A republic, if you can keep it." Have we kept it? We have almost lost it. We are fighting a rear guard action. The Bricker amendment is the last stand.

The Constitution which Gladstone called "the most wonderful work ever struck off at a given time by the brain and purpose of man" came from many sources—from England, from Scotland, from Ireland, from Holland, from France, from the classics, from Blackstone, from the Bible, and from the American Genius itself. It came from the lang thoughts of hard-working lonely pioneers who cherished freedom above all earthly gifts—above security, above peace. Theirs were the "giant hands who from the womb of the world tore the Republic."

The central, unifying, illuminating principle of the Revolution and the Constitution is religious. That is why Marxism which must destroy religion must first destroy the Constitution. William Penn said: "Those people who will not be governed by God will be governed by tyrants." He could have said: "Those people who will be governed by God will not be governed by tyrants." The Communists and the fascists know that. Mussolini said that he came to power because the people were tired of liberty. Communism, which is the essence of tryanny, cannot exist in a free land—a free land can only exist when it is governed by God. In the Bible you will find this text: "Where the spirit of the Lord is, there is liberty."

Our Revolution recognized that men are the children of God, not mechanical-chemical compounds, not robots. It recognized that the God who created man endowed him with certain inalienable rights, amongst them life and liberty. It recognized that government is made to protect those gifts which God has given to man. No unlimited government can do that. That is why we had the Constitution. That is why we need to save it. That is why we need the Bricker amendment.

The problem presented to the Founding Fathers was not easy. It was necessary to create a central government of adequate powers. It was even more necessary to limit the powers of that government. Many centuries ago Plato and Aristole said the powers of government must be limited if men are to be free. This has been repeated throughout the centuries. One of the best statementss of it was by Woodrow Wilson, who said: "The history of liberty is a history of limitations of government power, not the increase of it."

It is worth our while to examine our Constitution and study with care the limitations on the powers of government whereby a republic conceived in liberty was brought fourth.

The Constitution created what was intended to be an indestructible Union of indestructible States. The States remained sovereign States. It was Hamilton's idea that we should have a unitary Nation in which the States would be administrative agencies only. That idea did not prevail. The fourth article of our own Massachusetts Constitution defined the position of our Commonwealth in the constitutional system in words which are now only rhetoric:

"The people of this Commonwealth have the sole and exclusive right of governing themselves, as a free, sovereign, and independent State; and do, and forever hereafter shall, exercise and enjoy every power, jurisdiction, and right, which is not, or may not hereafter, be by them (expressly) delegated to the United States of America in Congress assembled."

We fought a war to prove that the Union was indestructible, but we have permitted the States to be destroyed with hardly a murmur of revolt.

How was the destruction of the States accomplished? The first and most important step was the adoption of the income-tax amendment, effective in 1913, giving Congress the power to tax incomes, which has been interpreted to extend also to the taxation of capital gains, gifts, and inheritances. No State can long continue as a free and sovereign State when there is a superior sovereign who can, by taxation, destroy all property and income and can even destroy the income and property of State officers and State judges.

The second step in the destruction of the States was the extension by the Supreme Court of the United States of the concept of interstate and foreign commerce. It was necessary for the Federal Government to be given the power to regulate interstate and foreign commerce, and the States readily conceded that; otherwise, intolerable, situations would have arisen. It was not necessary and it was not intended that the Federal power should extend to every part of our economic activity and would regulate all manufacturing, agriculture, insurance, banks, local communications, labor relations, wages, and prices—all in the name of commerce.

The Supreme Court has held that an elevator operator who was born in New York, had never taken his elevator anywhere except up and down, certainly had never taken it across the State line, was in interstate commerce so that his wages and hours of labor could be regulated by the Federal Government. The reason given was that one of the tenants in the building was engaged in manufacturing pants that were sold across the State line in New Jersey.

The Supreme Court also decided that a farmer in Ohio who raised wheat to be consumed on his own farm by his own hogs who were also consumed on his own farm by his own family was in interstate commerce and could be restrained from growing more wheat than was permitted to him by a quota imposed by a Federal agency.

How free is this country when a landowner cannot grow his own food except with the permission of a Federal bureaucrat?

The third revolution in the Constitution came from another extension of the power of taxation. As written, Congress had the power to levy taxes for the common defense and the general welfare. As now interpreted, the words general welfare mean anything that Congress decides is for the welfare of the country. From this broadened concept Congress has the power to tax you and me for the building of houses and schools in Alabama and grain elevators in Pakistan, the payment of old-age pensions to persons who are neither veterans nor public employees, the publishing of newspapers in Germany, the financing of socialism in England, and practically anything that an imaginative do-gooder can think of. By the exercise of this power, Congress can take from the citizens of Massachusetts an unlimited percentage of their incomes and property and use the proceeds for other States or for other countries.

The fourth step in the destruction of the States was the interpretation by the Supreme Court whereby the first 10 amendment to the Federal Constitution were applied to the States. These first 10 amendments were adopted as limitations on the power of the Federal Government and are often called the Federal Bill of Rights. There were several liberty-loving States that were wise enough to fear the tryranny of a central government and would not ratify the Constitution until they were assured in writing that the fundamental liberties of the State and the individual would be protected. No one until recently ever supposed that these amendments would restrict the States themselves. They are not worded that way. They are worded to prevent Federal action. The Supreme Court has now, however, decided that by the adoption of the 14th amendment after the Civil War the first 10 amendments were made applicable to the States. It is because of this decision that the States are now deprived of their powers in the fields of education, religion, and personal rights that everyone supposed they had.

Some people interpret what has happened to the States and to our Constitution as part of a plan or plot to prepare the country for international socialism—a world state with a Marxist constitution. Let us be content to call it a series of coincidences.

This series of coincidences had a great deal to do with a man named Karl Marx. Karl Marx is not my favorite character. He was a hater. He hated all mankind. In particular, he hated Jews, despised Negroes, and held all Christians in contempt. He preached class hatred and advocated murder and violence. He did not reason well or honestly. He did not understand what men live by. He did not understand what are the enduring values and the everlasting verities. No Marxist does; nothing infuriates him so much as an argument that in any system of government or economics the best as well as the worst of human nature must be reckoned with.

In 1848 Karl Marx issued the Communist Manifesto. This contains 10 points regarded as preliminary objectives to be accomplished before the governments of the world are overthrown by force and violence and the dictatorship of the proletariat is established.

Not one of these preliminary objectives could have been accomplished in the United States under the Constitution as it stood in 1848 or in 1910. Now every one of them can be accomplished by legislation or by treaty. Some of them have already been accomplished completely; the others are well along.

There is probably a difference of opinion among you as to the desirability of some of the economic points of the Marxian program. I think they are all evil. However that may be, there can be no argument about the tenth point, which concerns personal rights and liberty and does not involve economic considerations.

The tenth point sounds very innocent indeed. It reads: "Free education for all children in public schools."

Now, no one is going to say that we should not have public schools or that they should not be free. The catch to this point is the requirement that all children should be educated in public schools. Remember, it is intended that those schools will be godless and will provide education barren of every spiritual value and of patriotism. Prof. Allan Nevins of Columbia has given this show away. He wants to take what he calls the poision out of thte public school textbooks. What is the poison? Anything that glorifies America, patriotism, or nationalism.

In America we once had no doubt that if we sent all of our children to school for a sufficient time they would be good, useful and loyal citizens. Now our faith is shaken by delinquent youth, foolish voters, and disloyal eggheads. Was there something the matter with our theory or is the matter with what we call education? Some will think the latter is true. You will recall Kipling's Lama who wrote that "Education, if of the best sort, is the greatest blessing; otherwise no earthly good."

In the early days of the Republic, education was, with negligible exception, an individual, family, or church responsibility Presbyterian and Puritan children who learned their letters at a dame school or at home were expected to know their catechism, to be familiar with their Bible, to keep the Sabbath, to fear God, to keep a good conscience, with industry and economy to be independent, and at last to die Christianly. Similar standards applied everywhere and in all denominations.

For secondary education, groups of neighbors combined and employed schoolmasters. In many places, church schools, classical academies, and sectarian colleges were founded and supported with private funds. In every case the instruction was designed primarily to promote piety, religion, and morality.

It was never supposed that the Federal Government should have anything to say about the education of the child. It was never supposed that a State could not permit religion to be taught. As Dean Manion has demonstrated, the constitutions of all the States were rooted in religion. Harvard College was Christian in its origin and its original objectives. In the language of our Massachusetts constitution which created the corporation of Harvard College, the arts and sciences and all good literature were encouraged because such encouragement tended to the honor of God, the advantage of the Christian religion, and the qualification of students for public employment in the church as well as in the State.

State control of education and religion presented a serious problem for the Marxists, who to succeed in their plan for world domination must destroy religion. This necessarily implies the destruction of church schools as well as churches, and explains why all children must be educated in public schools and why all public schools must be godless.

It would not do for the Marxists to deal with 48 States. That would be slow. Dealing with the Federal Government was much simpler and quicker.

But how could the Federal Government get into the fields of education and religion, which under the Constitution belonged exclusively to the States without any prohibition or limitation?

This is how it was done.

The first amendment reads in part as follows:

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof."

The 10th amendment:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Nothing could be plainer than this. The States had not delegated anything to the United States about religion and about the education of their inhabitants. Nothing had been prohibited to the States on these subjects. They could establish a religion, they could favor one religion over another, they could prohibit the free exercise of religion. So of education—they could have public schools, no schools, private schools, no private schools, segregated schools, desegregated schools, religion in schools, no religion in schools, just as they wanted. It was up to them and to their constitutions because they were sovereign States who had reserved all their powers in these fields.

Now came one of the coincidences. Someone with this particular ax to grind discovered the 14th amendment, which contains this language:

"No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty or property, without due process of

law; nor deny to any person within its jurisdiction the equal protection of the laws."

"Ha," said that someone, "here is a way to destroy religious instruction in all the public schools. All we need do is to get the courts to decide that the 14th amendment makes the first amendment applicable to the States and that teaching religion is the establishment of a religion." And so they did, and it wasn't very hard, for the courts have been extremely sympathetic throughout the past 20 years.

Out in Illinois there was a statute permitting the teaching of religion an hour a week in the public schools. The system was a voluntary one and no child could attend the classes without the consent of his parents. There were separate classes for different religions. The Catholic children were taught by a priest, the Jewish children by a rabbi, and the protestant children by a protestant minister. The Supreme Court of the United States said that this was something that the State could not do. It was a law respecting an establishment of religion. Therefore, they said, since Congress could not have passed such a law under the first amendment and since the first amendment now applies to the States, the State could not do so.

They really did that—eight of them. One dissenter wondered how the majority could justify a chapel at West Point or a chaplain in the Navy. Isn't it clear that the chapel and the chaplain are doomed? I wonder how a State can be permitted under this decision to grant tax exemptions to privately operated schools that teach religion or to churches? Withdrawal of tax exemption would result in the destruction of many church schools of many denominations. Remember, compelling everyone to be educated in secularized public schools is still the objective. A State could do it. I do not see how Congress can. It can be accomplished by use of the treaty power.

With these revolutions in the Constitution, the sovereign States were destroyed and what is left is a unitary Nation that Hamilton wanted with all governmental power concentrated in Washington.

What we had left was a Nation, not a union of States. Is it still the Nation conceived in liberty that we bargained for in the Constitutional Convention? We have seen that it has taken over almost all the powers that were retained by the States so that it is now for all practical purposes a sovereignty of full and plenary jurisdiction.

With the division of powers and with the limitations on the legislative power contained in the Constitution and the Federal Bill of Rights, tyranny was made impossible. Or so we thought.

As time went on, it appeared that many reforms and expenditures which many men thought desirable could not be accomplished or made under the system of the Constitution. It is another coincidence that these reforms happened to coincide with the 10 preliminary objectives, the 10 points, of the Communist manifesto. No one of them could have been accomplished under the original Constitution.

Moreover, our type of government, with the division of powers between the Nation and the States and among the departments and the limitation of all powers, was entirely unsuited for a totalitarian state which would own all the land, railroads, telephone companies, coal mines, steamships, steel mills, etc., and operate all the businesses of the country. Our type of government was entirely unsuited even for the sort of show we are running now. You can't regulate prices, wages, working conditions, rents, hours of labor, polio vaccine, railways, utilities, stock markets, education, medicine, agriculture; you can't be the biggest landowner, the biggest house builder, the biggest employer, the biggest banker, the biggest insurance company, the biggest power producer, the biggest munition manufacturer, the biggest grain dealer, the biggest shipowner, the biggest printer, the biggest borrower, the biggest taxer, the biggest spender, the biggest defaulter, the biggest meddler, the biggest sucker in history without making a million executive decisions every day. You can't wait for legislative action; you can't debate; you can't have two parties; you can't stand investigation or criticism; you can't let your courts determine whether your action is constitutional; you must act and you must have in the Executive all the powers of Government, all the powers of the States, all the powers of the Congress and you must have a supine Supreme Court. You must have the powers of a dictator.

The Executive, by usurpation, the Supreme Court, by interpretation, and the Congress by surrender have nearly done the Constitution in. But it and the State constitutions are still a nuisance to the internationalist socialists in some way. That is where the treaty power comes in. Under the treaty power as now interpreted, the President and a handful of Senators can amend the Constitution and the State constitutions and legislate for the Nation and for every State, enacting laws that neither the Congress nor the States could lawfully enact. This sounds incredible—it is all too true.

That puts us back where we were when the shooting began in 1775—victims of unlimited arbitrary government with no rights or liberty that our Government must respect, with no recourse if we are deprived of life, liberty, property, religious freedom, free speech. The President and another nation (Argentina or Russia would be a good choice) could by an exchange of letters deprive us of the right of meeting here to discuss the Bricker Amendment and we would have no lawful recourse.

In fact we are worse off than we were in 1775, because then our tyranny was a Parliament which had to act openly and with debate and where our petitions could be heard. Even now in Great Britain and Canada a treaty is not internal law until Parliament makes it so. With us it is law right away and we may not know for years what has happened to us.

Worse than all this, under the treaty power we can, without any action or debate by Congress as a whole or by the States or the people, surrender our state, national and popular sovereignty to a superstate making ourselves a subordinate state, perhaps a mere administrative division, in a government of the world. This, the most important decision we could possibly make, the most momentous in all history, is in the power of one man and a handful of Senators.

A treaty is a contract with a foreign government. The treaty power is the power to make contracts with foreign governments. This is a necessary power. Under our system of divided sovereignty, the Federal Government has the treaty power exclusively. The States are expressly forbidden to enter into treaties. No one supporting the Bricker Amendment wishes to destroy the treaty power or take it away from the Federal Government. That would be absurd and unwise. No one wishes to take away from the President his constitutional functions in the treaty-making process. Someone must negotiate the contract. The executive department is best organized for that and should be the best informed.

The Constitution says:

"(The President) shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur."

Here is a check, a balance. The President can act only with the advice and consent of the Senate and the treaty must have the concurrence of two-thirds of the Senators present. This insures publicity, debate, and hearings on important treaties. This kept us out of the League of Nations because the Senate refused, after much deliberation and debate, to give the necessary concurrence.

All this sounds very sensible and in harmony with the American way of doing things. What has happened to make it necessary to amend the treaty provisions in the Constitution? What has happened is that we now have a Government that believes that the treaty power can override the Constitution and cut across all the rights of the States and the people, and is acting accordingly. The Supreme Court has given aid and comfort to this arrogation of power and confirmed it by its interpretation of the following words in the Constitution:

"The Constitution, and the laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land."

I have neither the learning nor the time to compare the older concept of the treaty power with what it is now. There is no question of what it is now. It is all powerful and it does not make much difference what Hamilton or Jefferson or Calhoun thought. It is what Mr. Dulles thinks or thought in 1952 that counts now, because that is what the Supreme Court thinks. This is his language:

"The treatymaking power is an extraordinary power liable to abuse. Treaties make international law and also they make domestic law. Under our Constitution treaties become the supreme law of the land. They are indeed more supreme than ordinary laws, for congressional laws are invalid if they do not conform to the Constitution, whereas treaty laws can override the Constitution. Treaties, for example, can take powers away from the States and give them to the Federal Government or to some international body and they can cut across the rights given the people by the constitutional bill of rights."

So there you are. Here is a power vested in the President and a few Senators that can override the Constitution, the Bill of Rights, and every State constitution. Should it be limited? Do we need the Bricker amendment?

But that is not the worst of it. This absolute power can be exercised in many cases by the President alone without the Senate. It can be done in secret and no man may know for years what the law is. That is the doctrine of the executive agreement. That is the Pink case, where the Supreme Court held that an executive agreement made by the President alone, without the approval of the Senate is, like a treaty, the supreme law of the land and overrides the due process clause of the fifth amendment as well as the law of New York. In that case all there was was an exchange of letters between the President and Litvinov, and property which under the laws of New York belonged to certain private persons was given to the Soviet Government. They could just as well have taken your house and given it to me. I don't think this administration would give me anything or if I had a house, give it to you, but it could if it wanted to by finding a correspondent down in Guatemala to swap notes with.

Perhaps you think I am an alarmist. All right, I will tell you what the law is now under existing treaties or executive agreements. Just a few examples.

The President can declare war without any declaration by the Congress. That power is claimed by the President under a treaty—the treaty creating the United Nations. Think that over. Under the Constitution only the Congress could declare war. Now, if war comes between Russia and Poland, the Presi-

dent, acting alone, can put us in it on either side.

NATO can merge our political and economic resources with other nations without any reference to the Congress.

An international body called the International Materials Conference, set up without congressional authority, can and did impose a system of international allocations of raw materials.

Great Britain has a continuing veto over our diplomatic and military policies insofar as the use of atomic weapons is concerned. We can't use the bomb in our defense unless Great Britain permits.

The treaty power can and did take away the constitutional rights of our soldiers accused of crime in foreign lands and turned them over to trial by foreign courts. Two homesick GI's in France named Dick Keefe and Tony Scaletti, got drunk, stole a taxicab, and went to Paris. Stealing a taxicab by drunken soldiers on a spree is a crime and should be punished. Before the treaty Dick and Tony would have been tried by our military court and punished in accordance with our ideas of the seriousness of the offense. At the trial the constitutional rights of the accused would have been protected. Under a NATO treaty called the Status of Forces Agreement, they were turned over to a French court for trial and sentenced to 5 years of solitary confinement in French cells 4 feet wide and 7½ feet long. The Army took from Dick's wife the basic allowance for quarters and the French do not allow her to communicate with her husband.

Dick and Tony were lucky that they did not steal a chicken in a Moslem country, for then their hands would have been chopped off.

An Air Force captain named William Powell, in Bermuda, violated a law he did not know existed—he drove an automobile without having third-party insurance. He got 2 months' imprisonment and this automatically meant that he must be court-martialed, and may go home discharged and disgraced with no retirement benefits.

The Pentagon gets a report of these cases every 6 months. There are hundreds of them—you and I cannot see those reports, neither can Senator BRICKER. They are top secret.

What other things can be done under the treaty power as now interpreted?

Anything you can think of. I will mention only those things which have been seriously proposed.

Our immigration laws can be set aside and everyone in the world given the right to come here. The do-gooders in the U. N. phrase their desire for this action: "Everyone has the right to seek and enjoy in other countries freedom from persecution." Thus will come the fifth column. Thus will come the weak, the depraved, and the criminal.

Crimes like this can become the law of every State:

Causing mental harm to members of a racial or religious group—you won't be able to criticize any race or religion.

Criticizing foreign governments may be made a crime. In such cases there will be no trial by jury and no appeal if the U. N. people have their way.

No private employment agencies, no private collective-bargaining—government do it all.

Right to censor news in peace as well as war . .

Religious freedom to be guaranteed, subject to limitations prescribed by law. Ditto of freedom of speech. Ditto of meetings like this—peaceful assemblies to talk things over. This is a back-handed way of giving law the right to limit those freedoms.

Conscriptions for an international military power, which could be garrisoned all over the world. Think that over. How useful will an international army be when the time comes to overthrow our Government by force and violence?

Legalize mixed marriages in States that prohibit them. This has already happened.

International taxes.

Regulate ownership of land, overrule alien land laws of States. This has already happened. A State, the Federal Government cannot prevent aliens buying strategic land anywhere in the country.

Distribution of our gold supply.

Regulation of world resources, communications, industries, defense, currencies, tariffs, tidelands.

A world church.

And so on. Nothing however fantastic is impossible. All the things I have mentioned have already been enacted or have been seriously suggested as subjects of treaties.

It is not too much to say that we are now in an international state with plenary legislative power vested in the President of the United States, a handful of Senators, and the State Department of a foreign country.

Now what is the Bricker amendment? It is very short. I will read it:

"SECTION 1. A provision of a treaty or other international agreement which conflicts with this Constitution, or which is not made in pursuance thereof, shall not be the supreme law of the land nor be of any force or effect.

"SEC. 2. A treaty or other international agreement shall become effective as internal law in the United States only through legislation valid in the absence of international agreement.

"SEC. 3. On the question of advising and consenting to the ratification of a treaty, the vote shall be determined by yeas and nays, and the names of the persons voting for and against shall be entered on the Journal of the Senate."

What are its objects?

1. To prevent any treaty or executive agreement in conflict with the Constitution from being of any force or effect.

2. To prevent any treaty or executive agreement from being effective as internal law except through valid legislation.

3. To prevent treaties from being approved by a mere handful of Senators present and voting. Voting by "yeas and nays" would assure that at least a majority of the Senate (now 49) would be present to act on the treaty.

It is incredible that this amendment should be opposed by any American. Yet the administration is against it and is fighting it with every sort of pressure. Secretary Dulles has switched and now indulges himself in quibbles about language. Republican Senators have forgotten this plank that was in the Republican piaform:

"We (the Republican Party) shall see to it that no treaty or agreement with other countries deprives our citizens of the rights guaranteed them by the Federal Constitution."

Not only the Daily Worker but also the New York Times, the New York Herald-Tribune, and the Washington Post are against it.

What semblance of reason do they advance?

With characteristic dishonesty some left-wingers have told the public that a treaty will require ratification by the 48 States. That is absurd as well as dishonest. All the amendment does in that respect is to provide that a treaty does not become internal law in a State unless the State acts and acts constitutionally. The treaty as a treaty (an agreement between nations) will need no more ratification than it now does (two-thirds of the Senators present) and an executive agreement will stand just as it does now if it conforms to the Constitution. It will not, however, be the internal law of any State unless that State acts and acts constitutionally.

Another argument is that the amendment is unnecessary because the people can trust the executive department, who really do not want to do anything unconstitutional or forfeit any of our liberties.

This is not a debate to be settled by an appraisal of personalities. It makes no difference what we think about any particular President, any particular Secretary of State, any particular group of presidential advisors. I would say what I have said if George Washington were President, and so would he.

No man or group of men should ask to retain this absolute power. An all-wise, all-powerful, benevolent autocrat who would live forever would be the ideal government. That is not a bad definition of God Himself. It is a bad definition of any man who ever lived.

On this subject and many others Jefferson is worth hearing. He said: "In questions of power, let no more be heard of confidence in man but bind him down from mischief by chains of the Constitution."

No President, no Secretary of State, has the time to study all the details of all executive agreements or treaties, to detect the hidden traps laid by traitors at the conference table, by double-talkers who can always find good names for evil things and incorporate in documents ambiguities for interpretation by complaisant courts. No President can legislate for 48 States and take into account 48 varying conditions, constitutions, and local histories. No President should be allowed to legislate for anyone. Legislation should be a deliberative matter; there shoud be debate; there should be hearings; there should be publicity; there should be a chance for public opinion; there should be votes of representatives of the people.

A President cannot always be alert. President Roosevelt blamed himself for Yalta. Shortly before his death he told Pat Hurley, our loyal Ambassador to China, that on the last day at the Yalta Conference, in a state of utter exhaustion, he had signed the shameful document.

"Go ahead," he told his friend, "ameliorate it or set it aside and return to the fundamental principles that you have been fighting for, because they are mine."

Yalta has a lesson for us in this discussion. The damage done by a badly conceived treaty would be minimized by the Bricker amendment which would make it void if it was unconstitutional and in any event keep any part of it from becoming internal law until legislation adopted it.

Now, what are we going to do about it? Edmund Burke once said, "When bad men combine, good men must associate." We must find some way of associating ourselves effectively to make our numbers felt.

Then, we must understand the peril that we are in. Many men of good will do not understand it. They see values in international socialism—a world government with Marxism its constitution. They see peace and social justice. They think that a world government will keep the peace and that socialism will work if it spreads all over the world.

Some of you may want to be just a "lettle" socialistic. That is Fabianism; that is the welfare state. Beware. Someone has said: "Fabianism is socialism with intent to commit communism." And it won't work. England found that she could support the welfare state (the cradle to the grave plan) only at the expense of the capitalism of the United States or her own capitalism and tried to stop short when she found that further nationalization would be ruinous. As Max Eastman, an ex-socialist, recently said, England's socialistic dream became a nightmare. She learned Adam Smith the hard way and still has some lessons to learn. It would be marvelous if we could learn from her but we won't. Russia supports her welfare state by enslaving her own people, rob-

bing other countries, and importing slaves from China. China supports her welfare state by murdering 100 million of her people and exiling 5 million to Siberia.

Stephen Leacock had it right: Socialism will work only in heaven where they don't want it or in hell where they have it already.

If I had time I could demonstrate to you by the inexorable logic of double entry bookkeeping why the socialist economy in its mildest form cannot possibly protect your economic security—inflation won't let it.

But however you may feel about that and however wrong I may be about it, I am everlastingly right when I tell you that no measure of peace, security, or economic welfare is worth the liberty you will pay for it.

The notion of a world government at this stage in history is fantastic. It would be suicidal for us to be in it with only 6 percent of the votes. It would not work. After a generation of slavery it would fall to pieces like the Roman Empire. I hope that we would be the first to rebel with a Declaration of Independence we could copy almost word for word from the old one.

Over the past dozen years this country has negotiated many treaties with the criminal gang who have announced their intention to rule the world and to root out liberty and religion everywhere. No good has come of these treaties. Even when our representatives were able and loyal they could get only worthless promises while they gave away the last hope of liberation for millions of the enslaved people of the world and the last hope of life and freedom for other millions.

What did these treaties do to us? What will other treaties do in the future? Every syllable of every treaty, every syllable of every executive agreement is now the internal law of the land and of every state. Congress does not have to act, the State legislatures do not have to act. The constitutions have been overridden, not amended. With treaty power as now interpreted there is now no place on earth where the individual can force his government to respect his rights.

We need the Bricker amendment now. I pray it is not too late.

Small Town Employees and Employers—Local Collective Bargaining

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. HOFFMAN of Michigan. Mr. Speaker, a letter received recently from a small-town employer emphasizes a long-existing trend which may ultimately bar industrial plants from all except a very few large communities. This employer writes:

Our company, although not in any way a part of the automotive industry, is being hard pressed to meet the union demands granted in the recent Ford and General Motors contracts.

Recently our employees' union dues were raised from $2.50 per month to $7.50 per month (UAW–CIO). The purpose of this dues increase, of course, was to establish a $25 million strike fund, completely controlled by the officials of the UAW. This is big money, much bigger than a company the size of ours (whose total sales are less than $5 million per year) can combat.

Organized labor has, obviously, taken complete control of interstate commerce. This fact is well established in the Kohler situation.

Even more disturbing is the further fact that our union locals have lost their power to arrive at contractual agreements with their employers, due to the fact that the international holds veto power over any arrangements which we may make with our own men.

General Motors, Ford, Steel, and a few other employers, joining with the UAW–CIO and other nationally powerful labor unions, have created and now maintain a monopoly of the labor supply. They have destroyed the independence of the employee. His right to bargain for his own services. They have placed him in the same category with raw material. They have made him just a cog in an industrial machine, to be bought or sold when a labor dispute is on.

No longer can the individual worker seek, hold a job which he considers desirable. Using special privileges and benefits given by labor legislation and employing violence, intimidation, a disregard of all law and authority, unions now successfully insist that an individual shall not hold a job unless he joins the union, pays dues and the arbitrary assessments levied by union officials.

The right of a local union to bargain collectively no longer exists, because the international, with the approval of General Motors, Ford, Steel, and others, insists local workers shall not make an agreement with the employer unless the contract is approved by the international.

This arbitrary, tyrannical practice exists because of monopolistic agreements between big employers and labor unions. It is implemented through strikes, where violence and illegal interference with interstate and foreign trade are usual. Coupled with the present-day advancement in automatic production, this practice will undoubtedly drive the small employer out of business. It will deprive millions of independent, homeowning workers, living in smaller communities, of their jobs.

Because of the millions—in 1 or 2 instances, the billions—of dollars at the command of industrial employers, they are now able to purchase labor-saving machinery of latest design, to produce with fewer employees, and using less production hours, and at less cost, many times the former output.

The result has been higher profits, higher wages—both desirable; little, if any, lessening in the cost to consumer, and a form of competition which smaller employers cannot meet if compelled to submit to the demands of international union officers. Smaller employers might be able to continue their operations if they were permitted to bargain collectively with local employees, but this the international unions will not permit.

Employees outside the big cities have certain advantages. They are not required to live in small, uncomfortable apartments, penned in like some animal, restricted in their comings and their goings, crowded, elbowed, and pushed around by their neighbors, many of whom they do not know; dependent upon the supermarket or the corner store for opportunity to purchase their daily sustenance.

The worker in the smaller community, though earning a less wage, usually owns his own home; has his own plot of grass or garden, his own automobile; sends his children to a neighborhood school; attends his own church; is within easy reach of a pleasant countryside, river, or lake. He is an independent, self-supporting, thrifty citizen—interested in and participating in local affairs—social, municipal, educational, and religious.

Unless not only employees, but citizens generally in smaller communities, and I refer now to cities of less than 250,000 inhabitants, awaken to and realize the meaning of the present situation and trend, industrial employment in their cities will certainly diminish if it does not cease.

Local workers should not only be given, but they should exercise, the right to bargain collectively through their own union with local employers.

Absentee domination is just as unsound and harmful in labor unions as it is in corporations.

A greedy, self-seeking, politically ambitious labor boss is just a bad as is his prototype in the industrial world.

Thou Shalt Show Us Wonderful Things in Thy Righteousness, O God of Our Salvation; Thou That Art the Hope of All the Ends of the Earth and of Them That Remain in the Broad Sea

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. REES of Kansas. Mr. Speaker, under permission approved by the House, I am including a very fine address delivered at the regular Thursday morning prayer breakfast meeting 2 weeks ago by our colleague, the Honorable CLIFF YOUNG, of Nevada. In order that other Members of Congress, who did not have a chance to hear Mr. YOUNG, may read the statement, I am including his remarks herewith. I am sure the Members will find his statement interesting.

REMARKS OF HON. CLIFF YOUNG, OF NEVADA, AT THE PRAYER BREAKFAST, JULY 14, 1955

When BILLY MATTHEWS, our president, asked me to speak here today, I felt somewhat like the young housemaid who, while seeking employment, was interviewed by a prospective employer. "Do you have any religious views?" was the question. The maid hesitated briefly and with an understanding look replied, "No, but I have some good pictures of Niagara Falls and the Great Lakes."

And, as this morning of accounting or day of judgment approached, I reflected on the truly superb religious messages and fine inspirational talks it has been my privilege to hear at these breakfast meetings; it made me feel even more inadequate. There came to mind the story of two members of a small country church who were discussing the virtues of their new minister with obvious approval. Said the first, "Say, can't he pray?"

"Yes," rejoined the second, "why he asks the Lord for things that that other preacher didn't even know He had." I might say that

in the fullness of supplication, his prayers bear some resemblance to letters received from several of my constituents in the past few months.

I should like to take as my text today the 65th chapter of Psalms, fifth verse: "Thou shall show us wonderful things in Thy righteousness, O God of our salvation; Thou that are the hope of all the ends of the earth and of them that remain in the broad sea."

It has not been many years since George Bernard Shaw said he was sure that our world is the one to which other planets in the universe send their insane. And I might add, parenthetically, there are doubtless many of our constituents who would add that when these deluded individuals arrive on earth, they usually end up in Washington, D. C.

If there were an observer on another planet watching that which has transpired and is occurring today here on earth, he would have ample reason to wonder at our strange conduct. In a generation there have been two world wars and millions have perished as a result of man's inhumanity to man. Still these struggles have not shocked man into a realization of the gravity of our international problems and the urgent need for a peaceful solution before it is too late. The armament business is the biggest business in the world except perhaps for the current manufacture and sale of Davy Crockett toys. Everywhere throughout the universe men are looking into radar screens watching, watching, watching. The commonwealth of fear is universal.

Recently there appeared in the Washington Post Outlook a challenging, although I hope not too prophetic, article entitled "Death of Earth, Seen from A. D. 45000." It purported to be a review written of a singularly important set of volumes which was the report of a select exploratory mission from another planet. The volumes were entitled "The Rise and Annihilation of Earth Life."

For years there had apparently been some doubt on this other planet as to what had occurred on earth. This mission determined once and for all how death came but admitted that it was at an utter loss to discover why the destructive event was allowed to happen. What was this event? According to the mission, it was 240 simultaneous or near-simultaneous giant nuclear reactions.

Fortunately, the mission discovered a time capsule which gave much information about mankind. With regard to man's physical structure and appearance, they thought it rather bizarre. It was their conclusion, however, that he was equipped with a superb brain. Psychically, according to the mission, man stood apart. He was possessed of a nobility of aspiration, a cosmic as well as inner awareness, a respect for life, a feeling for beauty, and in his honoring of God and good, he was utterly unmatched, let alone surpassed elsewhere in the planetary system.

All the people of the earth save for some few harmless anachronisms in out-of-the-way places were roughly similar. Values cherished differed more in formal trappings than in their essence. They hoped the same hopes, were animated by the same basic forces and drives. Although many spoke different languages, interpretation was universal, and their knowledge of each other far exceeded the areas in which there was substantial lack of information.

According to the mission, the planet shrank and apparently man's mastery of nuclear energy meant that economic scarcity, which had been a cause of countless conflicts, was no longer a major factor. The mission said that the reason for self-destruction defied speculation and that its imagination was not equal to the difficulty of postulating an issue over which people so far advanced would exterminate themselves.

The war when it came must have been quickly finished. Carnage at the blast site was immense, but man survived long enough to let fly a total of 240 nuclear weapons which the mission totaled in its inspection of the planet. Said the report, "On the site of one large city the ruins included a huge fallen obelisk and indicated it had been an important seat of government." And it continued, "The ruins of a capitol were found far inland on earth's largest continent." Thus apparently did the report allude to the once great capital cities of Washington, D. C., and Moscow, U. S. S. R.

Though hundreds of millions were killed outright, the majority, approximately 2 billion, died in the next few weeks or days as the heavily poisoned atmosphere was carried by wind and currents around the globe.

The volumes told how man had apparently made slow but steadiy progress against the elements and then concluded by saying, "But in one incredible moment he renounced his goal, mocked the flowering promise ahead of him, considered the ooze he had worked a billion or 2 years to escape, and embraced it."

When Winston Churchill was awarded the Nobel prize for literature, he wrote, "Since Alfred Nobel died in 1896, we have entered an age of storm and tragedy. The power of man has grown in every sphere except over himself. Never in the field of action have events seemed so harshly to dwarf personalities.

"The fearful question confronts us: Have our problems got beyond our control? Undoubtedly, we are passing through a phase where this may be so. Well may we humble ourselves and seek for guidance and mercy."

It is to avoid such a cataclysm as was described in the report of the select exploratory mission—to preserve mankind from extinction—that in my opinion represents the greatest challenge Christian civilization has ever faced. It seems appropriate this morning to take a few minutes to discuss this problem for several reasons. First, it was 10 years ago this week that man terrified himself by winning a monumental scientific victory. In our race with the Nazi scientists, fortunately the United States came in first. For 5 years we had exclusive possession. But atoms bear no imprint "Made in America," and no one expected this mastery of atomic power to remain solely ours. Thus it was not unexpected when Russia eventually announced it too had atom bombs but there was an element of surprise in the speed Soviet scientists exhibited in narrowing our lead.

Secondly, this last week Bertrand Russel, the British philosopher and mathematician, released a statement signed by Albert Einstein and several other prominent scientists in which they asked that mankind abolish war or face the risk of extinction by slow torture from radioactive dust and rain.

We are now in the year 10 of the atomic age, and great progress has been made in devising ingenious engines of destruction. For several years after the first atomic device was exploded, there was some doubt about the development of any great variety of these weapons. But time has wrought vast changes in our thinking on this subject. Nuclear fission explosions ranging from a few kilotons to perhaps as many as a hundred kilotons have been detonated at the proving ground in my own State, according to newspaper reports. At Eniwetok proving grounds in the Pacific presumably even larger detonations have occurred. These, of course, are the mere conventional fission explosions—little things measured against the H-bomb, which has been said by one grim jokester, to come in three sizes—big, bigger, and where is everybody.

Preliminary tests of the 1952 thermonuclear weapon using a device much smaller than the 1954 weapon, resulted in the virtual obliteration of an island of the Bikini atoll leaving a crater a mile wide and 175 feet deep in the ocean. But it was the 1954 test with its potential for raining down lethal radioactive fallout on 7,000 square miles which cause the greatest concern and has helped bring this problem into focus.

Leo Szilard of the University of Chicago and one of the principal architects of the atomic bomb, has estimated, according to one newspaper reporter, that 400 one-ton deuterium-cobalt bomb would release enough radioactivity to extinguish all life on earth. Bertrand Russell said there is credible authority to the effect that we can produce bombs 2,500 times as powerful as that which created the baleful light over Hiroshima.

In talking about the cobalt bomb, nuclear scientists sometimes quote an entry in the Journal of the Goncourt Brothers of April 7, 1869, exactly 86 years ago. The entry describes a conversation between leading scientists of the day in which they predicted that in a hundred years "Men would know of what the atom is constituted and would be able to create life (synthetically) in competition with God."

"We have a feeling," the Goncourt Journal states, "that when that time comes to science, God with His white beard will come down to earth swinging a bunch of keys and will say to humanity what they say at 5 o'clock in the saloon: 'Closing time, gentlemen'."

It used to be a favorite device of clergymen to conjure up a vivid picture of the tortures and horrors of hell awaiting the sinner and the fallen for unworthy conduct here on earth. With the development of nuclear power, it no longer requires the eloquence and fervor of a Dante to portray a tale of woe and horror. A brief statement of scientifically accepted facts will suffice as well—and we need not wait till the hereafter for proof of what is said.

The question that comes to our mind is this: Is there anything that can be done to prevent this holocaust or is it the inexorable will of God?

In my opinion, there is much that can be done and herein lies the greatest challenge that we, as Christians, have ever faced.

I do not think that God has placed us here on earth to have us wiped out in one hideous moment. The Bible tells us that He so loved the world that He gave His only begotten son to the end that all that believe in him should not perish but have everlasting life.

Nor do I think that our future is determined only by chance. As one famous scientist said, "Our God is not a dice-playing God." I do not subscribe to the thoughts of the poet who said, "All nature is but art unknown to thee. All chance, direction, which thou canst not see."

I believe "There is a divinity that shapes our ends roughhew them how we will." Christianity with its exalting of the individual, with its emphasis on his dignity and development and promise of immortality contains more to it, in my opinion, than that we must play some part here on earth in a predetermined script.

Life is a challenge; we should accept it willingly and gladly, treating the obstacles not as barriers but as steppingstones to ever-greater achievement. Not long ago I read in the paper where a Mrs. Fugal, a grandmother from Utah, was selected as mother of the year. Her life had not been easy. Hardship and work were her constant companions. She said, however, that she didn't want to live without troubles and problems because they make us strong. The problems and conflicts of life can have a similar effect on us as nations and peoples.

In this weary, atom-blessed world, what is the nature of the problem that presents this supreme challenge? With typical Amer-

ican tendency for oversimplification, may I suggest that the problem is twofold, consisting first of technology and, secondly, totalitarianism with a new face called communism. Either, taken alone, would present an enormous problem; but taken together they offer a challenge of the highest magnitude and one which we dare not ignore if we hope to survive.

Next comes the question: What can we, as a Christian nation, do? One possibility would be to engage in a preventive war to destroy the latter threat with the hope we could then control the former. This, however, is repugnant to Christian concepts. I am confidient we will never debase ourselves as a nation to achieve this end—an end which would certainly prove to be highly elusive.

Secondly, there is the possibility of following a policy of pacifism. This is consistent with many of our Christian concepts and principles but, in my opinion, Christian doctrine does not inflexibly require its adoption. To do so would inevitably result in our domination by an ideology and godless outlawry that has neither sympathy nor respect for Christian principles and peoples. Christianity would doubtless survive this ordeal but, understandably, there is little likelihood of popular support for such a policy even with the grim prospects of the atomic age.

Thirdly, we can maintain a posture of strength while we work with diligence and energy to promote Christianity both at home and abroad. The Bible reminds us, "When a strong man armed keepeth his court, those things are in peace which he possesseth." My 6-year-old son occasionally sings a verse from the ballad about Davy Crockett's gun Betsy which goes:

> "The only time I draw my gun,
> Believe me it is not in fun,
> I shoot it for defending me,
> I shoot for life and liberty."

It seems to me that we, as a nation, can do likewise without violating essential precepts of Christian living. This, to me, is the most realistic approach because it offers real hope and is capable of receiving widespread public support which is so necessary in our form of government.

In my opinion, the easiest problem to overcome will be that of communism. In the ideological conflict which now rages between Christianity and the doctrines of Marx, Christianity is bound to prevail. To build a country on Communist doctrine is to be like the foolish man in the Bible who built his house upon the sand, and the rains descended, and the floods came, and the winds blew and beat upon the house, and it fell and great was the fall of it. As the old hymn tells us, "Crowns and thrones may perish, kingdoms rise and wane, but the Church of Jesus constant will remain."

A far more difficult problem, to my way of thinking, than emerging triumphant in our contest with communism will be that of bringing about an understanding and trust among the nations of the world that will permit eventual disarmament with effective controls. Those who recall the Kellogg peace renunciation will perhaps feel little reason for optimism. So often it seems that those who least intend to keep such a pact are the first to favor its adoption. Perhaps the grim specter of what can happen to us in a nuclear war will soften the prejudices, the antipathies, and the antagonisms. War can be declared; peace cannot. It must emerge from causes which give rise to its development. Peace is not found in conferences or laboratories but in the hearts of men. Perhaps out of the good will of the future will come enlightenment and intelligence which will create the restraints which are necessary to our existence in an atomic age.

As a nation, we, of course, are not fully responsible for what other countries and peoples do but we cannot avoid our obligations as a nation of convincing people of the world of our sincere good will and desire for peace. I believe it was Van Dyke who once said with regard to a man, "Four things a man must do if he would keep his record true: Learn to think without confusion clearly. Act from honest motive purely. Love his fellowmen sincerely. Trust in heaven and God securely." If we could do the same thing as a nation and convince others of it, we would have made great progress toward our end of convincing other people of our sincere desire for peace.

Our past record as a nation is not without blemish although we have in recent years demonstrated a generosity without parallel in the history of the world and during a time when our military strength was supreme.

We must show the world we are genuinely concerned about the welfare of others; we must back this up with deeds, as well as words. And in a world where mass communications are so highly developed and our enemies resort to every device to deceive and distort, it is essential that we make our position clearly understood. As the Bible tells us, "Let your light so shine before men, that they may see your good works and glorify your Father which is in heaven."

We have been derelict in our responsibility to missionary services abroad. It has been reported that when General MacArthur was in Japan, he asked for several thousand missionaries. We sent him instead a few hundred. Our United States Information Agency has done an excellent job in many respects but its staff is limited and appropriations inadequate. Its work should be broadened and accelerated to the end that the lies and distortions of our enemies may be unmasked and that our good work and intentions are clearly presented to peoples throughout the world who are looking for leadership, friendship, and good will.

Emerson once said that peace can only come if there is a triumph of principles. It is also true that no one can live in peace longer than his neighbors permit. It is essential, therefore, in our dealing with other countries that we endeavor to understand their problems, their aspirations and goals. We should not be like Mr. Smith and Mr. Jones, who lived next to each other. One day Mr. Jones sent a note to Mr. Smith which went somewhat as follows: "Mr. Jones sends his compliments and requests that Mr. Smith poison his dog because it barks at night and keeps the Jones family awake." Next day there came a note from Mr. Smith to Mr. Jones which went somewhat as follows: "Mr. Smith is delighted to return Mr. Jones' compliments and beg to inform him that he will be glad to poison his dog if Mr. Jones will shoot his daughter and destroy her piano."

There is a Mexican legend which illustrates the importance of a good neighbor. It concerns one San Ysito who was plowing in his field when an angel of the Lord appeared and requested that San Ysito accompany him back to the Lord. San Ysito refused. The second time the angel spoke, "If you do not come, the Lord will send you a sandstorm and a drought." San Ysito persisted in his refusal and said that he had withstood sandstorms before and when a drought came, he had obtained water from the river. Again the angel came and said, "If you do not return with me this time, the Lord will send you a bad neighbor." San Ysito put down his plow and said, "I will go with you. I can stand anything except a bad neighbor."

Our individual conduct is also extremely important in showing that we are a Christian nation and dedicated to the realization of the goals of the man who gave us the Sermon on the Mount. According to one observer, as Christians, our attitude toward our country should be like that of a good wife to her husband. She will do anything for him except stop criticizing and trying to improve him.

We must bear in mind that God works His will to some extent through us as His instruments. As a poet expressed it, "Christ has no hands but our hands to do His work today. He has no feet but our feet to lead men in His Way. He has no tongue but our tongues to tell men how He died. He has no help but our help to bring men to His side."

Small deeds and individual action have had profound effects on the history of our country. One of the great Baptist leaders of England during the last century was Charles Spurgeon. He was motivated to take up the life of a religious leader by the remarks of an itinerant minister. The transient preacher almost decided not to speak that night because of the smallness of the crowd. He never again saw Charles Spurgeon and never knew that his evening's work had kindled an outstanding religious career.

Several weeks ago when I was in Nevada delivering a commencement address in my hometown, I was talking to my aunt, who is a devoted Christian. She showed me a page from the Christian Advocate which, as I recall, was either written by or was about our colleague CHARLES BENNETT. She was quite impressed with its contents and the story of CHARLIE'S life. I told her that we, too, were impressed with his life and good work, and I proceeded to amplify the story from my recollections of remarks he made as a discussion leader here a year or so ago.

Thus we never know just how far will be the effect of something we may do. As a poet expressed it, "Do a deed of simple kindness, though its end you may not see; it may reach like widening ripples down a long eternity."

And, of course, in this field, as in many others, actions always speak louder than words. I recall a verse written by Edgar Guest: "I'd rather see a sermon than hear one any day; I'd rather one should walk with me than merely tell the way; the eye's a better pupil and more willing than the ear; fine counsel is confusing but examples always clear; and the best of all the preachers are the men who live their creeds; for to see good put in action is what everybody needs."

And in this period of peril and uncertainty it is important that we, as Christians, pray wholeheartedly for guidance and strength, not only for ourselves but also for our leaders and the leaders of other countries in the world. In some respects we are like the little boy who was of the habit of going to sleep each night with the lights on. At last his father thought the time had come for him to turn off the lights when he went to bed, and he made this suggestion to the little boy. The little fellow replied that, if such were the case, he wanted to get up and say his prayers again because he had left out several words. Perhaps we are in somewhat the same position as this little boy. Unfortunately, too many people do not realize the gravity of the situation we face. For if they did, they, too, might say their prayers again. In the words of Churchill, "Well may we humble ourselves and seek for guidance and mercy."

In the year 451 the most fearful of all barbarians threatened to swallow up the dying Roman empire. The Huns were marching on Rome, ravishing and destroying everything in their path. They were led by Attila, king of the Huns, a short, squat, swarthy man known as the Scourge of God, who inspired his savage followers with such enthusiasm that it enflamed their natural lust for destroying, burnishing, and ravishing.

In the terrible battle he was repulsed but did not give up his plans for conquering the world. The very next spring he set out again, ravishing and destroying. Everywhere people fled.

While the Romans trained a second army for defense, Leo the aged Bishop of Rome, trusting only in God, put on his stateliest robes and went forth to meet the wolf who threatened the precious flock. Harmless in his simplicity, venerable in his gray hair, he stood before the grim Hun and pleaded so bravely for mercy that Attila, deeply impressed, withdrew his hoard from Italy without attacking Rome. This was his last attempt at conquering the world.

Attila the Hun is dead but there are other Attilas the Hun, two of which I have referred to this morning. The one is in the form of military technological progress which, if not controlled, endangers our very existence. The other appears as totalitarianism in the form of communism, which also threatens to engulf civilization.

Our best and perhaps our last hope for salvation and triumph over these threats lies in following the principles of the wisest of men who died that we might live and spreading them throughout the globe. And then in the words of our text today, "Thou shall show us wonderful things in Thy righteousness O God of our salvation, Thou that art the hope of all the ends of the earth and them that remain in the broad sea."

In the discussion group which followed, BROOKS HAYS contributed the following quotations from Lincoln which I feel are quite appropriate to the situation we now face, and I am taking the liberty of including them:

"Lincoln felt that the dangers of disunity had to be presented factually to his people. He put it in eloquent language: 'The occasion is piled high with difficulty, and we must rise with the occasion. As our task is new, we must think anew, and we must act anew. The dogmas of the quiet past are not adequate for the stormy present. The fiery trial through which we pass will weigh us down with honor or dishonor to the latest generation. We may meanly lose or nobly save the last best hope of earth.'

"In another mood, Lincoln spoke of this process of using faith and good will and love. It is beautifully stated in the address at his second inauguration: 'With malice toward none, with charity for all, and with firmness in the right as God gives us to see the right, let us finish the work we have begun, to bind up the Nation's wounds, to care for him who has borne the battle, his widow and his orphan, and to do all things that will achieve and cherish a just and lasting peace among ourselves and with all the nations of the earth.'"

Washington Calvacade

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from an address delivered in Minnesota by the distinguished news analyst, Mr. Bill Costello, on July 20, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WASHINGTON CALVACADE

This is hardly an enviable time to be making a speech, considering the fact that the leading statesmen of the world met 2 days ago in Geneva and considering the probability that both American policy and world history may be decided, or at any rate massively influenced, by what is said there this week at the summit.

The situation remind me of a Washington social "gimmick" which was invented some months ago by a high administration official. At dinner parties after he was seated he used to hand the ladies on either side a card which read: "My mind is made up—don't bother me with facts." I feel today a great sense of envy of that man—and rather like the author of a movie cliffhanger—trying to discuss the National Government and its policies at a moment when one either has to make up his mind without reference to facts, or else put one's mind into suspended animation until next week. My hope is that I can tell you enough about the general climate of political feeling to help you judge the facts when they do become known.

The notable feature of the 1955 political landscape—not only in Washington but in London and Paris, in Moscow, and in fact throughout the world—is that mankind has rather suddenly, rather mysteriously grown afraid of too much violence. We have reached one of those occasional moments when the world seems in a state of equilibrium. That equilibrium may be precarious, it may be only temporary, but for the moment at least, the nations and the states have called a truce. Whether the great mushroom cloud on the horizon embodying the threat of nuclear destruction is going to make this truce permanent is something that no one can yet foretell.

What is more impressive to an old hand in Washington is that moderation tends to express itself in almost every aspect of our political life. President Eisenhower, in what may be perhaps a keynote of Washington's new mood, first suggested that the country wants to be governed by progressive moderates. Later, as if to emphasize the need for new definitions of tolerance, he suggested a better phrase might be "dynamic conservatism." In a sense, either phrase might be considered a notable advance. As recently as the 1952 campaign progressive was almost a subversive word. So far as dynamism goes, it has had to contend violently throughout this administration with retrenchment, and if the President has finally decided in favor of a dynamic policy, he is probably fairly well in tune with national attitudes. By and large, there seems to be a fairly deliberate effort to obliterate the more painful memories of the 1952 campaign. The whole inflammatory technique of Government by slogan is finally getting a bad reputation. There is less and less temptation to win arguments by charges of appeasement. There are fewer and fewer accusations that all opponents are soft on communism or outright subversives. In official circles they have stopped talking about their plans for a positive, dynamic foreign policy and about the master blueprint that was supposed to give us a permanent initiative in world affairs. Responsible politicians no longer discuss the liberation of the satellites or the rollback of the Iron Curtain.

The Republicans have grown wary, have stopped chanting those magic formulas that were supposed to take the place of hard work and taxes, and perpetual vigilance. The political hucksters, the supermerchandisers, who invaded Washington in the early months of 1953, have either been discarded or reeducated. They are no longer talking about "gimmicks" in the tricky formulation of national policy. They no longer regard nations and whole populations as piles of poker chips easily subject to devious manipulation. They are seriously intent now on seeing every problem in its true historical depth and proportion.

Even in domestic affairs there is a tendency to shy away from phrases like "sound money" and "creeping socialism" and "balancing the budget." The Republican official who in 1953 wanted to achieve a total posture of the entire Government is delighted in 1955 to be able to strike any kind of posture that suggests a modicum of dignity.

The point is: Slogans have lost respectability. Extremism is losing ground. Prosperity makes it easier to govern. Peace encourages the lion and the lamb to lie down together. Politically, the best sign of normalcy is that the ins are worried about staying in and the outs are licking their chops. The quipsters make the most of this situation. They said, for example, when Republicans promised plenty of Easter eggs for the annual Easter egg rolling on the White House lawn. "There ought to be plenty; the Republicans have spent 2 years laying them." When the Republican Party appoints a new public relations chief, they say: "It is his job to convince the country that the difference between Republicans and people has been greatly exaggerated." When the President urges a new addition to the White House offices, they say: "Republicans are so worried about the dangers of big government they need more room to do their worrying in."

One story that went the rounds some months ago told of a visit to the White House by Republican National Chairman Hall, whose report to the President was anything but cheerful. Judge Hall groaned over reversals in the election, over defeats in the President's legislative program, over fluctuations in the Gallop-poll ratings, and over the schism between left- and right-wing Republicans. In his eyes, the Republicans had every reason to "run scared." Well, the President, so the story goes, listened patiently to this melancholy recital, but when Judge Hall finished there was a twinkle in Ike's eye. He leaned over to his political adviser and asked, solemnly, "Tell me, Len, do you think I ought to put the White House in Mamie's name?"

It's worth asking how President Eisenhower fits into the whole Washington picture. He is by no means a static quality. Quite the contrary, in fact: He is about as mercurial as any President we have ever had. His enemies say he has been on both sides of every subject that has arisen during his administration. The public conception of President Eisenhower fluctuates a little, but not with any extremes of feeling. In 1953, when the honeymoon was on, the Gallup poll rated his popularity at 76 percent. Last winter, the monthly survey rated him 57 percent—down 19 points. Recently the rating climbed into the middle sixties. This can be taken to mean most voters think he is doing a reasonably good job, but that like all his predecessors, he is not a miracle man; he is not immune from criticism.

Naturally, being a conspicuous personage—fond of golf, fishing, and travel—he's the butt of a great many jokes. The other day someone remarked: "The Washington tourist season must be reaching its peak. Even President Eisenhower is in town." All Presidents do a fair amount of traveling, but Eisenhower is more restless than any recent predecessor; and that of course is one of the most frequent topics of comment. Apropos of his usual weekend trips to his Gettysburg farm, someone remarked: "If they had known Ike was going to be the next occupant when they remodeled the White House, they would have made it into a trailer."

The politicians, including some in the Republican Party, have taken a fairly

jaundiced view of Mr. Eisenhower's capabilities. He has offended a considerable number of Senators by failing to consult them or notify them about impending appointments in their States, and the resulting frictions have sometimes been inflammatory. Perhaps that's what gave rise to one product of the Washington jokesmiths, a little more savage than most. It might even have been a Democrat who observed: "Before the 1952 elections, there was alarm at the idea of having a professional military man in the White House. Now look at us—with an amateur civilian."

If you are looking for a residual grain of truth in a field as controversial as this, my advice is: don't underestimate the President's political talents. He has a high degree of flexibility. He has a genius for finding protective coloration. In his desire to be all things to all people, he shows extraordinary adroitness at finding common ground, and at avoiding entrapment in dogmatic positions. His enemies say he lacks dedication to principles; but his friends counter by quoting the cynic who once observed that genius is the capacity to rise above one's principles. Certainly, the President is not a fanatic, as Sir Winston Churchill once described a fanatic: "A man who can't change his mind, and won't change the subject."

Seriously, President Eisenhower has undergone a considerable transfiguration during his 2½ years in office. It was Walter Lippmann, I think, who pointed out some weeks ago, that when Mr. Eisenhower entered the White House, he was still a theorist in politics. In the Army, he had relied on civilian advisers to deal with civilian affairs; his West Point education had given him only the most primitive kind of background in social and economic affairs, and he had no practical experience to assist him in making national policy in literally dozens of fields.

Somehow, in the period before he became a candidate, General Eisenhower had been sold on the idea that the Federal Government had become some kind of monstrous juggernaut—something alien, and wicked, and far too big and powerful for the good of the country. For that reason, he campaigned in 1952 on the platform that Government had to be decentralized. He ignored the fundamental reasons for bigness—such factors as the population pressures of the 20th century (our own as well as others); and I think he cherished a kind of vague, idealistic conception of America governing itself like one vast New England town meeting house.

He had a similar conception of the Presidency itself. Perhaps in an excess of modesty, he began with an attempt to undercut the power of his own office. He created a whole series of informal new institutions attached to the White House—institutions that seemed designed to relieve the President not only of some drudgery, but also of some responsibilities and prerogatives. The Monday morning meeting with congressional leaders became a solemn ritual, especially during the 83d Congress, even though it produced about equal parts of legislation and frustration. The Cabinet was more and more tightly organized, and finally given a secretariat to coordinate its work. The National Security Council became a top policy-making body; and the President formed a Council on Foreign Economic Policy to handle all the tiresome paper work involved in the support of our overseas alliances. In general, Mr. Eisenhower showed a distaste for making individual decisions, a preference for well-organized staff work and group decisions. His chief reliance from the beginning was on the military staff system, the pyramidal chain of command. His tendency was to use his personal power sparingly, unlike Harry Truman who used to have a sign on his desk saying, "The buck stops here."

In Eisenhower's mind, at least in the beginning, even a President could pass the buck; he seemed to believe that irrevocable decisions of great national or international importance should not be made by a single individual, no matter how highly placed. When he first opposed a high-level Big Four meeting, it was because he is not the man for grandiose adventures in personal diplomacy; he felt that even a President is not entitled to embrace judgments of worldwide gravity.

In 2½ years, the cares of office have brought about a radical transfiguration of the President's theories. He has learned some new facts of life. One is that, under the Constitution the President possesses ultimate responsibility; and there is no device or informally created institution that will enable him to shirk that duty. Another is that the American Government is big because the Congress and the people have made it that way—and no President can unmake it.

Mr. Eisenhower in 1953, in the first flush of Republican victory, created two commissions that were supposed to whittle down the Federal bureaucracy and enhance State powers. The Hoover Commission undertook a review of Federal functions. This year it published a series of reports that no one in either Congress or the administration could find it in his heart to consider seriously. Essentially they would have repealed the 20th century. In the light of our political history over the last 100 years—and the infinite pains with which our philosophy of government has been hammered out by Congress—some of the Hoover reports were fantastically archaic—and in some respects presumptuous.

The other Commission—on the relationships between the Federal, State, and local governments—had originally been conceived as a device for shifting more responsibility to the lower levels, but its final report was a triumphant vindication of statesmen who have built our present national institutions; the report agreed the States lacked power today because they had not modernized their institutions, had not grown with the times, had not built a system of personnel or organizations capable of assuming greater government authority. Only minor changes were considered desirable. The result of these two Republican-sponsored investigations was to indorse the present structure of Government, and to repudiate all thought of revolutionary overhaul.

In terms of Presidential thinking, the practical effect of these advisory studies has been to persuade President Eisenhower that he cannot wage a successful war against the reforms of the New Deal-Fair Deal era; and he has called off that vendetta against the Democrats. The change became noticeable in his 1955 message on the state of the Union. Two years earlier, he had sprinkled his message liberally with the merchandising slogans that had been coined for him in the election campaign—with superficial concepts like dynamic initiative, psychological warfare, clandestine nonmilitary operations that would roll back the Communist empire, and all the rest. This year, Mr. Eisenhower abandoned all reliance on amateur sloganeers, and made it his aim in foreign affairs to find a modus vivendi or a means of coexistence that might give promise of stabilizing what had obviously become a world stalemate.

Likewise in domestic affairs, the emphasis in this year's message was no longer as it was last year on balancing the budget, but on balancing the national economy. In references to welfare legislation, whose necessity he conceded reluctantly in 1953, Mr. Eisenhower this year was cordial and even enthusiastic in urging liberal extensions of the present system.

The President recognized in effect that modern political, economic and social concepts are not a private, monopolistic possession of the Democratic Party, but a global aspect of twentieth-century progress. He is under the same compulsion as politicians in other countries: all are expected to join in making rules by which we can parcel out a decent living for everybody. The President has simply acknowledged political reality. His administration has adjusted its aims, its methods, and its scope. In this respect, it has been vastly more successful than the Republican Party as a whole.

In Harry Truman's day, it was the Democrats who were suicidally split and perpetually quarreling among themselves. Today, the Democrats have buried the old hatchets, at least in shallow graves, and have achieved a degree of unity which is probably without parallel in this century.

Not so with the Republicans. The pro-Eisenhower, internationalist wing of the party has been challenged again and again by an old guard faction favoring isolation in foreign affairs and big money at home. The strength of Eisenhower's position has been in its consistency in favoring collective security and in its ability to attract Democratic support. The weakness of his Republican enemies lies in the fact that their policies have lacked both consistency and leadership. The old guard, for example, has wanted no Government interference with the economy, but a strong mobilization base in preparation for eventual war with communism; has wanted a reduction in military spending, but intervention in Asian wars against communism; has favored a tough line with the Kremlin on the satellite issue, but the recall of American troops overseas. In general, the isolationists would revert to high tariffs and a defense system based on the Hoover concept of "fortress America," but along with that they want an authoritarian world peace imposed by some mysterious American edict.

To achieve this best of all possible worlds, the rightwingers thought for a time that they had found a leader in McCARTHY, because he seemed to have a political "gimmick" that would win elections. After McCARTHY's eclipse—I might almost say obliteration—the tendency was for the Old Guard to coalesce around Senator KNOWLAND, but even his loyalties have been equivocal.

Last fall the relative strength of the 2 feuding Republican factions was pretty well dramatized in the vote on censuring Senator McCARTHY; in that case, you may recall, 22 Republican Senators joined in condemning the Wisconsin Senator, and 24 voted in favor of McCARTHY. From that, it appeared for a time that the party leadership hung in the balance. This summer the question was resolved; and, of course, entirely to the advantage of the President. When McCARTHY last month made another attempt to dictate foreign policy to the President only three Republicans voted with McCARTHY in the showdown. That's why people nowadays don't even bother to smile when they remark that McCarthyism is no longer an "ism" but a "wasm." Some weeks ago, in a classic bit of understatement, GOP Chairman Hall summed up the party's position by advising one group of State leaders: "The Republican Party has got to remake itself in the image of President Eisenhower's thinking. In my travels I find that the party is not popular."

An honest assessment of the Democratic Party boils down to this: Its successes in dealing with the Eisenhower administration have been based on its frequent ability to unite, either in support or in opposition. Its failures have resulted uniformly from disunity. Now, with a Presidential election in the offing, the Democrats find themselves in a horrendous predicament.

Their dilemma is this: In order to establish a reputation with the voters as the party of responsibility, the Democrats at the legislative level have to handle every Eisenhower

recommendation strictly on its merits. That's the LYNDON JOHNSON strategy. They also have to treat the President himself with courtesy because, as one Senator told me last week at luncheon, "Eisenhower is a good man, a decent man, and we're not going to vilify him the way the Republicans hated and vilified Roosevelt and Truman." But, in doing that, it's hard to make a case for electing more Democrats to Congress or for putting a Democrat in the White House.

Some Democratic Senators are warning their colleagues that their present strategy is self-defeating. They say, if the Democrats have no program of their own, they may have trouble finding a strong presidential candidate in 1956; and if Eisenhower runs against only nominal opposition, he may win in a landslide—in which case he may carry the Republican Party along to a victory in both Houses of Congress. About a dozen Democratic leaders have concluded that the whole party has got to run against Ike, starting right now, if it expects to keep control of the lawmaking machinery in 1957.

Many Democrats say privately that Mr. Eisenhower plays too much golf, has too many rich friends, makes too many bad appointments, and altogether is not a good President. Publicly, only a handful of these critics have spoken out, and it was your own Senator HUMPHREY who put their case in a nutshell when he said: "President Eisenhower is directly responsible for the deeds, misdeeds, and lack of deeds in his Republican administration." It remains to be seen, of course, whether this view—and, believe me, HUMPHREY'S views are studied closely by his Senate colleagues—will overcome the reluctance of the southern standpatters who secretly sympathize with certain conservative aspects of republicanism.

For the time being, the Democrats are coasting, pretending they can take-it-or-leave-it-alone. In the back of their minds is an uneasy awareness that defeat for the party would deprive them of their powerful committee chairmanships. Sooner or later that fear may rouse them to do battle. It may be, however, that the swift march of events will force them into a more vigorous political posture. One of the cohesive forces in the Democratic Party—in fact the essential ingredient in bipartisanship—has been the threat of Communist aggression; if there should now be an agreement on coexistence with communism, the Democrats would naturally find their partisan center of gravity shifting from foreign to domestic affairs. It has been possible for the Democrats to cooperate actively with the President on many subjects because their views on collective security were identical. If conditions now change drastically, this alignment may be ruptured. If peace is assured, the paramount issue may become prosperity. Attention may focus sharply on the national economy—and on that sector of the political front, the danger signals are already flying.

There is a fundamental difference in the economic philosophy of the Republican and Democratic Parties, making some allowances for dissenting minority factions. The orthodox Republican attitude is that the economy should regulate itself automatically with a minimum of Government manipulation. The orthodox Democratic view is that the economic health of the Nation requires a balanced growth in the economy and a total growth exceeding 3 percent a year. The Democrats say competitive forces alone will not guarantee a healthy rate of expansion, and that national security requires a certain amount of Federal encourgement and guidance to produce an expanding economy. The Republicans say competitive forces, stimulated by the normal factors of population growth, will provide the necessary incentive.

Actually, neither party is able to practice in any literal sense what it preaches. The public rejects some of the controls that liberal Democrats would favor, and the same public insists upon some of the Federal activities that orthodox Republicans would reject.

A notable case in point is the present administration's fiscal policy. In the spring of 1953, Secretary of the Treasury Humphrey undertook to carry out Republican hard money promises by launching a tight credit policy. The program was frankly deflationary. That policy lasted all of 6 months. At the first sign of a recession, there was a nationwide howl of protest, and the Treasury itself saw with alarm that a deflationary policy would reduce Federal revenues so drastically as to offset administrative economies and practically guarantee a bigger defiicit than before. Since the fall of 1953 the administration has consistently followed a policy of easy credit; in fact, the present policy has been described as the loosest credit structure in our history—an essential element in an expanding economy. Since this policy creates all the outward appearances of prosperity, no one in either party offers serious objection. There is reason to believe, however, that the seeds of future trouble have already been planted. For more than 2 years the cost of living has remained virtually stable despite the administration's easy money policy. In part this has been a result of tax reductions, in part the result of falling production costs in industry, in part a result of postponing certain costs which some day the Federal Government will have to meet.

What I am trying to say is this: Today's appearance of stability in the economy is partly illusory. An easy-money policy is fundamentally inflationary, and the Eisenhower policy is, therefore, inflationary. Sooner or later that inflation wil make itself visible.

This year the dikes have been greatly threatened by a rising spiral of wages and prices. The President has acquiesced and perhaps even encouraged this trend by approving pay raises for almost everyone in the employ of the Government. Having done that, he could hardly oppose union demands for higher pay; and having acquiesced thus in the demands of labor, he could hardly discriminate against business and industry by limiting their access to credit. One step along the road to inflation leads inevitably to another and another. The history of this administration is in keeping with everything we know about the history of the last 2,000 years—an almost unbroken story of piecemeal inflation.

However realistic this policy may be in the eyes of the President and in the eyes of the Democratic Party, it still remains to be seen whether it will be tolerated by the more orthodox wing of the Republican Party.

Cynics are, nevertheless, convinced that the hope of another Republican victory in 1956 will prevail in the end over any reservations that conservative Republicans may have. Treasury Secretary Humphrey and his associates may gag at the political necessities of their position, but they are no less expert in the technics of controlling inflation than their predecessors in the Truman administration. There may be minor quibbles next year over the character and scope of tax reductions, but the practical politicians see only two big question marks on the immediate economic horizon—whether automobile production and building construction will continue at the present luxuriant and unprecedented pace until the 1956 elections are safely out of the way.

Assuming that Eisenhower will run—and almost everyone does—and assuming that there will be nothing resembling an economic recession or collapse, the Republicans are likely to go into the 1956 campaign with the slogan every politician dreams of: "Peace and Prosperity."

Other issues are problematical. The Eisenhower administration has adopted almost in its entirety the Truman-Acheson foreign policy of building coalitions and distributing foreign aid, and there is no controversy to speak of in that regard. Since the administration has stopped trying to repeal the domestic reforms of the New Deal-Fair Deal era, there are only scattered targets for Democratic opposition. One of these is public power, as exemplified by the Dixon-Yates attempt to subvert TVA; another is the dissipation of natural resources by executive and administrative subterfuge; another may be discrimination against the farmer, and favoritism toward Big Business and Big Money. The Democrats feel they are sure to get some mileage out of the unprecedented succession of mergers in many branches of industry and finance; the trend is definitely toward monopoly. The Democrats are viewing this trend querulously, and they are prepared to leap on it venomously at the first sign of trouble or corruption. Similarly, there will be no reluctance in Democratic ranks to becoming the champions of agriculture if it appears that predatory financial interests are victimizing the small farmer. No one yet knows how potent these issues will be, but there are enough independent voters in these and related areas in the national economy to riddle anybody's election calculations.

So much for the crystal-ball department.

These are by no means unprofitable speculations, but they should not be overemphasized. What must not be forgotten is that, in any overall review of American Governmnet attitudes today, the menace of Communist Russia is still paramount. No matter what happens this week at Geneva, the problem of dealing with the Red conspiracy is Washington's major preoccupation, and is likely to remain so for a long time. Since the enunciation of the Truman doctrine in 1947, and especially since the Lisbon meeting of the NATO Council in 1952, every responsible American official has agreed that Communist ambitions are insatiable, Communist intentions are implacable, Communist capabilities are being accelerated every year.

I would urgently remind you—notwithstanding the wave of optimism now sweeping the world—that communism is a revolutionary conspiracy which has long boasted of its contempt for western ethics. Dictator Stalin once observed: "Since diplomacy is no more possible than dry water—or iron wood." When the Reds talks about cooperation—as they do from time to time—they consider efforts at harmony a temporary tactic, not a moral commitment. Lenin told a party congress in 1919: "We are living not merely in a state but in a system of states, and the existence of the Soviet Republic side by side with imperialist states for a long time is unthinkable. One or the other must triumph in the end. A series of frightful collisions between the Soviet Republic and the bourgeois states will be inevitable."

A thoroughly indoctrinated Communist does not forget such a warning; in fact, the idea has been endlessly elaborated since Lenin's time. In 1928, the Comintern said in a resolution: "The proletariat in the Soviet Union harbors no illusions as to the possibility of a durable peace with the imperialists. The proletariat knows that the imperialist attack against the Soviet Union is inevitable." In 1946, a Soviet navy publication assured party members: "The Soviet Union, building communism in conditions of capitalist encirclement, is not guaranteed against the danger of attack from outside and against attempts to restore capitalism."

To rationalize their imperialism, the Reds have concocted a wholly ruthless set of ethical principles. They say: "We must resort to all sorts of stratagems, maneuvers, illegal methods, evasions and subterfuges."

"There can be no breathing space in ideological warfare." They say: "The strictest loyalty to the ideas of communism must be combined with the ability to make all the necessary compromises, to tack; to make agreements, zigzags, retreats, and so on, in order to accelerate the coming into power of the Communists." As recently as 1950, Moscow radio said: "From the point of view of Communist morality, only those acts are moral which contribute to the building up of a new Communist society."

There is a tremendous Communist literature, all of which has been subject to careful study and analysis in the postwar period. Everything Communist leaders have said is part of the same consistent pattern; no one can possibly have any illusions about their intentions. Lenin said in 1917: "The task of a truly revolutionary party is not to renounce compromises once and for all, but to be able throughout all compromises, when they are unavoidable, to remain true to its principles, to its class, to its revolutionary purpose, to its task of preparing the way for revolution and of educating the masses for victory in the revolution." In 1952, Stalin's last testament was a theoretical work called The Economic Problems of Socialism in the U. S. S. R. It outlined two possible policies for the Soviet Union. If the allied coalition held the democracies together under American leadership, Stalin recommended a policy of economic penetration and subversion. If the western allies fell apart, he proposed an intensification of military preparations and pressures.

Well, look around the world today and what do you see! You see the free enterprise system creating a level of prosperity and well-being that has never been matched in all the centuries before us. You see the western allies, with American support, tightening the bonds of mutual understanding, acknowledging their interdependence, creating new mechanisms for consultation and cooperation. You see the threat of Communist aggression resulting in a tremendous consolidation of anti-Communist power.

Last year my news director sent me on a survey trip through Asia, the weakest part of the free-world coalition, and what I saw there was a revelation. Recognizing the existence of continuing poverty, spotty dissatisfaction, and some insecurity, it is, nevertheless, a fact that the outlook in Asia today is more encouraging than at any time in history. With a rising standard of living and with greater political stability, the fear of war has receded. Even where communism threatened the anti-Communists have become more sure of themselves than formerly. There is an awareness that communism can be beaten. Nowhere does one find now a sense of panic or demoralization; everywhere it is possible to see evidences of greater stability.

Asia's progress has been multiplied many times in Europe. On both continents it is well to remember that order was achieved in the face of violent Communist efforts to create chaos and disorder. In short, 8 years of cold war has succeeded in creating a degree of political equilibrium in the world; has had the effect of containing militant, aggressive communism.

What remains now is to find another system of containment—this time for the containment of economic aggression. The postwar rehabilitation period is over. Now comes the period of fundamental development, of lifting the entire economic plateau of the backward countries to a higher level. The race between the United States and the Soviet Union is to invent a formula, a principle, an assembly line that will produce a good living for anyone, anywhere, provided he is willing to work. The challenge is to rally our know-how in a massive assault on poverty; and the penalty for failure would be to see the Soviet Union take the leadership and friendship of large parts of Europe and Asia.

Today we stand on the threshold of compromise with the Communist world—their version of compromise, which makes illusory concessions while remaining true to their revolutionary principles. It is no exaggeration to say we have forced the Reds to negotiate, and I ask you these questions: Is it wrong to suspect Soviet motives? Is it wrong to question Soviet good faith?

My answer is that neither Bulganin nor Khrushchev nor anyone else in the Kremlin has repudiated one syllable of the doctrines preached by Marx, Lenin, or Stalin. No Communist leader has promised the free world that there will be a cessation of the struggle tactic which has poisoned world relations since the day of the Bolshevik revolution. No responsible spokesman has even so much as hinted at a repudiation of the doctrine of world revolution. The closest anyone in the Kremlin has come to an acceptable definition of coexistence is Bulganin's invitation to live in peaceful competition, but no one knows whether his definition of "peaceful" includes the continued use of communism's international conspiratorial apparatus.

I say the Government of the United States has a right to suspect Soviet intentions until the Kremlin publicly rejects Lenin and Stalin as spokesmen for the Communist movement. When the Russians abandon the struggle tactic then we can have real peace, and general disarmament. It is all very well to talk about the horrows of atomic warfare, and the possible destruction of the human race, but it is a mistake to imagine that nothing worse could happen. I can shudder even more picturesquely at the prospect of barbarism and death under the Communist heel.

In Washington they say there are two kinds of diplomats—those who think you can deal with the Russians and those who have tried. I think there is more skepticism in this country toward the Reds than there is in Europe, and the absence of a healthy skepticism in Europe may ultimately prove to be one of our greatest hazards. The yearning for peace is profound and the fear of atomic disaster is spreading. This feeling almost certainly points toward some kind of accommodation between communism and the West. No one has any ground for objecting to an accommodation, but no agreement with the Communists should be taken for anything more than an accommodation. It should not be some an excuse to relax our vigilance. It should not become a broad causeway for the introduction of a revolutionary Trojan horse. It is just as true today as it has been since the onset of the cold war and, in fact, since the Bolshevik revolution; we must never let down our guard.

More than that, if the struggle against revolutionary communism is going to have to be waged in the political and economic arena, there is going to have to be a realinement of American policy. A new emphasis is needed on partnership—on keeping alive the kind of trade relationships and political kinships that will assure the United States of strong, friendly allies. In the backward regions we can well afford to review our foreign-aid philosophy. The time for charity handouts is nearly over.

An American diplomat last year warned me in Asia that military aid and point 4 have just about exhausted their usefulness as instruments of national policy. What we need now is a program of major capital improvement: New trunk highways, railroads, better waterways, multipurpose dams for the creation of integrated agricultural-industrial areas, new harbors, and modern communications systems. The need is to promote impressive projects expressing faith in the long-range future—an earnest of our belief that communism is not going to seize these improvements, and a tacit warning to the Reds that we would be ready to defend what we help build.

Besides this species of logic, there are two other cogent arguments being brought to bear on the administration's high policy-makers. One is the fact that, if the Soviet Union undertakes a program of economic penetration, the competition will be based on State subsidies; and we are either going to have to match their subsidies or lose by default.

The other argument is that the laissez-faire policy of the Republican Party did not win the 1954 congressional elections. In fact, the policy came within a ace of causing a depression before it was modified. And if the Republicans have any hopes for 1956, in a period of arms reduction and savage competition, they are going to have to find markets for our enormous industrial output—in Europe and Asia if that's where the markets are, and by subsidies if that's what it takes to keep them out of Communist hands.

Amending the Classification Act of 1949

SPEECH
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 30, 1955

Mrs. KELLY of New York. Mr. Speaker, I, too, support H. R. 3255 which will correct a serious injustice to our loyal civil servants. So many of my constituents were the victims of downgrading in their civil-service positions that I was prompted to introduce similar legislation early this year. My bill, H. R. 5887 is very similar to the one introduced by the gentleman from Michigan [Mr. LESINSKI] which the House considered favorably last week. The only difference is that my measure included those persons who had held their jobs for 1 year while H. R. 3255 pertains to those employees with not less than 2 years of service.

I commend my colleague from Michigan for the excellent presentation of this legislation. Every employee, whether in the Government or in private industry, can do a much better job when he has a feeling of security in his position. On the other hand, an employer—in this case the Federal Government—has an obligation to its employees.

I have been impressed with the number of letters I have received from my constituents on this subject. In many cases, they have held a certain grade for 4 or 5 years, or even longer. A classification survey occurs and a decision is reached that their duties no longer warrant the grade they are holding. Or, after several years in a position of a certain grade, the employee is informed that the agency had improperly placed his position in a higher grade. Assuming this contention is accurate, it is difficult to understand how the failure of the agency to properly classify the position should be borne by the employee. If the agency has failed to apply the classification standards developed in the Classification Act of 1949, as amended, the employee should not be made to suffer a monetary loss.

Very recently, Congress approved a much needed salary increase for Federal classified workers. In those instances where jobs have been downgraded in the past several months, the effect of the salary increase has been nullified in whole or in part by the loss of pay resulting from the reduction in grade. I am most gratified that the House has passed H. R. 3255 to correct this situation this year.

Anniversary of Swiss Independence

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, on the night of August 1, fires glow in the Alps in celebration of the anniversary of Swiss independence. They shine through the night like the spirit of Swiss democracy which has stood through the centuries as a beacon to guide mankind toward freedom and democracy. Today, Swiss independence serves as a flaming symbol of man's struggle toward freedom and democracy. It illuminates the political night which has fallen upon the many nations that have lost their independence.

Nearly 7 centuries ago, on August 1, 1291, Switzerland threw off the oppressive yoke of monarchist tyranny, gladdening the hearts of all who yearned for liberty much as our own people did on our first July 4.

Throughout the centuries that followed, the Swiss nation broadened the base of its liberties, developed education, science, the arts, and crafts. And its people, of German, French, and Italian ancestry learned, as did the American people, to live in peace and harmony together, solving their problems in the open forum that only democracy provides.

It is no wonder, then, that so many of the far-seeing projects of our time have been originated or make their homes in Switzerland such as the Red Cross, the League of Nations, and the World Health Organization. Perhaps the greatest tribute to Switzerland is the fact that through the decades, other nations so often call upon the Swiss to provide the site for great international conferences. It is tribute to the impartiality and justice which characterize the country.

The Swiss have addressed themselves equally successfully to more material matters. Like America, they have a prosperous, clean, and healthy land with a standard of living with few equals in the world. In a mutuality of trade, both of our economies have prospered, each supplying the other with those goods insuring comfort and well-being for our peoples. America and Switzerland have proved throughout their history that industrious men have nothing to fear from competition, but are only stimulated by it toward new and greater accomplishments.

But last summer, a blemish developed to mar this fine record. For it was then, on July 27, that the administration approved a 50-percent increase in the Swiss watch tariff. This shortsighted development was brought about by a small group of fearful men, trying to protect us from free competition. Let us hope that our President will soon be reminded of his fine statement "the free world alliance will be most firmly cemented when its association is based on flourishing mutual trade," and that the United States once more assumes the role of champion of increasing international trade.

Economic Control of Communists in Hawaii

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. PILLION. Mr. Speaker, the following article by Victor Riesel appeared in the Buffalo Courier-Express newspaper of July 28.

In this article, Mr. Riesel verifies the facts and the statements made during the Hawaiian-Alaskan statehood debate relative to communistic influence in Hawaii.

HARRY BRIDGES CONTROLS THE ECONOMY OF HAWAII

(By Victor Riesel)

HONOLULU.—The surf, the sand, the catamaran sailing, the stars, and soft music at the Royal Hawaiian at Waikiki lull into forgetting—until you stand on the sunken hull of the U. S. S. *Arizona* and realize that there are still 1,100 skeletons of American fighting men sealed beneath the twisted bombed deck of the battle wagon destroyed by the Japs one Sunday morning.

There still are machine gun bullet pockmarks on some Hickman Field barrack walls where Nipponese fliers sent many of our boys from here to eternity.

Suddenly you realize that the unified military, naval, Marine, submarine and Air Force command here is second in importance and power only to the Pentagon itself.

And a sickening feeling hits you because you know that an arrogant man by the name of Harry Bridges really controls the economy of this island outpost and knows virtually every detail of what transpires here.

This is the same Harry Bridges ousted from the CIO for following the Commie line. The same man who all through the Korean war sneered at our efforts to stop Communist aggression. The same man who worked with the Soviets' International Federation of Sailors and Dockers Unions, affiliated wtih the viciously anti-United States World Federation of Trade Unions controlled by Moscow.

Yet Bridges is the labor boss of the islands on which Adm. Felix Stump runs the headquarters of all our Pacific forces.

On a hill above Pearl Harbor the admiral directs a command which stretches to Formosa, Japan, and Asia, and the down-under countries.

Through these Army forts, docks, sub bases, navy yards, and airfields move our men and war machines to the only real vital front—Asia.

Yet Harry and his aide, Jack Hall, and a couple of lawyers growing wealthy out of their handling of cases of the native workers, are the bullying, terrorizing, cocky, behind-the-scenes powers here.

Does no one care on the mainland?

These men so frequently charged in congressional hearings with being Communists are political powers wooed by some politicos, feared by others because they control some 22,300 workers. These are members of the International Longshoremen and Warehousemen's Union. There are another 2,000 in the United Public Workers, also kicked out of CIO for pro-Communist activity. These two unions operate out of the same headquarters over on Atkinson Drive—and have the same telephone number.

These 24,300 workers and their families cast a good part of the 80,000 votes turned out in elections here. So few politicians will publicly antagonize these unions.

Furthermore, neither the AFL nor CIO national headquarters back home are putting any real money into a campaign to compete with Bridges here. Instead, he is moving in on the AFL and CIO territory. George Meany and Walter Reuther might like to know.

In fact, the Bridges people have told the teamsters' representative here to stop organizing. Bridges and Hall want it all. The Bridges union is being hit by automation. Plantations are mechanizing and laying off members of his union. So Bridges is unionizing mattress workers, butcher shops, a bakery, hotels, anything he can put his hands on.

Bridges and his boys want continued power on these island gateways to Asia, and they talk rough, these leftwingers. When Jack Hall, Bridges' right-hand man here, was being tried under the Smith Act, Hall met the Government prosecuting attorney in the Federal Building elevator. Hall turned to the United States official and snarled that "Bridges will come in here and tear the building down brick by brick if we are convicted."

They were convicted. But they are up on appeal and move around the islands in style and live well. The anti-Communists do not have it so well. There is a Jack H. Kawano, a former Commie who was high in Bridges' union. Kawano broke and told all. Today he is a night watchman at the Kamahehe School. Nobody seems to care.

I've been with labor leaders across the world at international anti-Communist conferences and have heard them make strong speeches.

A little action here would help make those speeches mean a little more.

Government Clinics—Part II

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 2, 1955

Mr. MILLER of Nebraska. Mr. Speaker, it has been my custom every other year, during adjournment to hold Government clinics in each of the 38 county seat towns in my district. These meetings are not political, but merely question and answer periods to give folks an opportunity to visit with their Representative, ask questions, and to render a report of my stewardship in Congress.

The first hour is devoted to school studens, entitled "Youth Wants to Know."

The last hour is for adults who may attend. Following is the schedule of clinics for the period from October 10 through October 20:

Monday, October 10: North Platte, 2 to 4 p. m., gas company building; Tryon, 7 to 9 p. m.

Tuesday, October 11: Stapleton, 2 to 4 p. m.; Thedford, 7 to 9 p. m.

Wednesday, October 12: Mullen, 2 to 4 p. m.; Arthur, 7 to 9 p. m.

Thursday, October 13: Chappel, 2 to 4 p. m.; Oshkosh, 7 to 9 p. m.

Friday, October 14: Grant, 10 to 12 a. m.; Ogallala, 2 to 4 p. m.

Monday, October 17: Brewster, 2 to 4 p. m.; Broken Bow, 7 to 9 p. m.

Tuesday, October 18: Lexington, 2 to 4 p. m.; Kearney, 7 to 9 p. m.

Wednesday, October 19: Burwell, 2 to 4 p. m.; Ord, 7 to 9 p. m.

Thursday, October 20: Loup City, 2 to 4 p. m.; Grand Island, 7 to 9 p. m.

Note: All meetings will be held in the county courthouse unless otherwise indicated. The public is invited.

The Farm Program in Missouri

EXTENSION OF REMARKS
OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 2, 1955

Mr. GOLDWATER. Mr. President, there appeared in the RECORD of July 29, several remarks of the Senators from Missouri that I can construe only as political ones. Not being completely aware of the situation that exists in that State, but being cognizant that what they complain of now was accepted as proper during the New Deal days, I appealed to a Congressman from that State for an appraisal of the complaints. His remarks were very concisely put, in my opinion, in a letter to the Secretary of Agriculture, Mr. Benson, and I ask unanimous consent that it be printed in the RECORD for the edification of those who might be intrigued with the arguments offered by the Democrats of Missouri.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

AUGUST 2, 1955.

Hon. EZRA TAFT BENSON,
Secretary of Agriculture,
Washington, D. C.

DEAR MR. SECRETARY: In the CONGRESSIONAL RECORD of July 29, 1955, from pages 10519 to 10529 there appears with the heading "Political Manipulation in the Farm Program in Missouri" a series of statements by Senators SYMINGTON and HENNINGS, both from Missouri, along with insert of letters and other material. Mr. HUMPHREY, a Senator from Minnesota, enters the discussion and among other things he states: "I wish to assure the Senator from Missouri that it is my intention, as chairman of the subcommittee, to come into his area. I shall notify the respective Senators and the other Members of the congressional delegation, and I shall hold whatever hearings may be necessary."

Now, I know it has been your intention, Mr. Secretary, to so run the Department of Agriculture that partisan politics would be kept out of the administration. It is your belief, as it is my belief, that the best politics is to run a good and efficient organization. It is also your belief, as I understand it, and again it is mine, that there are basic policy decisions to be made in carrying out the laws enacted by the Congress and in running any department. These policy decisions in many instances properly give rise to honest political differences which may and should be openly discussed, not by those who are employees of your Department, but by those who are the people's representatives and, indeed, by the people themselves.

Now, almost from the time that the Eisenhower administration took office the two Senators from Missouri, Senator SYMINGTON and Senator HENNINGS, have been making general charges of political manipulation of the farm program in Missouri. Congressman PAUL JONES also has been making general charges, in the beginning on the floor of the House, but I am happy to state not on the floor of the House since I challenged him to either back up his charges with details or desist. Most of the charges made have been ex parte in political speeches and in releases to the newspapers. Seldom have the charges been made on the floor of the House or the Senate where they were subject to rebuttal. The statements appearing in the CONGRESSIONAL RECORD of July 29, 1955, were essentially insertions in the RECORD and not matters openly expressed upon the floor of the Senate. It is a well recognized device and all too frequently used by Senators and Congressmen to insert material in the RECORD as if it had been presented orally on the floor. The only proper technique to use when attacking a program, or a policy, or a man, or a group of men is to notify ahead of time those you know take a contrary position to yours, that you intend to take the floor at such and such a time, and discuss the matter. I have many times used this technique in launching an attack on something I thought was wrong or improper. The failure of any Senator or Congressman to employ this technique leaves open to question by fair minded people the sincerity and accuracy of their charges.

There are no Republican Senators from Missouri who could have taken the floor to challenge Messrs. SYMINGTON's and HENINGS' charges; however, there are many Senators who would have undertaken to defend the Missouri situation had the two Missouri Senators notified anyone that they planned to make such an attack. It is obvious, from the reading of the CONGRESSIONAL RECORD, that Mr. HUMPHREY, the Senator from Minnesota, a fellow partisan of Senators SYMINGTON and HENNINGS, was notified and well prepared to participate in this discussion.

Under the rules of the Congress, I, as a Member of the House, am not permitted to challenge the statements of Members of the Senate on the floor of the House. Accordingly, I have to resort to other means to challenge their statements, as I do. One means I intend to use is to publicize this letter I am writing to you. Another means I intend to use is to publicly challenge either Senator SYMINGTON or Senator HENNINGS, or both together, to appear in public debate on these issues at any time or place in Missouri of their choosing.

Just last year and the year before, Missouri, along with other parts of the Nation, was in the grip of a devastating drought. The two Senators from Missouri—SYMINGTON and HENNINGS—went up and down the State making untrue and unsubstantiated charges about the administration of the drought-relief program. Time and again I publicly challenged the statements of both these men and offered to appear in public debate to refute what I felt were their unfounded charges. By good luck, twice I was able to appear on the same program with Senator SYMINGTON. The first time in St. Louis County, in October 1953, at the Creve Coeur Farm Bureau meeting. I spoke first and challenged him to answer a series of specific questions about the Federal drought-relief program which he had been castigating around the State. Mr. SYMINGTON's reply in essence was he had not expected to have to debate the matter and had left his notes at home. He answered none of the questions. The second time was in 1954 in Jefferson City, before the Missouri Farm Bureau State meeting. Mr. SYMINGTON requested to speak first, and did speak first. Before he spoke he asked me whether I intended to take issue with him on the Federal drought-relief program. I stated I certainly did intend to, and stated that he still had not answered the questions I posed to him at the Creve Coeur meeting. I further stated, and still state, that he and Senator HENNINGS deliberately misrepresented the Federal drought-relief program, repeated unsubstantiated charges which reflected on the integrity of certain individuals, and thereby were guilty of trying to use the terrible drought disaster for partisan purposes.

Now, to get at the issue at hand, the alleged political manipulation in the farm program in Missouri. The charges to date and the RECORD of July 29, 1955, reflect the type and nature of these charges, follows exactly the same pattern as the general charges directed by Senators SYMINGTON and HENNINGS against the administration of the Federal drought-relief program in Missouri.

If you will refer to the July 29, 1955, CONGRESSIONAL RECORD you will notice that with very few exceptions each charge made "begs the question"; in other words, it merely states the charge sought to be proved, that there has been political manipulation in the farm program in Missouri. I shall take up a little later the few instances of specific details alleged and discuss them. Of course, it is specific detail alone that can substantiate a general charge and the absence of specific detail in itself demonstrates the falseness of the general charges.

However, I want to point out one very obvious general fact. If Senators SYMINGTON and HENNINGS were truly anxious to keep the Missouri farm program in Missouri out of politics why have they resorted to the press and political speeches to try to correct errors they thought existed before they referred the alleged instances of improper administration to the Department of Agriculture for correction? For 2½ years now the tactics have been the same, make public charges first, then, if at all, refer the matter to the Department. Furthermore, even when the specific charges have been proven false, Senators SYMINGTON and HENNINGS have never cleared the record by admitting their information was false. Quite the contrary, by back reference they try to capitalize on the publicity given the original charge knowing that newspapers tend to prominently print charges (and people remember charges) and rather inconspicuously print the retraction.

Furthermore, I think it is important to point out the strangeness of the claim for lack of bias in all the letters and statements of Missourians placed in the RECORD by Senators SYMINGTON and HENNINGS, which alleged political manipulation in the farm program. Why were these letters and statements written or made to Senators SYMINGTON and HENNINGS instead of the Department of Agriculture if the purpose and intent of the authors was to get and keep the farm program out of partisan politics?

Indeed, why weren't letters of allegations of improprieties written to me or DEWEY SHORT or the other two Republican Congressmen from Missouri (in the 83d Cong.), complaining about the situation—if the purpose was really to try to correct it? To date I have received no letter of complaint from any Democrat or Republican.

I believe, at least I certainly hope, I have a reputation for fairness and a desire to see

partisan politics kept out of any Federal programs. Why was not my assistance sought if there were really a concern about the allegations that the Eisenhower administration had put the farm program in Missouri into politics?

The answer is quite clear to me. Senators SYMINGTON and HENNINGS aren't interested in getting the farm program out of politics, they want to put it into politics. For twenty-odd years it was difficult, if not impossible, for a person who happened to be a Republican to either be federally employed in Missouri in the first instance or be promoted because of merit. My Democrat friends have become so accustomed to this situation that they call it politics when the present administration states that it is no longer policy that a Republican is a pariah.

Let's take one of the specific cases referred to by Senators SYMINGTON and HENNINGS, that of Callaway County. What was one of the basic issues in the removal of the county committee? A statement by the committee that the only county manager they would employ would be a Democrat. At least they were frank about it and to support their position they pointed out, rightly, that Callaway County was 10 to 1 Democrat politically. The issue was, however, if the best qualified applicant for county manager happened to be a Republican, then he should be appointed. In a 10-to-1 Democrat county it would seem that the odds would also be 10 to 1 that the best qualified man would be a Democrat, but that was no justification under proper administration to rule out the 1-in-10 chance for a Republican or an Independent.

Senator SYMINGTON starts his accusations against Republican administration by referring to a letter (which he inserts in toto) by the Republican State chairman Perry Compton to all Republican county chairmen in which he urges the Republican county chairmen to look for and encourage qualified Republicans to apply for these agricultural jobs. Frankly, I think that was a fine letter and one that should improve the agricultural program. Why? Because it would increase the number of applicants for particular jobs and so give a wider choice to the administration.

The first test of good and proper employment practices is whether or not the best qualified person is selected. I only hope both Democrat and Republican Parties will compete on the basis of trying to beat the other out on a job by putting up a better qualified candidate.

The proof of the pudding is in the eating. Since the Republicans have taken over in Missouri 70 percent of the county managers have bachelor of science degrees in agriculture. This is probably a higher percentage of quality along that particular line than any other State in the Union and certainly it is a tremendous change from what existed under the Democrat rule in Missouri.

The next test of good and proper employment practices is whether the person selected tends to his knitting and applies his qualifications to getting a good job done without regard to partisanship. On this score the Missouri administration obviously rates high because not one of the complaints registered by the Missouri Senators even imply that the men appointed as county managers are not doing a good job or have carried out their jobs in a partisan fashion.

No, the charges seem to be centered around (1) removal of committee and county managers; (2) insistence upon getting the best qualified man as county manager; (3) upon the Republican Party making a real campaign to get the people of Republican faith who are highly qualified to apply for the jobs.

Let's examine the first charge—removal of county committees and county managers. Murray Colbert, the chairman of the Missouri State committee, stated to me, when I asked him at a meeting on July 15, 1955, of many heads of the Department of Agriculture and some lower official specifically charged with the Missouri program, that there was no instance of any removal or suspension of a committee or county manager for political reasons; that in all instances they were suspended or removed for cause. He asked if anyone in the room cared to challenge that statement and no one did. The person or persons whom Senator HUMPHREY refers to when he says (p. 10525): "I have discussed the situation with representatives from the Department of Agriculture, and believe the testimony to date will reveal that they recognize the fact that there is a very unfortunate, or I might use a more blunt word and say incredible situation in the ASA program in the State of Missouri," must have been at the July 15 meeting. Evidently Senator HUMPHREY has misunderstood their position.

The occasion for this July 15 meeting was to discuss certain complaints which had been made in regard to the suspension of the Mississippi county committee. I had been asked by the Republican State chairman to check into the allegations of politics in this suspension which he, the State chairman, stated were false. The evidence indicated that the suspensions were entirely based upon cause and had nothing whatsoever to do with politics. The Mississippi committee had been forced by the State ASC committee to remove a totally incompetent county manager a few months before. I trust that if this is the pressure the State committee exerts on the county committee that this kind of pressure along with that to get highly qualified county managers continues. The county committee then connived with their former employee to falsify his sick-leave payments after his removal. Among pending detailed charges against the Mississippi county committee which seem substantiated by records one involves possible criminal culpability.

Now, Mr. Secretary, let me refer to the 10 pages of allegations of political manipulation in the farm program in Missouri set forth by Senators SYMINGTON, HENNINGS, and HUMPHREY, to see what specific allegations there may be to support these serious general charges. First, I properly eliminate all restatement of the general charges as begging the question.

It is alleged (1) "In many counties, where the farmers did not elect ASC committees willing to take dictatorship from the State committee, the State committee moved in with suspension and dismissals."

Alleged proof: (a) "Texas County ASC chairman and then the entire committee were summarily dismissed." Answer, the word "summarily" begs the question. The records clearly show the removal was for cause. Do Senators SYMINGTON and HENNINGS want to debate the details of this removal?

(b) "In Greene County, the county ASC chairman was dismissed." Answer: Well so what? Is it charged that the dismissal was not for proper cause? Do Senator SYMINGTON and HENNINGS want to debate the details of this removal?

(c) "In Callaway County, the entire ASC committee was dismissed." An editorial in the Springfield News Leader is then set out as proof, I suppose, of improper dismissal. (Springfield is in Greene County 100 miles away from Callaway County.) One aspect of the Callaway County committee's dismissal has already been pointed out. The committee insisted on the right to appoint a Democrat county manager. This, of course, was not their right. Indeed, it was highly improper and really goes to show how brazen the Democrats in certain sections of Missouri had become.

The Springfield News Leader editorial deals mostly in generalities. It is in error in implying that State ASC Chairman Colbert fired these men "for noncooperating. Just that and nothing more." Even though Colbert may have been correctly quoted as saying that, the records clearly show that there was a great deal more to it.

(d) The "unhung picture" case. This is trivia on its face and yet it too reveals the arrogance of certain Democrat politicians in Missouri who refused to recognize that the Eisenhower administration meant what it said about "cleaning up the mess" and getting partisan politics out of the farm program. Imagine, a fight over hanging the picture of the President of the United States in an office of a Federal agency. This same county committee had had the picture of President Truman in its office when he was President and this point is conveniently forgotten by the partisan Senators from Missouri. Instead of trying to blow this case up an an example of Republican politics in Missouri, I would think they would have written the county committee and said, "For heaven's sake, how far do you want to let partisan politics go." I might add that if I had been the State committee I would have made no issue of the matter, knowing full well that men with such narrow and small minds as they had exhibited by not putting the picture of the President of the United States in the office, would be guilty of similar small mindedness particularly in carrying out their duties as committee members. However, I notice in spite of the picture episode the committee was not fired.

It is alleged (2) for 2½ years the Department of Agriculture and its Secretary have been repeatedly requested to take the necessary steps to correct the abuses in the ASC program in Missouri.

Answer and query: What abuses? This begs the question. The issue is, Were there abuses? Then just what documentation have Senators SYMINGTON and HENNINGS to substantiate their charges that repeated requests were made? It would be interesting to see what letters were written by them to the Department of Agriculture, and what details, if any, were set out in the letters. The repeated requests referred to probably were no more than newspaper statements setting forth unsubstantiated generalities such as appear in the July 29, 1955, CONGRESSIONAL RECORD.

A letter of January 4, 1954, by Mr. R. D. Cummins, chairman of Newton County, Mo., PMA, to Senator SYMINGTON is set forth as an example of the Department of Agriculture not taking action on complaints. First, I would comment that the letter of Mr. Cummins does not contain specific charges of anything. Second, it was written to Senator SYMINGTON, not the Department of Agriculture. On the face of it, it appears that the State ASC committee were within their rights in discharging Mr. Cummins for making unsubstantiated charges against the ASC administration, when the gentleman, upon request, refused and failed to back up his charges by supplying details. Furthermore, Mr. Cummins himself was obviously guilty of interjecting partisan politics into the matter by referring his complaint to a United States Senator rather than the Department of Agriculture. Mr. Cummins' affidavit itself makes it clear that he was neither willing nor ready to carry out policy properly decided by the Department of Agriculture in Washington. His charges of "politics being played" remain solely in the realm of unproven generalities, and the tone of his letters and statements indicate that he is intent upon "playing politics."

Senator SYMINGTON states that the case of Mr. Cummins is not an isolated case. I wonder if all his other cases are likewise matters of unproven generalities. The real questions are, Does Newton County have a

qualified county manager? Was the most qualified applicant selected? Is the program being administered properly? Furthermore, Mr. Cummins himself is alleged to have admitted that some of the charges in his letter to Senator SYMINGTON were false, and he even refused to retract the statements that he admitted to be false.

The case of Benton County is referred to as follows: "In Benton County several qualified applicants for office manager were turned down because the State ASC committee insisted on a local mechanic." The whole issue is one of qualifications and it helps nothing for Senator SYMINGTON to simply state the applicants were qualified without setting forth some detail. Furthermore, being a local mechanic does not of itself either qualify or disqualify a man.

I have previously commented upon the Callaway County situation. Senator SYMINGTON'S statement of general conclusions does not jibe with the detailed facts in the case. He supplies no details so it is difficult to reach any conclusions.

The charges in regard to Franklin County are mere generalities with no indication whatever of who made the charges or how the charges could be substantiated. The charges are false. The Franklin County committee has not been removed. The position of office manager is vacant. The allegations in regard to Greene County have already been discussed. The chairman was removed for making political speeches.

The statement in regard to Howard County is false. The county committee fired the county manager for cause. The position of county manager is open. The allegation in regard to Lewis County is false. The audit was a bad audit, not a good audit as Senator SYMINGTON alleges. The audit is available for anyone to see. It contained false statements and the office manager resigned voluntarily rather than appear before the State committee to explain the basis for his false reports.

The Madison County case is rather apparent on the face of it. Getting into further details will demonstrate that the employee fired had not limited her campaigning to driving a car to work with a Democrat campaign sticker on it.

The charges in regard to Saline County are false. The employee was discharged for loafing on the job over a period of time and bragging about the fact that because of his influence with the vice chairman he didn't have to work if he didn't want to. The vice chairman tried to hold him in his job. These facts can be readily ascertained.

The Barton County case referred to in Senator HENNINGS' remarks becomes quite apparent just reading the case that Senator HENNINGS presents. The committee just didn't want an office manager that would carry out the policy set by the Department of Agriculture in Washington and I understand there are still difficulties in Barton County.

I am happy to note that the Senators no longer are complaining about the situation in Iron County where the chairman of the county committee who was removed has now been sentenced to the penitentiary by the Federal district court.

I personally have checked the detailed charges involved in the removal of the committee in the Mississippi County case, and if their removal is an example of what Senators SYMINGTON and HENNINGS regard as politics, I can unequivocally state they are in error. I would be happy to debate this or any of the cases publicly with the Senators.

The character assassination referred to by Senator SYMINGTON is most interesting in view of the fact that the Senator is the one who is dragging all this matter out in the press. Men could be removed from office without embarrassment to themselves if each time there was a removal Senators SYMINGTON and HENNINGS, without any knowledge of the facts, did not run to the press with charges of politics.

Indeed, the proper way to proceed—and the two Senators know it—is to ask the Department of Agriculture for information concerning the removal of any person. Then, if the files reveal there was not proper grounds for removal, some public oratory would not be out of line. I do not believe in any instance, the two Senators have followed this course. They were perfectly willing to further embarrass an incompetent committee member or manager by crying politics and calling the public's attention to the matter, only later to learn that there were ample and good grounds for the removal.

Nothing can possibly be served by having a subcommittee of the Senate headed by the Senator from Minnesota [Mr. HUMPHREY] come to Missouri unless he changes his approach. Senator HUMPHREY has already disqualified himself as an impartial observer by stating his conclusions ahead of time, based upon half-baked generalities advanced ex parte.

Mr. HUMPHREY'S remarks, including page 10527, "I do not trust the Secretary of Agriculture," obviously mark him as prejudiced and partisan. It is difficult to perceive how any hearing or investigation he conducted would be objective.

Senator HENNINGS' charges consist of several letters written to him by Missouri people. Senator HENNINGS is presently engaged in doing a subcommittee study of the dangers existing in the country to our civil liberties. He is an attorney, and he has many times expressed his interest in proper procedures to protect our citizens from false and unsupported accusations. Yet he is perfectly willing to set forth in the CONGRESSIONAL RECORD letters which make serious but unsubstantiated charges against those in charge of the Missouri ASC program. Is this his idea of correct and fair procedure? Wasn't he interested in obtaining the statements from the other parties involved? Senator HENNINGS states, "My files are replete with irate letters from Missouri farmers." I wonder if the few he plucked out to insert in the CONGRESSIONAL RECORD are typical? I wonder what he has done to try to test the accuracy of the charges of the irate farmers?

Furthermore, I wonder if Senator HENNINGS approves the procedure of writing up these general charges and merely inserting the material into the CONGRESSIONAL RECORD without subjecting himself to cross-examination or rebuttal. I wonder if he will not agree with me that the correct procedure on matters of this nature, which is observed by many Senators and Congressmen, to notify those who might disagree with him that he plans to take the floor to set forth certain charges. Furthermore, what has Senator HENNINGS done in the Department of Agriculture or with representatives of the Eisenhower administration to stop the practice he alleges exists other than to publicize charges he apparently has never investigated or verified?

Now, I am contacting my Republican colleagues in the Senate to do what I can to assure that any investigation or hearing conducted in Missouri on this subject be conducted in a fair and nonpartisan manner. A fair, impartial investigation is welcome and is needed to separate slander from facts.

If there is any basis to the general charges made by Senators SYMINGTON and HENNINGS, we want to get to the bottom of them and correct the situation. To date there have been little details set forth upon which to investigate the accuracy of the general charges. In the few instances where details are given it becomes quite apparent that they are incomplete and untrue.

To conclude and restate the case, Senators SYMINGTON and HENNINGS' charges that there is political manipulation in the farm program in Missouri, are general, unchecked, unsubstantiated by detail and made without reference to specific denials by those against whom the charges are directed. There has been no real attempt to present these charges to the Department of Agriculture for substantiation and correction. The primary efforts seem to be devoted to conducting a political publicity campaign, and having, as it does, a subject involving other men's integrity, a "smear campaign."

The fact remains that no charges have been made that the county managers are not administering a good program without partisanship. No charges, except the one of Benton County, which is unsubstantiated, have been made that the best applicant for county manager was not chosen. In contrast we have an encouraging picture of 70 percent of the county managers being appointed holding bachelor of science degrees in agriculture.

The extent of the charges center around removals of county committees and office managers. The State ASC chairman has made the challenge that there has been no removal in Missouri for other than cause. The files are available to be checked. In consideration of the people removed the checking should be done quietly and without publicity. I would be happy to go over any case in detail with Senators SYMINGTON and HENNINGS to check whether, indeed, in their opinions, the removal was not in the best interests of good administration. If the matter is one in which there is real disagreement, then the matter should be publicized (regrettable for the individual), but necessarily in order for the public to exercise their judgment of whether the procedures followed have been fair and just.

And now, Mr. Secretary, I wish to state that I am making this letter public. I want everyone in Missouri who has heard the general charges of political manipulation in the farm program being made to understand the matter, and understand that these charges are denied, that they are unproven, and in the opinion of the State ASC committee cannot be proved because they are untrue. If any person can throw light on any specific case I would be happy to have their name and statement. I want no partisanship interfering with our Missouri farm program, whether it be in administration of the program or in making false accusations against its administration.

Let Senators SYMINGTON and HENNINGS agree to resolve this issue. Let's have the charges and countercharges investigated by a group of impartial Missouri citizens or a congressional committee that comes in to review the situation without bias and prejudice.

My interest, I might add, comes from several sources: As a Missouri citizen, as one of the two Republican Congressmen from Missouri (and I might add my colleague, Congressman SHORT, has asked me to undertake the chore for both of us) and by specific request of the Republican State chairman and, finally, as one who believes in honesty and fairness in political matters.

I have great faith in your integrity and abilities, sir. I think the Department of Agriculture under your administration has been excellent. I feel certain that the administration of your Department in Missouri merits your complete confidence. I want the matter fully and impartially investigated. I want partisan politics out of the administration of the agriculture programs. There is plenty of room to draw up political sides on the policy questions without resorting to mudslinging.

Sincerely,

THOMAS B. CURTIS.

REMARKS OF THOMAS B. CURTIS, OF MISSOURI, IN THE HOUSE OF REPRESENTATIVES, AUGUST 2, 1955

Mr. CURTIS of Missouri. Mr. Speaker, in the July 29, 1955, CONGRESSIONAL RECORD, pages 10519–10529, there appear certain charges that there has been political manipulation in the farm program in Missouri. Under the rules of the House which do not permit criticism to be directed against Members of the other body, it is awkward to refute the charges in detail on the floor of the House. However, it is proper to state that any charges that there has been political manipulation by the Eisenhower administration in the farm program in Missouri are incapable of proof because they are untrue. I have written a letter to the Secretary of Agriculture, Mr. Benson, which I have made public, setting forth in detail a refutation of the charges made with comment as to what the situation actually is.
